By Edward Earle Purinton	
Shall We Increase Our Army? (Both Sides) .....	36

On the evening of January 12, at the national headquarters of the Young Men's Christian Association on West Fifty-seventh street, there will be held an Efficiency Rally for Men of New York and Vicinity at which Edward Earle Purinton, The Independent's Efficiency Expert, will be the principal speaker of the evening. He will discuss "How to Study Efficiency." Dr. Walter L. Hervey, member of the Board of Examiners of the New York City Board of Education, will speak on "Efficiency in Everyday Life," and Mr. George P. Barber, the Efficiency Director of the West Side Y. M. C. A., will discuss "Efficiency Applied to Your Work."

The Third Efficiency Number of The Independent will bear date of January 25. The subject of Mr. Purinton's article will be "Play and Efficiency." Mr. Purinton believes that relaxation is absolutely necessary and that thre is some one game or sport or form of recreation which is best suited fgr each person. In this article he shows how to find what that is for the individual and how to make up a personal schedule to show the comparative values of tennis, golf, billiards, dancing, card playing, mountain climbing, etc.

In sending in four new subscriptions, a Michigan reader writes: "While I am glad to help along, I think I am doing these next door neighbors and warm personal friends a greater service than I am you. I missed my first number of your great paper this week in the past several years. I am completely 'lost at sea' without it. It is par excellence the best busy man's broadening friend published, in my opinion. At least it fills my needs to a T."

A reader in Canton, Ohio, writes: "I have been a subscriber to The Independent almost ever since I became a man, and I have learned to rely upon it for the clarifying of the frequently conflicting news items in the daily press. The Independent doesn't print as much 'news' as the dailies; but it certainly prints a much smaller proportion of what 'ain't so.'"

## CALENDAR FOR JANUARY

- San Diego Exposition, San Diego, California, *January 1-December 31.*
- Automobile Show, New York, Grand Central Palace, *January 2-9.*
- Sportsmen's Show, New York, Madison Square Garden, *January 2-9.*
- Centennial of the Battle of New Orleans and the making of peace, celebration at New Orleans arranged by the Louisiana Historical Society, *January 8, 9, 10.*
- Automobile Show, Philadelphia, *January 9-16.*
- National Automobile Show, Chicago, *January 22-30.*
- Automobile Show, Minneapolis, *January 30-February 6.*
- Motor Boat Show, New York, Madison Square Garden, *January 30-February 6.*

# Motor Progress

IN less than a dozen years America has changed from a horse-drawn to a motor-driven nation.

One person in every eighty today owns an automobile.

Nowhere in the annals of Business is there a more fascinating story than that of the development of this tremendous industry.

The Independent will publish in an early issue an important article by Bronson Batchelor, of its Editorial Staff, outlining the progress of this remarkable business, what it is that has made it possible, what its future is.

It will describe how the genius of the American manufacturer has succeeded in making the American automobile the world's standard.

This section will be fully illustrated, with photographs and charts.

NUMBER 3448

## MR. ROOSEVELT AND PEACE

**I**N his article, "Utopia or Hell," which we are privileged to publish this week, Mr. Roosevelt elaborates three lines of thought. He urges in definite detail the formation of a League of Peace. He attacks the Administration for sundry sins of omission and commission. He damns the peace movement.

In our opinion Mr. Roosevelt is right in his first contention. He is partly right in his second contention. He is wrong in his third contention. A few words as to each:

Mr. Roosevelt's League of Peace may be reduced to the following four proposals:

1st. The nations of the League shall mutually agree to respect and guarantee the territory, vital interests and national honor of each other.

2nd. All other questions shall be arbitrated in an international court, the judges of which shall be chosen by lot, excluding from any given arbitration the judges from the powers whose interests are concerned.

3rd. The force of the League shall be used against any nation within or without the League in order to maintain the territory, vital interests or national honor of the contracting powers or to carry out the decisions of the International Court.

4th. No civilized nations unable to help execute the decrees of the International Court or uncivilized nations shall be members of the League tho they may be given the right to appeal to the International Court of the League.

It will be seen that this scheme agrees very closely with that of the Editor of The Independent published in our issue of September 28. Except for the fact that Mr. Holt provides for automatic and gradual disarmament and does not exclude questions of national honor from arbitration, the two plans are practically alike.

**M**R. ROOSEVELT is right in excluding vital interests from arbitration providing he defines what they are. Otherwise vital interests may be made to include almost anything, no matter how trivial. As a matter of fact the only two things that are vital to a nation are its territory and the untrammelled exercise of sovereignty within that territory. All other questions, even those including national honor, are justiciable.

Mr. Roosevelt should modify his League of Peace so that only questions of territory and sovereignty shall be reserved from arbitration. Then he will have drawn a definite and scientific distinction between what questions are proper for arbitration and what are not. Otherwise there is too great a loophole left for the employment of arms in settling differences inside and outside the League.

Mr. Roosevelt has two main grievances against Mr. Wilson and Mr. Bryan.

1st. They have negotiated all-inclusive "arbitration" treaties.

2nd. They have failed to attempt to enforce the Hague Conventions, to which the United States is a signatory power.

**M**R. ROOSEVELT is not quite fair in repeatedly designating Mr. Bryan's peace pacts as "arbitration" treaties. They are not arbitration treaties, but treaties for investigating disputes between nations in which it is agreed to postpone hostilities until the investigation is completed. There is no agreement whatsoever to arbitrate.

But Mr. Roosevelt is evidently incensed because Mr. Bryan proposes that any and all disputes that may arise shall be settled by the provisions of a treaty. "Does Mr. Bryan," he asks, "or does he not mean to arbitrate, if Japan should so desire, the question whether Japanese laborers are to be allowed to come in unlimited numbers to these shores?" At first blush this is a poser. But if we stop and think a minute it is evident that Japan does not want her laborers to come here—all she wants is not to be discriminated against on account of race. But even if she did want them to come she would not have the faintest idea of bringing such a question before any international court or commission, for no court or commission could for a moment entertain the plea. For otherwise Japan would have concurrent jurisdiction with the United States Government in American territory, which is contrary to all law and morals. Mr. Roosevelt is absolutely right when he says no nation ought to enter into a treaty when the probability is that it would not arbitrate every question that might arise under it. But the probability that Japan or any other nation would bring up such a question as Mr. Roosevelt suggests is negligible or at least infinitely less than the chance that a court or commission would decide in their favor. And if they so decide, then there is nothing in Mr. Bryan's treaties that compels the governments to adopt the recommendations of the investigation commission. If Japan after such an investigation insisted on dumping her hordes on California, we could with all propriety, if we so desired, fight.

Mr. Roosevelt finds Mr. Wilson and Mr. Bryan derelict in their duty for not enforcing the Hague Conventions, which are being violated with impunity by some of the belligerents in the present war.

He says on this point:

I took the action I did in directing these conventions to be signed on the theory and with the belief that the United States intended to live up to its obligations and that our

people understood that living up to solemn obligations, like any other serious performance of duty, meant willingness to make effort and incur risk.

Does this mean that if Mr. Roosevelt were President now, he would, for instance, have used the army and navy of the United States to compel Germany to evacuate Belgium, England to cease strewing the high seas with mines, and Japan to make reparation for violating China's neutrality? We have ourselves urged that even at this late date Mr. Wilson should protest in broad terms against all violations of international law by whomsoever committed and give notice that the United States intends to bring them up for judicial consideration at the close of the war. But to go beyond that and have the United States enter the European conflagration in order to punish international promise breakers is like burning the house down to roast the pig.

AS to Mr. Roosevelt's assertion that the Hague conventions "have accomplished only a small amount of good," we would remind him of the Hague Court, which has already peacefully settled sixteen cases that have come before it, some of which might have led to war. The Hague Court cannot be expected all at once to stop all wars and bring about the millennium. Even the Supreme Court of the greatest "League of Peace" known to history, the United States of America, did not prevent our great Civil War, despite the many disputes between the various states it had previously and amicably settled. We would also remind Mr. Roosevelt of the institution known as the commissions of inquiry, which have already settled two serious disputes—one between England and Russia in 1904 and one between France and Italy in 1912. We would also remind him of the rules perfected at The Hague for good offices and mediation, whereby he himself was enabled to step in between Russia and Japan and end the bloodiest war in all history up to August 1, 1914, and whereby Argentina, Brazil and Chile, less than twelve months ago, mediated between the United States and Mexico and prevented war on this continent.

As to the peace congresses, they have done all they could have been expected to do in the way of disseminating sound and progressive peace ideas in advance of governmental action. Their function is limited strictly to this field.

It was a delegation from the North Carolina Peace Society, for instance, that waited upon Mr. Roosevelt in the White House on April 2, 1908, and suggested to him that "effective arbitration necessitates treaties between our country and all other governments, by which the contracting powers mutually agree to respect each other's territory and sovereignty in said territory, and to arbitrate all other questions of law and fact." To which Mr. Roosevelt replied in part that "The North Carolina Peace Society is to be congratulated upon its position. . . . Effective arbitration necessitates agreements between all the powers to respect each others' territory and sovereignty in said territory, and to arbitrate all other questions." This was the first time the head of a great nation ever made such an advanced declaration, and the North Carolina Peace Society and Mr. Roosevelt are both to be congratulated upon it. It was likewise the resolutions of the Inter-parliamentary Union, at its session at St. Louis in 1904, that suggested to Mr. Roosevelt, as he publicly

acknowledged, the calling of the Second Hague Conference; while the plank of the resolution urging the nations to convert the Hague conferences into something approaching a permanent and periodic assembly was afterward made one of the frontispieces of America's proposals at The Hague in 1907.

It was likewise the Third American Peace Congress, held in Baltimore in May, 1911, that made one of its chief planks a League of Peace almost identical with that now so ably and enthusiastically championed by Mr. Roosevelt.

It would not be difficult to quote many other ideas first advanced by peace congresses and afterward taken up by statesmen and governments and translated into international action, but enough instances have been given to prove the point.

Let us say in conclusion that the pacifists are human, like everybody else. Tho most of them are high-minded and sensible folk, they have their weak and foolish brothers and sisters. But we venture to prophesy that if Mr. Roosevelt's admirable League of Peace is ever to be realized, he will find the peace workers his chief allies in bringing it into existence.

As to the "ultra-pacifists," against whom Mr. Roosevelt thunders his heaviest artillery, it is in order to say that no "ultra" anything or "ultra" anybody ever helped or hindered a genuinely great cause to any appreciable extent. Mr. Roosevelt's hammer is too big to be used in crushing egg-shells.

Nevertheless, these points on which we find ourselves in disagreement with Mr. Roosevelt are after all the less important ones. With him in his broad proposal of a League of Peace we are in heartiest concord. It is in this direction that the world must move for the abolition of war through the establishment of the peace of righteousness. It is a great thing that a man who has held the highest public office in the world proposes such a far-visioned plan of world statesmanship.

## WOMAN'S RIGHT TO A LIVING WAGE

THE Supreme Court of the United States has before it a case of fundamental importance. It is a vital case, for it deals not with governmental machinery, nor with legal distinctions, nor with artificial relationships, but with life itself.

The court has to answer a single question: Does the American Constitution forbid the government of a state to demand for women in industry a living wage? Or, to reverse the statement for the sake of increased clarity: Does the Constitution permit a state government to prevent employers from paying to women wages inadequate for living and the maintenance of health?

The case is briefly known as the Stettler case, tho there are actually two, one brought by Frank C. Stettler, an employer, the other by Elmira Simpson, one of his employees, against the members of the Oregon Industrial Welfare Commission. The facts are these.

The Legislature of Oregon has declared it unlawful to employ women "for wages which are inadequate to supply the necessary cost of living and to maintain them in health." It has created an Industrial Welfare Commission to enforce this provision. The commission has forbidden any employer in a manufacturing establishment in the city of Portland to employ any adult

woman worker at a smaller wage than \$8.64 a week. The plaintiffs, Stettler and Simpson, employer and employee, brought injunction proceedings to prevent the enforcement of this prohibition, alleging that it offended against both the State and the Federal Constitutions. The Supreme Court of Oregon decided against them. The United States Supreme Court of the United States must now determine whether the minimum wage law violates the Federal Constitution.

The case against the law is based mainly on the contention that it offends against the Fourteenth Amendment. That amendment provides that "No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law."

The law on the case is clear; it is in its application to the facts that room for argument, according to the contention of the plaintiffs as well as of all those who oppose such legislation, is to be found. By decisions of the highest court it is established, that the "liberty" protected by the Fourteenth Amendment includes the right to purchase or to sell labor; that this liberty is, however, subject to reasonable restraint under the police power of the state for the protection of health, safety, morals and the general welfare; that a law imposing restrictions upon the right of the individual to enter into labor contracts will not be sustained unless it has a real and substantial relation to public health, safety or welfare, and is not an unreasonable and arbitrary interference with individual liberty; that the burden of proof rests upon those who assail such a law; and that the validity of the statute must be sustained unless the court finds that there is no fair and reasonable ground to say that there is material danger to the public health or safety or to the general welfare, if the conditions of labor be not restricted.

Such is the law. It remains for the court to determine whether the facts in relation to the work of women for wages lower than the minimum establish such a material danger to the public health and the general welfare. It is not, therefore, a question of law which the court must decide, but a question of fact.

In arguing the case before the Supreme Court, Louis D. Brandeis, as counsel for the Industrial Welfare Commission, has presented an impressive brief. In it little space, appropriately enough, is devoted to the law, and much space to the facts. In the preparation of the brief, which comprizes a printed volume of nearly four hundred pages, Mr. Brandeis has had the able and expert assistance of Miss Josephine Goldmark, Publication Secretary of the National Consumers' League.

The brief is not made up of argument; it is composed of evidence. Its body consists of significant quotations from many works written by close students of industrial and social problems. The quotations are grouped under three general heads, The Evils of Low Wages, The Benefits of an Adequate Wage, and The Benefits of the Legal Minimum Wage.

Under the first head it is shown, by the testimony of those who have given time and care to the study of the problem, that insufficient wages compel working women to cut down their food to a point where health inevitably suffers, and compel them to spend too little on health, altho their need, because of the hardships to

which their mode of living exposes them, is the greatest. A single quotation from the report of an actual investigation drives this point home:

Another little girl of twenty, who is getting \$6.50 a week in the millinery workroom of a large department store, laughingly said: "I buy my suits with my lunches. Usually I have rolls and coffee for breakfast—that's ten cents—then a sandwich and a glass of milk—that's fifteen cents—for lunch, and then a real good twenty-five cent treat for dinner. But, of course, when I have to pay for a suit or a hat or a pair of shoes it's different. Then I have one meal and perhaps two a day until the bill's paid."

If such an experience is typical, and there is ample evidence that it is, who can doubt that a wage so low is detrimental to the health of the worker?

It is further shown that insufficient wages for women mean not only impairment of the working efficiency of the community, but deterioration for the health of the race. All female workers are potential mothers; mothers insufficiently nourished and with their health insufficiently conserved mean weakened offspring; weakened offspring mean race deterioration. "We cannot expect a race of healthy nor of well-governed children if the mothers-to-be are permitted to grow anemic in their young womanhood."

Insufficient wages lower the general standard of living by bringing about overcrowding in housing with the consequent loss of all privacy, a hard struggle to obtain necessary clothing, and the lack of all legitimate recreation. Of 1568 women whose expenditures were investigated at one time sixty-two per cent reported that they spent no money for pleasure—that it took all their earnings to meet their daily expenses.

It is the consensus of opinion among authorities on social questions that while low wages for women and the consequent struggle to live may not be the primary cause for entering upon an immoral life, it is inevitably one of the most important contributing factors. When wages are too low to supply nourishment and other human needs, temptation is more readily yielded to.

Turning to the economic aspect of the subject, it is shown that the wages of women are fixed only by supply and demand. Wages are fixed neither by the value of the service rendered nor by what the industry can afford. Rates of pay are not standardized and there is no protection for women workers from the exploitation that is found in many occupations and localities.

Women workers are particularly subject to loss of earnings thru seasonal fluctuations in the trades in which they are employed and thru other causes on the economic side of industry. It has been conclusively shown that only a negligible proportion of wage-earning women are working for "pin-money." In the main they are working to support themselves and in many cases to assist substantially in the support of their families.

Lastly on the economic side it is demonstrated that an industry that is paying less than a living wage is receiving a subsidy from some source. The workers in such an industry are supported partly by the earnings of some other class. Such an industry is parasitic.

On the benefits of an adequate wage the evidence presented in the brief supports the contentions that the payment of higher wages is an incentive to increasing efficiency on the part of both employers and employees; that in many cases high wages mean lowered cost of production; and that with an increase in wages, the standard of living rises.

The final section of the brief sets forth the benefits of the legal minimum wage. Minimum wage legislation has been enacted in New Zealand, Australia and Great Britain, and in seven American states, California, Colorado, Minnesota, Oregon, Utah, Washington and Wisconsin. The experience of those countries and states shows that the effect has been to raise wages, to tend to create industrial peace, and to benefit the enlightened employer by relieving him from the competition of the unscrupulous employer of underpaid labor.

The brief taken as a whole is an impressive document. It presents a picture of a phase of our industrial life that must arrest the attention and enlist the sympathy of any one interested in the problems of human existence. The plight of thousands of women workers who are ill nourished, insufficiently clad, housed in discomfort and lamentable lack of privacy, deprived of wholesome recreation and subjected to merciless temptation, is a reproach to our industrial system. The community which permits their continued exposure to such conditions is not only callous to human suffering, it is indifferent to its own interests. The nation owes it to itself to protect its women, potential mothers of its future citizens, from such exploitation.

We confidently expect the Supreme Court to find in the array of evidence gathered together by Mr. Brandeis and Miss Goldmark solid ground for the conviction that the public health, the public safety and the general welfare will find in such legislation as the minimum wage law needed protection and a proper means of defense. The decision of the court will be of widespread application. If it should be in the negative, it would wipe from the statute books of seven states similar pieces of legislation and set up the Constitution of the United States as a formidable barrier to this great movement for social and industrial justice to women and, more distantly, to all workers in industry. An affirmative decision will give encouraging proof that the Federal Constitution is not to be made a fetter to progress but an instrument of human advancement.

### THE CONTROL OF THE LIQUOR TRAFFIC

THE resolution for submitting to the states a constitutional amendment establishing national prohibition failed of the necessary two-thirds vote in the House. But it received more than a majority vote. This is significant of the growing sentiment in favor of the suppression of the liquor traffic. Tho one cannot forbear to wonder if the vote would have been so large if members of the House had thought the resolution had any real chance of passage.

We cannot regret the failure of the resolution. Not because we are not keenly alive to the evils that the unbridled use of liquor brings in its train. We know that drunkenness leads to poverty, misery and crime. Not because we begrudge the great revenue brought in from the manufacture and sale of liquor. Not because of any fetich worship of personal liberty.

What primarily concerns us is the dignity and the efficiency of the law. A law that cannot or will not be enforced is a disgrace to the community and a menace to all law and order.

It is hard to the point of impossibility to enforce

prohibition in any community where the weight of public opinion is not against the sale of liquor. The danger in state prohibition is that in certain districts, notably the large cities, the law will be ignored and defied. If prohibition were nation-wide, the danger would be immeasurably increased. The suppression by law of the liquor traffic can best be carried out in such community units as have a uniform preponderance of public opinion against the business.

This is the strength of local option. This is the weakness of prohibition. It is this that produces such scandals as the open and flagrant violation of the law in large cities in prohibition states.

It is not because national prohibition would put an end to the liquor traffic that we do not favor it. It is because it would pretend to put an end to it and would not succeed that we look to other ways of minimizing the liquor evil. We should welcome a prohibitory law in any community where the weight of public opinion is in favor of it. In such a community the law would be a success. In any greater unit it would tend to be a failure.

### A MORAL TRUSTEE

A CORRESPONDENT courteously suggests that in describing Henry Siegel, the merchant-banker whose depositors lost practically all their deposits because of the failure of his stores, as a "fiduciary" we were not speaking by the legal card. He reminds us that the relation of banker and depositor is not that of trustee and *cestui*, but that of debtor and creditor.

He is undoubtedly right. That is, we believe, the law. But we were not assessing Siegel's responsibility in any legal sense. We were assessing his moral responsibility, and regretting that the law did not recognize it.

A banker who invites and accepts the savings of the people as deposits in his bank is a moral trustee for those savings. A banker who uses those deposits for his own purposes, and, because he is an unsuccessful merchant, causes his depositors to lose them, has violated a moral trust. When the law finds itself unable to punish such a use of the money of others as it would punish it if it were done by more direct methods, it is, to say the least, inadequate.

Such law runs counter to the moral sense of the community. It is bad law.

### VOTES FOR WOMEN!

A NEW YORK court has ruled that the adage, "A penny saved is a penny earned," is not true. At least, not in married life, as viewed by the law.

A wife saved money from her allowance for house-keeping expenses, and deposited it in the joint savings bank account of her husband and herself. Her husband tried to draw out the money for his own purposes. She tried to prevent him. The court refused to let her do it.

Mr. Justice Blackmar, in deciding against the wife, said, "I regret to say that our law has not reached the point of holding that property which is the joint result of the earnings of the husband and the economies of the wife is their joint property."

Sometimes, the law is an ass.

# THE STORY OF THE WEEK

## THE GREAT WAR

**December 21**—French gain in Peronne region. Russians invade East Prussia near Thorn.

**December 22**—Hard but indecisive fighting between Russians and Germans on Pilica River, Poland. General Joffre retires twenty-four French generals.

**December 23**—Germans repulsed in attempt to cross Bzura and Rafka rivers. French gain in Argonne Forest.

**December 24**—On Nida River Russians take 4000 Austrian prisoners. Near St. Hubert Anglo-Indian troops lose 3000 killed and 837 taken prisoners by Germans.

**December 25**—Seven British sea-planes attack German naval base of Cuxhaven. Austrians recapture Uzok Pass in Carpathian Mountains.

**December 26**—British submarine enters Dardanelles and destroys mines. Russians claim victory at Krosno in Galicia and capture of 10,000 Austrians.

**December 27**—Germans regain Mlawa in northern Poland. French aviators drop bombs in Metz.

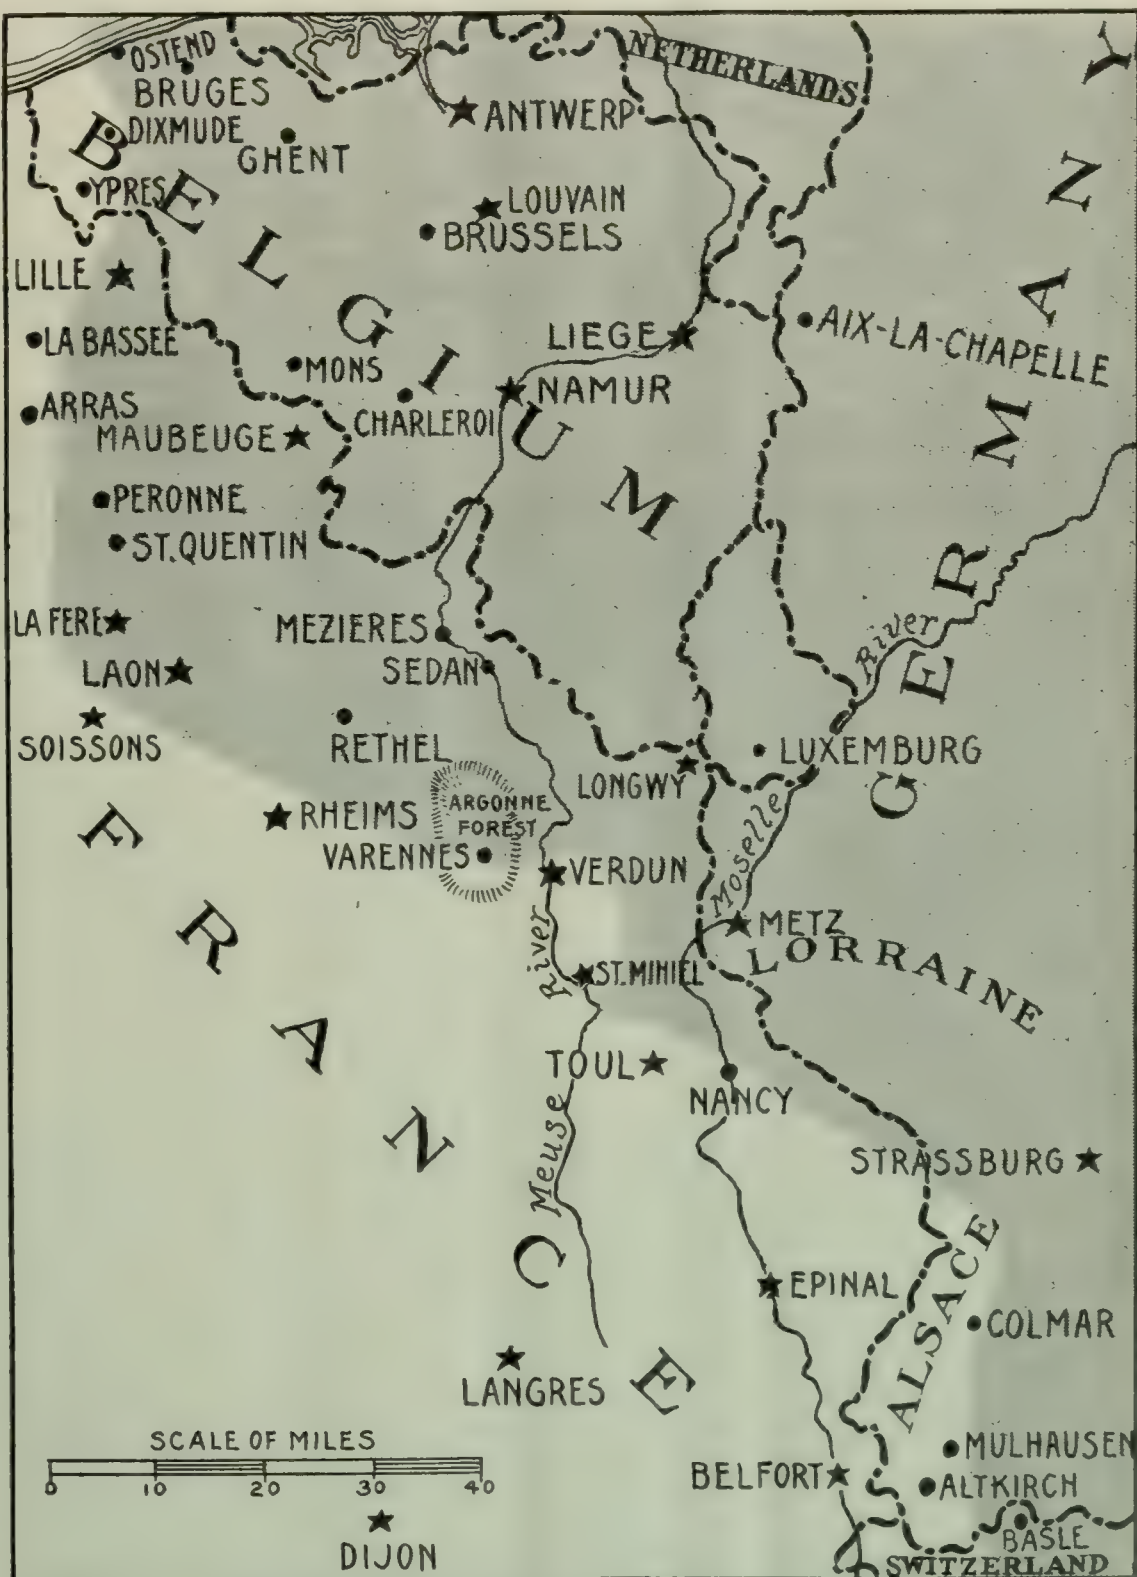

On December 17 General Joffre, commander-in-chief of the French Army, issued a general order to the troops announcing that the time had come to take the offensive all along the line. This order was accompanied by the stipulation that it should not be published in the press, but the Germans, when they heard of it, promptly sent it out to the world. During the three months that the Germans have been on the defensive the French have been engaged in reorganizing and strengthening their army where experience had disclosed weaknesses. In particular the manufacture of ammunition and new guns has been rushed until now the army is reported to be well equipped. The French light artillery has had the reputation of being equal to the German, if not superior, but the war showed that the Germans had the advantage in heavy field guns. This deficiency is said to have been made up, altho it does not appear that the French have attempted to match the 42-centimeter guns with which the Germans surprised their foes.

The skill which General Joffre showed in saving his army from overthrow or capture by retreating in good order before the advancing Germans, and then, as soon as their onrush slackened, turning to attack them, has secured for him the unlimited confidence of the French Government and people. This position of authority he is using to weed out incompetents in the army with-

out fear or favor. On December 22 he issued an order retiring from active service twenty-four generals, including ten commanders of divisions. Some are stated to have been removed for "reasons of health," others for "convenience," while for the rest no explanation is proffered.

The French army has doubtless been much in need of such a shaking up, for political influences have for many years had a demoralizing effect upon it. First the Dreyfus case showed that the army was domi-

nated by a narrow clique of officers, of aristocratic or royalist proclivities, quite out of sympathy with the republic and willing to corrupt the courts to secure their ends. But the consequent attempt to democratize the army soon led to scandals quite as great on the other side, for a secret spying system was disclosed by which Catholic officers were discriminated against. Then, too, the needlessly offensive way in which the troops were employed at the time of the separation of Church and State

THE ATTACK ON THE GERMAN ENTRENCHMENTS

The Allies have assumed the offensive and all along the line from the North Sea to Switzerland they are trying to dislodge the Germans from the positions they have held, with little change, since the middle of September. The attack is directed chiefly against that part of the German line that extends almost straight northward from the Aisne near Soissons into Belgium, and against the German semicircle about Verdun. The French have for a second time invaded lower Alsace from Belfort and are half way to Mülhausen. The shaded area represents in a general way territory held by the Germans the last week in the year

caused the resignation or deposition of certain Catholic officers. General Joffre is believed to be promoting or removing officers solely with a view to increasing the efficiency of the army and without regard to whether they are clerical or anti-clerical, royalist or republican.

Other scandals in the army, such as corruption in the contracts, sabotage in the arsenals, anti-militarism in the ranks, and incompetency in the maneuvers, led to a general but evidently fallacious impression at home and abroad that the French army was unprepared for war and would make as poor a showing as in 1870. A committee appointed by the Senate to investigate military affairs brought in, just before the war, a very unfavorable report, and this may have contributed to the belief of the Germans that French resistance would quickly collapse. But put to the bitter test of war the French army has proved very capable and has displayed a courage in attack and a steadiness of purpose under defeat that have won the respect of their enemies.

The war has had the effect of uni-

fying the French people and raising them above the pettiness of partisanship. The session of the Chamber of Deputies on December 22 was one of the most remarkable in the history of the country in the fine spirit shown by all parties. Three of the seats were draped in black for deputies killed at the front, and others were vacant for those who had been captured. Premier Viviani, who, as a former socialist and anti-clerical, would have under other circumstances been interrupted by the jeers of the opposition, was heartily applauded on all sides as he praised General Joffre and spoke of the war in the following language:

Since despite their attachment for peace France and her Allies have been compelled to go to war they will carry it to the very end. The Allies are determined to continue the fight until outraged right has been avenged, until the stolen provinces have been regained, heroic Belgium restored, Prussian militarism crushed and Europe regenerated and reconstructed according to every ideal of justice.

The Chamber unanimously voted an appropriation of \$1,700,000,000 to cover the cost of the war and other expenses for the next six months.

### The French Attack

No striking victories have rewarded the Allies since they took the offensive, but in various places all along the line from Belgium to Belfort gains of a few hundred yards or several miles are reported. Altogether these amount to a considerable success, altho at a heavy cost, since the Germans have had time to fortify their entrenched positions as strongly as possible and to arrange successive lines of defense. The activity of the Allies in the west has, it is said, compelled the Germans to bring back to France some of the troops which had engaged in the advance on Warsaw.

In Flanders the chief gains of the Allies were made near the coast, where the troops have the support of the British fleet and are pushing forward near Nieuport, with the aim of reaching Ostend and Zeebrugge, where the Germans have established a naval base.

South of the Belgian border the Germans claim to have successfully held their ground and to have captured 750 "British and colored" soldiers and five machine guns.

Further south the French have succeeded in pushing back the German line in front of Peronne. Rheims is still within range of the German positions a few miles to the northeast, and an intermittent bombardment reminds the few remaining inhabitants that their city and cathedral are at the mercy of the invader.

The greatest activity, however, is manifested where the German line circles about the stronghold of Verdun at a distance of ten miles or more. The numerous detached forts and concealed batteries around Verdun have kept the Germans at bay for six months, and on the other hand, the utmost efforts of the French have not sufficed to dislodge either the German right wing, which is fixed in the forest of Argonne on the west, or the left wing, which holds St. Mihiel, on the Meuse, to the southeast. The woods of this region prevent the use of aeroplanes and the batteries are concealed by branches and protected by fallen timber, so as to make them difficult of discovery or approach. It is chiefly by the slow process of undermining and blowing up the enemy's entrenchments that the French are making progress here. East of St. Mihiel they have forced their way across the German border and reached a point only about ten miles south of Metz, one of the most important of the German fortresses on the western frontier.

### TRENCHES WHERE EVEN LETTER-WRITING IS POSSIBLE

A British dug-out at the front, well protected from bombs, in which Tommy can write home—what he is allowed to write

ly, for the French army from Bel-fort has only got about seven miles inside the German boundary in the direction of Mulhausen.

**The Campaign in Poland** The German advance toward Warsaw has been checked about thirty miles west of the Polish capital. Here three rivers run together, the Ravka emptying into the Bzura, and the Bzura into the Vistula, and in the angle formed by them Marshal von Hindenburg had concentrated his forces. A crossing of the Bzura was made near its confluence with the Vistula by means of a pontoon bridge after the Russian batteries on the eastern side had been silenced by shelling. This force got to within fifteen miles of Warsaw, but was driven back with heavy losses. The force that crost the Ravka River near Skierniewice met with a similar fate. According to the Petrograd account, more than two thousand Germans were left dead upon the field and no points on the eastern side of these rivers remain in German hands. The town of Sochaczew is said to have been demolished by the German bombardment of five days, and thousands of men, women and children who were trying to flee to Warsaw lost their lives from the explosion of shells or the falling of buildings.

On the other side of the Vistula the detachment of the Russian army which defeated the Germans at Przasnysz and Mlawa continued on toward the northwest and invaded West Prussia near Thorn. The Germans, however, returned in force and are now again trying to clear the Russians from that part of Poland which lies north of the Vistula and south of the German border.

South of Warsaw the Pilica is the scene of conflict, for the Germans from the neighborhood of Piotrkow are striving to move down the valley of this river to the Vistula, which would then give them access to Warsaw from another direction.

Further to the south and near the Galician border the Austrian general Dankl assumed the offensive in the endeavor to free Cracow from the danger of Russian attack from this quarter and to make connections with the German forces in the Pilica Valley. The Russians, however, took up a strong position on the left bank of the Nida River near where it enters the Vistula, and here, according to the Petrograd report, the Austrians, on December 24, suffered a severe defeat, with the loss of 68 officers and 4000 men as prisoners. Vienna, on the contrary, claims the

FIGHTING ON FIVE RIVERS

The map of the seat of war on the Russian frontier shows the value of natural obstacles for defense. The German onset, which the Russians were not able to withstand in the open, has been checked at the swamps and watercourses of Poland. The Germans are said to have sacrificed 50,000 men in the vain attempt to cross the comparatively insignificant streams which keep them from Warsaw, the Bzura and the Ravka. Their troops north of the Vistula were badly beaten because those south of that river could not come to their aid. In the south the Austrian attack has been halted at the Nida River, one of the tributaries of the Vistula. The shaded portion of the map shows the territory held by the Russians and the arrows indicate the chief points of German or Austrian attack.

capture of 2000 Russians in this field.

The Russian Government gives the total number of German prisoners in Russia as 1140 officers and 131,700 men, and of Austrian prisoners as 3166 officers and 221,400 men.

#### The Campaign in Galicia

Both sides claim successes in Galicia and it is hard to say which has the best of it. The Austrians have certainly succeeded in relieving Cracow of any immediate danger of attack, for they have driven the Russians eastward be-

yond Tarnow, a distance of over fifty miles. South of this, along the slope of the Carpathians, they have advanced still further and have dislodged the Russians from the mountain passes leading over the range into Hungary.

On the other hand, the Austrians have not succeeded in again raising the siege of Przemyśl, and the efforts of that garrison to get in touch with the relieving force by means of sorties have been disastrous. The Russians have gained possession of a section of the railroad used to connect parts of the

made, especially on the strongly fortified island of Corregidor. Two companies of scouts were disarmed there. Rifles and ammunition were sent to American residents in isolated places. The attack was begun on the 24th, but it came to nothing. Followers of Ricarte fired upon the Manila police in the Botanical Gardens. They were soon subdued and fifty prisoners were locked up. At Navotas, six miles north, there was an unsuccessful attack upon the municipal building and guards. The police and constabulary took twenty-five prisoners. Press reports say that documents have been found which prove the existence of a widespread conspiracy, and that 30,000 Filipinos have been drilling for an uprising.

#### The Executions in Mexico

Reports published by Carranza's agents in this country that Provisional President Gutierrez had quarreled with Zapata and left the Mexican capital proved to be without foundation, but there were indications that Gutierrez's relations with both Zapata and Villa might soon become strained on account of the long and growing list of executions or official assassinations. These have taken place at the capital and in the north. Hundreds of men have been shot at the capital, and among them are said to have been ten who were delegates in the Aguascalientes convention. At dawn on Christmas day victims were falling before a firing squad commanded by Colonel Fierro, Villa's friend and bodyguard, who killed Benton, the English ranchman, months ago, near Juarez. In the northern state of Chihuahua this bloody work is called a housecleaning. It is reported that for some time past there have been from fifty to seventy-five executions a day. When Villa came up from the capital, not long ago, he brought several victims with him. Among those executed in Chihuahua are said to have been General Delgado, General Garcia and Guillermo Terrazas. By Villa's orders, it is said, Castula Baca, the richest resident of Parral, has been held for a ransom of \$1,000,000.

The case of General Iturbide has excited much interest. Against his will, Huerta made him governor of the capital district. He protected American lives and property, and continued to make a good record after the departure of Carbajal. He delivered the city to Carranza and was useful after Carranza fled. Knowing that Zapata and Villa sought his life, he procured the protection of the British Legation. Our Government asked Gutierrez to give

him safe passage out of the country, and Gutierrez consented. John R. Silliman, Mr. Wilson's special representative, detailed Leon J. Canova, an agent of our State Department, to accompany Iturbide, and they started for Texas. Then Manuel Palafox, representing Zapata in Gutierrez's cabinet, publicly asserted that Silliman and Canova had been bribed with \$250,000 to get a passport for Iturbide. Both were "knaves," he said. He complained to Villa, and the latter telegraphed orders for the interception and arrest of Iturbide.

Gutierrez then published and sent to all the generals a long statement, explicitly forbidding all summary executions. He denounced the kid-

napping of prominent men and the assassination of them. In all cases "there must be trials, with the formalities required by law." Only by good behavior could the Government win recognition by foreign powers and prove that the supporters of it were civilized people. "The right to punish," said he, "should never be left to private persons, military leaders or armed groups." He gave warning that all his power would be used to procure even for enemies of the revolution the protection of the laws. In an authorized interview, his secretary protested against Villa's order for the arrest of Iturbide.

#### Relief at Naco

After some delay, due to the heavy rains which have caused floods in Arizona, General Scott, in conferences with General Hill and General Maytorena, was successful in his attempt to raise the siege of Naco. His conference with Hill, the Carranza commander, was held in the bullet-scarred American custom house, and bullets struck the building while they were talking. On the 26th, General Maytorena withdrew his forces and moved southward. The siege had continued for seventy-seven days. On American soil five persons had been killed and forty-seven wounded. Hill's soldiers say they found 238 bodies on Maytorena's lines. They picked up and carried back to Naco a shrapnel shell. While they were examining it there it exploded, killing five men and wounding eleven. General Scott proposed that there should be a border neutral zone ten miles wide. But it is expected that Naco's experience will be duplicated at Douglas, Arizona, because the Villa forces are preparing to attack a Carranza garrison at Agua Prieta, which is separated from Douglas by only the boundary line. Salazar's small independent army menaces Palomas, just across the line from Columbus, New Mexico, and is raiding cattle ranches near at hand, owned by Americans.

The defeat of Carranza's forces at Puebla was a crushing one, and the army of Zapata and Angeles is approaching Vera Cruz. There has been fighting in the outskirts of that city, and transports have been ready to carry Carranza's men to Tampico. Reports about the results of engagements in the vicinity of that port are conflicting. Villa says that Torreon is now safe. The cities of San Luis Potosi, Monterey and Saltillo have agreed to be neutral. The assertion of Gutierrez's secretary that recognition of his Government has been offered by our Government, upon certain conditions, is denied at Washington.

BURLESQUING THE IRON CROSS  
These satirical imitations of the Kaiser's ubiquitous decoration are being sold on the Strand. On the reverse of the cross marked "liar" are the words "For Brave Deeds"

# UTOPIA OR HELL

BY THEODORE ROOSEVELT

FORMER PRESIDENT OF THE UNITED STATES

SHERMAN'S celebrated declaration about war has certainly been borne out by what has happened in Europe, and above all in Belgium, during the last four months. That war is hell I will concede as heartily as any ultra-pacifist. But the only alternative to war, that is to hell, is the adoption of some plan substantially like that which I have advocated and which has itself been called utopian. It is possible that it is utopian for the time being; that is, that nations are not ready as yet to accept it. But it is also possible that after this war has come to an end the European contestants will be sufficiently sobered to be willing to consider some such proposal.

The proposal is not in the least utopian if by utopian we understand something that is theoretically desirable but impossible. What I propose is a working and realizable Utopia. My proposal is that the efficient civilized nations—those that are efficient in war as well as in peace—shall join in a world league for the peace of righteousness. This means that they shall by solemn covenant agree as to their respective rights which shall not be questioned; that they shall agree that all other questions arising between them shall be submitted to a court of arbitration; and that they shall also agree—and here comes the vital and essential point of the whole system—to act with the combined military strength of all of them against any recalcitrant nation, against any nation which transgresses at the expense of any other nation the rights which it is agreed shall not be questioned, or which on matters that are arbitrable refuses to submit to the decree of the arbitral court.

## PUT FORCE BACK OF RIGHTEOUSNESS

In its essence this plan means that there shall be a great international treaty for the peace of righteousness; that this treaty shall explicitly secure to each nation and except from the operations of any international tribunal such matters as its territorial integrity, honor and vital interest; and shall guarantee it in the possession of these rights; that

this treaty shall therefore by its own terms explicitly provide against making foolish promises which cannot and ought not to be kept; that this treaty shall be observed with absolute good faith—for it is worse than useless to enter into treaties until their observance in good faith is efficiently secured. Finally, and most important, this treaty shall put force back of righteousness, shall provide a method of securing by the exercise of force the observance of solemn international obligations. This is to be accomplished by all the powers covenanting to put their whole strength back of the fulfillment of the treaty obligations, including the decrees of the court established under and in accordance with the treaty.

## ASSAULT AND ARBITRATION

This proposal, therefore, meets the well-found objections against the foolish and mischievous all-inclusive arbitration treaties recently negotiated by Mr. Bryan under the direction of President Wilson. These treaties, like the all-inclusive arbitration treaties which President Taft started to negotiate, explicitly include as arbitrable or as proper subjects for action by joint commissions questions of honor and of vital national interest. No such provision should be made. No such provision is made as among private individuals in any civilized community. If in private life one individual takes action which immediately jeopardizes the life or limb or even the bodily well-being and the comfort of another, the wronged party does not have to go into any arbitration with the wrongdoer. On the contrary, the policeman or constable or sheriff immediately and summarily arrests the wrongdoer. The subsequent trial is not in the nature of arbitration at all. It is in the nature of a criminal proceeding. The wronged man is merely a witness and not necessarily an essential witness. For example, if, in the streets of New York, one man assaults another or steals his watch, and a policeman is not near by, the wronged man is not only justified in knocking down the assailant or thief, but fails in his duty if he does

not so act. If a policeman is near by, the policeman promptly arrests the wrongdoer. The magistrate does not arbitrate the question of property rights in the watch nor anything about the assault. He satisfies himself as to the facts and delivers judgment against the offender.

## LET US HAVE PLAIN SPEAKING

A covenant between the United States and any other power to arbitrate all questions, including those involving national honor and interest, neither could nor ought to be kept. Such a covenant will be harmless only if no such questions ever arise. All the worth of promises made in the abstract lies in the way in which they are fulfilled in the concrete. Mr. Bryan's arbitration treaties are to be tested in this manner. His theory is, of course, that these treaties are to be made with all nations, and this is correct, because it would be a far graver thing to refuse to make them with some nations than to refuse to enter into them with any nation at all. The proposal is, in effect, and disregarding verbiage, that all questions shall be arbitrated or settled by the action of a joint commission—questions really vital to us would, as a matter of fact, be settled adversely to us pending such action. There are many such questions which in the concrete we would certainly not arbitrate. I mention one, only as an example. Does Mr. Bryan, or does he not, mean to arbitrate, if Japan should so desire, requesting whether Japanese laborers are to be allowed to come in unlimited numbers to these shores? If he does mean this, let him explicitly state that fact—merely as an illustration—to the Senate committee, so that the Senate committee shall understand what it is doing when it ratifies these treaties. If he does not mean this, then let him promptly withdraw all the treaties so as not to expose us to the charge of hypocrisy, of making believe to do what we have no intention of doing, and of making promises which we have no intention of keeping. I have mentioned one issue only; but there are scores of other issues which I could mention which this Government

would under no circumstances agree to arbitrate.

#### WORTHLESS PEACE CONGRESSES

In the same way, we must explicitly recognize that all the peace congresses and the like that have been held of recent years have done no good whatever to the cause of world peace. All their addresses and resolutions about arbitration and disarmament and such matters have been on the whole slightly worse than useless. Disregarding the Hague conventions, it is the literal fact that none of the peace congresses that have been held for the last fifteen or twenty years—to speak only of those of which I myself know the workings—have accomplished the smallest particle of good. In so far as they have influenced free, liberty-loving and self-respecting nations not to take measures for their own defense they have been positively mischievous. In no respect have they achieved anything worth admiring; and the present world war proves this beyond the possibility of serious question.

The Hague conventions stand by themselves. They have accomplished a certain amount—alho only a small amount—of actual good. This was in so far as they furnished means by which nations which did not wish to quarrel were able to settle international disputes not involving their deepest interests. Questions between nations continually arise which are not of first class importance; which, for instance, refer to some illegal act by or against a fishing schooner, to some difficulty concerning contracts, to some question of the interpretation of a minor clause in a treaty, or to the sporadic action of some hot-headed or panic-struck official. In these cases, where neither nation wishes to go to war, the Hague Court has furnished an easy method for the settlement of the dispute without war. This does not mark a very great advance; but it is an advance, and was worth making.

#### THE CULT OF COWARDICE

The fact that it is the only advance that the Hague Court has accomplished makes the hysterical outbursts formerly indulged in by the ultra-pacifists concerning it seem in retrospect exceedingly foolish. While I had never shared the hopes of these ultra-pacifists, I had hoped for more substantial good than has actually come from the Hague conventions. This was because I accept promises as meaning something. The ultra-pacifists, whether from timidity, from weak-

ness or from sheer folly, seem wholly unable to understand that the fulfilment of a promise has anything to do with making the promise. The most striking example that could possibly be furnished has been furnished by Belgium. Under my direction as President, the United States signed the Hague conventions. All the nations engaged in the present war signed these conventions, alho one or two of the nations qualified their acceptance, or withheld their signatures to certain articles. This, however, did not in the least relieve the signatory powers from the duty to guarantee one another in the enjoyment of the rights supposed to be secured by the conventions. To make this guarantee worth anything, it was, of course, necessary actively to enforce it against any power breaking the convention or acting against its clear purpose. To make it really effective it should be enforced as quickly against non-signatory as against signatory powers; for to give a power free permission to do wrong if it did not sign would put a premium on non-signing, so far as big, aggressive powers are concerned.

I authorized the signature of the United States to these conventions. They forbid the violation of neutral territory, and, of course, the subjugation of unoffending neutral nations, as Belgium has been subjugated. They forbid such destruction as that inflicted on Louvain, Dinant and other towns in Belgium, the burning of their priceless public libraries and wonderful halls and churches, and the destruction of cathedrals such as that at Rheims. They forbid the infliction of heavy pecuniary penalties and the taking of severe punitive measures at the expense of civilian populations. They forbid the bombardment—of course including the dropping of bombs from aeroplanes—of unfortified cities and of cities whose defenses were not at the moment attacked. All of these offenses have been committed by Germany. I took the action I did in directing these conventions to be signed on the theory and with the belief that the United States intended to live up to its obligations, and that our people understood that living up to solemn obligations, like any other serious performance of duty, meant willingness to make effort and to incur risk. If I had for one moment supposed that signing these Hague conventions meant literally nothing whatever beyond the expression of a pious wish which any power was at liberty to disregard with impunity, in accordance with the dictation of self-interest, I

would certainly not have permitted the United States to be a party to such a mischievous farce. President Wilson and Secretary Bryan, however, take the view that when the United States assumes obligations in order to secure small and unoffending neutral nations against hideous wrong, its action is not predicated on any intention to make the guarantee effective. They take the view that when we are asked to redeem in the concrete promises we made in the abstract, our duty is to disregard our obligations and to preserve ignoble peace for ourselves by regarding with cold-blooded and timid indifference the most frightful ravages of war committed at the expense of a peaceful and unoffending country. This is the cult of cowardice. That President Wilson and Mr. Bryan profess it and put it in action would be of small consequence if only they themselves were concerned. The importance of their action is that it commits the United States.

#### FORSAKING THE CAUSE OF PEACE

Elaborate technical arguments have been made to justify this timid and selfish abandonment of duty, this timid and selfish failure to work for the world peace of righteousness, by President Wilson and Secretary Bryan. No sincere believer in disinterested and self-sacrificing work for peace can justify it; and work for peace will never be worth much unless accompanied by courage, effort and self-sacrifice. Yet those very apostles of pacificism who, when they can do so with safety, scream loudest for peace, have made themselves objects of contemptuous derision by keeping silence in this crisis, or even by praising Mr. Wilson and Mr. Bryan for having thus abandoned the cause of peace. They are supported by the men who insist that all that we are concerned with is ourselves escaping even the smallest risk that might follow upon the performance of duty to any one except ourselves. This last is not a very exalted plea. It is, however, defensible. But if as a nation we intend to act in accordance with it, we must never promise to do anything for any one else.

The technical arguments as to the Hague conventions not requiring us to act will at once be brushed aside by any man who honestly and in good faith faces the situation. Either the Hague conventions meant something or else they meant nothing. If in the event of their violation none of the signatory powers were even to protest, then of course they meant nothing; and it was an act of unspeakable silliness to enter into

them. If, on the other hand, they meant anything whatsoever, it was the duty of the United States, as the most powerful, or at least the richest and most populous neutral nation, to take action for upholding them when their violation brought such appalling disaster to Belgium. There is no escape from this alternative.

#### THE BAD FAITH OF THE UNITED STATES

The first essential to working out successfully any scheme whatever for world peace is to understand that nothing can be accomplished unless the powers entering into the agreement act in precisely the reverse way from that in which President Wilson and Secretary Bryan have acted as regards the Hague conventions and the all-inclusive arbitration treaties during the past six months. The prime fact to consider in securing any peace agreement worth entering into, or that will have any except a mischievous effect, is that the nations entering into the agreement shall make no promises that ought not to be made, that they shall in good faith live up to the promises that are made, and that they shall put their whole strength unitedly back of these promises against any nation which refuses to carry out the agreement, or which, if it has not made the agreement, nevertheless violates the principles which the agreement enforces. In other words, an international agreement that is to produce peace must proceed much along the lines of the Hague conventions; but a power signing them, as the United States signed them, must do so with the intention in good faith to see that they are carried out, and to use force to accomplish this, if necessary.

To violate these conventions, to violate neutrality treaties, as Germany has done in the case of Belgium, is a dreadful wrong. It represents the gravest kind of international wrongdoing, but it is really not quite so contemptible, it does not show such short-sighted and timid inefficiency, and, *above all, such selfish indifference to the cause of permanent and righteous peace*, as has been shown by the United States (thanks to President Wilson and Secretary Bryan) in refusing to fulfill its solemn obligations by taking whatever action was necessary in order to clear our skirts from the guilt of tame acquiescence in a wrong which we had solemnly undertaken to oppose.

It has been a matter of very real regret to me to have to speak in the way I have felt obliged to speak as to German wrongdoing in Belgium,

because so many of my friends, not only Germans, but Americans of German birth and even Americans of German descent, have felt aggrieved at my position. As regards my friends the Americans of German birth or descent, I can only say that they are in honor bound to regard all international matters solely from the standpoint of the interest of the United States, and of the demands of a lofty international morality. As regards Germany, my stand is for the real interest of the mass of the German people. If the German people as a whole would only look at it rightly, they would see that my position is predicated upon the assumption that we ought to act as unhesitatingly in favor of Germany if Germany were wronged as we would act in favor of Belgium when Belgium was wronged. There are in Germany a certain number of Germans who adopt the Trietschke and Bernhardi view of Germany's destiny and of international morality generally. These men are fundamentally exactly as hostile to America as to all other foreign powers, and I call the attention of my fellow Americans of German origin who wish this country to act toward Belgium, not in accordance with American traditions, interests and ideals, but in accordance with the pro-German sympathies of certain citizens of German descent, to the statement of Trietschke that "to civilization at large the [Americanizing] of the German-Americans means a heavy loss. Among Germans there can no longer be any question that the civilization of mankind suffers every time a German is transformed into a Yankee."

I do not for one moment believe that the men who follow Trietschke in his hatred of and contempt for all non-Germans, and Bernhardi in his contempt for international morality, are a majority of the German people or even a very large minority. I think that the great majority of the Germans, who have approved Germany's action toward Belgium, have been influenced by the feeling that it was a vital necessity in order to save Germany from destruction and subjugation by France and Russia, perhaps assisted by England. Fear of national destruction will prompt men to do almost anything, and the proper remedy for outsiders to work for is the removal of the fear. If Germany were absolutely freed from danger of the least aggression on her eastern and western frontiers, I believe that German public sentiment would refuse to sanction such acts as those against Belgium. The only effective way to free it from this

fear is to have outside nations like the United States in good faith undertake the obligation to defend Germany's honor and territorial integrity if attacked, exactly as they would defend the honor and territorial integrity of Belgium, or of France, Russia or England, or any other well behaved, civilized power, if attacked.

#### PEACE WITHOUT RIGHTEOUSNESS

This can only be achieved by some such world league of peace as that which I advocate. Most important of all, it can only be achieved by the willingness and ability of great, free powers to put might back of right, to make their protest against wrongdoing effective by, if necessary, punishing the wrongdoer. It is this fact which makes the clamor of the pacifists for "Peace, Peace," without any regard to righteousness, so contemptible and so abhorrent to all right-thinking people. There are multitudes of professional pacifists in the United States, and of well meaning but ill-informed persons who sympathize with them from ignorance. There are not a few astute persons who wish to take sinister advantage of the folly of these persons, in the interest of Germany. All of these men clamor for immediate peace. They wish the United States to take action for immediate peace or for a truce, under conditions designed to leave Belgium with her wrongs undressed and in the possession of Germany. They strive to bring about a peace which would contain within itself the elements of frightful future disaster, by making no effective provision to prevent the repetition of such wrongdoing as has been inflicted upon Belgium. All of the men advocating such action, including the professional pacifists, the big business men largely of foreign birth, and the well-meaning but feeble-minded creatures among their allies, and including especially all those who from sheer timidity or weakness shrink from duty, occupy a thoroly base and improper position. The peace advocates of this stamp stand on an exact par with men who, if there was an epidemic of lawlessness in New York, should come together to demand the immediate cessation of all activity by the police, and should propose to substitute for it a request that the highwaymen and burglars cease their activities for the moment on condition of retaining undisturbed possession of the ill-gotten spoils they had already acquired. The only effective friend of peace in a big city is the man who makes the police force

would under no circumstances agree to arbitrate.

#### WORTHLESS PEACE CONGRESSES

In the same way, we must explicitly recognize that all the peace congresses and the like that have been held of recent years have done no good whatever to the cause of world peace. All their addresses and resolutions about arbitration and disarmament and such matters have been on the whole slightly worse than useless. Disregarding the Hague conventions, it is the literal fact that none of the peace congresses that have been held for the last fifteen or twenty years—to speak only of those of which I myself know the workings—have accomplished the smallest particle of good. In so far as they have influenced free, liberty-loving and self-respecting nations not to take measures for their own defense they have been positively mischievous. In no respect have they achieved anything worth admiring; and the present world war proves this beyond the possibility of serious question.

The Hague conventions stand by themselves. They have accomplished a certain amount—alho only a small amount—of actual good. This was in so far as they furnished means by which nations which did not wish to quarrel were able to settle international disputes not involving their deepest interests. Questions between nations continually arise which are not of first class importance; which, for instance, refer to some illegal act by or against a fishing schooner, to some difficulty concerning contracts, to some question of the interpretation of a minor clause in a treaty, or to the sporadic action of some hot-headed or panic-struck official. In these cases, where neither nation wishes to go to war, the Hague Court has furnished an easy method for the settlement of the dispute without war. This does not mark a very great advance; but it is an advance, and was worth making.

#### THE CULT OF COWARDICE

The fact that it is the only advance that the Hague Court has accomplished makes the hysterical outbursts formerly indulged in by the ultra-pacifists concerning it seem in retrospect exceedingly foolish. While I had never shared the hopes of these ultra-pacifists, I had hoped for more substantial good than has actually come from the Hague conventions. This was because I accept promises as meaning something. The ultra-pacifists, whether from timidity, from weak-

ness or from sheer folly, seem wholly unable to understand that the fulfilment of a promise has anything to do with making the promise. The most striking example that could possibly be furnished has been furnished by Belgium. Under my direction as President, the United States signed the Hague conventions. All the nations engaged in the present war signed these conventions, alho one or two of the nations qualified their acceptance, or withheld their signatures to certain articles. This, however, did not in the least relieve the signatory powers from the duty to guarantee one another in the enjoyment of the rights supposed to be secured by the conventions. To make this guarantee worth anything, it was, of course, necessary actively to enforce it against any power breaking the convention or acting against its clear purpose. To make it really effective it should be enforced as quickly against non-signatory as against signatory powers; for to give a power free permission to do wrong if it did not sign would put a premium on non-signing, so far as big, aggressive powers are concerned.

I authorized the signature of the United States to these conventions. They forbid the violation of neutral territory, and, of course, the subjugation of unoffending neutral nations, as Belgium has been subjugated. They forbid such destruction as that inflicted on Louvain, Dinant and other towns in Belgium, the burning of their priceless public libraries and wonderful halls and churches, and the destruction of cathedrals such as that at Rheims. They forbid the infliction of heavy pecuniary penalties and the taking of severe punitive measures at the expense of civilian populations. They forbid the bombardment—of course including the dropping of bombs from aeroplanes—of unfortified cities and of cities whose defenses were not at the moment attacked. All of these offenses have been committed by Germany. I took the action I did in directing these conventions to be signed on the theory and with the belief that the United States intended to live up to its obligations, and that our people understood that living up to solemn obligations, like any other serious performance of duty, meant willingness to make effort and to incur risk. If I had for one moment supposed that signing these Hague conventions meant literally nothing whatever beyond the expression of a pious wish which any power was at liberty to disregard with impunity, in accordance with the dictation of self-interest, I

would certainly not have permitted the United States to be a party to such a mischievous farce. President Wilson and Secretary Bryan, however, take the view that when the United States assumes obligations in order to secure small and unoffending neutral nations against hideous wrong, its action is not predicated on any intention to make the guarantee effective. They take the view that when we are asked to redeem in the concrete promises we made in the abstract, our duty is to disregard our obligations and to preserve ignoble peace for ourselves by regarding with cold-blooded and timid indifference the most frightful ravages of war committed at the expense of a peaceful and unoffending country. This is the cult of cowardice. That President Wilson and Mr. Bryan profess it and put it in action would be of small consequence if only they themselves were concerned. The importance of their action is that it commits the United States.

#### FORSAKING THE CAUSE OF PEACE

Elaborate technical arguments have been made to justify this timid and selfish abandonment of duty, this timid and selfish failure to work for the world peace of righteousness, by President Wilson and Secretary Bryan. No sincere believer in disinterested and self-sacrificing work for peace can justify it; and work for peace will never be worth much unless accompanied by courage, effort and self-sacrifice. Yet those very apostles of pacificism who, when they can do so with safety, scream loudest for peace, have made themselves objects of contemptuous derision by keeping silence in this crisis, or even by praising Mr. Wilson and Mr. Bryan for having thus abandoned the cause of peace. They are supported by the men who insist that all that we are concerned with is ourselves escaping even the smallest risk that might follow upon the performance of duty to any one except ourselves. This last is not a very exalted plea. It is, however, defensible. But if as a nation we intend to act in accordance with it, we must never promise to do anything for any one else.

The technical arguments as to the Hague conventions not requiring us to act will at once be brushed aside by any man who honestly and in good faith faces the situation. Either the Hague conventions meant something or else they meant nothing. If in the event of their violation none of the signatory powers were even to protest, then of course they meant nothing; and it was an act of unspeakable silliness to enter into

them. If, on the other hand, they meant anything whatsoever, it was the duty of the United States, as the most powerful, or at least the richest and most populous neutral nation, to take action for upholding them when their violation brought such appalling disaster to Belgium. There is no escape from this alternative.

#### THE BAD FAITH OF THE UNITED STATES

The first essential to working out successfully any scheme whatever for world peace is to understand that nothing can be accomplished unless the powers entering into the agreement act in precisely the reverse way from that in which President Wilson and Secretary Bryan have acted as regards the Hague conventions and the all-inclusive arbitration treaties during the past six months. The prime fact to consider in securing any peace agreement worth entering into, or that will have any except a mischievous effect, is that the nations entering into the agreement shall make no promises that ought not to be made, that they shall in good faith live up to the promises that are made, and that they shall put their whole strength unitedly back of these promises against any nation which refuses to carry out the agreement, or which, if it has not made the agreement, nevertheless violates the principles which the agreement enforces. In other words, an international agreement that is to produce peace must proceed much along the lines of the Hague conventions; but a power signing them, as the United States signed them, must do so with the intention in good faith to see that they are carried out, and to use force to accomplish this, if necessary.

To violate these conventions, to violate neutrality treaties, as Germany has done in the case of Belgium, is a dreadful wrong. It represents the gravest kind of international wrongdoing, but it is really not quite so contemptible, it does not show such short-sighted and timid inefficiency, and, *above all, such selfish indifference to the cause of permanent and righteous peace*, as has been shown by the United States (thanks to President Wilson and Secretary Bryan) in refusing to fulfill its solemn obligations by taking whatever action was necessary in order to clear our skirts from the guilt of tame acquiescence in a wrong which we had solemnly undertaken to oppose.

It has been a matter of very real regret to me to have to speak in the way I have felt obliged to speak as to German wrongdoing in Belgium,

because so many of my friends, not only Germans, but Americans of German birth and even Americans of German descent, have felt aggrieved at my position. As regards my friends the Americans of German birth or descent, I can only say that they are in honor bound to regard all international matters solely from the standpoint of the interest of the United States, and of the demands of a lofty international morality. As regards Germany, my stand is for the real interest of the mass of the German people. If the German people as a whole would only look at it rightly, they would see that my position is predicated upon the assumption that we ought to act as unhesitatingly in favor of Germany if Germany were wronged as we would act in favor of Belgium when Belgium was wronged. There are in Germany a certain number of Germans who adopt the Trietschke and Bernhardi view of Germany's destiny and of international morality generally. These men are fundamentally exactly as hostile to America as to all other foreign powers, and I call the attention of my fellow Americans of German origin who wish this country to act toward Belgium, not in accordance with American traditions, interests and ideals, but in accordance with the pro-German sympathies of certain citizens of German descent, to the statement of Trietschke that "to civilization at large the [Americanizing] of the German-Americans means a heavy loss. Among Germans there can no longer be any question that the civilization of mankind suffers every time a German is transformed into a Yankee."

I do not for one moment believe that the men who follow Trietschke in his hatred of and contempt for all non-Germans, and Bernhardi in his contempt for international morality, are a majority of the German people or even a very large minority. I think that the great majority of the Germans, who have approved Germany's action toward Belgium, have been influenced by the feeling that it was a vital necessity in order to save Germany from destruction and subjugation by France and Russia, perhaps assisted by England. Fear of national destruction will prompt men to do almost anything, and the proper remedy for outsiders to work for is the removal of the fear. If Germany were absolutely freed from danger of the least aggression on her eastern and western frontiers, I believe that German public sentiment would refuse to sanction such acts as those against Belgium. The only effective way to free it from this

fear is to have outside nations like the United States in good faith undertake the obligation to defend Germany's honor and territorial integrity if attacked, exactly as they would defend the honor and territorial integrity of Belgium, or of France, Russia or England, or any other well behaved, civilized power, if attacked.

#### PEACE WITHOUT RIGHTEOUSNESS

This can only be achieved by some such world league of peace as that which I advocate. Most important of all, it can only be achieved by the willingness and ability of great, free powers to put might back of right, to make their protest against wrongdoing effective by, if necessary, punishing the wrongdoer. It is this fact which makes the clamor of the pacifists for "Peace, Peace," without any regard to righteousness, so contemptible and so abhorrent to all right-thinking people. There are multitudes of professional pacifists in the United States, and of well meaning but ill-informed persons who sympathize with them from ignorance. There are not a few astute persons who wish to take sinister advantage of the folly of these persons, in the interest of Germany. All of these men clamor for immediate peace. They wish the United States to take action for immediate peace or for a truce, under conditions designed to leave Belgium with her wrongs undressed and in the possession of Germany. They strive to bring about a peace which would contain within itself the elements of frightful future disaster, by making no effective provision to prevent the repetition of such wrongdoing as has been inflicted upon Belgium. All of the men advocating such action, including the professional pacifists, the big business men largely of foreign birth, and the well-meaning but feeble-minded creatures among their allies, and including especially all those who from sheer timidity or weakness shrink from duty, occupy a thoroly base and improper position. The peace advocates of this stamp stand on an exact par with men who, if there was an epidemic of lawlessness in New York, should come together to demand the immediate cessation of all activity by the police, and should propose to substitute for it a request that the highwaymen and burglars cease their activities for the moment on condition of retaining undisturbed possession of the ill-gotten spoils they had already acquired. The only effective friend of peace in a big city is the man who makes the police force

thoroly efficient, who tries to remove the causes of crime, but who unhesitatingly insists upon the punishment of criminals. Pacificists who believe that all use of force in international matters can be abolished will do well to remember that the only efficient police forces are those whose members are scrupulously careful not to commit acts of violence when it is possible to avoid them, but who are willing and able, when the occasion arises, to subdue the worst kind of wrongdoer by means of the only argument that wrongdoer respects, namely, successful force. What is thus true in private life is similarly true in international affairs.

#### A WORKABLE PEACE PLAN

No man can venture to state the exact details that should be followed in securing such a world league for the peace of righteousness. But, not to leave the matter nebulous, I submit the following plan. It would prove entirely workable, if nations entered into it with good faith, and if they treated their obligations under it in the spirit in which the United States treated its obligations as regarded the independence of Cuba, giving good government to the Philippines, and building the Panama Canal; the same spirit in which England acted when the neutrality of Belgium was violated.

All the civilized powers which are able and willing to furnish and to use force, when force is required to back up righteousness—and only the civilized powers who possess virile manliness of character and the willingness to accept risk and labor, when necessary to the performance of duty, are entitled to be considered in this matter—should join to create an international tribunal and to provide rules in accordance with which that tribunal should act. These rules would have to accept the *status quo* at some given period; for the endeavor to redress all historical wrongs would throw us back into chaos. They would lay down the rule that the territorial integrity of each nation was inviolate; that it was to be guaranteed absolutely its sovereign rights in certain particulars, including, for instance, the right to decide the terms on which immigrants should be admitted to its borders for purposes of residence, citizenship or business; in short, all its rights in matters affecting its honor and vital interest. Each nation should be guaranteed against having any of these specified rights infringed upon. They would not be made arbitrable, any more than an individual's right to life and limb is made arbitrable; they would be

mutually guaranteed. All other matters that could arise between these nations should be settled by the international court. The judges should act not as national representatives, but purely as judges, and in any given case it would probably be well to choose them by lot, excluding, of course, the representatives of the powers whose interests were concerned. Then, and most important, the nations should severally guarantee to use their entire military force, if necessary, against any nation which defied the decrees of the tribunal or which violated any of the rights which in the rules it was expressly stipulated should be reserved to the several nations, the rights to their territorial integrity and the like. Under such conditions—to make matters concrete—Belgium would be safe from any attack such as that made by Germany, and Germany would be relieved from the haunting fear its people now have lest the Russians and the French, backed by other nations, smash the empire and its people.

#### BENEFICIARIES OF THE PLAN

In addition to the contracting powers, a certain number of outside nations should be named as entitled to the benefits of the court. These nations should be chosen from those which were as civilized and well behaved as the great contracting nations, but which, for some reason or other, were unwilling or unable to guarantee to help execute the decrees of the court by force. They would have no right to take part in the nomination of judges, for no people are entitled to do anything toward establishing a court unless they are able and willing to face the risk, labor and self-sacrifice necessary in order to put police power behind the court. But they would be treated with exact justice; and in the event of any one of the great contracting powers having trouble with one of them, they would be entitled to go into court, have a decision rendered, and see the decision supported precisely as in the case of a dispute between any two of the great contracting powers themselves.

#### CIVILIZATION A PREREQUISITE

No power should be admitted into the first circle, that of the contracting powers, unless it was civilized, well behaved and able to do its part in enforcing the decrees of the court. China, for instance, could not be admitted, nor could Turkey, altho for different reasons, whereas Germany, France, England, Italy, Russia, the United States, Japan, Brazil, the Argentine, Chile, Uruguay, Switzer-

land, Holland, Sweden, Norway, Denmark and Belgium would all be entitled to go in. If China continues to behave as well as it has during the last few years it might perfectly well go into the second line of powers which were entitled to the benefits of the court, altho not entitled to send judges to it. Mexico would, of course, not be entitled to admission at present into either circle. At present, every European power with the exception of Turkey would be so entitled; but sixty years ago the kingdom of Naples, for instance, would not have been entitled to come in, and there are various South American communities which at the present time would not be entitled to come in; and, of course, this would at present be true of most independent Asiatic states and of all independent African states. The council should have power to exclude any nation which completely fell from civilization, as Mexico, partly with the able assistance of President Wilson's administration, has fallen during the past few years. There are various South and Central American states which have never been entitled to such consideration as civilized, orderly, self-respecting powers as would entitle them to be treated on terms of equality in the fashion indicated. As regards these disorderly and weak outsiders, it might well be that after a while some method would be devised to deal with them by common agreement of the civilized powers; but until this was devised and put into execution they would have to be left as at present.

Of course, grave difficulties would be encountered in devising such a plan and in administering it afterward, and no human being can guarantee that it would absolutely succeed. But I believe that it could be made to work and that it would mark a very great improvement over what obtains now. At this moment there is hell in Belgium and hell in Mexico; and the ultra-pacificists in this country have their full share of the responsibility for this hell. They are not primary factors in producing it. They lack the virile power to be primary factors in producing anything, good or evil, that needs daring and endurance. But they are secondary factors, for the man who tamely acquiesces in wrongdoing is a secondary factor in producing that wrongdoing. Most certainly the proposed plan would be dependent upon reasonable good faith for its successful working, but this is only to say what is also true of every human institution. Under the proposed plan there would be a strong likelihood of bettering world

conditions. If it is a Utopia, it is a Utopia of a very practical kind.

#### FATUOUS INDIFFERENCE TO FACTS

Such a plan is as yet in the realm of mere speculation. At present the essential things for each self-respecting, liberty-loving nation to do is to put itself in position to defend its own rights. Recently President Wilson, in his message to Congress, has announced that we are in no danger and will not be in any danger; and ex-President Taft has stated that the awakening of interest in our defenses indicates "mild hysteria." Such utterances show fatuous indifference to the teachings of history. They represent precisely the attitude which a century ago led up to the burning of Washington by a small expeditionary hostile force, and to such paralyzing disaster in war as almost to bring about the break-up of the Union. In his message President Wilson justifies a refusal to build up our navy by ask-

ing—as if we were discussing a question of pure metaphysics—"When will the experts tell us just what kind of ships we should construct—and when will they be right for ten years together? Who shall tell us now what sort of navy to build?" and actually adds, after proposing and leaving unanswered these questions: "I turn away from the subject. It is not new. There is no need to discuss it." If during its last ten years England's attitude toward preparedness for war and the up-building of her navy had been determined by statesmanship such as is set forth in these utterances of President Wilson, the island would now be trampled into bloody mire, as Belgium has been trampled. If Germany had followed such advice—or rather no-advice—during the last ten years, she would now have been wholly unable so much as to assert her rights anywhere.

Let us immediately make our navy thoroly efficient; and this can only be

done by reversing the policy that President Wilson has followed for twenty-two months. Neither our foreign affairs nor our naval affairs can be satisfactorily managed when our President is willing to put in their respective departments gentlemen like Mr. Bryan and Mr. Daniels. President Wilson would not have ventured to make either of these men head of the Treasury Department, because he would thereby have offended the concrete interests of American business men. But as Secretary of State and Secretary of the Navy the harm they do is to the country as a whole. No concrete interest is immediately affected; and, as it is only our own common welfare in the future, only the welfare of our children, only the honor and interest of the United States thru the generations that is concerned, it is deemed safe to disregard this welfare and to take chances with our national honor and interest.

#### WHEN THE SNOW FALLS ON THE BATTLEFIELD

The coming of cold weather has added to the misery of war without checking its activity. The easy-going days when soldiers went home for the winter and rested for the summer campaign have gone forever and there is no relaxation of effort on either side. Now that fighting consists mostly of standing in trenches night and day waiting for a charge, the heavy snow in both France and Poland has made the strain more painful than before, for the trenches fill with freezing water and the men are kept in perpetual chill. The wounded who lie between the lines, sometimes for days, since truces are rare, must suffer the most excruciating torture. The airmen, who have to ascend a mile or more to get out of range of the guns, drop to earth because their frozen feet and hands cannot control the aeroplane. When the ground is frozen hard the soldiers cannot dig shelters quickly enough to protect themselves from the leaden hail. And whenever the ground thaws the wheels of the heavy guns sink deep into the mud and they have to be left behind. Russia's chief reliance has always been on "General January," and Field Marshal von Hindenburg in Poland is now being taught the lesson that Napoleon learned to his sorrow a hundred years ago

#### AN EPITOME OF THE LOCOMOTIVE'S PROGRESS

The tremendous advance from the grasshopper *Atlantic* to the 300-ton mountain grade locomotive would have been impossible if improvement in rails and roadbed had not paralleled the development of the locomotive

## THE ROAD AND THE CAR

BY HENRY B. JOY

PRESIDENT OF THE LINCOLN HIGHWAY ASSOCIATION

**T**O accomplish much worth doing one must have an ideal. The prevision which foresaw the motor carriage coming into reality out of the haziness of experimental thought was laughed at by the wiseacres. Those who scoffed at the horseless carriage "dreamers" have lived to see the ideal realized in the greatest revolution of all time in industrial transportation, a forward step that means almost if not quite as much to the human race as the

steam engine, the locomotive, the steamboat, or other wonders of the century.

First a dreamer must dream, and afterward some one must make those dreams into practical realities. Then follows a wonderful industrial development—years of evolution in manufacturing methods and refinement of the invention itself toward the perfection of its economic usefulness. Within the lives of the living, the first crude steamboat has grown

spark, thus beginning the development of the modern explosive engine. Truly evolutionary processes are slow. The ideals of motor vehicle students have progressed laboriously, but in the next twenty years we believe we can see an ideal condition practically accomplished—individual transportation by an economical and convenient power.

Just as steamships developed and grew too large before details of design permitted such size, as in the case of the steamship "Great Eastern"; just as the locomotive developed to meet varieties of service, took too great a step and halted, because rails and bridges and other details were not fitted for it—so the motor vehicle has crawled on and up thru successive advances and recessions, until it has become classified into types and varieties for pleasure, utility and commercial purposes. It has developed far more rapidly and completely than did the steamship, locomotive or harvesting machine, or other similarly complicated inventions.

But what the motor vehicle may mean to the people of the United States—this country of great distances—is today unrealized. For a quarter of a century, and much more, after the locomotive was an accomplished fact, and recognized as a great, revolutionary industrial force, it stood hampered and fettered. The steel rails had not come; the genius of Stephenson had in the '20's of the last century harnessed steam so that the means of rapid conveyance of freight and passengers was at hand, but the metallurgist was still in the age of *iron*; we had the locomotive but not the roadbed rails that were essential to the coming locomotive.

#### WHAT THE LOCOMOTIVE HAD TO GROW AWAY FROM

The original track upon which Trevithick's first locomotive ran in 1804. Now in the United States National Museum. England continued to supply rails for America long after railroads had been widely developed in this country

#### THE SINE QUA NON OF MODERN RAILROAD SERVICE

A section of rails and roadbed of the sort that make express service and monster freight trains possible. To-day we are producing considerably more than 3,000,000 tons of steel rails per year

into the "Aquitania," the "Imperator," and those marvelous mechanisms, the fighting dreadnoughts of modern navies.

Some of the ideals are never reached—some are wonderfully surpassed, and as wonders are accomplished further vistas of possibilities are opened to the imagination and the ideal recedes further and further.

It is an interesting fact that in 1744 C. T. Ludolf, of Berlin, succeeded in igniting the vapor of ether by an electric

**A GREAT STRIDE HAS BEEN TAKEN ALREADY IN THE AUTOMOBILE INDUSTRY—THERE'S MORE TO COME**

From the primitive runabout to the touring car of the present day there is an amazing development. But even now when there are a score and more of distinct types of motor vehicles serving diverse functions the adaptation of the automobile to the requirements of business is only begun. It cannot reach its maximum till the roads are ready

Even in 1876 we read in the first annual report of the Michigan Central Railroad Company as follows:

"Contracts have been made for the purchase of 18,500 tons of iron (rails) at an average cost of \$73 per ton deliverable in Detroit."

Later on by several years that same railroad, still struggling to get a road on which its locomotives could operate, bought steel rails of the best quality obtainable, in England. Think of it, steel rails from England and at a price of about \$125 per ton, to relay the entire road from Detroit to Chicago!

The railroad reaching from Detroit half-way to Chicago—actually to Kalamazoo—had been built by the state of Michigan, but it had failed of success and faced the necessity of reconstruction thruout, when it was sold to private parties. In the first seven months and eight days of private ownership it earned net \$123,132.61. The then very large sum of \$1,350,500 worth of iron rails of the heaviest and best kind were ordered and laid. The evolution was onward and upward. As better and larger iron rails were obtainable, and then later on steel rails from England, the locomotives and cars increased in load capacity and the train speed increased.

It took years to unfetter the locomotive and free it to the service of the public by providing suitable rails to carry the burden.

Can we draw any parallel with motor vehicle conditions today? Is it not true that we have the dreams of a hundred centuries realized in the modern motor vehicle? And is it not also true that our roads—the nation over—are impossible and impassable and inappropriate to the era?

Are not our highways today to the motor vehicle as the soft iron rails of the '40's were to the locomotives of that day?

Did iron rails at \$73 per ton, and later steel rails at \$125 per ton, repay those who bought them?

What did good railroads mean to the public then, when our population was 23,191,876?

What do good highways mean today with a population of 100,000,000 to be served?

It cost the public for the rails only, in those days, from \$8000 per mile for iron to \$15,000 per mile for steel, and yet I venture to say the railroads at that day would not carry in traffic volume per mile what our main arterial highways would carry today were they traversible in an economical manner.

Is the value of good roads measurable alone in dollars? Is not the

social welfare of a nation valuable beyond measure? But consider if you will only the broad proposition that by far the greater part of the freight which the railroads carry has first to be moved to the railroad over the highways at an average expense which, it is estimated, is greater than the entire railroad charges to its destination.

Is it conceivable that such a condition should continue to burden us as a nation, while the good roads of every other civilized country give their people so great an advantage over us?

*Detroit, Michigan*

*Courtesy Automobile Club of America*

**THIS HALTS THE AUTOMOBILE'S PROGRESS**

This is not the worst road we might picture: it could be traversed without the greatest difficulty, just as the old iron rails could be used and were used till something better was found. But we will never realize the possibilities of the automobile till roads like this—and worse—are replaced by adequate highways

# HOW TO THINK OF GOD

WHAT I BELIEVE AND WHY—SEVENTEENTH PAPER\*

BY WILLIAM HAYES WARD

**I**T is impossible by any arguments absolutely to demonstrate the existence of God. Some may doubt. Those only who believe they have in their souls a consciousness of God can therein find the demonstration which the rest of us must lack. It is the privilege of the few, and it is not easy to convince others that this conscious apprehension of God as something other than themselves is not, or at least may not be, the product of a longing which finally creates within the mind the apparent fulfilment of its own desire. To be sure, we also have in our own Sacred Books, and in the sacred books of all religions, accounts of the intervention of God, or the gods, in a way that would be conclusive of the divine existence; but no such interventions appear now, and questions inevitably arise as to the trustworthiness of such accounts. Miracles have ceased to be a convincing proof of God; they need proof; and we are and must be satisfied to depend for our faith in the existence of God on those proofs which we have considered, and on such as have satisfied the searchers after God.

The common consent of mankind gives us the belief that there are one or more non-material superior existences, spiritual in their nature, which have power over material forces and over mankind. Those existences, called gods, or God, have knowledge of us, and can be appealed to, placated or provoked, and can do us good or harm. They may have passions, as do we, good or bad, or the one God may be infinitely and changelessly wise, powerful and good. Mankind conceives of its deities or Deity as like itself, only far superior, its highest ideal of what is noble and worthy, or even as the spiritual impersonation of its evil passions. As humanity grows in ethical sense out of savagery its gods gain quality until we reach the conception of a single God, with no rival or competitor, infinitely wise and powerful, but also infinitely good. To him is ascribed the creation and the rule of the universe. In a sense it is true that man creates his God. His idea of God is of his own conception, and it grows in spirituality and moral quality with his own spiritual and moral growth.

## WHAT IS THE FIRST CAUSE?

Christendom possesses this highest conception of God, first reached by Judaism. But we have not seen God walking in our gardens. We

have no such physical evidence of him as we have of each other, and it is impossible that we, or at least most of us, should have. We must be content, as in so many of our beliefs, with evidence of the probable sort. But that probability may be enough to depend upon, enough for practical purposes; and such appears to me the evidence in support of God's existence drawn from the universe of nature. To me it seems clear that there must have been a great First Cause, that the world of matter did not create itself, but had a Creator, and equally that its coördinated laws had a Contriver. Equally, the evidence presented in earlier chapters make me believe that the world of life and the world of mind were guided by a Superior Intelligence rather than that they happened to develop without intelligence or guidance.

If in this conclusion I am right, I must have already learned from his works what is the nature and what the qualities, attributes, of God. What are his attributes?

I do not see that this question need raise any great difficulty. We need not flounder about in self-made mazes wondering about the Absolute, or refuse to cross in thought an unbridged gulf between our finite and his infinite. Why create the gulf? We have bodies and souls; we know matter and mind, not relationless and absolute, but related to time and space. We know nothing else; we have no reason to believe there is anything else. If our minds cannot comprehend the infinite they can at least apprehend it, and can understand that it is like what we know outside of us, and are conscious of within ourselves, only more of it. We can know something of what God is, and be positive of it.

## HE IS ALL-POWERFUL AND ALL-WISE

And, first, all power is embraced in the first Great Cause. The whole course and force of nature came out from him. To be sure, we have not been able to find any evidence in the ether of space that it is not coterminal and cotermporal with time and space, boundless and eternal as God; but we have also found that it has been subject to an exterior Power which out of this ether has created all things. Ether was the formless and the void, the darkness upon the face of the deep, out of which God made light and the heaven and the earth. He that made all things is God. This is what we

call Omnipotence, for he that can do all this can do all things. This does not imply that he can do what in the nature of things it is impossible to do. Thus can God now cause that Woodrow Wilson, who was inaugurated President on March 4th, shall have been inaugurated on March 3d? Can God cause that March 4th shall have come before March 3d? Or that March 4th should be skipt, and there be no March 4th? Can he abolish time?

Equally the Intelligence which knew how to contrive the numberless multiformities of nebulae and stars and solar systems, and equally the laws and forces of their constituent atoms; and, further, the vital powers which create plants and animals, and could distribute intelligence and instinct to bee or man as needed, all appearing in due course under a system of law and a plan of development—that intelligence must be without limit. It must cover all that can be known. It may not cover anything which in the nature of the case cannot be known, if such a thing there be; just as the divine omnipotence cannot do what is in essence impossible, as to make the three angles of a plane triangle equal to more than two right angles. Whether God, after giving freedom to a creature, can foresee what his every choice will be I am not sure. Nor is it important to decide that he can, for his wisdom is enough to meet any imaginable emergency; or he may choose to leave all things without interference to the operation of his wise laws and the free choices of his creatures. All that can be known he does know. This we call Omniscience.

## HE IS GOOD

Another even more important quality or attribute assigned to the Infinite Power and Intelligence whom we call God is Goodness. Yet there are those, like John Stuart Mill, who have found in nature the evidences of a God of might and wisdom, but who could not, seeing the sin and suffering in his world, be assured of his stainless goodness. The assumed problem of a good God and a world of evil does not seem to me to need solving. That God is good is, I think, involved in his infinite wisdom. God would not be wise if he were not good. I do not need to argue this to myself; nor am I affected by the fact

\*Thru error this paper, which should have been the fifteenth in the series, was omitted from its place at the end of the articles on theism.—THE EDITOR.

that for us prudence and goodness seem sometimes to conflict, that to do right sometimes causes suffering and wrong. But the elements of our little arc are insufficient to compute and describe his infinite circle. Our temporary loss may be swallowed up in a larger gain. The hermit thrush may be killed by the hawk, but it had a busy, blissful life of sweet song, and it was best that thrush and lark and hawk and deer and wolf and man should die and make room for others of their kind; and the sum of their happiness was good. It was best that the law of life and death should rule, without exception for suffering's sake. The suffering was incidental; it was good to live. It is the drift of life we must consider when we think of suffering, not its eddies; the whole orbit, not its epicycles; the rule, not its exceptions; and the prevailing rule and drift of life is not suffering, but enjoyment, so that life is sweet. The chief appeal of both religion and ethics is to well folks. And I hold that *moral* evil is not predominant. Even bad people are likely to do more good things than bad. To be sure, they do many bad things; much sin is in the world, and a good God cannot be pleased with it; but I am not sure that he can help it. He cannot make a thing to be and not to be at the same time; and I am not clear that he can make men who shall be free and yet not free to sin. It would hardly be worth while to have a world and yet no place planned in it for free moral beings; not worth while to create man, and not let him sin as he chose. That is, as many have said before me, while it is clear that God might have refused to create, it is not clear that if he created beings with moral natures and possess of free will, he could have excluded sin. And equally it is not clear that if God gave rules of law to the world of matter and the world of life, a reign of law that we can depend upon, he could have excluded suffering. The sum of enjoyment, and equally the sum of goodness, may be—I doubt not it is and will be—much greater than the by-products, the remnants, the offal, the slag and cinders of suffering and sin. The bad is sad, very sad, I know, but the good in fatherhood and motherhood and childhood, in love and fellowship and help, in health and useful work, is much greater; and I do not feel the need to solve studied riddles and “justify the ways of God to man.” I find no difficulty in believing that God is good beyond limit, as well as powerful and wise.

These qualities of Power, Wisdom

and Goodness belong not to matter, but to mind. When we then formulate our belief as to the nature of God we have already thought of him as a spirit, a real personality possess of the same kind of mind as is ours, with intellect to know, feeling to love, and will to create. God is a spirit; there is no question of that.

#### HE IS SPIRIT, AND INFINITE

But can he be more than a spirit? We have both spirit and body; can God have both? He is not matter as known to us, and in his activity he transcends and embraces all matter. Yet one exception to this statement we have observed. So far as we can judge, his infinity does not transcend the infinity of ether in space and time. Ether appears to be infinite in extent and infinite in past and future duration. Then it is conceivable that it may have a special relation to the Infinite Spirit. We may conceive of ether as the agency thru which God works, just as our souls work thru our bodies; or we might even, for the moment, ask whether ether can of itself be spiritual and of the nature of God. It will not be easy to accept the latter view if we allow the conclusion of most physicists at present that matter in its ultimate elements is simply a modification of ether. All the present studies of ether, with its various waves for transmitting force, tend to make it clear that its alliance is not with mind, but with the familiar forms of matter. We may, to be sure, possibly think of ether as having special relations to the Supreme Spirit, but not as itself the Supreme Spirit; not, as Haeckel would have it, that ether is God. God's nature, shown by his attributes, is plainly that of Spirit.

It is obviously of the nature of God as a self-existent being that his existence should be infinite in time. The necessity of his existence always has been and always will be. That is, he is the eternal God.

He would also of his own nature be universal in his being, in one place as well as another, covering all space. We know very little as to the way in which Spirit localizes itself; but in whatever way, in whatever sort of consciousness or intelligence it acts, no place is exempt from the activity of a necessarily existent Spirit. The necessity of his existence is universal. That is what we call the divine omnipresence.

#### HOW TO THINK OF GOD

How, then, am I to think of God? I think of him as the original substratum of the universe, the self-existent, co-eternal of eternity, that from which all came; yet not as an

abstract, non-related essence, but as a real, concrete Intelligence and Will, that stands behind all material things which he has devised, created and rules. How he rules them we may not know, except that he does it in accordance with the laws of nature. We see no exception to those laws, and to every appearance nature has been put under them and automatically obeys them. So I do not think of God as the constantly active volitional agent in every smallest and largest attraction and repulsion of nature, but as author of its laws and presiding over them. I think of those laws as securing the beneficence of the seasons, and also the paroxysms of tornado and earthquake, and I do not think of these as separate and individual choices and volitions of God.

I think of God as infinitely good, as an intensely moral Being, loving the right and by his nature pledged to its victory, and equally hating the wrong and pledged to its defeat. I think of him as faultlessly and redundantly good, actively so whether that activity is exercised by the process of his laws or by his supervision over them. Suffering is but the necessary and undesired by-product of his wise and good laws. Only sin is the alien act of man's hostile free will.

Thus I think of God as a Spirit eternal, universal, pervasive, and active, as a personal Being, in his power, wisdom and goodness. But the question must still arise as to the way of his relation to the world he rules. The mind constantly recurs to that other infinity apparently as pervasive as God, as eternal as God, which we call ether. What, then, is its relation to God?

#### IS ETHER THE BODY OF GOD?

I cannot know; but when I think of ether as the probable source of everything, of every atom of matter in the universe, of earth and stars as made out of ether; and of every sort of force, not of light only, but of electricity and gravity as well, as depending on the strain of ether; the earth carried by ether about the sun, as well as the apple drawn to the ground; of every physical or chemical or vital activity resting in the eternal force of ether; of ether never displaced by matter but identified with it as the air is identified with its eddies or the ocean with its waves, it seems not unlikely that the infinite Spirit somehow works in and thru ether as our souls act thru our bodies. Would it be illegitimate to think of ether as in a sense the body of God, God the Spirit, and yet at the same time the universe God? I

# THE NOVELS OF MRS. MARY S. WATTS

"When Mrs. Watts's fullness of style, her charmingly intimate regard for detail, and her wonderful ability for character portrayal are considered . . . comparison with Thackeray and the Thackerayan quality of the great age of English fiction is striking and inevitable . . . The scorn of meanness, the toleration of weakness, the pity for error, the detection of motive, the half-veiled satire, the reticence of feeling which suggests rather than displays emotion, result in passages of pathos or humor which might have come from the master's own pen."—*San Francisco Chronicle*.

## NATHAN BURKE

**\$1.50**

"There is a slowly increasing group of novels which seem likely to last much longer than the great mass of fiction which is talked about for a few months and then totally forgotten. This group is not large. Once in a decade an addition is made to the group. . . . 'Nathan Burke' is a novel so sound, so filled with much that has inspired the great novels, that it is hard to maintain moderate standards of comparison."—*Boston Transcript*.

## THE LEGACY

**\$1.35**

"In 'Nathan Burke' and in 'The Legacy,' Mrs. Watts has reached a high-water mark in American fiction, has told two stories of genuine Americanism. Every page shows her truly remarkable gift of observation—observation shrewd but not unkind—and her power to probe the hearts of weak and erring mortals. Those who would keep in touch with the best product of story-telling in America must not miss 'The Legacy.'"—*New York Globe*.

## VAN CLEVE

**\$1.50**

"Van Cleve's picture deserves to hang on the wall with the very best that American literature has painted of the American man. . . . Mrs. Watts brings back the Spanish War in a style Tolstoi himself could not have bettered."—*The Bellman*.

"Altogether the book is in ripeness and mellowness the best of the three excellent novels which Mrs. Watts has to her credit, and it may be added that all three are entitled to a place of honor in American pictures of this country."—*The Outlook*.

—Mrs. Watts's New Novel. Just Published—

## THE RISE OF JENNIE CUSHING

**\$1.35**

"Mrs. Mary S. Watts's latest story . . . is as indubitably a masterpiece of characterization as were her 'Nathan Burke' and 'The Legacy.' It has, too, much of the warm humor of 'Van Cleve.' . . . Jennie Cushing arouses your admiration, not merely for the self-control, balance, and judgment of the woman, but for her unselfishness and her almost glorious freedom from petty meanness and misjudgments, and the utter absence of self pity from her makeup. Indeed, it is a masterpiece of character drawing that, having all these fine qualities, Jennie never for an instant impresses you as a made-up character, created to work out a theory or to draw your sympathy."—*Brooklyn Daily Eagle*.

"Mrs. Watts has rapidly risen to a place of honor in the small group of our contemporary novelists who are seriously worth our while. Her books are native American to the core. This truly remarkable character study is remarkable in its unforced, altogether natural consistency and development. Loving service, the impulse to aid and comfort others, is the dominating trait of Jennie's character."—*New York Tribune*.

Occasionally a book appears that is so human, so vital, that one rejoices and suffers with the people that inhabit it. This is such a book, and the growth and development of Jennie herself is the best work that Mrs. Watts has done. . . . A character of the most profound and the most moving sweetness and wisdom, Jennie accepts the ugly facts and commonplaces of existence with serenity, but turns instinctively to beauty in whatever form it comes. . . . It is a good sign when such books are written in America."—*Philadelphia Public Ledger*.

think not. I do not believe such to be the fact, nor do I disbelieve it, for I have no evidence—it is a mere conjecture. Yet it seems somewhat plausible. At least we know that God does nothing outside of ether and its modifications. In ether he is omnipresent.

The conjecture is not pantheistic. It would be if God were not thought of as also a controlling Spirit, as with us the mind rules the body. It is—is it not?—a fact that God lives and works in ether, as we live and work in our physical bodies. It would thus follow that other spirits and our own souls may yet live and act in a direct sense in God, in the same space, the same ether, the same God who fills all things.

### SPIRIT AND ETHER-STRAIN

And may we not wonder, and perhaps learn some day, whether the ether is not the medium in its strain by which our spirit, our will, acts on our physical structure? We know that it is thru strain in the ether that physical movements are secured; why may not the mind act on and thru ether? Are we quite sure that the mind is not itself a modification of ether, just as the electron is? Thus we might conceive of the beasts as having an ether soul to be compared with the low combining weight of hydrogen, while the human soul is complex, like an organic molecule, and the vital soul of the tree is inert, like argon. We do not know, but at least the conjecture is plausible that, as the ether is only semi-material, it may be that my mind creates a current, a wave, in the ether, and this semi-immaterial ether is the conducting link between my immaterial mind and my material body. It is as good a conjecture as any, and is in line with phenomena not yet explained, in which, if a multitude of apparently well authenticated tales are true, telepathic influence has been conveyed from one mind to another far distant, wireless telegraphy thru ether. I do not accept it as based on any real evidence, but I am allowed the conception of God as an infinite Spirit, residing in infinite ether, acting in it, working thru it, ether as really himself, as our bodies are ourselves, converting it into matter or mind, and controlling it by his will. Thus I may dare to conceive of ether as in a sense the body of God, and may conjecture that when God made all things out of ether he made them not out of nothing, as men have been wont to say, but out of himself; and yet I would conceive of the ether out of which everything is made, as God only in the lower sense in which I speak of

my body as myself, when it is only the organ by which the *I*, that is, my mind, reaches its purposes.

But who by searching can find out God? His infinity dazes us; his power and his wisdom awe us; and at the vision of his dread holiness we cry, "Wo is me," till the live coal from off the altar glows with his goodness, his boundless, endless mercy and love. Then the spaciousness of his existence, the mystery of his wisdom, and his resistless power all appear but as the serving satellites of his regnant goodness; and we, finite souls, dust in his balance, can only praise and pray. Thus it is, that when we would try in thought to compass God, thought rises to worship.

### INTERNATIONALISM IN TOKYO

When His Majesty the Emperor of Japan makes a gift of fifty thousand yen (\$25,000) to an American institution several conclusions may be drawn. Obviously behind such a grant there is a desire to show friendliness in no small measure to this country. So generous a gift to a Christian project is unprecedented, and, coming as it does after a series of indications of friendship—not mere pronouncements but concrete acts—it is a notable proof of Japan's cordiality. That is the first implication. Furthermore the institution so honored must have proved its worth. It has. Fourteen years' service have transformed St. Luke's Hospital in Tokyo from a small, ill-housed medical mission station to an eighty-bed hospital commanding the services of Japan's foremost surgeons and physicians, and have demonstrated its right to grow into something much more useful. And the third implication is that Americans ought to share at least as heartily as the Emperor of Japan in the upbuilding of this international enterprise.

Readers of The Independent have already learned of the work of this hospital, which offers to Japanese, rich and poor, and to American and European travelers and residents the best possible care. The time has come when its scope should be greatly enlarged by erecting on a new site where expansion is possible a plant which will accommodate many more patients, do a broader work, and take its place as one of the chain of international hospitals—already including Panama, Honolulu, Manila and Colombo (Ceylon)—which extend the area in which Western men and women may live comfortably and safely. For even in the best native hospitals—where Japanese surgery is unimpeachable—there is a great gulf between Oriental and Occidental methods of caring for the sick which hampers their usefulness for such patients.

In detail the new plan provides for a free dispensary caring for at least 200 cases a day, fifty free hospital beds, fifty more for which a nominal fee will

## Annual Sale at McCutcheon's

Until within a few weeks ago we felt that we could not possibly hold an Annual January Sale this year. It seemed as though the war would make this impossible.

Happily our well-established reputation in foreign markets supplemented by prompt and decisive action on our part brought results which are most gratifying.

***This Annual Sale now promises to be quite as important as any we have ever held.***

First, we have been able to secure, in addition to full lines of our regular goods, two very important lots of Irish Table Linens of the very highest standard of quality at such price concessions as enable us to offer these at an average discount of

**25 per cent. from our regular prices**

In these lots there is a very wide collection of patterns in Cloths of all sizes with Napkins to match, and our guarantee—"Satisfaction or your money back"—goes with every piece.

In addition we have also made important price reductions on several other attractive lines made up of patterns and lots to be discontinued, etc., and as a further attraction we offer a 10% reduction on everything else in our regular Housekeeping Linen Departments.

This special 10% reduction will also apply to our Lingerie, Hosiery, and Children's Wear stocks.

This means that everything in our stock of Housekeeping goods, including our most exclusive patterns and qualities, is offered at from 10% to 25% reduction during January.

*Illustrated booklet free on request.*

**Fifth Avenue, 34th and 33d Sts., N. Y.**

## ORAL COMPOSITION

"I feel that the use of The Independent has been successful in several ways. As a basis for Oral Composition it has given us live subjects for discussion, and excellent models of concise and clear statement. It has interested many students who have not been interested in so-called 'classics,' impressing them with the idea that good style is not a fad or a mere literary invention, but a practical device for bringing out one's ideas with force and lucidity. To many it has also brought a wider field of vision and a higher range of interest."

*Send for free pamphlet called "The Independent—the National Text-Book."*

## WHAT 15c WILL DO

The little matter of 15c in stamps will bring you the **Pathfinder** for 13 weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

be charged, and fifty which will be ready for well-to-do Japanese and foreigners; a force of trained visiting nurses, a research laboratory, and the usual subsidiary buildings will complete the plant. Of this only the land, one pavilion for paying patients, and a nurses' home and service building need be provided for at once. In Japan Count Okuma heads a council, of which a number of distinguished public men are members, which is supporting the hospital and has engaged to raise yen 200,000. In this country Lloyd C. Griscom, ex-Ambassador to Japan, is president and John S. Rogers, 27 Cedar street, New York, treasurer of the American Council; and a Woman's National Council has also been formed, with Mrs. Charles Rodman Pancoast of Germantown, Pennsylvania, as treasurer.

With the endorsement and coöperation of the British Ambassador at Tokyo the project takes on a still more thoroly international aspect, and in furtherance of Japanese-American friendship the International Hospital should speedily realize its hopes.

## PEBBLES

All men are born free and equal, but the majority of them marry at the age of twenty-five or so.—George Ade in the *London Opinion*.

Inquisitive Motorist—Hey, Bub, what do you get for hoeing those weeds?

Bub—Nothin' ef I do, and hell ef I don't.—Puck.

"But your fiancé has such a small salary, how are you going to live?"

"Oh, we're going to economize. We're going to do without such a lot of things that Jack needs."—*Brooklyn Citizen*.

Bashful Youth—I want a present for a young lady.

Saleswoman—Sister or fiancée?

Bashful Youth—Well—er—she hasn't said which she would be yet.—*Judge*.

The Mistress—I shall take one of the children to church with me this morning, Mary.

The General—Yes'm; which?

The Mistress—Oh, whichever will go best with my new mauve dress.—*London Sketch*.

"Going to hang up your stocking on Christmas eve?" asked Harold's uncle.

"I suppose so," replied the young man patronizingly. "Father and mother seem to expect that sort of thing, and it would be a pity to disappoint them."—*New York Evening Post*.

Perhaps the reason George Ade and Will Levington Comfort have not been sent to Europe as war correspondents, along with the other gifted writers, is that it is contrary to the rules of neutrality to extend Ade and Comfort to a belligerent nation.—*Kansas City Star*.

The war was being discussed from all angles at the regular Saturday night meeting of the Gin and Possum Colored Gentlemen's Social Club.

"Yas, suh!" announced Pomp Dawson, with a wise look in his rolling eyes. "Dem Guhmans has got guns dat'll shoot, an' shoot tuh kill at twenty-fi' miles."

"Huh?" asked Brother Jackson, cocking his head.

"Yas, suh!" went on Pomp. "Dey not on'y shoot twenty-fi' miles, but dey kill at twenty-fi' miles."

"Great Lawd!" gasped Jackson. "Nigger'd run all day an' git killed 'bout supertime, wouldn't he?"—*Life*.

## THE PUBLIC BUSINESS

A committee has been appointed to prepare plans to give New York City an entirely new sewer system at a cost of \$100,000,000.

In order to cut down the budget for the year, the Pittsburgh councilmen reduced their own \$6500 annual salaries by \$1000 each.

Chicago is to install a municipal laundry in one of the municipal bath houses, where the poor may wash and dry their clothes for a low fee.

By legalizing a \$400,000 bond issue, the aldermen of Minneapolis, Minnesota, have authorized the city to go into the business of manufacturing ice.

Philadelphia is showing its citizens a "Know-Your-City-Better" exhibit in which all the city departments are telling of their work and their dreams for the future.

Hibbing, Minnesota, has completed the installation of its municipal heating system. The waste steam from the power plant will be utilized and sold at a rate of sixty cents for one thousand pounds.

The municipal saloon of Lemmon, South Dakota, is proving a profitable investment for the city. The saloon began last July, and the manager now announces that the resources are \$7142 and the liabilities \$1835.

The Police Department and Children's Playgrounds Association of Baltimore, Maryland, is coöperating with the city engineer in setting aside certain streets during specified hours for the children who wish to skate.

Police Commissioner Arthur Woods of New York City intends to make a social worker out of the policemen in dealing with the unemployed this winter. Policemen will inquire into cases and try to connect the men out of work with the proper aid agency.

Chicago has opened five municipal dance halls, the council having granted Mayor Harrison's request for \$5000 for the project. Admission prices will be low, light refreshments served and all the modern dances permitted—under the supervision of social workers and club women.

One of the strongest forces for fire prevention has been given impetus by a recent decision of the Appellate Division of the Supreme Court in a New York City case, by which an owner of a building must pay the costs of fighting a fire if he has neglected to comply with previous warnings and orders of the fire department.

Sixty municipalities, nearly one hundred civic organizations and 100,000 school children are banded together to make the city and county of Los Angeles, California, a veritable floral paradise in 1915. The county alone has appropriated over \$500,000 for beautifying public property. Two hundred miles of asphalt boulevards will be lined with roses. A series of elaborate open-air entertainments will begin on New Year's Day with a Carnival of Roses in which forty cities will join.

# STEINWAY

AN increasing popular demand for a piano adapted to the modern home or apartment has led to the manufacture of two new Steinways. These are Style M, the smallest Steinway Grand, and Style V, of the Upright type. They have the incomparable tone and the long life of the most costly Steinway. Yet, as a result of the smaller frame and case, enabling a saving in manufacturing cost, they are offered at prices lower than ever asked for this supreme piano. They make it possible for you to own the ideal piano—a Steinway—at a price you would expect to pay for many so-called "good" instruments.

*We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.*

# ATWOOD GRAPEFRUIT

No Other Grapefruit Equals It In Flavor

THE superiority of Atwood Grapefruit is not an accident. From the first planting the Atwood Grapefruit Co. has sacrificed everything for QUALITY. An initial expense of hundreds of thousands of dollars was incurred, while everything that scientific culture and experience could suggest was done to produce QUALITY. Even then some trees at maturity bore simply good grapefruit, but not good enough for the Atwood Brand. These trees were cut down and replaced by superior varieties.

So through the various processes of selection, cultivation and elimination has evolved the ATWOOD FLAVOR, as hard to describe as it is difficult to produce.

People who have eaten Atwood Grapefruit say:

"It is absolutely the best grapefruit I ever tasted."

"Fruit is fine and full flavored, 'The Best Ever'."

"They are the nicest fruit we have ever tried."

"The best that we have been able to secure."

"As usual, your grapefruit is 'way ahead.'"

"Fully ripe and delicious."

A well-known physician writes: "I prescribe grapefruit for all my patients, and tell them to be sure and get Atwood Grapefruit."

Atwood Grapefruit is always sold in the trade-mark wrapper of the Atwood Grapefruit Co.

## The New Books

### THE CRUMBLING EMPIRE

The two foci of the great Ottoman empire that has been slowly crumbling to pieces for a century or more are Cairo on the Nile and Constantinople on the Bosphorus. In these regions the peoples of the East and of the West have met and mingled for ages. The forces of incoherent and antagonistic civilizations have there been in continual conflict, producing a life so complex that it is difficult to analyze its elements or grasp its significance.

The new trend of the Great War brings into prominence these Moslem centers, upon which much welcome light is thrown by a recent volume on *The Real Turk*, and two books upon Egypt as it is today.

It is characteristic of the confusion of the Sultan's empire that less than half the people of the capital are Turks, the majority being composed mainly of Greeks and Armenians. In Cairo one hears principally the Arabic tongue, altho French and English are heard with growing frequency.

There is no unity of language, race, educational systems, or even form of government under Turkish sovereignty. The unifying principle of the past has been religion supported by a ruling warrior caste. The inroads of western civilization have been breaking down this binding force and Turkey is fast disappearing as a political entity. The many fine qualities in the Turk, as Mr. Cobb points out, will doubtless thrive when cultivated under more natural relations and a freer civilization.

The real Turk, however, is still in the dark ages as regards sensitiveness to suffering. He is a man of contradictions. Tho affable and dignified, he is subject to violent fits of temper. Kind, gentle, and of winning personality, he is yet capable of the utmost cruelty. Mr. Cobb gives a very sympathetic picture of Turkish life and customs, and much valuable information about business, educational, and religious institutions and tendencies.

A similar picture of Egypt has been given by Mr. Cooper in his *The Man of Egypt*, altho most of his attention is devoted to the government and the history and results of the English occupation. If Egypt remains true to Great Britain in the present crisis, it will be largely due to the fact that the far-sighted plans of Lord Cromer and the efficient administration of Lord Kitchener are beginning to bear their legitimate fruit. Just courts, sanitation, agricultural schools and experiment stations, new canals and irrigation systems make possible the statement that

"the country of the Nile is witnessing the most satisfactory government she has seen for many centuries and probably in her entire history." Such evidences of grateful change conducive to universal prosperity are bound to overcome even religious and racial prejudice.

*Out of Egypt*, by Miss Crouse, combines in a delightful way descriptions of the present life and its natural surroundings with some account of Egypt's past glories, suggested by the beautiful ruins scattered along the banks of the Nile.

These volumes leave one with the impression that the collapse of Turkish rule will lay bare tremendous problems of political, racial, educational and religious adjustments which may well give great concern to those upon whose shoulders must fall the task of smoothing the way for social progress among these heterogeneous peoples who recognize the sovereignty of the Sultan.

*The Real Turk*. By Stanwood Cobb. Pilgrim Press.

*The Man of Egypt*, by Clayton S. Cooper. Hodder & Stoughton.

*Out of Egypt*, by M. Elizabeth Crouse. The Gorham Press. \$1.50.

#### A POET OF THE OPEN

It has been said by his friends that Harry Kemp should keep away from the studios of the pseudo-artistic class. Certain it is that in his published poems, *The Cry of Youth*, a collection, and *The Thresher's Wife*, a narrative poem, a sharp contrast can be drawn between the inspired and the artificially re-inspired. Few poets since Whitman have more thoroly understood and sympathized with the worker and the man who will not work because he cannot.

In "The Box-car," which is average Whitman improved or spoiled by a Keatian sense of form, "The Breadline," "The Harvest Fly," "The Tramp's Confession," Kemp's vividness of phrase is warmed into surer life by a sympathy that understands, very thoroly, the Christ best exemplified in "Jones, the Brother of Jesus."

On the unpleasant side of the contrast are found such strainings for effect as the various short efforts which have to do with dead men's grave woes. Yet "The Hymn of the Star Folk in Heaven" and "Lilith" and "The Song of Israel" have naught to do with labor and naught to do with labored writing. The most unique and one of the most beautiful poems in the collection is the "Star of God's Malison." A sensitive, strong poetic spirit is Harry Kemp's. May his strength curb his sensitiveness and keep him in the ways which lie open.

*The Cry of Youth. The Thresher's Wife*. Mitchell Kennerley. \$1.25—40c.

#### THE MARCH OF THE BEAR

Of all great regions of the earth the average American is probably most ignorant of the history of the Russian Empire in Asia, and Professor F. A. Golder has done a real service in writing a history of *Russian Expansion on the Pacific, 1641-1850*, with a full bibliography, sources translated from the Russian and an interesting series of

## Which of these Homes will the Burglar Shun?

Not the pitch-dark house—easy to approach unseen, easy to ransack without detection.

It's the home with the all-night lights that's safe.

Imagine a burglar daring that porch-light or attacking a house with a light upstairs!

For only a cent or two a night, you can burglar-proof your home in this way, if you use EDISON MAZDA Lamps—and have besides the convenience of an all-night light in your bath-room or hall-way.

EDISON MAZDAS give you 3 times as many hours of light for the same money as old-style carbon lamps, some of the smaller sizes giving light all night for a cent.

To gain all that EDISON MAZDAS can give you in burglar protection, convenience and economy—you should have them in every socket in your house.

Be sure the MAZDA lamps you buy bear the name EDISON

# Britain's Case Against Germany

By RAMSAY MUIR

Professor of History, University of Manchester

\$1.00 Net

The book is a short, clear, and popular exposition of:—(1) The events which led up to the war, and the way in which Germany has conducted the war. (2) The noxious and dangerous political theories by which Germany has been hypnotised; these are not only analyzed, but answered. (3) The History of Modern Germany, showing how these ideas and policies came to win their ascendancy. (4) The German constitution. (5) The threatening and aggressive policy by which Germany has aimed at world-wide dominion during the last twenty-five years. (6) The steps which have been taken towards diminishing war by all the civilized nations except Germany, which has consistently opposed these attempts.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation  
Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,219,045,826.00  
Received premiums thereon to the extent of.....282,298,429.80  
Paid losses during that period 141,567,550.30  
Issued certificates of profits to dealers.....89,740,400.00  
Of which there have been redeemed.....82,497,340.00  
Leaving outstanding at present time.....7,243,060.00  
Interest paid on certificates amounts to.....22,585,640.25  
On December 31, 1913, the assets of the company amounted to.....13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

EDWARD L. ROSSITER, Treasurer

## 6% DIVIDEND COUPON CERTIFICATES

PAYABLE ON DEMAND AT ANY TIME

THESE certificates are issued in even multiples of \$100.00. They bear dividends at the rate of 6 per cent per annum, payable semi-annually from the date of issue, and have done so for 24 years.

They also participate in an additional dividend at the end of each five years, netting 7 per cent for each year. They are amply secured by first mortgages on homes; part of the principal and all of the interest being paid back to us each month.

We are the oldest Savings Association in this State. Under strict supervision of the State Building and Loan Examiners. Many of the best business men in this country are placing their savings with us. There is no cleaner or safer investment. Send for booklet and best of references East and West. 7 1/2 per cent paid on monthly savings for 24 years. \$5.00 saved monthly. \$1,000 at maturity.

INDUSTRIAL BUILDING AND LOAN ASSOCIATION  
338 15th Street, Denver, Colo.

old maps. The author informs his readers with engaging candor that he had started out to write a history of Alaska, but as his materials accumulated for the period of early Russian exploration he turned aside to write the story of eastern Siberia and the explorations in the northern Pacific instead of completing his original task. The conquest of Siberia and Alaska, which added so much to the wealth and prestige of the Tsar's empire and to the geographical knowledge of the civilized world, is a fascinating story of daring and achievement altho marred by the cruelty which always occurs when bands of half-barbarous adventurers forcibly subjugate wholly barbarous native races.

*Russian Expansion on the Pacific, 1641-1850*, by F. A. Golder. Arthur H. Clark Co. \$5.

## HOW THE WEST WAS WON

With war, the thoughts of war, and a reawakened public interest in history, Professor Robert McN. McElroy's latest contribution to the history of our western states will be gratefully received. *The Winning of the Far West* is announced as a continuation of Theodore Roosevelt's *Winning of the West*, and gives a most vivid and intimate account of the stormy days when Texas was annexed, of the Oregon Controversy, the purchase of Alaska, and the Mexican war. Professor McElroy has found letters of Jackson, which have never been published, and the great spoilsman is here shown in a brighter light than usual. The work combines value as a reference book with bright narrative quality.

*The Winning of the Far West*, by Robert McN. McElroy. New York: G. P. Putnam Sons. \$2.50.

## AMONG BRITAIN'S IMMORTALS

Himself a member of the Royal Academy, and son of C. R. Leslie, R. A., George Dunlop Leslie in his *Inner Life of the Royal Academy*, gives an intimate account of the art schools of the famous British institution, together with many new anecdotes of Millais, Leighton, Turner, and a brief description of Whistler at work and play. Mr. Leslie's work is an admirable source for historical data, and has, moreover, a chatty charm which reveals unconsciously the spirit of the Academy.

Dutton. \$3.50.

## RULES NOT ALWAYS FOLLOWED

A most timely book that should clear up much existing discussion about neutrality, mines, war at sea and the Hague treaties is the *Outlines of International Law* by Admiral Charles H. Stockton. The present volume presents the evolution of the law of nations from the time of Grotius to the opening of the Great War of 1914. It is a safe, well-selected compilation of recognized authorities rather than interpretation of the trend of modern international relations.

Dodd, Mead. \$2.50.

## FROM THE KENTUCKY MOUNTAINS

*Sight to the Blind*, by Lucy Furman, gives another pathetic yet humorous glimpse of conditions with which the

settlement school in the heart of the Kentucky mountains has to contend and its splendid results. The little story, as unpretentious as *Mothering on Perilous*, is slipt in between an appreciative introduction by Ida M. Tarbell and an afterword by the author telling of some of the work that has been done for these "little sons and daughters of the Revolution."

Macmillan. \$1.

#### COMPENSATIONS FOR THE VEGETARIAN

Thanks to the mother of invention, the ranks of the vegetarians are swelling rapidly. Who knows but the prophecies of prolongation of life will be fulfilled and a race of centenarians result? Marie McIlvaine Gillmore has prepared a most complete receipt-book on *Meatless Cookery*, including novel and liberal uses of cheese and fruits, vegetable gelatines and meat substitutes, and especially valuable menu suggestions.

E. P. Dutton. \$2.

#### A PERTINENT QUESTION

*Must Protestantism Adopt Christian Science?* The Rev. Dr. J. Winthrop Hegeman, a clergyman of the Episcopal Church, answers this question with a decisive affirmative. He holds that Christian Science bears much the same relation to Protestantism today as early Christianity did to the Judaism of that period. The author doubtless has a competent understanding of Christian Science, but he is singularly defective in his logic and in the knowledge of the genius of modern Protestantism.

Harpers. 75 cents.

#### SYMPATHY WITH SANITY

The ever-problematical and popular small boy again attracts his share of attention in *The Training of a Working Boy*, by Rev. H. S. Pelham. As a man who has become a theorist only after a broad experience, the author candidly and simply discusses the English working lad, his environment and his needs, his individuality and its development not thru charity, but thru comradeship and understanding.

Macmillan. 50 cents.

#### FROM KINDERGARTEN TO COLLEGE

The germ of practicality in *The Industrial Training of a Girl*, by William A. McKeever, is a vigorous one or it would have miserably perished in such an atmosphere of sentimentality, but when disentangled from "baby hands" and "soft little fingers" the author's latest educational treatise offers his usual constructive and valuable material.

Macmillan. 50 cents.

#### FROM THE SOUTH'S POINT OF VIEW

Webster and Hayne, in their great speeches, touched on most of the constitutional arguments advanced in *Richardson's Defense of the South*, by J. A. Richardson. Its six hundred pages are concerned with proving that the North, and not the South, was the enemy of the Constitution. A sincere patriotism marks a work which otherwise seems futile.

A. B. Caldwell.

Most painters are anxious to do good work. Most painters know the good that

## The Truth About Poultry

Get the Facts by  
Reading **The  
One-  
Man  
Poultry  
Plant**

Successful Methods of Men on Farms or Small Acreage.  
Complete in twelve parts; printed in one volume.

By **DR. N. W. SANBORN**

REAL work, with real poultry, on a real New England Farm. This is a simple story of what has been done by a man, at forty-five years of age, town bred and city educated, getting out of practice of medicine, buying a small farm in the hill country, and making a success of the venture. Not only is the rearing of chicks and the management of adult fowl completely covered, but the interesting side issues of fruit growing, grain raising and the production of milk, that cannot be escaped on a real farm. You get rugged facts—rarely found in print. The truth about poultry as found in actual life on a one-man poultry farm.

**You Can Do the Same, Book Tells How**

**OUR SPECIAL OFFER**—The One-Man Poultry Plant, in twelve parts (book form), and the American Poultry Advocate, one year for only 50 cts., book and Advocate, three years, for only \$1.00, if order is sent at once.

Our paper is handsomely illustrated, practical, progressive, and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cts. a year. 3 months' trial 10 cts. Sample copy free. Catalogue of poultry literature free. Address **AMERICAN POULTRY ADVOCATE, 517 Hodgkins Bldg., Syracuse, N.Y.**

# THE MARKET PLACE

**MINIMUM PRICES AND  
SPECULATION**

For four months the Stock Exchange was closed. It is now open with the unusual restriction upon trading of a minimum price barrier below which stocks and bonds may not be sold on the floor. It is an interesting experience for Wall Street—tho perhaps a painful one—and out of it may come valuable light upon some vexed questions that are perennially subjects for debate. Stock speculation has always been condemned by many who looked at it from only one point of view, and that a limited one, as an unmitigated evil practically identical with gambling. On the other hand, free speculation in securities has been adjudged by most serious students of the subjects as an indispensable and thoroly useful accompaniment of an open security market. The financial world is now having an opportunity to see what a stock exchange without speculation is like. For the minimum price barrier makes speculation practically impossible.

The writer in the *New York Times Annalist* who uses the signature The Onlooker has set forth some interesting thoughts on this subject, which we cannot forbear reprinting. It is not that we agree with all that he says. But what he says is stimulating to thought. And what we need more than anything else in our consideration of the problems of the financial world is thought. Prejudices, feelings, sentiments, impressions are easy to acquire. Thinking is hard work. Any one who can help us to think is doing a service. This we believe The Onlooker does:

"Wall Street's experiment with a minimum price schedule below which transactions on the Stock Exchange shall not take place has yet to justify itself by results; but when it has done so, as it probably will do, it will be all the more a text for those who in the future may seek to attack the economic desirability of unrestricted stock market fluctuations. It is a subject that has been very little discussed, because, for one reason, nobody is sure of what will happen. There are certain definite facts, however, which cannot by any subsequent circumstances be altered in the least. One is that by putting up their shutters all over the world, the Stock Exchanges openly confess that the convertibility of securities in large quantities without notice is like nearly everything else in the world, a limited convenience, so that only provided the emergency be great enough, securities are not convertible at all. Another fact is that the use of free speculation as an infallible corrective has been denied in the house of its friends.

"There is probably nobody thought-

fully interested in the phenomena of stock market speculation who, on reviewing at the end of a year the violent rise and fall in a few stocks, has not contrasted the sum of their fluctuations with the net result, and asked himself the use of it. On rumors, on expectations, on disappointment of those expectations, by reason of manipulation and the cupidity and necessities of speculators, a stock may have had a rise during the year of thirty points, a fall of twenty-five points, with a great variety of minor fluctuations, and may then have ended the year at a net price change of only five points, as if nothing had happened. And in many instances nothing has happened really to change the value of the stock. Its dividend may have remained the same, its earning power may have been unimpaired, and the proportion of the shares owned outright by investors may have only a little increased or decreased. But for all that, the stock has been a vortex of speculation; many millions of dollars have been staked, and won and lost, on the hazard of its going up or down. And for what use? The answers are well known. Stock Exchange speculation, says Wall Street, serves a very useful purpose, and, notwithstanding its abuse, it is worth all it costs. Evil is inseparable from good. And the greatest use of speculation is that it keeps a market for securities. In changes of eighths and quarters between transactions, on which at any time you can buy or sell very large amounts without notice. That is, on one side, convertibility, and, on the other side, the way of finding instant employment for large sums of idle money.

"That Stock Exchange speculation does serve that purpose none will deny. That it is worth what it costs will be disputed by many, and that, under certain exceptional conditions, speculation not only is not worth what it costs but cannot be afforded at all is now the testimony of the financial world itself. Everybody knows that if the Stock Exchanges of the world had not closed at the beginning of war last August there would have been a general panic, in which prices would have fallen headlong, and in which quotations would have represented not values at all but the necessities and unreasoning fears of the sellers. Equally, everybody knows that the liquidation, if unrestricted, would have run its course in a little while, that whatever had been sold had also been bought, and that the sellers' loss would have been the buyers' gain. Indeed, there were some who had the courage of that logic and opposed the closing of the New York Stock Exchange, arguing: 'Let Europe sell out if she will; the American investor and speculator together will take care of

## DIVIDENDS

### The Bowery Savings Bank

128 and 130 BOWERY.

NEW YORK, Dec. 14, 1914.

A semi-annual dividend at the rate of **THREE and ONE-HALF Per Cent.** per annum has been declared and will be credited to depositors on all sums of \$5.00 and upward and not exceeding \$3,000 which shall have been deposited at least three months on the first day of January next, and will be payable on and after Monday, January 18, 1915.

Money deposited before January 10 will draw interest from January 1, 1915.

WILLIAM G. ROSS, Secretary

### The Manhattan Savings Institution

644-646 Broadway, Cor. Bleecker St., N. Y.

127th SEMI-ANNUAL DIVIDEND

December 8, 1914.

The Trustees of this Institution have declared interest (by the rules entitled thereto) at the rate of **THREE AND ONE-HALF PER CENT.** per annum on all sums not exceeding \$3,000 remaining on deposit during the three or six months ending on the 31st inst., payable on or after January 18, 1915.

Deposits made on or before January 9, 1915, draw interest from January 1, 1915.

JOSEPH BIRD, President

CONSTANT M. BIRD, Secretary

ARTHUR STILES, Ass't Secretary

the liquidation. The foreigner cannot afford to sell our stuff back to us at less than we can afford to pay him for it. . . . And, indeed, American speculators and investors would have acquired in that way some rare bargains, provided the desire of Europe to sell was as great as was supposed to be the case, as it probably was not. The reasoning was flawless, but the corrective was too heroic. It simply couldn't be thought of seriously.

"Speculators, of course, could afford to see a four per cent bond sell at fifty and a seven per cent railroad stock at eighty, and investors would have bought them greedily, no doubt; but in the meantime, what of the banks that had loaned, respectively, eighty on the bonds and perhaps one hundred on the stock? What of the savings banks and insurance companies who would be unable to make their books balance, with their investments quoted at such prices? There is no telling what would happen. Therefore the Stock Exchange closed up. And when, in time, it came to open again, speculation still couldn't be trusted to apply the corrective, liquidation in excess of the ability of speculation to maintain reasonable prices was still doubted, and so the invention of a minimum price schedule, which is to say to the European holder of a four per cent bond, 'You may sell it to us at eighty, but no cheaper,' or to the holder of a seven per cent stock, 'We will buy that back from you at 105, but if you offer it at 100 we will not take it.' That sounds extremely irrational, and yet it was a very practical thing to do. And that it is a restraint upon professional speculation in a large way only adds to its practical value, as you will be told in Wall Street, where formerly you could hear only that speculation, free and unrestricted, under all conditions, was the infallible corrective and, with all its evils, was worth what it cost.

"There are two reasons why the minimum price schedule is a restraint upon large speculation. If a speculator buys stocks for a rise, and the price sinks to the minimum, trading ceases and his market is gone. He cannot sell out; therefore, he cannot protect himself. If, instead, he sells stocks for a fall, his profit is limited by the minimum price. . . . Nobody is anxious to assist speculation for the present. If the conditions are unfavorable to the speculator, then he will have to wait. That may be all right; but it is denying much that has been said in the past in defense of the speculator's right of access to bank funds and the use of violent fluctuations in the stock market."

The following dividends are announced:

Bank of America, semi-annual, 14 per cent, payable January 2.

Merchants' Exchange National Bank, semi-annual, 3 per cent, payable on and after January 2.

United States Realty & Improvement Company, coupons on Twenty-year Debenture 5 per cent bonds, payable January 2.

Bowery Savings Bank, semi-annual, 3½ per cent, payable on and after January 18.

La Rose Consolidated Mines Company, quarterly, 2½ per cent, payable January 20.

### THE SOUTH BROOKLYN SAVINGS INSTITUTION.

160 and 162 Atlantic Ave., Brooklyn, N. Y.

4%

Interest at the rate of **FOUR PER CENT.** per annum will be credited to depositors for the six months ending December 31, 1914, on all accounts entitled thereto from \$5.00 to \$3,000, payable on and after January 15, 1915.

Deposits made on or before January 10, 1915, will draw interest from January 1, 1915.

WILLIAM J. COOMBS, President

CLARENCE S. DUNNING, Treasurer

### MERCHANTS EXCHANGE NATIONAL BANK of the City of New York.

December 22, 1914.

The Board of Directors have this day declared a semi-annual dividend of **THREE PER CENT.**, free of tax, payable on and after January 2, 1915, to stockholders of record at the close of business December 26, 1914.

E. V. GAMBIER, Cashier.

### THE BANK OF AMERICA.

New York, December 18, 1914.

The Board of Directors have today declared a semi-annual dividend of fourteen (14) per cent., free of tax, payable January 2, 1915, to stockholders of record of this date. The transfer books will remain closed until January 4, 1915.

W. M. BENNET, Cashier.

### D. C. HEATH & COMPANY

BOSTON.

Preferred Stock.

The regular quarterly dividend of one and three-quarters per cent. has been declared by the Directors of this Corporation, payable January 1, 1915, to preferred stockholders of record December 24, 1914. Checks will be mailed.

WINFIELD S. SMYTH, Treasurer

### WESTINGHOUSE

Electric &amp; Manufacturing Company

A quarterly dividend of 1¼% on the **PREFERRED** stock of this Company will be paid January 15, 1915.

A dividend of one per cent. on the **COMMON** stock of this Company for the quarter ending Dec. 31, 1914, will be paid Jan. 30, 1915.

Both dividends are payable to stockholders of record as of Dec. 31, 1914.

H. D. SHUTE, Treasurer

New York, Dec. 23, 1914.

### AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A Dividend of Two Dollars per share will be paid on Friday, January 15, 1915, to stockholders of record at the close of business on Thursday, December 31, 1914.

G. D. MILNE, Treasurer

### AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their terms on January 1, 1915, at the office of the Treasurer in New York will be paid by the Bankers' Trust Company, 16 Wall Street.

### GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

**HOME LIFE INSURANCE COMPANY**

Geo. E. Ide, President.

256 BROADWAY

NEW YORK

## EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON IN  
CONNECTION WITH THE INDEPENDENT EFFICIENCY  
SERVICE

**T**HE aim of the Service is to increase health, energy, productivity, opportunity, for ambitious men and women; to educate employees in better, quicker and easier methods of work; to spread scientific optimism; to solve personal problems and surmount personal difficulties; to raise the standards of American life and labor thruout the world.

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, thru the Question Box or by personal letter. Please confine questions to one sheet.

When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

Mr. A. C. D., Arizona. "How to save money systematically?"

You are already efficient—you put your whole message into five words, and brevity is the brains of efficiency. Thank you. The five words were typewritten—thank you again. We have had five-page letters, written with sea-sick fingers and a discouraged pen. Would that all our friends might learn from you.

In the science of money-saving there are at least seven fundamentals: (1) a regular, stated income; (2) a tabulation of minimum expenses to keep you well and comfortable; (3) a strong, sustained motive for economy; (4) a specific object; (5) a safe, permanent and growing investment; (6) a weekly or monthly apportionment of salary as received; (7) a friendly understanding and system of co-operation on the part of your family and others who may now be only too glad to help you waste your money.

Check up on this analysis. Find where you are weak, or absent. Having rated yourself, set yourself to strengthen the weak spots and to fill in the empty places. Saving is almost wholly a question of deliberate determination, careful planning, and rigorous adherence to your plan.

Prof. A. H. D., Iowa. "Will you do me the favor of giving me a bibliography on Efficiency?"

Such a work is now in preparation, but requires the utmost care. The field is so vast, the branches are so many, and the reliable texts are so few, that the whole range of publishing houses must be covered. You will be notified when our Efficiency Book List is ready for distribution.

A college student, California. "Can you suggest a system of exercises that will make me a prize-winning athlete? Especially, how can I develop my biceps—is there any quick, guaranteed, method?"

Why do you wish an overgrown biceps? Are you studying to become a blacksmith? Or do you merely want to "show off?" The youth who boasts of his biceps does so because he hasn't any brains to boast of.

You ask for a "quick, guaranteed, method." There is no such thing, in athletics or any other field of worthy endeavor. The guaranteed method is always slow, usually hard, often ugly and painful.

As for muscular development, aim at the torso—you haven't time, as a student of Efficiency, to bother much with the biceps. Your lungs and heart and stomach and liver and solar plexus make your health—

and a large degree of your mentality. The muscles that surround these organs—not the superficial muscles of arms and legs—will improve your circulation, digestion, vitality and longevity. The rowing-machine, parallel bars, flying rings, punching bag, and other gymnasium devices for strengthening the torso muscles are superior to all biceps-beautifiers.

Ask the Editor of *Physical Culture*, Flatiron Building, New York City, for a method of muscle-building to suit your case.

Rev. H. S., Wisconsin. "You have a vital gospel to preach, one that I thoroly appreciate. I am especially interested in the phase of inefficiency caused by the use of alcohol. The treasurer of the largest factory in this city tells me that 75 per cent of all their accidents have been due directly to drink. Where can I get statistics on this subject? I have been putting up temperance posters in our mills and factories once a month."

Congratulations on your enterprize and wisdom—you are beginning a temperance reform in the right way, by getting facts on the money-loss due to liquor. Your leaflet, enclosed, on "Making Prohibition Sentiment," is a masterly document—I wish that every temperance advocate might read and profit by it. Hard-headed men have no use for soft-hearted theories; and the teaching of temperance will become a part of the welfare work in business corporations when we establish temperance on a basis of logic, science, and pecuniary gain.

The statistics you require may probably be had from the National Civic Federation, Metropolitan Tower, Twenty-third Street, New York City. Write Mr. Ralph M. Easley, organizer and executive head. Be sure to mention The Independent, and to enclose stamped, self-address envelope. A book, "The Anti-Alcohol Movement in Europe," by Earnest Gordon, Fleming H. Revell & Co., 158 Fifth Avenue, New York City, may contain useful information. A pamphlet, "Can Insurance Be Applied to Lengthen Life?" recently prepared by Arthur Hunter, chairman Mortality Investigation, New York Life Insurance Company, 346 Broadway, New York City, offers eloquent facts on temperance. The Anti-Saloon League, 156 Fifth Avenue, New York City, should be able to give you valuable data. The American Magazine for October, 1912, published an article on the scientific cure of alcoholism being employed at the Charles B. Towns Hospital, 273 Central Park West, New York City. Alcoholism is a disease more than a crime. In the saloon there are factors of psychology, food, fatigue, heredity, sociability, and other symptomatic causes which "drive a man to drink." These must be changed or removed.

Intolerance is a form of intemperance—do not be intemperate yourself. And remember that the saloon is "the poor man's club"; your problem is not merely to enact its abolishment, but more to provide a satisfying substitute. Where shall working-men gather, and talk and joke and make friends, if not in the saloon? Figure this out—then close the saloon!

Miss A. J. S., South Dakota. "I would like to get material for an oration on Efficiency; or if you know where I could get one already written, I should be very glad to pay for it."

You do not want an oration somebody else wrote—you want the benefit of writing it yourself. We will suggest books containing material, when we know exactly what you need. Is the oration to be on general efficiency, industrial efficiency, educational efficiency, domestic efficiency, social

efficiency, or any other special kind of efficiency? There are as many kinds as there are trades and professions.

Among the standard books available for your purpose may be mentioned: "The Education of Self," by Dr. Paul Dubois, Funk and Wagnalls; "The Efficient Life," by Dr. Luther Halsey Gulick, Doubleday, Page & Co.; "The Human Machine," by Arnold Bennett, George H. Doran Company; "Human Efficiency," by Dr. Horatio W. Dresser, G. P. Putnam's Sons. All these publishers have New York City headquarters.

Would it not be a good idea for your class to present to your school, on graduation day, a real Efficiency library? You could buy for \$12 to \$15 ten or more valuable works on the subject. Then you could order a neat shelf or rack from a local cabinet-maker; and thus leave a most useful reminder of your class for all the classes yet to come. We should be glad to prepare a message for you to read on graduation day, at the presentation ceremonies. Might not this be made a unique and enjoyable occasion, reflecting honor and credit on the enterprise of your class? May we not help you plan such a program?

Mr. J. H., New York City. "I am anxious to know all there is to know about Efficiency. However, it must necessarily take a long time before your series of articles can be completed: are there no more direct means to bring about the desired result?"

I have studied and experimented fourteen years—and am only beginning to understand the subject. You hope to master it in a few weeks. Your enthusiasm is fine—follow it. But your clock is fast—regulate it. Efficiency means a long, steady pull toward a great life-purpose. We could tell you of institutions that claim to work marvels of health and wealth overnight—but we will not do it. Such a service would be neither honest nor efficient.

A series of talks and lectures, for members of schools and corporations in Greater New York and vicinity, has been planned, is now being prepared, and will be put in effect as soon as possible.

The first of these talks will be given at the West Side Y. M. C. A., of New York City, on Tuesday evening, January 12th, the subject being "How to Study Efficiency." All our men readers in the city are invited. As other meetings are held, you will be advised. Meanwhile, follow closely and regularly the articles and the Question Box; you will see here many ways of reaching sooner the goal of your ambition.

"Well, the New York Stock Exchange is open again, Mrs. Nurich." "I'm so glad. Now those poor men can go off the curb." —*Buffalo Express*.

Robby—Elsie, I—I I-love you!  
"Oh, Robert!"  
"Well, Skinny Adams dared me to say it." —*Life*.

Bix—I see there's a report from Holland that concrete bases for German cannon have been found there.

Dix—Don't believe a word you hear from Holland. The geography says it is a low, lying country. —*Boston Transcript*.

Mrs. Henpeck—Is there any difference, Theodore, do you know, between a fort and a fortress?

Mr. Henpeck—I should imagine a fortress, my love, would be harder to silence! —*London Opinion*.

Faint heart ne'er won fair lady; but fair lady has occasionally won faint heart. —*Puck*.

"Dad," said the small boy, "I hear Tom Morse is going to be married one day this week."

"Yes," answered the father. "Mr. Morse has only three days more."

The boy sighed. "The last three days," he said, "they give them everything to eat that they ask for, don't they, dad?" —*New York Evening Post*.

## INFORMATION!

The Independent invites inquiries from its readers, and will gladly answer all questions pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

# BOTH SIDES

## SHALL WE ENLARGE OUR ARMY?

# A DEBATE

*RESOLVED: That the army of the United States should be enlarged and strengthened.*

**A** RESOLUTION introduced recently into the House by Representative Gardner and into the Senate by Senator Lodge calls for the creation of a National Security Commission "to make investigation into the question of the preparedness of the United States for war, defensive or offensive." This resolution has aroused widespread discussion, much of which centers about the question of enlarging the army.

### BRIEF FOR THE AFFIRMATIVE

I. The present position of the United States among the powers necessitates military preparedness.

A. Our desire to avoid war cannot guarantee us against it.

B. A single nation cannot safely reduce armaments.

C. The following may cause friction:

1. Our extended foreign policy.
2. The Monroe Doctrine.

If Germany wins the European war her South American trade and colonization may prove a menace; Japan may cause trouble if the Allies win.

D. We cannot tell what part we may have to take in the European war.

1. Our neutrality may be violated.

2. Our efforts at mediation will be better respected if we are in a position to enforce decisions.

E. In the end we shall probably have to intervene in Mexico. "Intervention . . . will prove the sole alternative to an indefinite state of anarchy." Sydney Brooks in *Nineteenth Century*, 75: 1194, June, 1914.

II. The United States army is not prepared for war.

A. It is smaller than the armies of Russia, Germany, France, Austria, Italy, Japan, Great Britain or Mexico.

B. It lacks a trained reserve.

C. Both the regular army and the militia are below war strength because of vacancies.

D. If attacked, we shall lack an adequate mobile force, which the European war has proved to be the only effective means of defense.

1. Too few men are left after provision is made for guarding our outlying possessions and our coast defenses.

2. The addition of untrained recruits to fill vacancies and make up for losses would destroy the efficiency of the regular force.

"Trained armies alone can meet trained armies." H. L. Stimson in *Harper's Weekly*, 56:12, Aug. 31, 1912.

3. Quick mobilization is impossible. Troops are widely scattered and unaccustomed to serving together.

E. Our supply of ammunition is insufficient for defense.

III. We cannot afford to have our army unprepared.

A. Any nation would be more apt to attack us if her chances of winning were strong. Belgium's neutrality was violated because she was thought unable to defend herself.

B. The financial risks of war are too great.

1. In cost of life.

2. In destruction of property and commerce.

3. In cost of ammunition.

4. In interest on war debt.

5. In pensions.

C. The moral risks of war are too great in endangering:

1. Our national honor.
2. Lives of our citizens.
3. Our standing as a force for peace.

IV. Recent proposals for strengthening the army are in accordance with our permanent military policy.

A. A reserve of regulars and militia will make a large standing army unnecessary.

B. Greater efficiency will be secured without increasing military expenditures.

1. There will be little additional cost for salaries in the regular army.

2. Ten men can be maintained in the reserve for the cost of one in the regular army.

3. Earlier retirements will lessen the number of high salaries.

C. Selling of useless and expensive military posts will more than offset any additional cost.

V. An enlarged army would be a great advantage to the country in time of peace.

A. It would train more citizens

1. In physical efficiency.

2. In prevention of disease.

3. In obedience, respect for authority and patriotism.

B. With shorter enlistments more men with military training could enter economic life.

C. The army could better continue such constructive work as the following:

1. Engineering feats such as the building of the Panama Canal and the building of roads in Alaska.

2. Work in sanitation and medicine such as sanitation of the Canal Zone and the testing of anti-typhoid vaccine.

3. Police work in the Philippine Islands and in strike districts in the United States.

4. Rescue work in time of floods or earthquakes.

VI. Tho our ideal may be international peace thru disarmament, we must meet conditions as they exist today.

### BRIEF FOR THE NEGATIVE

I. There is no immediate possibility that the United States will engage in any war, offensive or defensive.

A. We have no reason to attack any nation.

B. Never have we been obliged to defend ourselves against invasion.

1. We have been the aggressors in all our foreign wars.

2. Any of these wars since the Revolution might have been settled by arbitration.

3. Many questions which might have caused war have been arbitrated.

C. Our geographical position makes invasion practically impossible.

D. No nation is now unfriendly to the United States.

E. None of the great European nations will be able to attack us for years to come.

F. The administration has demonstrated its ability to keep us from becoming involved in Mexico.

II. The United States should not now change her established military policy.

A. It has proved successful in the past.

1. We have never maintained a reserve.

2. We have always had the smallest standing army consistent with safety.

3. We have never been defeated in a war.

B. It is adequate for the present.

1. Absolute preparedness is never possible.

2. Our regular army and militia, when vacancies are filled, will be large enough for safety.

a. Successes of British troops in the European war show that a small trained force, reinforced by recruits, can be used against trained armies.

b. The strength of our navy and coast defenses make a large army unnecessary.

C. It is impossible to tell, at this stage in the European war, what means of defense will prove effective in modern warfare.

D. Enlarging the army would be extravagant.

1. Armed preparedness is more expensive than the financial losses thru wars it is meant to prevent.

2. The cost of living is already too high.

3. Money is needed for constructive work in education, in prevention of disease, in social betterment, etc.

III. Tho the army, in time of peace, is of great value in training for citizenship and in carrying on important public works, it does nothing which could not be accomplished at less cost thru other agencies.

IV. Enlarging the army is inconsistent with American ideals.

A. Establishment of a reserve is a step toward compulsory service and militarism.

B. The present European war has proved conclusively that military preparedness does not make for peace.

C. The influence of the United States in ending the European war and in furthering the cause of international disarmament would be destroyed if we should now prepare for war.

## J U S T A W O R D

The new subscribers added to The Independent's list on the thirtieth of December were a thousand and forty-nine in number, and the "stops" only thirty-seven, making the net gain for that day 1012. On the last day of the year the record of new subscribers was 658, and the "stops" twenty-nine, making the net gain 629. A proportionate gain for a whole year would make almost any circulation manager dizzy with delight. But of course it couldn't happen with The Independent—yet!

The third Efficiency Number of The Independent will bear the date January 25. Mr. Purinton's article in that issue will be entitled "Efficiency and Play," and the reader may be assured—for the writer knows—that it is as human, as stimulating, and as helpful for daily living as those which have preceded it. The "Efficiency Question Box" will appear next week. There has rarely been a more enthusiastic response to any feature of The Independent than has greeted the articles and replies to questions from Mr. Purinton's pen.

It is a really extraordinary coincidence that the Hundred Years of Peace should end almost simultaneously with the dispatch to Great Britain of a formal protest against her manner of exercising the Right of Search, which had so much to do with bringing about the War of 1812. But another war with Great Britain is practically unthinkable, and we may confidently count on the wisdom of our statesmen, stimulated by the century-old friendship, to find the businesslike way to adjust this business question.

The advertising pages of The Independent are reflecting from week to week the growing confidence of the business world, and more particularly the recognition on the part of national advertisers of the rapid development of The Independent as an exceptionally profitable advertising medium.

The immigration which passed thru Ellis Island in 1914 was only a little more than half that of the preceding year—573,675, in comparison with

1,163,993 in 1913. And yet the population of the United States continues to increase with unabated rapidity.

Six hundred schools and more have used The Independent in their classrooms during the past three months. And for every Chautauqua Circle in the country The Independent is the exclusive periodical element in the course.

One in every seven of the subscribers to The Independent in New York City appears in "Who's Who." This is significant testimony to the prominence of our readers.

## WHAT THE WOLVES SAID

Wolves came round after the battle, tearing the slain.—Recent message.

The wolves came round the Russian wounded slinking,  
The wolves came nosing round the German slain;  
Perchance they wearied of the river-drinking  
And sought a richer beverage on the plain.

Perchance these shaggy cold-emboldened howlers,  
By timorous mortals christened "beasts of prey,"  
Felt kinship with the wounded human prowlers,  
And marveled much what kind of wolves were *they*.

For wolves beyond a shade of doubt *they must be*—  
These things that tore their fellows tooth and nail.  
And Gray Coat howls to Gray: "What can the lust be  
That drives these men beneath October's gale?"

"To tear each other piecemeal in their trenches,  
To pin each other down with teeth of steel,  
To fill the air with death and deadly stench,  
And thunder-claps that make the forest reel?"

"We wild four-footed hunters make no slaughter  
To slake our thirst as do these bipeds grim  
Who pour each other's blood like Dnieper water,  
And rend their brethren madly limb from limb.

"There is no wood marauder lithe and savage  
Would glut his greed upon his ravening kind,  
Our pack will take its fill of bitter ravage  
And leave a taint of blood upon the wind.

"But never do we leave such witness gory  
As *these* do, piled on hill and slope and lea,  
Where rages Man—the Wolf's a bygone story.  
There is no need on Earth for such as *We!*"  
—Sydney Bulletin.

**THE GUARDIANS OF NEUTRALITY**

SENTRIES ON DUTY ON THE FROZEN FRONTIER OF SWITZERLAND AND ALSACE

# The Independent

VOLUME 81

MONDAY, JANUARY 11, 1915

NUMBER 3449

## ENGLAND AND AMERICA ON THE SEA

**T**HE President of the United States has addressed to the Government of Great Britain a friendly but vigorous protest on the subject of the treatment by the British Admiralty of American shipping. It is an interesting coincidence that this action should have been taken just a hundred years after the close of a war begun by the United States because Great Britain would not respect the rights of American shipping on the high seas.

This protest deals with a much vexed subject. Controversies between belligerents and neutrals over their respective rights upon the sea have been incidents of every considerable war of modern times. Such controversies do not mean hostility on the part of the belligerent toward the neutral nor on the part of the neutral toward the belligerent. They are merely the natural and logical outcome of the desire of each to preserve to the fullest extent its own national interests.

The fundamental rights in the case are perfectly plain. It is only when those rights come to be practically applied that conflict and confusion ensue.

**T**HE two principles which are perfectly distinct in theory and often antagonistic in practice are these:

Neutral trade in time of war has a *prima facie* right to go on unmolested.

Belligerent nations have the right to prevent the traders of neutral nations from supplying the sinews of war to the enemy.

In the application of these principles to any particular ship and its cargo several questions must be answered.

Is the vessel in fact a neutral or an enemy ship? If the latter, it is *ipso facto* subject to seizure and confiscation or destruction. If the former, the nature and destination of its cargo are the determining factors.

Does the cargo in fact consist of sinews of war?

Is the cargo destined for the armed forces of a belligerent power?

These two questions are not in reality separate questions, but interlocked. For there are some things which are not in themselves sinews of war, and therefore not indubitably subject to seizure, which become such when definitely destined for a belligerent army or navy.

In order that these last two questions may be answered intelligently, it has been the endeavor of the nations of the world to draw up two lists of articles, known respectively as absolute contraband and conditional contraband. The first list contains articles of direct application to military or naval uses. Absolute contraband includes such articles as arms, explosives, military clothing, harness and equipment, armor plate

and warships. The articles on this list are subject to unconditional seizure whenever they are shown to be destined to territory belonging to or occupied by the enemy, or to the armed forces of the enemy.

Conditional contraband includes such articles as foodstuffs, forage, money, fuel, barbed wire, railway materials. Conditional contraband is liable to capture when it is shown to be destined to the armed forces of the enemy or to an enemy government, but not otherwise. The lists of absolute and conditional contraband are not immutably fixed. It is the custom, honored by usage, but generally accepted by neutral nations under protest, for a belligerent, in time of war, to make its own lists of contraband, which may or may not agree in all points with the previously accepted practice of other nations. Great Britain, for instance, has notified the world during the past five months that many articles formerly considered as conditional contraband will henceforth be regarded by her as absolute contraband. Herein lies one ground for disagreement between belligerent and neutral nations.

A second ground for disagreement lies in the question of destination. There is a doctrine, known as that of "continuous voyages," almost exclusively developed and applied in the past by Great Britain and the United States, which declares that conditional contraband is liable to seizure even when the destination of the vessel carrying it is a neutral port, when its ultimate destination is shown to be the armed forces of the enemy.

**T**HERE is one other principle that must be clearly understood in apportioning the right and wrong in such a controversy as the present one. A belligerent nation has the unquestioned right to stop and search neutral merchantmen in order to determine whether they are in reality neutral vessels and not enemy ships in disguise, whether there be contraband in their cargoes, and whether the contraband be in fact destined for the enemy's use.

In the light of these established principles, what is it that the United States has to complain of in the acts of the British navy?

We are protesting because the British navy is stretching the doctrine of continuous voyages to a tenuous thinness, in diverting, with too little regard for neutral rights, ships carrying American cargoes against which there is little evidence of illegality, and in general creating such a state of apprehension among well-intentioned American shippers as seriously to interfere with American commerce.

American ships, it is asserted, have been not only stopped and searched, but taken into British harbors on

flimsy suspicion and held there for unwarrantable times, to the great detriment of the shippers' interests. A press dispatch gives an estimate of the value of American cargoes held in British ports pending a determination of their character and ultimate destination of more than ten million dollars.

Great Britain has also extended the doctrine of continuous voyages to what is declared to be a wholly unwarranted degree by holding up shipments not only of absolute but of conditional contraband to such neutral countries as Holland, Denmark, Sweden and Italy. The justification for such practises, in the British contention, lies in the fact that the territory of these countries has a common frontier with that of England's enemies, making it necessary for England to stop such shipments before they are landed in neutral ports if they are to be stopped at all.

It is natural for Great Britain, the great sea power of the Allies, to take the utmost pains to keep all kinds of contraband out of Germany and Austria. Perhaps the greatest hope of success for the Allies lies in the fact that, as matters now stand, Germany and Austria are cut off from the outside world and must fight-it out on their own resources. The Allies have forged an iron ring about their enemies, and while that ring can be kept intact, a mighty pressure that may some day become unbearable can be exerted upon them. It is perfectly understandable that England, on behalf of her allies, should do her utmost to keep that ring inviolable.

It is equally natural that private citizens of neutral countries—private American citizens—should seek to slip thru the ring for their own profit. Perfect neutrality on the part of a nation may well be expected and demanded, and indeed secured. Such neutrality the United States as a nation has preserved. But complete neutrality on the part of an individual at the expense of personal commercial advantage is too much to expect. If American business men can stand to make war profits by running the gauntlet of the British navy with contraband, it is too much to expect of human nature that they will not essay the feat. Running a blockade is fair sport. The stakes are high, both to win and to lose. The blockade runner strives to dart thru at his peril. It is true there is no blockade declared of German and Austrian ports. But the principle is the same. The carrier of contraband destined, by however roundabout a way, for German and Austrian forces, sails a perilous sea at his own risk.

The present controversy has its origin in two inherent and legitimate tendencies—the desire of a warring nation to keep the sinews of war from the armed forces of the enemy; and the desire of business men to sell their goods in the best market and to reap profits where they may.

We are not here seeking to adjudicate this controversy. We are aiming to explain what it is and whence it arose. For the first step toward the settlement of any question is to understand it. And it is too easy to take sides in a quarrel before we know what the quarrel really is.

It is eminently proper that the President of the United States, having evidence that American merchants and American shipping are not receiving what he believes to be fair treatment at the hands of the British navy, should make a strong and impressive

protest. To do less would be to fail of a high duty. Now let Great Britain state her case. Thus may the merits of the case be determined and justice be served.

The case will be settled, as the protest has been made, in all amity and good feeling. The lesson of the Hundred Years of Peace is before our eyes. The English speaking peoples have learned that lesson too well.

## THE RIVAL SAINTS

EASTERERS thought it rather ambitious of the Californians to get up an exposition of their own. They are hardly yet awake to the fact that the Californians have got up two expositions at the same time. This is not, as it seems, a wasteful duplication. It will assist the visitor to realize the very important fact that there are two Californias. Calling a stretch of country seven hundred and twenty miles long by the same name does not make it the same if it happens to stretch north and south. Extension east and west would not make so much difference, for, as the anthropogeographers are always saying, it is latitude and not longitude that marks distinctions in temperament, customs, tastes and ideals.

It is not our purpose here to attempt to differentiate the Californians of the North from the Californians of the South. For one reason we have not space for it, and for other reasons we should beg to be excused. Not that we have anything bad to say about either, but what good we have to say about either might not be appreciated by the other section. Comparisons are odious, however complimentary they may be.

The expositions of San Francisco and San Diego seem likely to express quite emphatically and picturesquely the characteristics of the two sections, and the tourist cannot say that he has seen California unless he has visited them both. What would the New Englander think of the Californian who said that he did not need to see Boston, for he had gone to the Jamestown Exposition at Norfolk, Virginia? Well, San Francisco and San Diego are as far apart, whether we measure by miles, climate or temperament. But, mind you, we are not saying which stands for the Boston and which the Norfolk of the Pacific coast.

The outlines of the Panama Exposition at San Francisco are still somewhat hazy in our imagination as yet, but that at San Diego is, thanks to the fine photographs, already assuming a concrete and very attractive form; the form of the "castle in Spain" of which we have dreamed when under the spell of Irving's glowing style; a vision of patio and prado, of cloister and arcade, of palms and pergolas. The new stuff our architects have to work with, ferro-concrete, gives them a power of expression never possible before, and if they do not accomplish wonders with it, it will prove them lacking in creative imagination. They can cast where the older architects had to carve; they need not pile, for they can pour. This gives them not only greater speed, but a direct control of artistic effects hitherto unattainable. The rich molding of capitals and cornices shows how the architects of San Diego have reveled in the freedom of the medium. They have caught the spirit of the Spanish but avoided slavish imitation. In these buildings the medieval and the modern are happily

combined, and since they are permanent structures we are saved from the disenchanting feeling of theatricality which marred our enjoyment of the staff architecture of earlier expositions. But the buildings of the World's Fair of 1893 at Chicago produced a lasting effect upon the artistic taste of the country, and we may expect as great an influence upon those who during the coming year visit this new Court of St. James's on the Pacific coast.

### THE DIFFICULTY OF DOING GOOD

THIS is a kind-hearted world. We all of us are susceptible to sympathy; most of us willing to do something to relieve suffering. But when it comes to doing it we run against obstacles. Whatever we propose somebody objects to, so it is no wonder if we finally get discouraged and quit trying.

The case of Belgium is an instance in point. All hearts were wrung with the reports of homes destroyed and people impoverished by the ruthless invader. The tales of children left lost and alone appealed to the mothers in the neutral nations, and homes in England and America were opened to the orphans of the war. "Buy a Belgian baby" superseded "Buy a bale of cotton" as a slogan. But here the strong hand of the Church interposed to check these charitable impulses. Since most of the population of Belgium is classified as

Catholic, the chances were that any waif, too young to know its name, belonged to that faith and it would never do to have its immortal soul imperiled by being brought up in an heretical family. Some Protestants have surmounted the obstacle by paying the sisters of a Catholic orphanage to take care of the child instead of adopting it as their own. Nothing is said about the danger that the orphaned baby of some intolerant anti-clerical, of whom there are many in Belgium, should be brought up in a faith that its parents abhorred.

It might be supposed that times of such distress would soften racial and religious prejudice, but it seems on the contrary to intensify it. *The New Witness*, Cecil Chesterton's paper, is furious because several Jewish ladies and gentlemen have been permitted to serve on the committees for the reception and care of Belgian refugees in England; this is "an outrage," "an insult" and "a grave scandal." Now, the Jews are distinguished for their charity; they not only care for their own poor,

but are generous in helping to relieve others by both money and personal service. Whenever they see the Church of St. Gudule, erected to commemorate the barring of the Jews of Brussels and Louvain, they must feel that they have no great reason to love the Catholics of Belgium, and if they are willing to aid them in their distress it indicates a forgiving spirit that we should like to call "Christian" if the word were not appropriated by those who sneer at these charitable efforts.

Another good impulse was nipped in the bud by the Belgian Government when it frowned upon our offer of American hospitality to Belgian refugees. We have been so accustomed to regard this as the land to which the oppressed of all nations could flee that there was a spontaneous movement for the suspension of any restric-

tions on immigration in favor of Belgian refugees, and offers of land and occupation and passage money were coming in. We had received the Irish when they were persecuted by the English, the Jews when they were persecuted by the Poles, the Slavs when they were persecuted by the Austrians; so we were prepared to extend a similar welcome to the Belgians persecuted by the Germans. But no, Belgium wanted all her people kept in her own narrow land, even tho they could find opportunities for a better living in the New World.

The shiploads of supplies that we are sending to Belgium arouse protests of all sorts. If we send food

we are interfering with the plan of the Allies to starve out the enemy. If we send money we are contributing to the payment of the tribute imposed by the invader and so aiding to support the German army. If we send goods we are spoiling the market for home made products. If we send men and women who are willing to give their services for nothing to help the poor and sick we are cutting down wages and breaking up the guild of trained nurses.

Verily, the way of the benefactor is hard!

### THE IMMIGRATION BILL

AS the Immigration Bill passed the House it was bad enough, but the Senate has made it worse. The House excluded all immigrants who cannot read and write in some language; and the Senate has added an amendment excluding all of African or negro blood. The President was known to be opposed to the literacy test, but he had not given intimation that he would veto

*PLUMES of fire are dropped from the clouds on undefended towns and cities. The United States is silent.*

*Deadly mines are strewn on the high seas. The United States is silent.*

*Buildings dedicated to religion, art, science and charity are razed to the ground. The United States is silent.*

*Enormous fines, far in excess of military necessities, are levied on ravaged cities. The United States is silent.*

*Seven millions stand emaciated in Belgium. The United States is silent.*

*The Hague Conventions are thrown into the scrap basket. The United States is silent.*

*But—*

*The dollars of American trade are threatened. And the United States protests.*

*It is the duty of the United States to protect the commercial rights of her citizens. But it is also the duty of the United States to protect the civilization of the world.*

*Above all nations is humanity.*

HAMILTON HOLT

the bill if the test were retained; and the Senate retained the test by the surprising majority of 47 to 12. The amendment excluding Africans or negroes was adopted by a small majority. This is the first Congress since the Civil War that could have excluded negroes.

The literacy test was not accepted because of any particular regard for the alphabet, but because it was the most convenient way to restrict immigration. In the days before the Civil War it was the policy of the Democratic leaders in Massachusetts to keep their party "conveniently small" so that the offices would go around during a favorable administration. It is the present policy to keep the population limited as far as possible so that there shall be no competition for workmen's jobs, forgetting that population makes jobs and makes prosperity. The restriction is bad political economy. It is also bad efficiency, for it is the vicious and the criminal that we ought to keep out, and a literacy test would be entirely ineffective in this direction. It would be much more probable that the members of the criminal class could read than honest, industrious peasants. Lastly, it is bad morals as well. The children of these illiterate immigrants would have a much better chance to get an education here than they would in their present homes where the law would compel them to remain to their disadvantage. Good morals does not require a selfish patriotism, while good policy remembers that every strong immigrant adds, in his own bare hands, to the wealth of the country.

Only some 900 Africans were admitted as immigrants last year. It was pure prejudice against negroes that led to the exclusion of those coming from Africa or the British West Indies. We have been glad to admit them to dig the Canal. A tenth of the citizens of our own country are of negro blood, and the bill is an insult to them. This alone is sufficient reason why the President ought to veto the bill, should the House accept the amendment, as it is very likely to do.

## THE IMPOSSIBILITY OF MAINTAINING ENMITY

TAKE two million men, draw them up in two opposing rows facing one another, put guns in their hands, tell them they have enemies before them and order them to kill. They will obey you but they will not believe you. They will go on shooting until the final command "Cease firing!" is given, tho it may be months or years, but they will not remain enemies simply because they cannot. If they had remained a thousand miles apart they could have maintained a theoretical hatred for any length of time, but brought within a hundred yards of one another for a month even with a dead-line between they are bound to get to know one another and then whole-hearted hatred becomes impossible. For hatred is an expensive luxury. It is too exhausting to the system to be long kept active. It is an abnormal state and as such evanescent. It is different with love. You can love a person with whom you live intimately for a lifetime, but a perpetual state of hatred cannot be maintained under conditions of close association. Forced into unwelcome intimacy with your foe you would either fight till one of you were killed or you would grow to tolerate, even to like one another. Hate

is one of those diseases of which it is commonly said "you either die or get over it."

So it is not surprising to learn that the soldiers on the firing line cannot be kept from fraternizing with their enemies in spite of their officers. They dutifully toss hand grenades into the opposing trenches when told to do so, but they also throw over less dangerous missiles such as canned beef, soup, beans and pudding for the comparison of their commissariat, when told not to do so. An illicit traffic in newspapers, letters, tobacco and gramophone records soon springs up between the lines. Misery loves company and will seek it even in the ranks of "alien enemies." In the Woëvre a regiment had to be moved because the Germans and French became so friendly as to go swimming together at a certain hour of the day in the stream which ran between the lines. At another point where the trenches were only fifty yards apart a ruined house stood between which still retained a practicable fireplace. This being so obvious a convenience to both sides it was made by mutual consent a neutral ground where both sides could make their tea and care was taken that the fire should be kept up and hot water be always on tap. We even hear of international competitions in marksmanship, where a target is painted on a shovel held just above the rampart while the man who holds it runs along the trench and the enemy shoots at it. If this moving target is hit the score is signaled by the waving of a flag to the men in the other trench and then they in turn set up the ringed shovel to be shot at.

There was no official armistice on Christmas Day, but the men made one of their own. This is the way an officer in the Queen's Westminster Rifles describes it in a home letter: "Many of our chaps walked out and met the Germans between the lines. I went over in the afternoon and was photographed in a group of English and Germans mixt. We exchanged souvenirs; I got a German ribbon and photo of the Crown Prince of Bavaria. The Germans opposite us were awfully decent fellows—Saxons, intelligent, respectable looking men. I had quite a decent talk with three or four and have two names and addresses in my notebook.

"It was the strangest scene you could imagine—going out unarmed to meet our enemies, also unarmed. After our talk I really think a lot of our newspaper reports must be horribly exaggerated."

Joint concerts between the lines are not rare, as is natural when the trenches are within hearing distance, since many of the patriotic, religious and other songs are common to all countries. The English may be singing "God Save the King," the Germans "Heil dir im Siegerkranz" and the Americans of the Foreign Legion "My Country 'Tis of Thee," but it all sounds the same at a distance and it all means much the same at bottom. And at Christmas when German and British soldiers in Flanders joined in the same hymns it was a manifestation of the deeper harmony that underlies the present discord. It is not hypocrisy that these men should sing together of love and peace in the intervals of slaughter. It was the revelation of a mutual aspiration and desire. If there was any hypocrisy at all, it was the pretense of enmity, not the profession of affection.

Men are killing each other in Europe. It is true and a pity. But, thank God, they are not hating each other so much as it seems. That would be worse.

# THE STORY OF THE WEEK

## THE GREAT WAR

**December 28**—Russians cross the lower Nida and take villages held by Austrians. French take by surprise hamlet of St. Georges, near Nieuport.

**December 29**—President Wilson protests against detention of American ships in search for contraband. Russians defeat Austrians near Carpathians, taking 3000 prisoners.

**December 30**—Germans abandon eastern bank of Bzura. Hard and continued fighting in trenches between Meuse and Moselle.

**December 31**—French attack village of Steinbach, Alsace. Montenegrins invade Herzegovina.

**January 1**—Turks capture Ardahan in Russian Transcaucasus. British battleship "Formidable" sunk in Channel with loss of 550 men.

**January 2**—Germans gain in Argonne forest. Russians invade Hungary thru Carpathian passes.

**January 3**—German attack in Poland directed toward Tomaszow. French shell train at Altkirch Station, Alsace.

**The Capture of St. Georges** In Flanders the only event reported during the week of any importance is the capture by the French of the hamlet of St. Georges, which lies between the Yser and the canal, less than two miles east of Nieuport. The news we get of this war consists mostly of the bare and meager official announcements of results, and it is rare that we hear of cases of individual valor. Of this engagement, however, we have a picturesque account from a correspondent of the *Paris Matin*, which we quote because it illustrates the character of the fighting in this region:

The attackers had driven the Germans from the advance trenches, but, taking refuge in the houses in the village, the Germans soon placed their assailants in a difficult position. The situation of a force of Belgians isolated on a strip of land surrounded by a flood became critical and the artillery alone was able to effect anything against the enemy. The British batteries at Ramscapelle tried, but their shells burst over the French.

Six bluejackets then hoisted a three-inch gun on a large punt and poled along the canal behind the village, running the gantlet of the German rifles. As one was hit another took the pole and continued until he in turn fell stricken. The sixth man was mortally wounded as with a last push he sent the punt to the bank, where the French advance guard was waiting.

The gun was quickly landed and a few shots at 300 yards brought the houses on top of the Germans, who retreated into the arms of a battalion of Belgians. The latter completed the enemy's rout.

Meanwhile the French column triumphantly took possession of the heap of ruins which was formerly St. Georges, and before the night the engineers had established a bridge head enabling the Allies' artillery to debouch on the right of the Yser.

### Regaining the Lost Provinces

The French are rejoicing in the establishment of civil government in that part of upper Alsace which they have regained, as indicated by the appointment of a sub-prefect for the new *Département du Haut-Rhin*. For forty-four years this rich agricultural region has been under German rule, and whether the inhabitants have become accustomed to it or whether they still long for restoration to France is hotly disputed and not likely to be determined, since the question will presumably be decided by the issue of the war as a whole without reference to the preferences of the Alsations.

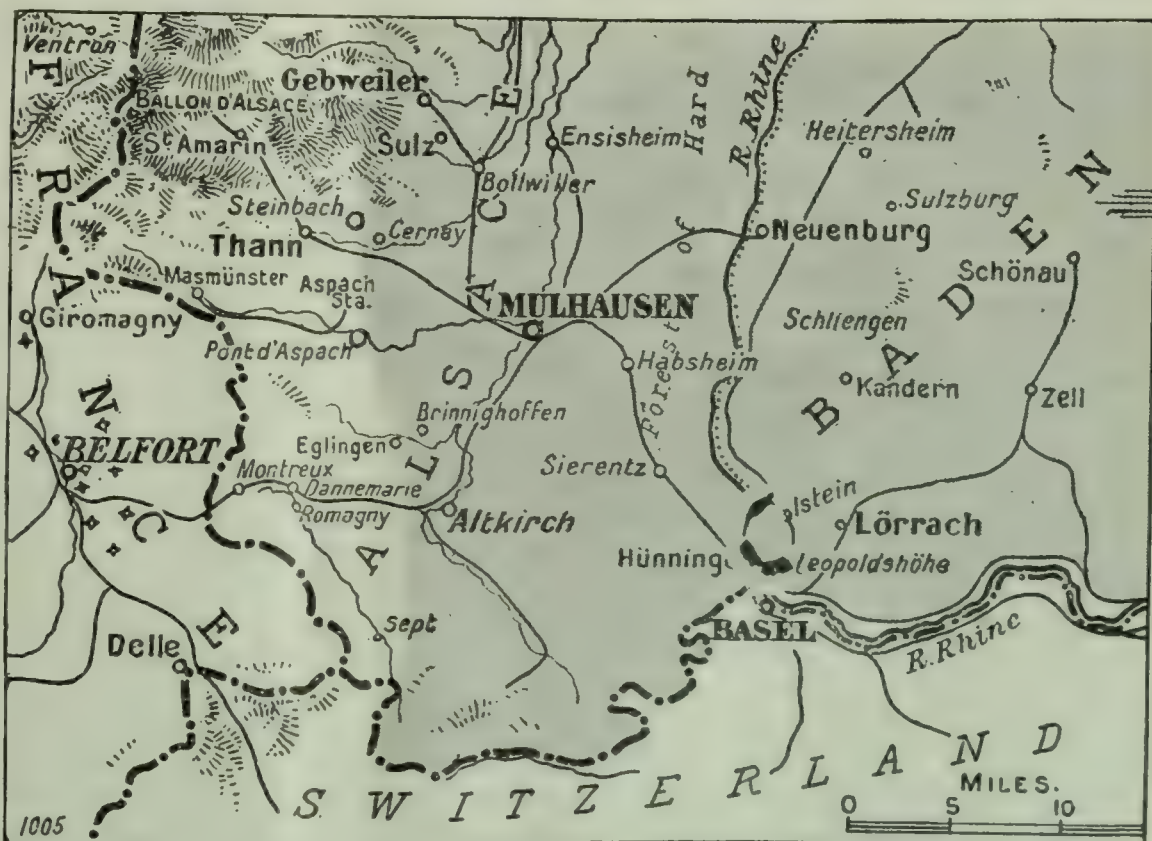

The French advance has penetrated upper Alsace for a distance of about ten miles from the border, with Altkirch and Mülhausen as its objective. Aspach station is held by the French in spite of the counter attacks of the Germans, and they have captured part of the town of Steinbach by hand to hand fighting thru the houses. Their lines have approached sufficiently close to Mülhausen so that they are able to shell

the German positions under the direction of the airmen. They also are within gunshot of the village of Altkirch. Heavy storms have checked the fighting in this region.

In the Argonne forest, west of Verdun, the Germans claim to have gained ground of late and to have captured here during December 2950 prisoners, 21 machine guns and 14 mine throwers.

### Entrenching in Poland

The campaign in the east seems to be undergoing the same transformation of character as took place in the western theater last September, when the Germans, finding they could not gain anything by their forward dashes, retired behind the Aisne and established themselves on the strategic line which they have held ever since. The lull in the fighting in Poland seems to indicate that the Germans feel that here, too, they have gone as far as they can, and that they will henceforth act mostly upon the defensive. Doubtless the failure to capture Warsaw before abandoning the offensive is a disappointment second only to their failure to capture Paris, but in this case, as in the other, the desire to take the capital is more for its political effect than strategic value. It may be that the reinforcements which Hindenburg is getting from France—200,000 are said to have

THE INVASION OF ALSACE

The French are regaining the lost provinces foot by foot and a strip about ten miles wide along the border is now under French civil administration. The towns of Altkirch and Steinbach are now the chief points of contention in Upper Alsace. The shaded area shows the territory held by the Germans at the beginning of the year.

© Underwood & Underwood

RUINING A RUIN

Whitby Abbey, which dates from the twelfth and fourteenth centuries, and has already felt the ravages of time, suffered further from the bombardment inflicted by the German raiders

passed thru Cologne on their way east—are intended to be used in a third attempt to take Warsaw, but it seems more likely that they will be used to straighten the fortified line either to the north or south of this point. The Germans are now within twenty miles of Warsaw, which is as close as they have ever been with any considerable force, but to the south their line had by the middle of October reached to the Vistula at Ivangorod. Apparently the Germans are trying to reach this point again before they “settle down,” for it is reported that a strong force, including troops drawn from the Bzura opposite Warsaw, is advancing from Piotrkow down the Pilica River toward the Vistula.

The new “Polish quadrilateral” in which the Germans are establishing themselves consists of the four railroad centers of Lodz, Lowicz, Skier-niewice and Piotrkow. These are now being strongly fortified with material obtained from the demolition of the factories. The 11-inch guns have been brought into this field mounted on sledges, and it is said that some of the new 17-inch guns have been shipped east from the Krupp works at Essen, tho whether these are intended for the defense of Thorn or Cracow, or for the siege of Warsaw, is not known. Lodz is the chief manufacturing center of Poland, and the stoppage of industry has thrown more than 200,000 out of work. The operatives, mostly Jews, and pitifully poor in the best of times, are now near starvation, in spite of the municipal

soup kitchens established by the German quartermasters. There is no milk to be had, so infant mortality is appalling. The winter is a hard one and coal is unobtainable.

The Germans have made no further efforts to cross the Bzura and Ravka rivers since their recent disastrous attempts to reach Warsaw from this point. Their losses in this field within the last few weeks amount to 200,000 men, if we may credit the Petrograd estimates. The Germans contradict the Russian claim to hold 135,840 prisoners of war, for they say this includes interned citizens. From Berlin the statement is given out that at the end of the year there were held in Germany the following prisoners, not including civilians:

	Officers	Men
French .....	3,459	215,905
Russian .....	3,575	306,290
Belgian .....	612	36,852
British .....	492	18,828
Total.....	8,138	577,875

The Campaign in Galicia The meaning of the recent operations in Galicia is now becoming clear. The plan of campaign adopted by the German officers who are now in command of the Austrian forces was an ingenious one, but nevertheless resulted in failure. When the Austrians resumed the offensive the last of November, the Russians were within gunshot of the outer ring of the Cracow forts. Upon the approach of the Austrians they retired eastward about fifty miles along the railroad to Tarnow, which

is protected by the Donajec River. Here they came near being surrounded and cut off by Austrian armies approaching from three directions. One of these moved down the northern bank of the Vistula; the second advanced eastward between Cracow and the Carpathians; the third coming thru the Carpathian passes south of Przemyśl attacked from the east.

But before the three armies could join they were met and defeated severally. The army on the Polish side of the Vistula was stopped at the Nida River and lost heavily in attempts to cross it. The two armies on the northern slope of the Carpathians were routed and driven back, one east and one west. This gave the Russians command of the mountain passes, which they are already using for the invasion of Hungary. They are also, for the third time, marching from Tarnow westward to the attack of Cracow. The Austrian troops seem to be completely demoralized and the Russians claim to have taken 30,000 of them prisoners in the month of December.

The Invasion of Hungary Hungary is protected by the fortifications of nature. On the south is the moat of the Danube, and on every other side it is enclosed by the rampart of the Carpathians, which sweep around it in an eight hundred mile curve, with both ends resting on the river. All of the fighting so far has taken place outside this rampart, that is, in Galicia and Bukowina, on the northeastern side of the great divide. Now, however, it is reported that the Russians are invading Hungary by way of the four railroad passes thru the mountains, and that the clergy and municipal officers are fleeing from Budapest in a panic. This report comes from Rome, the source of wildest rumors, and it seems quite incredible that the Russians would attempt to cross the range in the dead of winter with as many troops as stated, eight army corps or some three hundred thousand men. It is more probable that the movement is a Cossack raid such as was made in November.

But however insignificant such an invasion may be from a military point of view, its political effect is likely to be great, for the Hungarians have been complaining that their troops have been sacrificed in the defense of Austria and even Germany, and if their own land is invaded in force the Hungarian Government may insist upon withdrawing its troops from Galicia and Poland for home defense, or may possibly be disposed to treat inde-

pendently with Russia for terms of peace. In Transylvania the Rumanians, who form a large part of the population, are revolting against Hungarian rule and appealing to Rumania for protection. It will be difficult for Rumania to resist such an appeal, for it has always been her ambition to include within her domain the Rumanians on the other side of the Transylvanian Alps, but if the Russians should invade this territory from Bukowina, Rumania would have to give up all hope of it.

**Turkey Loses Egypt** On December 18 the British Government declared that Abbas Hilmi Pasha had been deposed from his position as Khedive of Egypt because of his adherence to the King's enemies, and that his uncle, Prince Hussein Kemal Pasha, had been put in his place, with the title of Sultan. This change of title means the abrogation of the fiction of Ottoman suzerainty, since only independent Mohammedan rulers have the right to the designation of "Sultan." Nevertheless, Sultan Hussein will have as little independence as his predecessor, for the Government of Egypt will continue to be controlled by the British resident agent. By appointing the eldest living prince of the family of Mehemet Ali the British Government has followed the old Mohammedan law, but has disregarded the Khedivial firman of 1866, which declares that the succession should be from father to son. Prince Hussein is over sixty years of age, and while living in Paris was closely associated with the Emperor Napoleon III in the days when De Lesseps was constructing the Suez Canal.

On the same day that Egypt was declared a British protectorate the British Government formally recognized the French protectorate of Morocco, which was consummated in March, 1912. This brings the entire Mediterranean territory of Africa under the control of the three friendly powers, Great Britain, Italy and France.

**Our Protest to Great Britain** The protest sent by cable to the British Government by our Government on the 28th ult., relating to interference with American trade with neutrals by the British fleet, was given to the public three days later. Already the substance of it had excited much interest at home and abroad. The protest is set forth in about three thousand words. It begins by saying that our foreign trade has been so seriously affected by frequent seizures and detentions of cargoes destined to neutral ports in Europe that a candid statement

© Underwood & Underwood

#### ENGLAND—NOT BELGIUM

At this doorway of a fine home in Scarborough a German shell killed a postman and the woman to whom he was delivering a letter

of our Government's views as to the British policy is required. This statement is made "in the most friendly spirit and in the belief that frankness will better serve the continuance of cordial relations than silence," which might be misconstrued into acquiescence in a course of conduct which our Government must regard as an infringement upon the rights of American citizens. While viewing with concern the many seizures, we were not disposed in the early days to protest, but waited with confidence for amendment, expecting it because the British Government had expressed satisfaction with guarantees given by Norway, Sweden and Denmark. But the war is nearly five months old and the objectionable policy has not been materially changed.

Commerce between countries which are not belligerents, the protest continues, should not be interfered with by those at war "unless such interference is manifestly an imperative necessity to protect their national safety." We are reluctantly forced to the conclusion that the present British policy "exceeds the manifest necessity of a belligerent" and subjects the rights of American citizens to restrictions which are not justified by the rules of international law or required for self-preservation. It is pointed out that the British authorities have not applied their own rules with uniformity. Copper has been detained because it was consigned to a country which did not forbid the exportation of it to Germany, but Italy's rigid prohibition

of exportation has not protected cargoes shipped for Italian ports. We are justified in asking how the British Government proposes to carry out its policy. Cargoes of foodstuffs, conditional contraband, have been seized without evidence that they had an ultimate belligerent destination. "Mere suspicion is not evidence, and doubts should be resolved in favor of neutral commerce." Doctrines stated by Lord Salisbury during the South African war are cited in support of the protest. The right to search is admitted when there is sufficient evidence to warrant a belief that contraband articles are in the cargoes," but there must be protest against long detention in British ports upon mere presumption.

Many of our great industries, it is added, are suffering because they are excluded from European neutral markets. Producers, exporters and steamship companies are pressing for relief from the menace which is gradually but surely destroying their business. Our Government, relying upon the British nation's deep sense of justice, confidently expresses the hope that British officials will be instructed to refrain from all unnecessary interference with the freedom of trade between nations which are sufferers, tho not participants, in the conflict, and that the British Government will conform more closely to those rules which have received the sanction of the civilized world and have been advocated by Great Britain in other wars. In conclusion, it is said that the condition of our trade with neu-

trials may "arouse a feeling contrary to that which has so long existed" between the two nations. It is becoming more and more the subject of public complaint, and there is an increasing belief that the British policy is responsible for the depression of certain American industries.

**How It Was Received** In England the friendly tone of the protest was recognized. There and in this country an amicable adjustment was expected. Our Government may be asked to certify or guarantee the correctness of manifests and bills of consignment. Great Britain will strive to make the neutral countries "water-tight." There have been leaks. On the other hand, it is admitted that attempts to conceal contraband goods have been made. Copper, it is asserted, has been hidden in bales of cotton. At Lloyds, in London, the insurance against war with the United States was for a day 15 per cent. Then the rate fell to 7 per cent.

Our Government's position was supported in Congress, without regard to party lines. Ex-President Taft said the protest was right and that the tone of it was admirable.

#### NO CONTRABAND HERE

Photographing bales of cotton by the x-ray to prove that there is no concealed contraband of war. This precaution was taken at New York with a cargo for Germany, on the initiative of the shippers, who hoped to avoid delay if the vessel should be searched

Mr. Knox, formerly Secretary of State and Attorney-General, expressed a similar opinion. In the Senate, Mr. Walsh set forth the record of seizures in the copper trade. Thirty-one cargoes, worth \$5,500,000, he said, had been taken. All were on their way to neutral ports. In Chicago it is asserted that in the last six weeks twelve Norwegian or Danish ships,

carrying \$5,350,000 worth of canned meat, have been seized and taken to English ports, where the meat has been confiscated. On the 2d, three American ships which had been detained for a month were released. Two had cargoes of oil. It is said that the British Government will propose the establishment of a tribunal or shipping board in which both nations shall be represented, and which shall consider questions like those to which the protest relates.

From the New York World

"OBSTRUCTING TRAFFIC, YOUR HONOR"

**The Executions in Mexico** It was predicted that Villa, Zapata and Gutierrez, the Provisional President of Mexico, would quarrel about the executions at the capital and elsewhere, but at the end of the week they were apparently in agreement. Our Government warned Gutierrez that no Mexican Government responsible for a policy so bloody and barbarous could hope for recognition at Washington. There was a panic at the Mexican capital. In four days 155 men, a majority of them former officers of the Federal army, were put to death. These men had been ordered to report at military headquarters. When they obeyed they were killed. Firing squads were at work night and day. There were executions daily at Juarez and elsewhere. General Lugo was put to death on his hacienda. Judge Prieda, an author, fled and reached American soil.

Villa said he had returned to the capital to stop the executions; that he was subject to the commands of Gutierrez, and that he approved the latter's decree which gave warning that all must have fair trials. It was not forgotten, however, that the firing squads were led by Fierro, his intimate friend (who killed Benton, near Juarez), and that he himself

had ordered by telegraph the interception and arrest of General Iturbide, thus ignoring the passport given by Gutierrez. Iturbide escaped by leaving at Santa Rosalia, 100 miles south of Chihuahua, the train in which he was accompanied by Canova, our Government's agent, and fleeing across the desert to Ojinaga, on the Texas border. He was pursued by cavalry, but he arrived safely in Texas. Villa publicly denounced Canova, and Palafox, a member of the Cabinet, asserted that he had been bribed. Even a member of Carranza's Cabinet said that our Government had no right to assist this "rich Mexican." Peace negotiations at Saltillo between Carranza and Villa generals came to nothing because of a disagreement about executions. When Zapata was denounced on account of these, the general representing Villa became angry and the meeting ended in a wrangle.

The convention, which was to have been held on January 1, to elect a President, was postponed until the 4th, and it was thought that there would be a longer delay. It was admitted that Gutierrez must go. Villa, it was expected, would cause the election of General Angeles, giving Zapata two-thirds of the Cabinet.

Work of the Armies There have been conflicting reports about the fighting. Zapata's forces have suffered reverses on the road to Vera Cruz. At Tepeaca he lost a battle, and in the vicinity of Puebla he was unsuccessful. Carranza predicted that he would have the capital in six weeks. On the west coast 7000 Carranza men went over to Gutierrez and Villa. The Carranza garrison in Oaxaca took similar action. General Jesus Carranza, the First Chief's brother, was put to death, with twenty officers of his staff. Villa won a victory west of Tampico, which gave him control of the Ebano oil district. He was also attacking Tuxpam, an oil port south of Tampico. In the northeast, Monterey was evacuated by Carranza's men, and the capture of Saltillo by Villa was reported. But it had not fallen. There was hard fighting around it. Carranza aided Salazar in the northwest, altho Salazar pretended to be making an independent revolution. He received supplies thru border ports of entry which Carranza's forces controlled.

At Naco, General Scott failed to obtain General Maytorena's approval of an agreement for a neutral zone, altho General Hill (the besieged Carranza commander) had signed it. Hill had proposed to take his men to Agua Prieta (near Douglas, Ari-

zona, if Maytorena would promise not to attack them. Maytorena would give no such promise. At Washington there was talk of sending an ultimatum. On the 3d, however, Villa superseded Maytorena, sending General Juan Cabral, with 8000 men, to take supreme command in that district. It was said that Cabral would sign the zone agreement.

Manuel Bonilla, an agent of the Gutierrez Government, has begun to survey the millions of acres owned by the Terrazas family in Chihuahua, intending to distribute the land among the farmers of small means. Our consul at Monterey reports that 2000 families there are on the verge of starvation. In many other parts of Mexico there is much suffering for lack of food.

Revolution in Paraguay On the first day of the year a revolution began in Paraguay, under the leadership of Colonel Escobar. He had been Minister of War in the Cabinet, from which he withdrew on account of a quarrel with the President, Dr. Eduardo Scherer, because the latter insisted upon economy, owing to the effect of the war in Europe upon Paraguay's revenues. Scherer was captured and placed in prison. He was elected in 1912 as the successful leader of a revolution.

The new Government in Hayti has demanded \$500,000 in gold which was recently sent to New York from the National Bank of Hayti for safe-keeping in order that it might be available for the payment of interest on Hayti's foreign debt. It was brought to New York on the gunboat "Machias," and is said to have been sent by employees representing the American interest in the bank. Our Government has declined to assist Hayti in regaining possession of it. Hayti is bankrupt, and its new Government needs the money. On the 3d the Government closed the bank, sealed its vaults and procured the passage of a bill for the establishment of a new national bank. Our Government seeks control of Hayti's revenues by a fiscal protectorate like the one in Santo Domingo, which is now eight years old.

The charges made against James M. Sullivan, our Minister to Santo Domingo, by Walter W. Vick, recently receiver of customs under the fiscal protectorate, have been referred by the President to James D. Phelan, Senator-elect from California, for investigation.

Owing, it is understood, to the discovery of a plot in Costa Rica for the assassination of President Gonzales, and for a revolution, several prominent residents have been deported.

# THE BRITISH PRESS AND AMERICAN SHIPPING

## A COLLECTION OF EDITORIAL OPINIONS ON THE NOTE OF PROTEST TO GREAT BRITAIN

IF England is to win, she must make sure her victory by a rigorous control of the seas, choking Germany by the stoppage of supplies. This inevitably involves inconvenience and even hardship to neutrals, but the United States, recognizing England's necessity, should accept this as her share of the war. This is the upshot of London's press comment on the Wilson note of protest. Most of it is friendly, and since it anticipated the publication of the text of the message it is general rather than specific in character.

The sharpest reflection on the American attitude comes from the *Morning Post*, which after pointing out that American copper shipments to Italy, Holland, Norway and Sweden during September and October last year were five times as great as in the same months of 1913, echoes a little sneeringly William Watson's indignation at America's uncompromising neutrality:

President Wilson is a very strong believer in peace. He is, as between Germany and the nations she has attacked, absolutely impartial. He has not the shade of a preference. . . . His attitude toward both sides and both causes is that of a notable personage in history who washed his hands; it is no affair of his, but he holds sacred the right of American citizens to take the risks and hazards of legitimate trade with neutrals.

He is Daniel come to judgment, and he has sent forth his decree. England may try to save her life by fighting Germany; she may try to restore Belgium by fighting Germany; she may let her young men shed their blood like water in order that there may be in Europe some law other than that of organized force; but if, in fighting for dear life England or France should occasion depression in American trade—if they act on his plain hint that copper is hidden beneath cotton, if they search American ships, and thereby cause delay, he will give a plain friendly warning to the British Government against impeding the rights of American citizens; the letter of the law must be respected.

In another article the *Morning Post* calls attention to the fact that so much dislocation of trade must have resulted from a four-power war that Great Britain's policy can hardly be held responsible for trade depression here; and states the case bluntly:

"The whole difficulty of using sea power with effect lies in the presence of neutral states adjacent to the belligerents, because thru those neutral states cargoes from other neutral countries can reach the belligerents. Accordingly, the practise has usually been to prevent those cargoes which could be useful in helping an enemy to carry on war from reaching the enemy across neutral territory or in neutral ships. This is the purpose of the doctrine of contraband.

It is a doctrine that has arisen from the necessities of war, and that has never been agreeable to neutrals, but it is but part of certain great facts of life, of the law of nature that great nations cannot carry on war against one another without other nations suffering.

The *Globe* is just as definite in its repudiation of the American position, and quite as sarcastic:

The American Government is silent and unprotesting in the face of the indefensible outrages inflicted on Belgium. The voice of the great neutral nation which seeks to be the final arbiter for civilization, the keeper of the world's conscience, is raised for the first time, not on a question of higher morality, but to express impatience with the fact that the greatest war in the history of the world has interfered with the opportunities of American traders to make money out of the necessities of the belligerents. Whatever is at stake, American business must not be allowed to suffer.

We have done much to minimize the loss and inconvenience of the war to American trade, but we are fighting for our life as well as for causes as vital to America as to ourselves. We cannot stave our necessary actions simply in order that American traders may reap the richest possible harvest out of Europe's blood and tears. The American Government in effect demands that we renounce in the interest of American profits our most potent weapon against the enemy—that we raise the blockade against the enemy's supplies. The demand may be made in the friendliest spirit, but there is only one possible answer, and in the friendliest spirit, "No!"

The *tu quoque* argument is applied by several of the journals, not, however, in an unfriendly fashion. The *Evening News* remarks:

Americans know well enough that if the late trouble with Mexico had developed into open warfare the Government at Washington would not have allowed the free importations of munitions of war by Guatemala on the ground that it was a neutral state. The matter, in fact, is largely one of common sense, and it is unthinkable that two great friendly nations should treat it in other than a friendly, common-sense way.

And the *Daily Express*:

The American people have from the first fully realized that in fighting Potsdamism the free countries of Europe are fighting for the root principles of the Constitution of the United States and are consequently protagonists of human liberty and progress.

We value their moral support and sympathy, but the war means inevitable loss for neutrals as well as for belligerents. Lancashire starved during the American civil war. The Government at Washington during the war with Spain took the same measures to prevent the enemy from receiving supplies as Great Britain and France are taking now.

Together with the insistence that Britain's course is justified there goes, however, a warm recognition of the friendliness of this country. The *Times* is thoroly conciliatory:

The note breathes thruout an unshaken faith in our sense of justice. That trust we shall assuredly do our best to preserve. . . . Americans should remember that this war has many features which are without precedent in history. We are waging war against two great continental states which have hardly any seaboard of their own. They are surrounded by neutral states, and their efforts to procure necessities for their armies thru those states are indefatigable. There is good reason to believe that, despite all prohibitions and other measures of neutral governments, those efforts have been in many instances successful.

Can we be justly blamed in these circumstances if our attitude toward American commerce with these neutral neighbors of our enemies is perforce somewhat rigorous?

England and the United States both pride themselves on the fact that they are eminently practical nations; it is to us quite inconceivable that two sensible peoples on the most friendly terms with each other should not succeed in devising a

*modus vivendi*, which shall be in accordance with the general principles of international law, and which at the same time will meet the peculiar facts and circumstances of this unprecedented war.

There is a warning for England in the comment of the *Daily News*:

On the other hand, it is for the British Government to consider carefully the relative values of certain of its regulations and of American good-will. America, without passing outside her strict rights, might reply to what she considered unwarrantable regulations with measures for the prohibition of the exportation of arms and ammunition, for example, which would hit the Allies. In all controversies of the kind a balance must be struck by both parties between loss and gain.

The *Westminster Gazette* suggests a partizan corollary of America's proposition:

The American Government, having decided to stand out of the European quarrel, is rightfully careful to guard its neutrality against any suspicion of partizanship, but to prevent us from checking this traffic would be to intervene on the side of Germany. That, we are sure, is not the intention of the American Government or the meaning of this note. The rights of Great Britain are admitted, and if the difficulties are fairly faced the two governments can do much by friendly agreement to ease the situation for each other.

Tho the *Daily Chronicle* detects hostile influences behind the message, it is conciliatory in its conclusion:

In the American Senate and Congress, now sitting at Washington, there are, of course, a certain number of strong pro-German politicians, and a certain number of other members who represent the old, bitter anti-English prejudice, now, we hope, obsolescent as regards the mass of the American people. These minorities will naturally seek to exploit in their own favor, the sentiment of American trade interest.

We feel sure that the British Government will, on its side, deserve their support by conceding readily to the representations of Mr. Wilson and Mr. Bryan every point which is not inconsistent with our legitimate and successful prosecution of the war.

This paper offers a novel defense for the British policy of haling suspected ships into port:

In itself this practise can hardly, we think, be given up, resulting, as it does, from the tactics of German submarines. As is well known, their almost invariable practise in attacking our warships is to approach them behind the screen of an enemy merchantman, and this has made it impracticable for warships to conduct more than a hasty examination of merchantmen in the open. This impracticability is enhanced by the great size of modern merchant steamers as compared with the old sailing craft and the possibility—not uncommonly exploited, we believe, during the present war—of smuggling in their capacious holds goods very different from those declared and shown on the surface.

In fact, unless search in a harbor and detention for that purpose be conceded, the right to search must, for all practical purposes, disappear.

The *Star* makes a reassuring and sweeping generalization:

President Wilson strikes a true note when he says he has the fullest confidence in Great Britain's sense of justice and we, on our side, need not hesitate to say that we have the fullest confidence in the American sense of justice.

This, it need hardly be said, is the prevailing note in the discussion.

# THE ZEPPELIN THAT NEVER FLEW

BY HENRY BEACH NEEDHAM

AT the British base, Havre, I had the good fortune to meet a Lieutenant of the R. N. V. attached to the Royal Naval Air Service. Of what he was doing he was absolutely mum. But he promised to give me "a story"—if he lived to tell the tale. Part of this story, omnivorous reader, you have already read. It concerns the bold aeroplane raid on the Zeppelin airship factory at Friedrichshafen, Germany. You already know how Squadron-Commander E. F. Briggs, Flight-Commander J. T. Babington, and Flight-Lieutenant V. S. Sippé, of the Flying Wing of the Royal Navy, flew from French territory to Lake Constance, and under heavy fire from guns, mitrailleuses and rifles spilled eleven bombs on the Zeppelin plant, effecting such damage as specifically will be set forth in this narrative—and no doubt categorically denied by German officialdom.

My friend's disappointment in not flying, which he did not once mention, was all on account of the "good of the service." It was he and his partner who made the maps—the road maps—for the flyers; now admitted by the Germans, who found them on the aviator taken prisoner, to be maliciously accurate. How they made them he is not permitted to tell; there is an exasperating lapse of one week in his story. But he did go so far as to clear up one point, fearing that a wrong impression might be given.

"We went everywhere in navy uniform—none of your German espionage for us. It isn't navy pigeon. If they caught us," he added, "we deserved to be caught."

Nothing more. But when I tell you that he drew the map appearing with this article, which shows the layout of the Zeppelin plant, and give you assurances that *he drew it from memory*, you will appreciate his essentially vital role in the great adventure. And the reason why he must not be named—must not be photographed or so much as described—is that, after a week's recuperative leave, he fared forth on other adventures. It would be unwise to provide the Germans with his description.

And he is a conspicuous person. This much I must say: He is one of the best-known Rugby football players in all England, a fact which is imprest on one by his magnificent physique and straight, resolute stride. More than that, he is manifestly handsome. Walking with him in Havre and in London, I could not

*It was in Friedrichshafen that Count Zeppelin began his experiments with dirigible balloons, and since the Great War began the Zeppelin works there have been feverishly busy. It was therefore a telling blow as well as a daring one to attack the plant from the air. Mr. Needham is a magazine writer of much experience, who was graduated from the New York "Evening Post" and has "covered" such stories as Colonel Roosevelt's tour in 1910.—THE EDITOR.*

escape this conclusion. For women of all ages stared at him most embarrassingly.

He calls the expedition "Winston's stunt." Because, be it widely known, the Right Honourable Winston S. Churchill, who is First Lord of the Admiralty (Secretary of the Navy without a President to boss) conceived and ordered the raid, as he did the aeroplane calls on Düsseldorf and Cologne.

Be it generally known, also, that the Friedrichshafen raid, and those on Düsseldorf and Cologne, were pulled off by the Navy—not the Army. There are two separate and distinct flying wings in the British service, one attached to the Army and the other to the Navy. Need one

say that between the two exists intense rivalry?

"The Navy attacks lower than any flying corps in the world," insisted the lieutenant.

"Why?" I asked.

"Navy nerve—Navy training," he answered.

What he meant was this: At nineteen a youngster may be in command of a small destroyer at maneuvers, plugging along in the Channel at thirty knots in a fog. This, you'll admit, is rather developing to nerve. Then he may be put on a big ship where he's under orders of a superior officer; then given a larger destroyer; then—tried out by a stunt like the one at Portland.

One year, I was told, the British Navy maneuvers centered around Portland Island, which is a naval station south of Weymouth, Dorset. There is here a breakwater with a searchlight on either side of the entrance, also naval guns. At the time of these maneuvers the defense was in charge of the Royal Engineers. They were to "sink" any destroyers that attempted to enter the harbor to attack the fleet lying at anchor. The "problem" of the destroyers, on the other hand, was to force their way in without being "sunk." Keeping a course as much in shadow of

THIS IS THE MAP

It shows the works at Friedrichshafen and it was made by the nameless football player who figures so largely in the story of the raid

By special arrangement with the London Sphere. © N. Y. H.

THE INSIDE OF A ZEPPELIN SHED, WITH A SHIP READY FOR FLIGHT

the breakwater as possible, the destroyers came driving along at thirty-one knots, and with a dangerous turn, made for the space between the two searchlights.

Crash!—the first destroyer tried to hurdle the breakwater. Every bit of machinery was shunted into the bow. Mechanically the war craft was a complete wreck.

Bang!—followed the second destroyer plumb into the stern of the leader. The third was turned aside and throttled down with supreme effort.

The Royal Engineers, cold-bloodedly planning their defense—in maneuvers, not war, remember—said, “We’ll spoil their game.” So they took down one of the searchlights, and put it up again on the breakwater at the proper distance beyond the other light. The space between was solid masonry—not water!

“And weren’t they—the engineers, I mean—courtmartialed?” I asked, excitedly.

“Courtmartialed?” The lieutenant grinned. “They were highly commended in the official report on the maneuvers. And the commanders of the destroyers were also praised for their nerve in entering the harbor—or trying to. But don’t you see from that how the nerve of the Navy man is developed? Don’t you see why our men attack at 400 feet where other pilots keep above 4000?”

Don’t you see?

“When we met in Havre,” said the lieutenant, beginning his story of the raid, “everything was ready. With my partner I had gone to the front in France, had got in touch with General Joffre, and had—disappeared. When we returned to Havre we had the maps—topographic or aerial; whatever you want to call them.”

“By the way,” I interrupted, “what about the German charge that the flyers violated Swiss neutrality?”

“Not one of the three flew over Switzerland,” he replied. “Following the maps, they steered north of Schaffhausen, and then when they picked up the northwest arm of Lake Constance, straight down it to Friedrichshafen. They steered by the peaks above the clouds—peaks in the Black Forest. All big peaks north of the Rhine lie in the Freiburg district. As long as they kept well up with the peaks to port, until they opened up the arm of the lake, they were perfectly certain of not infringing Swiss neutrality. Each flyer carried three maps. If they had gone the wrong side of the Rhine they would have had nothing to steer by.”

“The four machines,” he continued—“British-made biplanes of the Avro type, with eighty-horse Gnome engines—arrived at Havre by transport at five o’clock in the afternoon. We were told that we might possibly have them ashore the next morning.

We replied that the special train was waiting, and that the machines must be landed and loaded that night. Never wasting a minute, we got the special started at eleven o’clock, and arrived at Belfort at ten o’clock the next night. Belfort, you know, is the big fortified town in the east of France that has never fallen. It is almost at the junction of France, Switzerland and Germany—the natural starting point for a flight to Friedrichshafen.

“Ten o’clock the next morning all four machines were ready to start—petrol, oil and bombs aboard, everything shipshape.”

“How many bombs?” I asked, “and what size?”

“Four to each machine—big ‘T. N. T.’s—tri-nitro-tolnol; Germans call it ‘Trytol’—a high explosive obtained from a step-up nitration.”

“Not the small bombs the Germans use,” he laughed; “dropt from a hight of 6000 feet. Not the Flying Wing of the Navy!”

“The machines proved themselves,” he continued—“at least, three of them did. Briggie’s had to be brought down because the petrol tank was pierced with a shrapnel-base, but he had flown 120 miles into Germany, across mountainous country. Both Babington’s and Sippé’s machines were damaged by gun fire, receiving many shots thru the wings and controls. But they covered the entire flight of 250 miles. The fourth machine, taken for a trial at Belfort, was knocked up a bit in landing.

“If every man of us had been crazed with insomnia, it would have been but natural. Machines all ready for the start, mark you, and there was a delay of a whole week for good weather conditions. That was more trying than the flight.”

“What did you do?”

“Played patience, and Briggs won all the money. Cleaned every man out. So if any one had to be left on German soil, Briggie was the man!

“The start was made on Saturday morning. Three machines, intervals of five minutes—9:40, 9:45, and 9:50. And cold? It was minus 7 Centigrade on the ground, so you may know what it was up aloft four thousand feet. But they didn’t mind—Briggs especially. You know he put the British altitude record up to fifteen thousand feet last winter, getting badly frostbitten in the stunt.

“Briggs is the finest pilot of the lot—a scientific flyer. In peace times he goes up surrounded with instruments for the measurement of altitude, air-speed, engine-speed, and angles of tilt. His knowledge of atmospheric conditions gave him, before the goal was reached, a lead of

eight miles. His four bombs landed on the sheds, but a punctured petrol tank forced him to land by a gliding flight. He saw the Germans at the guns, and a regiment of the Land-sturm drawn up. After landing he fired every shot in his automatic pistol at them, in order to divert attention from the flyers behind him.

"Thanks are due to the German officer at Friedrichshafen who telegraphed that Briggs' wounds were not serious. They potted him as he came down.

"Babington started second, but had engine trouble, and Sippé past him in the flight. He saw the shrapnel shells burst around Briggs' machine. So what do you think he did? He sailed along six feet above Lake Constance! Took them by surprise, and when they did see him they couldn't tilt their guns to that angle. He rose to twelve hundred feet, let loose a bomb which dropt on the pavement, puncturing hydrogen gasometers, dove to about 400, and dropt two more, hitting the Zep. shed. Then got away. He succeeded in rattling the Germans, who scattered after his first bomb, and thus drew attention away from Babbie following.

"Sippé is a professional flyer; was a test pilot for one of the biggest aeroplane firms of England; has flown in Germany, Austria, France, Italy and Spain, and was only appointed from civil life to the R. N. A. S. after the outbreak of the war. He is a superb judge of pace and distance, and has the finest hands.

"After him came Babington, flying ninety miles an hour at an altitude of 4000 feet. He made a plumb-nose dive down to 400 feet, dropping his bombs on their mark, the Zep. shed. He was traveling so fast that he felt the kick of his bombs—traveling over 200 miles an hour at the bottom of the dive—probably faster than any man ever traveled who came out alive.

"First thing he said when he came down on friendly soil was: 'Never saw anything so rotten as their shooting. They ought to be shot!' Just like him. His idea was to get where he could carry out his instructions, no matter what cost; next, collect as much information as possible on shell fire and shell bursts, and then write a report."

"The damage?" I asked. "The Germans say the raid harmed nothing."

"They said the same thing after the Düsseldorf raid, but we learned the truth. In this case we know already. Swiss workmen who cross the lake every day from Romanshorn to Friedrichshafen are the sources of our accurate information.

"After the firing ceased, people at Romanshorn, eleven miles across Lake Constance, suddenly saw fire and smoke above the Zeppelin plant. Then came sudden outbursts of flame. From this they knew, as they afterwards learned definitely, that the Zep. shed, with the dirigibles,

went first; then fired the punctured gasometers, and finally fired the main gasometer and main hydrogen reduction plant.

"Thus, the damage came to this: Two gasometers and hydrogen reduction plant—which was one year and ten months building—totally de-

By special arrangement with the London Sphere. © N. Y. H.

NO MORE ZEPPELIN RAIDS FROM THIS SHED WHEN THE R. N. A. S. IS THRU WITH IT

stroyed; possible destruction or heavy damage to hydrogen tube store; severe damage to machine shed; and one completed Zep. entirely destroyed, and a dirigible nearing completion destroyed. The shed was built for two—I know!

"The Zeppelin completed was due

to come out at three o'clock for a spin over the lake. But our airmen interfered. They arrived about twelve. And that's the story."

"But the honors and glory?"

"The flyers picked up three Legions of Honor and two D. S. O.'s. Babington is a perfect Sahib of good

English stock. When they conferred on him the Legion of Honor, he seemed to hesitate about accepting it. Fine sense of honor.

"You see, I don't know how many generations back some ancestor of Babbie's had fought against the French!"

## OF IDLING AT AN INN

BY HAROLD J. HOWLAND

THERE is no place for idling like an Inn. The fellow who could not be idle at an Inn is a poor devil of a Tam o'-Shanter driven a headlong pace by the myriad witches of business and worldly cares and an uneasy conscience. There are reasons why the Inn is the idler's paradise. The Inn is out of the world's bustle and hurry. Hotels there may be in cities, taverns in towns; but your Inn must be on the open road.

At an Inn man need take no thought what he shall eat, or what he shall drink, or wherewithal he shall be clothed. There shall a man wear what he pleases, eat what mine host sets before him, be warmed by fires not of his own building, drink drafts not of his own brewing, bask in comforts of another's devising.

At an Inn man is well fed—indeed, what is more essential to a true definition of an Inn than this, "a place where good food abounds"? And who but the well-fed man can be really idle?

\* \* \*

It has been my fortune, in sundry vagabondings, to find many an Inn where it was joy to loaf and invite my soul. Most of them, it must be confessed, were in the old countries, where neither business nor busyness is all there is of life, where the verb "to live" has never demanded as its sole synonym the verb "to hustle." But twice within a summer time I have found, within striking distance of a great American city, a hostelry for which I am moved to paraphrase Phillips Brooks' diplomatic encomium of a baby, "That is an Inn."

\* \* \*

My two Inns are hundreds of miles apart; one is two centuries old, the other not two years; one is on a main traveled road, the other on a byway. But they have one thing in common. That is the thing of which Maggie Shand, in Barrie's play, *What Every Woman Knows*, said, "It's the thing which, if a woman hasn't it nothing will make up for, but if a woman has it nothing else

matters." That priceless gift is as valuable, as invaluable, to an Inn as to a woman. It is charm. Charm these two Inns have in common, and a second thing from which the first has sprung. Each is the product of a man with a vision.

\* \* \*

Beside the broad road that stretches from Boston to Worcester stands the Wayside Inn. It is the same Inn that slips into your mind when you read the name. Of it the poet sang:

Across the meadows bare and brown,  
The windows of the wayside inn  
Gleamed red with fire-light thru the leaves

Of woodbine, hanging from the eaves  
Their crimson curtains rent and thin.  
Without, it is a sprawled out, high shouldered ancient house of colonial mien, shaded by old elms and flanked by smiling fields. Within, it is a wilderness—but the word is inapt—a pleasant garden of old furniture, high-boys, low-boys, gate-legged tables, four-posters, settles, old pewter, old fire dogs, pot hooks and hangers, porringers and warming pans.

The vision that mine host, good Mr. Lemon, saw, when he bought the house, deserted, dilapidated, pathetic, was that of a reproduction of the appearance, the atmosphere and the quality of a roadside Inn of colonial days. He has succeeded in high degree. He has restored the house to solidity and liveableness with a reverent hand; he has gathered together in its rooms a wonderful collection of old furniture; he sets a generous and appetizing table. In full loyalty to his ideal he has resisted the temptations of modernity.

\* \* \*

To reach the other Inn of delight one may go by motor from New York. For just as our two hostelries are close related by their innishness, so are they linked to the days of stage-coach and road house by their way of approach. Speaks the poet again:

For there no noisy railway speeds,  
Its torch-race scattering smoke and gleeds;  
But noon and night, the panting teams  
Stop under the great oaks. . . .

Only, the panting teams have become

purring engines, the bowling coaches skimming motors.

When Robert Louis Stevenson was asked how one might get to his Samoan home, he said, "You sail from San Francisco and after passing Honolulu, take the first 'turning to the left.'" So in going to Yama-no-uchi, you go from New York and after you have past Middletown, take the first turning to the left. Over a mountain ridge, along a broad valley, up a narrower one between the hills, and there you are at Yama-no-uchi. An odd name for an American Inn, say you. But therein begins the charm. For when the Master, traveling in Japan, confided to his friend, Marquis Ito, his long cherished plan of building an Inn, the venerable statesman, according to the pleasant Japanese custom, claimed the privilege of naming the new home. Yama-no-uchi he called it, Home in the Mountains. When the thirteen acres became a thousand, the name was metamorphosed for the wayfaring man into Yama Farms Inn.

\* \* \*

To understand the Inn, one must go back. The Master had always wanted to keep an Inn. Just why he wanted it I do not know. Perhaps he does not know himself. He desired it as a man who is not a poet may desire to write a sonnet, a man who is not a musician to play the flute. He does not want to live as a real musician, or starve as a real poet, but he would like to show the professional sonneteer or the veteran musician a thing or two.

Long the Master waited, going about his proper business with diligence and patience, but with his pet project snug in the back of his mind. Then the day came when he said, "Here is an old farmhouse, far from the world that bustles and hurries and shouts. Make me of it an Inn." And they said to him, "What like of an Inn will you have?" His reply was prompt, for he had not lived with his vision all this time without knowing it as a man knows his pocket. And he said, "When my

friends come here—for this Inn of mine is to be for my friends, and the friends of my friends, and their friends in turn—let them first be disappointed because the Inn shall look usual and unpretentious and plain. Then, when they come in, let it be that they shall say, 'But this is homelike.' And when they go to their chambers, let it be that they shall find upon their beds the finest linen that was ever made from flax. And when they come to table, let it be that no man shall be able to find anywhere better food, more splendid cooking, more perfect service."

So said the Master. And so they did. And so it was—and is.

\* \* \*

On the approach the Inn makes no claim to distinction—partly because it is well hidden from the roadway, partly because it is merely rambling, and simple and white. But within are broad spaces, pleasant vistas, inviting corridors that turn and bend, mellow colors, rich fabrics, comfortable chairs and settles and couches, an air of quietness, a feeling of leisure, a sense of home.

No hotel office, becountered, beclerked and bekeyed, holds up the guest as he enters. A demure maid in a pleasant reception room offers a quiet welcome. No "Buttons," but the housekeeper, bids the guest to his chamber. It is to no numbered cell that you are ushered. It may be to "Land's End," to the "Grey Shadow Room," to "Jackanapes," to "Cock Robin," to "Nippon," to the "Chinese Room."

The furniture of each room has its individuality. There are no two alike, so you need not hunt to find them. But all the rooms have one thing in common, perfection of appointment. Comfort, daintiness, spotlessness, harmoniousness—in these prime qualities they share alike. Everywhere abovestairs it is homelike—but it is something more. All the comforts of home plus all the conveniences and appliances and services of the best hotel are supplied in fullest measure. There is nothing that the finest hostelry of Fifth avenue or Piccadilly or the Rue de Rivoli offers that Yama Farms Inn does not yield.

\* \* \*

In the dining room it is also homelike, but with a difference. Which again is as it should be. When man goes from home he asks nothing better than to sleep as if he were in his own bed. But when it comes to eating, he does not want the home table. In the first place it cannot be done. "Home cooking" outside of the home is a delusion.

In the second place he wants novelty; he is ready for a change. After a long stretch of the home table, the creations of a Brillat-Savarin taste good. In the third place such a change makes the return home to the old familiar things a new pleasure and a renewed content. No Inn could make a greater mistake than to set a "home table." Man on his journeyings does not want it.

And the Master knew it. So his first maître-d'hôtel (ravished from him now, alas, by the greedy hand of war) was a master of his craft. If his successor fails in any degree to match him in excellence, I who have eaten under the ægis of the one and not the other, will not believe it.

Perfection does not hide upstairs in the sleeping chamber. The soup is as rich as the bed linen is smooth. The pastry is as toothsome as the rugs are thick and silky. The coffee is as fragrant as the sleeping porches are broad and airy. If comfort waits above, delectation reigns below. If a man go away from this table ill-humored, the way to his heart lies not over the small-boy way.

\* \* \*

But I seem to hear the voice of Thomas unconvinced—"all this is not unique. There be other Inns perfect as this, other beds that feel like home, other dishes that savor of ambrosian fields." Very possibly.

But how of this? For all these comforts and every other there is but one price. No servant may be "tipped," no extra may be paid for, no service may be found added on the bill. No surprises lurk in that portentous moment of the guest's leave taking. It is the American plan carried to its logical, its ultimate conclusion as no American has yet had the "nerve" to carry it. It is the concept wrapt up in the phrase *tout compris* realized as no Frenchman would dare to realize it.

You are the Master's guest. While in his house, all that he has is yours. There are no exceptions, no reservations. Only, when you take your leave, you make your contribution to the general exchequer in accordance with a simple, well understood, arithmetically computed system. If you have dwelt in Land's End, so many dollars a day; if in "Cock Robin," so many; if in the Chinese room, so many. And no more, no less, no other. For this payment you have what the Inn affords—repose, food, drink, service of valet, masseur, manicurist, barber, postage stamps, and a dozen others. You eat when you like, what you like, where you like—breakfast on your own porch, lunch-

eon at Jenny Brook, where the Master raises such trout as the fisherman dreams of, tea on the broad piazza. You drink the same; buttermilk—the Master is proud of his buttermilk—and champagne flow with equal freedom. Which takes us back again.

\* \* \*

The Master was busy working out his vision, when he came to the subject of drink. Now this was to be no ordinary Inn, no road-house where men might come to drink and carouse and offend their neighbor guests. Else were the vision marred in the realization. But how to make it otherwise? The Master pondered, and "No Treating" was his thought. But they reasoned with him and showed him how badly such a restriction marched with his vision of an Inn of perfect freedom. And he pondered again. And he said, "Then shall there be no price for drink. Men shall drink what they will, where they will, when they will. For it is not thirst that hounds men on to become drunk. It is the desire to spend money, to show that they are able and ready to buy and pay."

They flouted his idea, and they proved to him conclusively and to their perfect satisfaction that it was not so. And he did it, and it is so.

You may drink buttermilk or champagne; your purse knows no difference. But your desire does. You do drink buttermilk and you do not drink champagne. Such is the human mind. The Master's logic may have been all wrong—it sounds so. But his instinct was right—it has been proved so. As one man said, "There are no prices on the wine-list; how can I know what to drink?" So each man drinks what he will; and no man, humanly speaking, drinks too much. And there you are.

\* \* \*

Now if you have heard of Yama Farms Inn, it is a hundred to one that this is the thing you have heard—that champagne is free as air. But it is the thing that matters least. From a distance it looms big; close by it dwindles small. For when you get there, there is too much else that is significant, too much else that is pleasant, too much else that really matters. You are too busy in fragrant idleness to bother your head about whether you are drinking wine or buttermilk, Scotch or Orange Pekoe, strong drink or water.

The Master's vision takes you up and enfolds you till this littlest corner of his vision slips into its proper place, hidden by comforts and pleasures and delights. I know, for I have idled there.

# THE BRIDGE OF CABRILLO

A TRIUMPH OF MODERN CONSTRUCTION AT THE PANAMA-CALIFORNIA EXPOSITION AT SAN DIEGO, CALIFORNIA. COMMENT ON THIS EXPOSITION WILL BE FOUND IN THE EDITORIAL PAGES

## A NEW YEAR'S MESSAGE FROM CARDINAL GIBBONS

EARLY two thousand years ago Jesus Christ founded a spiritual republic. He established it not by the material sword, but by the sword of the spirit, which is the word of God. He established it not by brute force but by an appeal to the conscience and intellect of humanity. The spiritual kingdom that he founded exists to this day and is continually expanding.

Two thousand years ago the first words that were uttered to announce the birth of the Savior of mankind contained a proclamation of peace to the world: "Glory to God in the highest, and on earth peace to men of good will." But, looking back and contemplating the wars that have ravaged the Christian world during the last twenty centuries, one might be tempted to exclaim in anguish of heart that Christ's mission has been a failure.

Yet such is not the case. So long as the moral Ruler of the world holds the reins of government, which he never surrenders, we have nothing to fear, provided we put our trust in God.

In advocating the reign of peace the Church has always labored at a great disadvantage. From the foundation of Christianity the Church itself was either pursued with unrelenting fury or bitterly antagonized or opposed. It is true that while the Church never considered a military life as incompatible with the profession of Christian religion, and has admitted that war may sometimes be necessary, she declares that hostilities undertaken even in a just cause are always to be deplored because they involve great calamities and are rarely exempt from acts of injustice and inhumanity.

But is it worth while to go to war? For it is a subject of profound concern to the Church and the friends of the gospel of peace that part of the world today presents the spectacle of a great military camp. I repeat, is it worth while, or has it been worth while? Let us consider the immense number of men torn in the bloom of life from the bosom of their families, withdrawn from active and industrial pursuits, condemned to a monotonous existence and exposed to the temptations incident to such a career, and then decide if it is not time to bring about the reign of peace. Let us get away from the mistake of instructing men in military tactics rather than in the duties of civil life; let us abandon the cult of destroying life and in its place teach the cult of developing the resources of the country—of the world.

In well ordered society the disputes of individuals are settled by recourse not to force, but to law. It would be a blessing to humanity if national controversies were decided on the same principle, and the just cause of any nation should be vindicated by a court of arbitration rather than by an appeal to arms. Then the powers that govern as well as private litigants would be guided by the principle, "thrice is he armed that hath his quarrel just." This amicable system while protecting the rights of the weak would not humiliate or wound the pride of the strong, since it does not attempt to interfere with or minimize the autonomy of any power.

It is a pleasing reflection for us all that the most ardent advocates of peace among the nations of the world, the most unselfish workers for it, who are devoting money, high intelligence, and exalted position to its attainment, are sons and citizens of the United States. Yet as peaceful citizens we are none the less patriotic.

Patriotism is a rational instinct planted by the Creator in the heart of man. It is a universal sentiment of humanity. It implies not only love of soil and fellow-citizens, but also—and principally—attachment to the laws, institutions and government of one's country; it implies filial admiration of the heroes, statesmen and other men of genius who have contributed to its renown by the valor of their arms, the wisdom of their counsel, or the fame of their other achievements. It includes also an ardent zeal for the maintenance of those sacred principles that secure to the citizen freedom of conscience, and an earnest determination to consecrate his life if necessary in defense of altar and fireside.

The American people possess in a marked degree the national virtues indispensable for the supernatural life. They are gifted with a high order of intelligence; they are self-poised and deliberate; they are of industrious and temperate habits; they are frank, manly and ingenuous; they have the courage of their convictions and they are a law-abiding people; they have a deep sense of justice and they demand and give fair play.

Let us, then, as Americans, continue to pursue our humane, enlightened and statesmanlike policy of fostering and developing our relations with all the nations of the world with no other motive than good fellowship. Let the streams of commerce flow between this country and the rest of the world like invigorating blood coursing thru the arteries of the human body, diffusing life and activity, and all forming, as it were, one social organism, each member exulting in the health and growth of the other, stimulating the remotest parts with renewed energy and activity. Let our business interests with all nations be so inseparable and reciprocal that the injury to one will be felt by the others and the prosperity of each will be shared by all.

Let us continue to invite the people of Europe to our shores. Let us give them the right hand of fellowship, embracing them as brothers, holding out to them every opportunity of advancing their material interests, inspiring them with so great an admiration for our civil and political institutions that they may be impelled to be incorporated with us, rearing children who, while cherishing the land of their fathers, will love still more the land of their birth.

Let us cherish the hope that the day will soon come—a day that may be nearer than we realize—when the Prince of Peace shall be found established on earth, and let us further hope that the spirit of the Gospel will so far sway the minds and hearts of rulers and of cabinets that future international disputes will be decided by permanent courts of arbitration.

Let us hope, then, that the year 1915 will usher in a new dawn of peace.

*Baltimore, Maryland*

# THE NEW BOOKS

## THE WAR FROM VARIOUS VIEWPOINTS

A WAR-BOOK that is "different" has been given us by Elbert Francis Baldwin in a volume entitled *The World War; How It Looks to the Nations Involved and What It Means to Us*. As a journalist the author understands that it is not enough to know what the facts are; it is even more important to know what the facts are supposed to be. Action is based upon opinion, whether the opinion be right or wrong. So Mr. Baldwin analyzes newspapers as well as White Papers and what is still better gives us his personal impressions of the feeling of the German, French, Dutch and English people in the early weeks of the war. For instance, the casual remark of the Bavarian and the description of a Munich street scene quoted below is more informing as to what the Germans mean than a speech of Chancellor von Bethmann-Hollweg:

This idea of defense, not offense, is everywhere present. It may be, as has been alleged, that certain secret and unworthy ambitions and aggressions are at the bottom of the war. Of them, however, there is no indication in this part of Germany at least. Only yesterday a Bavarian said to me: "It cuts us to the quick to have to fight France and England, simply because they are bound to Russia. Our quarrel is not in the least with them, but entirely with Russia. Had we the Russians alone to deal with we could have whipped them in a week and sent them about their business."

German patriotism stands at a high level. There is no need to stimulate it. Indeed there is rarely any need to use those devices which we use at home in our political party campaigns—the mass meetings, the flag wavings, the torchlight processions. The German may not be emotionally patriotic in the same way that we are. But his emotion lies quite as deep as ours and is always at hand for steady use. The German's love of country is a religion. He may not show his respect for the Church in the same way that we do. But the country of Luther is the country of an abiding faith both in the Fatherland and in the living God.

Usually a Munich Sunday is officially begun by a chorale played by an orchestra from one of the church towers. Last Sunday, however, for the benefit of the whole city, the Oberbürgermeister directed the band to play from the Rathaus tower such patriotic and religious hymns as these: "Dankgebet"; "Die Wacht am Rhein"; "Deutschland"; "Deutschland über alles"; "Die Königshymne"; "Nun danket alle Gott"; "Grosser Gott wir loben Dich." A vast crowd collected before the Rathaus in the Marienplatz. During the singing every man uncovered. After each hymn there were three Hochs. The whole affair typified the simple, lofty spirit, the soul of the nation, uniting Germans in unflinching strength. Such a nation's leaders may lead nobly or ignobly. The main thing to remember is that the people, the nation, constitutes the ultimate power.

Mr. Baldwin strongly condemns the violation of Belgian neutrality by Germany, but he shows the absurdity of the opinion common in this country that this was the cause of England's

entering into the war. That England would support France in case of a war with Germany was practically settled ten years ago and on August 2, two days before German troops had crossed the Belgian line, Sir Edward Grey had given positive assurance that the British navy would protect the north coast of France.

Most of the volume consists of comment on current events in diary form, but the latter part is devoted to the question of what America ought to do to prevent such catastrophes in the future. Among his suggestions are: the increase of military and naval strength of the United States; the calling of a tribunal of neutral nations to consider violations of the laws of war; the encouragement of democratic government; and finally an International Parliament and Supreme Court with an international armed force to back up their decrees.

*The World War*, by Elbert Francis Baldwin. New York: The Macmillan Co. \$1.25.

## NEW MUSIC PUBLICATIONS

Seventeen composers, from Hummel and Weber to Richard Strauss and Max Reger, are represented in the *Anthology of German Piano Music*, Vol. II: Modern Composers, which Moritz Moszkowski has edited for that unique and excellent series, "The Musicians' Library." The selection is pleasing, as well as finely representative of the best piano music of the period covered, and the editor's introduction is a very readable little essay by a musician of refreshingly eclectic tastes. The music printing is of the high standard set and maintained by this series of collections of masterpieces—a sheer delight to the pianist.

A well printed new edition of the complete piano and vocal score of Gounod's opera of *Faust*, including the ballet music in an appendix, should meet with a ready and extensive welcome. An introductory essay by Philip Hale gives an interesting account of the Faust legend, the origin of the opera, its first performance and its history on the stage. The text is given in both the original French and in the familiar English version of H. F. Chorley, "revised and extended" by Charles Fonteyn Manney. Bizet's *Carmen* has also been reissued under the same guidance.

*Five Quatrains from the Rubaiyat of Omar Khayyam* (of course as Englished by Edward FitzGerald, tho no credit is given to him in the publication) have been set to music by James H. Rogers and published in attractive style by the Ditsons. While hardly likely to rival in popular favor Mme. Liza Lehmann's famous "In a Persian Garden," Mr. Rogers' settings are thoroly musicianly in character and

convey in tones the grave and fatalistic feeling of the quatrains chosen. The copy sent us is for high voice.

Wilmot Lemont's Opus 6, entitled *Dream Pictures*, comprizes nine short pieces for the piano, most of them light and gracefully sentimental, dainty and not difficult. Young pianists especially, who enjoy other things besides rag-time, will find these tonal "pictures" attractive.

*Anthology of German Piano Music*, Vol. II: Modern Composers, edited by Moritz Moszkowski. Boston: Oliver Ditson Company. Paper, \$1.50; cloth, \$2.50.

*Faust*, A Lyric Drama in Five Acts, by Charles Gounod. Ditsons. \$1.50.  
*Carmen*, An Opera in Four Acts, by Georges Bizet. Ditsons. \$2.  
*Five Quatrains from the Rubaiyat of Omar Khayyam*, set to music by James H. Rogers. Ditsons. \$1.25.  
*Dream Pictures* (for the piano), by Wilmot Lemont. Ditsons. \$1.25.

## A SOLEMN WAG

Stephen Leacock is a humorist with a novel angle of vision; his humor is not fantastic nor grotesque, but springs from a clear knowledge of life. His *Arcadian Adventures With the Idle Rich* digs below the surface of the glimmering existence in fashionable clubs and luxurious mansions and reveals some of the foibles which are fostered there. The style is unusual; it is at once deft, subtle and clever.

John Lane. \$1.25

## EXTREMES THAT NEVER MEET

*Appearances*, by G. Lowes Dickinson, is a record of the impressions of an Englishman and the thoughts of a man who is brave enough to be candid. The note which he strikes is, in his own words: "To reconcile the Western flight down Time with the Eastern rest in Eternity; the Western energy with the Eastern peace." India, China, Japan and America are passed in review, each of which Mr. Dickinson sees clearly and tells engagingly.

Doubleday, Page. \$1.00.

## A DIALOG ON DESTINY

It might be thought that nothing new could be said on the old question of free will versus determinism, but Preston William Slosson in a little volume entitled *Fated or Free?* gives it a fresh treatment by adopting the dialog form and so bringing forward for refutation fourteen different objections to the freedom of the will. The arguments on both sides are presented with great fairness and in very readable style.

Boston: Sherman French & Co. \$1.

## FOR SUNDAY SCHOOL TEACHERS

Mr. B. S. Winchester's studies in *The Youth of a People* are based upon the biblical books from Genesis to Kings, and contain valuable materials and suggestions attractively set forth for those who desire to become Sunday school teachers. Part one ends with the first book of Samuel and contains twelve studies.

Pilgrim Press. 75 cents.

# THE GROWTH OF PAN-AMERICAN UNITY

THE STORY OF A FLUCTUATING FRIENDSHIP BETWEEN THE AMERICAN REPUBLICS

BY JOHN BASSETT MOORE

THE American Republics number just twenty-one. The youngest, Panama, which came into being eleven years ago, was very shortly preceded in existence by Cuba. Even the eldest, the United States, if its life be measured by that of many nations, is still comparatively young, for scarcely one hundred and forty years have elapsed since the "embattled farmers" at Concord "fired the shot heard round the world." But, if there was ever a case in which time should be counted by heart-throbs, and not by fingers on a dial, it is this. The shot of which Emerson sang did not cease to echo. On the contrary, it continued to reverberate, and as it reverberated grew in volume. Its significance was not at the time unnoticed. Altho France, having lost the greater part of her colonies in America, gave her support to the American Revolution, Spain—whose vast trans-Atlantic possessions still remained intact—understood the menace to her colonial system. In a prophetic paper submitted to the King of Spain after the independence of the United States had been established, Count d'Aranda, who was Spanish Ambassador at Paris during the American Revolution, said:

The independence of the English colonies has been recognized. It is for me a subject of grief and fear. France has but few possessions in America, but she was bound to consider that Spain, her most intimate ally, had many, and that she now stands exposed to terrible reverses. From the beginning, France has acted against her true interests in encouraging and supporting this independence, and so I have often declared to the Ministers of that nation.

The chief significance to Spain of the American Revolution lay in the fact that it marked the beginning of the end of the old system of colonial monopoly. In the Orient, as well as in America, colonies had been held by European nations purely for purposes of national exploitation. The movement for independence in America indicated the fact that the time would come when, with the development of colonial resources, dependence would be succeeded by independence.

## THE BEGINNINGS OF LATIN-AMERICAN INDEPENDENCE

For a number of years after the American Revolution the Spanish colonies in America continued to be comparatively quiet and contented. Grave misfortunes, however, awaited the mother country. In 1808 Spain

*Mr. Moore's record in public office is sufficient introduction to this paper: 1885-6, law clerk in the Department of State; 1886-91, Third Assistant Secretary of State; 1898, Assistant Secretary of State, secretary and counsel of the Spanish-American Peace Commission; 1904, agent of the United States before the Dominican Arbitration Tribunal; 1910, delegate to the Fourth International American Conference; 1912, delegate of the United States on the International Commission of Jurists; 1913-14, Counselor of the Department of State; 1913, member of the Permanent Court at The Hague. Since 1891 he has been professor of international law and diplomacy in Columbia University, and his books in his own field are numerous and the standard authorities. In the next number of The Independent this study will be continued by Mr. Moore in an article on "What Latin America Means." Further discussion of the Pan-American situation by Senator Theodore E. Burton, Secretary William J. Bryan and Prof. Franklin H. Giddings will be published later.—THE EDITOR.*

was invaded. Her King, Charles IV, was forced to abdicate and to transfer to Napoleon all right and titles to the Spanish Crown and to its colonial possessions. On June 15, 1808, Napoleon's brother, Joseph Bonaparte, was crowned as King of Spain at Bayonne. The people of Spain refused to bow to alien rule. Juntas were formed in various parts of the country for the purpose of resisting, in the name of Ferdinand VII, son of the dethroned monarch, the new government. Not long afterward similar movements took place in South America. Loyal juntas were formed, modeled on those that were organized in Spain. But owing to various causes, among which was the refusal of the Regency at Cadiz to recognize the American juntas, the loyalist movement in the colonies, altho originally leveled against the Napoleonic Government in Spain, was gradually transformed into a genuine movement for independence. And as a result, Spain, after the restoration of her legitimate government, found herself in a state of war with her American colonies.

## RECOGNIZING THE NEW REPUBLICS

In this struggle the government of the United States maintained a neutral position; but the sympathies of the people ran strongly in favor of

the revolutionists. At that moment every movement indeed for national independence naturally made a strong appeal to the sympathies of the people of the United States. Of the sympathy with the revolution in South America, the principal spokesman in our public life was Henry Clay.

In 1817 a commission consisting of Caesar A. Rodney, John Graham, and Theodoric Bland, with Henry M. Brackinridge as secretary, was sent out to examine into the conditions existing in South America, and particularly in Buenos Aires and Chile. The views of the commissioners, which in many respects differed, were embodied in separate reports. These reports were duly submitted to Congress, as was also a special report from Joel R. Poinsett, who had acted as an agent of the United States at Buenos Aires. The general tenor of the reports was unfavorable to the recognition of independence at that time, but this did not deter Mr. Clay from moving in the House of Representatives in March, 1818, an appropriation for the salary of a minister to the government which had its seat at Buenos Aires. It was not, however, till 1822 that recognition of independence began to be extended to the new American nations. Against such recognition, the Spanish Minister at Washington, in the name of his government, solemnly protested, but the action of the United States was vindicated, with his accustomed ability, by John Quincy Adams, then Secretary of State, on grounds both of right and of fact.

In spite of the protest of the Spanish Minister against the action of the United States, and of the refusal of his government for many years thereafter to recognize the independence of its former colonies, that independence had become an irrevocable reality. That of which Bolivar and his disciples had dreamed had come to pass.

## THE PANAMA CONGRESS

Soon after the recognition of the South American governments by the United States, a situation arose in which it became necessary for the latter to consider what seemed to be a momentous step in its relations with the countries whose advent into the family of nations it had so heartily applauded.

On December 7, 1824, Bolivar, as head of the Republic of Peru, sent out an invitation to Colombia, Mexico, Central America, the United Provinces of the Rio de la Plata,

Chile and Brazil, to send representatives to a congress at Panama. Subsequently, an invitation to attend the conference was extended to the United States by the ministers of Colombia and Mexico. The subjects to be discussed by the Congress were divided into two classes: First, those peculiarly and exclusively concerning the countries which were still at war with Spain; and, secondly, those between belligerents and neutrals. In the discussion of the former, it was not expected that the United States would take part, but the occasion was thought to be opportune for the establishment of fixed principles of international law in matters in respect of which the previous uncertainty had been the cause of many evils.

At this time John Quincy Adams was President of the United States and Henry Clay was Secretary of State. Altho they were careful to safeguard the neutral position of the United States, the proposal for a congress met with their warm and enthusiastic approval. With a long vision of the future, they sought to grasp the opportunity which lay before them to establish between the independent nations of this hemisphere the foundations of an enduring friendship. "Having been the first," said Adams, "to recognize their independence and to sympathize with them, so far as was compatible with our neutral duties, in all their struggles and sufferings to acquire it, we have laid the foundation of our future intercourse with them on the broadest principles of reciprocity and the most cordial feelings of fraternal friendship. To extend those principles to all our commercial relations with them, and to hand down that friendship to future ages, is congenial to the highest policy of the Union, as it will be to that of all those nations and their posterity." Entering into the matter more particularly, he placed the interest of the United States in the congress on four grounds: First, that of promoting "the principles of a liberal commercial intercourse"; second, the adoption of liberal principles of maritime law, including the rule that free ships make free goods, and the proper restriction of blockades; third, an agreement between all the parties that each would "guard by its own means against the establishment of any future European colony within its borders," as had already been announced in the message of Monroe; and fourth, the promotion of religious liberty.

Animated with these liberal sentiments, the President nominated to the Senate Richard C. Anderson of Kentucky and John Sergeant of

Pennsylvania as envoys extraordinary and ministers plenipotentiary of the United States to the Congress. The proposed mission was strongly assailed in the Senate. It was charged that it involved a departure from the wise policy of non-intervention established by Washington. Another ground of opposition was that one of the questions proposed for discussion in the congress was "the consideration of the means to be adopted for the entire abolition of the African slave trade." An apprehension was also felt that the congress would be called upon to consider plans of international consolidation which would commit the United States to a more hazardous connection with the fortunes of other countries than was desirable.

In the end, the nominations of the President were confirmed, but when our representatives reached the Isthmus of Panama the congress had adjourned. Four governments were represented in it, namely, Colombia, Central America, Mexico and Peru. The assembly held ten meetings, the last of which took place on July 15, 1826. Representatives of Great Britain and of the Netherlands were present on the Isthmus and, altho they were not admitted to the congress, no doubt freely advised with its members.

#### A PREMATURE LEAGUE OF PEACE

Four agreements were signed in the congress: (1) A treaty of perpetual union, league and confederation; (2) an engagement for the assembling of the congress every two years, and, while the war with Spain lasted, every year; (3) a convention specifying the contributions in men, in ships, and in money, which the parties should make for the prosecution of the war against Spain; and (4) a plan for the organization of their common force. To a great extent these agreements related to the interests which the parties had as belligerents, but there were some of the stipulations which had a far wider scope. An attempt was made to establish a council for the interpretation of treaties and for the employment of conciliation and mediation in the settlement of international disputes. It was provided that all differences between the contracting parties should be amicably compromised, and that if this were not done, such differences should be submitted to the General Assembly, as it was called, for the formulation of an amicable recommendation. In case of complaints or injuries, the parties were not to declare war or to resort to reprisals without first submitting their grievances to the decision of the General Assembly.

Nor was any of the parties to go to war against an outsider without soliciting the good offices, interposition and mediation of the allies. Any contracting party violating these stipulations, either by going to war with another, or by failing to comply with the decision of the General Assembly, was to be excluded from the confederation and was to be incapable of restoration except by a unanimous vote. The contracting parties also pledged themselves to cooperate to prevent colonial settlements within their borders, and as soon as their boundaries were determined mutually to guarantee the integrity of their respective territories.

These benevolent proposals, which strongly remind us of some that are put forth today, were not destined to be carried into effect. The agreements signed at Panama were ratified by one only of the contracting parties—Colombia—and by Colombia only in part. In reality, the conditions at the time were such that effective cooperation was scarcely possible.

#### THE SEEDS OF DISTRUST

The practical failure of the United States to be represented at the Congress of Panama was an unfortunate omen. Indicative in itself of an attitude somewhat unsympathetic, this impression was deepened by the arguments by which the opposition to the mission was sustained. But, in addition to this, the continuance of the war with Spain, and the prevalence of revolutionary conditions in the new states, gave rise to frequent complaints and controversies. In the southern part of the hemisphere an unfavorable sentiment was no doubt created by the breaking up by the United States of the establishment which the government at Buenos Aires had made on the Falkland, or as the Argentines call them, the Malvinas, Islands, the title to which was generally believed to belong to Great Britain, by whom they were afterward effectively occupied. But the greatest source of disturbance was that which existed at the north, where Mexico labored in the constant throes of revolution. This cause of divergence was greatly accentuated by the revolt in Texas and the cry which sprang up in the United States for the "re-annexation" of that imperial domain which was alleged to have been a part of the Louisiana territory. As I have elsewhere remarked,<sup>1</sup> no acquisition of territory ever made by the United States was more natural or more completely in conformity with the aspirations and habits of thought of the American people.

<sup>1</sup>Four Phases of American Development, p. 174.

## Managing the Business of 8,500,000 Telephones

Imagine a manufacturing business having millions of customers scattered over the country, with millions of accounts on its books, most of them less than \$30 a year, and including a multitude of 5-cent charges.

Consider it as having shops and offices in thousands of cities, and reaching with its output 70,000 places, more than there are post offices in the United States. Think of the task of patrolling 16,000,000 miles of connecting highways constantly in use.

This gives you a faint idea of the business of managing the Bell System.

Not all the 8,500,000 telephones are in use at once, but the management must have facilities always adequate to any demands for instant, direct communication.

In so vast an undertaking, every branch of the organization must work in harmony, guided by one policy. The entire plant must be managed in the light of accumulated experience, and with the most careful business judgment.

The aim of the Bell System is to make the telephone of the utmost usefulness. This requires an army of loyal men and women, inspired by a leadership having a high sense of its obligations to the public.

Animated by the spirit of service, and unhampered by red tape, the 150,000 Bell employees have the courage to do the right thing at the right time upon their own initiative. They work together intelligently as a business democracy to give the public good service.

But the annexation, no matter how justifiable it may have been, followed by the war with Mexico, had upon our relations with the states of Central and South America a more pronounced and more unfavorable effect than any other event that has ever occurred. Of this fact, practically nothing is said in our histories, and I think it has never been fully understood; but its influence may easily be traced in the acts of the Central and South American Governments.

For some years after the Congress of Panama steps were from time to time taken to bring about another meeting. In this movement Mexico was the chief factor, no doubt because of her apprehension as to the continued retention of her northern territory. The object which she proposed was a union and close alliance "for the purposes of defense against foreign invasion, the acceptance of friendly mediation in the settlement of all disputes . . . between the sister republics, and the framing and promulgation of a code of public law regulating their mutual relations." Sixteen years later, in 1847, a congress composed of representatives of Bolivia, Chile, Ecuador, New Granada (now Colombia) and Peru, assembled at Lima for the purpose of adopting measures to insure "the independence, sovereignty, dignity and territorial integrity" of the republics concerned. Other American republics were to be admitted to the deliberations of the congress or to adhere to the agreements which it might conclude. The congress even decided to extend an invitation to the United States, but a favorable response could hardly have been expected, the United States being then at war with Mexico and in occupation of California and New Mexico, besides having annexed Texas. The invitation was probably intended to convey to the United States an intimation of the views and objects of the congress.

#### A UNION FOR MUTUAL PROTECTION

On September 15, 1856, there was signed at Santiago, in Chile, the so-called "Continental Treaty," between Chile, Ecuador and Peru, for the purpose, as the text declared, of "cementing upon substantial foundations the union which exists between them, as members of the great American family . . . and promoting moral and material progress, as well as giving further guarantees of their independence and territorial integrity." The government of Peru was authorized to communicate the treaty to other American governments and to request their adhesion. Brazil, altho then a monarchy, was invited to join the union. The United States was not approached.

In reality the chief cause of the attempted alliance was the feeling of continued apprehension toward the United States caused by the expeditions of William Walker and other filibusters to Central America and Mexico in the years following the Mexican War.

The alarm created by these expedi-

tions, and particularly by those of Walker to Central America, was profound, nor can it be said to have been destitute of foundation. Costa Rica, apprehensive as to her own future, undertook the necessary sacrifices of men and of money for the expulsion of the so-called Walker-Rivas government from Nicaragua. In their extremity, the countries of Central America then looked for help to Europe rather than to the United States, and they felt that, so far as thanks were due to any foreign power for aid in the suppression of filibustering, they were due chiefly to France and Great Britain, who eventually took concerted action in that direction.

#### THE MEXICAN PROBLEM

Moreover, ten years after the close of the war with Mexico, a serious condition of affairs again arose between the United States and that country. By the so-called Gadsden Treaty of 1853, the United States acquired by purchase the Mesilla Valley from Mexico. Five years later, in 1858, President Buchanan, referring in his second annual message to Congress to the unhappy condition of affairs existing along the southwestern frontier of the United States, earnestly advised Congress "to assume a temporary protectorate over the northern parts of Chihuahua and Sonora, and to establish military posts within the same. "This protection might," he said, "be withdrawn as soon as local governments should be established in those states capable of performing their duties to the United States, of restraining lawlessness and of preserving peace along the borders." The disorders continuing to increase, he recurred to the subject in his third annual message and recommended that he be authorized to "employ a sufficient military force to enter Mexico for the purpose of obtaining indemnity for the past and security for the future." In making this recommendation, he referred to Mexico as "a wreck upon the ocean, drifting about as she is impelled by different factions." In these circumstances he intimated that if the United States should not take appropriate action, it would not be surprising if some other nation should undertake the task.

Having discovered that his recommendations would not be sustained by Congress, he sought to accomplish the same object by means of treaties, but the United States was then on the verge of a great convulsion which was to shake the structure of its own government to the very foundations, and attention was drawn from affairs in Mexico and other American countries to the approaching crisis in affairs at home.

But for the occurrence of the Civil War in the United States, there is every reason to believe that the relations between this country and the other independent nations of this hemisphere would have been substantially different from those that now prevail. The opposition to the extension of slavery having always operated as a force an-

# What is an Internal Bath?

By R. W. BEAL

MUCH has been said and volumes have been written describing at length the many kinds of baths civilized man has indulged in from time to time. Every possible resource of the human mind has been brought into play to fashion new methods of bathing, but strange as it may seem, the most important, as well as the most beneficial of all baths, the "Internal Bath" has been given little thought. The reason for this is probably due to the fact that few people seem to realize the tremendous part that internal bathing plays in the acquiring and maintaining of health.

If you were to ask a dozen people to define an internal bath, you would have as many different definitions and the probability is that not one of them would be correct. To avoid any misconception as to what constitutes an internal bath, let it be said that a hot water enema is no more an internal bath than a bill of fare is a dinner.

If it were possible and agreeable to take the great mass of thinking people to witness an average post mortem, the sights they would see and the things they would learn would prove of such lasting benefit and impress them so profoundly that further argument in favor of internal bathing would be unnecessary to convince them. Unfortunately, however, it is not possible to do this profitable as such an experience would doubtless prove to be. There is, then, only one other way to get this information into their hands and that is by acquainting them with such knowledge as will enable them to appreciate the value of this long-sought-for health-producing necessity.

Few people realize what a very little thing is necessary sometimes to improve their physical condition. Also, they have almost no conception of how little carelessness, indifference or neglect can be the fundamental cause of the most virulent disease. For instance, that universal disorder from which almost all humanity is suffering, known as "constipation," "auto-intoxication," "auto-infection," and a multitude of other terms, is not only curable but preventable through the consistent practice of internal bathing.

How many people realize that normal functioning of the bowels and a clean intestinal tract make it impossible to become sick? "Man of to-day is only fifty per cent. efficient." Reduced to simple English this means that most men are trying to do a man's portion of work on half a man's power. This applies equally to women.

That it is impossible to continue to do this indefinitely must be apparent to all. Nature never intended the delicate human organism to be operated on a hundred per cent. overload. A machine could not stand this and not break down and the body certainly cannot do more than a machine. There is entirely too much unnecessary and avoidable sickness in the world.

How many people can you name, including yourself, who are physically vigorous, healthy and strong. The number is appallingly small.

It is not a complex matter to keep in condition but it takes a little time and in these strenuous days people have time to do everything else necessary for the at-

tainment of happiness but the most essential thing of all, that of giving their bodies their proper care.

Would you believe that five to ten minutes of time devoted to systematic internal bathing can make you healthy and maintain your physical efficiency indefinitely? Granting that such a simple procedure as this will do what is claimed for it, is it not worth while to learn more about that which will accomplish this end? Internal Bathing will do this and it will do it for people of all ages and in all conditions of health and disease.

People don't seem to realize, strange to say, how important it is to keep the body free from accumulated body-waste (poisons). Their doing so would prevent the absorption into the blood of the poisonous excretions of the body and health would be the inevitable result.

If you would keep your blood pure, your heart normal, your eyes clear, your complexion clean, your mind keen, your blood pressure normal, your nerves relaxed and be able to enjoy the vigor of youth in your declining years, practice internal bathing and begin to-day.

Now that your attention has been called to the importance of internal bathing, it may be that a number of questions will suggest themselves to your mind. You will probably want to know WHAT an Internal Bath is, WHY people should take them, and the WAY to take them. These and countless other questions are all answered in a booklet entitled "THE WHAT, THE WHY and THE WAY OF INTERNAL BATHING," written by Doctor Chas. A. Tyrrell, the inventor of the J. B. L. Cascade, whose lifelong study and research along this line make him the pre-eminent authority on this subject. Not only has internal bathing saved and prolonged Dr. Tyrrell's own life but the lives of a multitude of hopeless individuals have been equally spared and prolonged. No book has ever been written containing such a vast amount of practical information to the business man, the worker, and the housewife; all that is necessary to secure this book is to write to Dr. Chas. A. Tyrrell at Number 134 West 65th Street, New York City, and mention having read this article in The Independent, and same will be immediately mailed to you free of all cost or obligation.

Perhaps you realize now, more than ever, the truth of these statements, and if the reading of this article will result in a proper appreciation on your part of the value of internal bathing, it will have served its purpose. What you will want to do now is to avail yourself of the opportunity for learning more about the subject and your writing for this book will give you that information. Do not put off doing this, but *send for the book now* while the matter is fresh in your mind.

"Procrastination is the thief of time." A thief is one who steals something. Don't allow procrastination to cheat you out of your opportunity to get this valuable information which is free for the asking. If you would be natural, be healthy. It is unnatural to be sick. Why be unnatural, when it is such a simple thing to be well?—*Advertisement.*

# The January Issue of THE YALE REVIEW

Edited by WILBUR L. CROSS

Established 1911

## WAR ARTICLES

### The Political Teachings of Heinrich von Treitschke

By ARTHUR T. HADLEY; President of Yale University. This is an article giving the personal impressions of the historian, with an estimate of the relation of his teachings to the war.

### America and the European War

By NORMAN ANGELL, Pacifist and author of "The Great Illusion." What Americans can do to bring about international peace.

### The Russian Problem

By PAUL VINOGRADOFF; Regius Professor of Jurisprudence, Oxford. Considerations of the political and educational reforms that are re-moulding Russian life.

### German Economics and the War

By HENRY CROSBY EMERY; Sometime Chairman of the Tariff Board. Professor of Economics at Yale. A study of economic fact in Germany which exposes many current fallacies regarding the war.

### Academic Superstition and Democracy

Florence V. Keys

and signed book reviews written by authorities

The YALE REVIEW in 1915 will publish a series of articles on the war designed for readers who have kept pace with events through the newspapers, and desire mature and vigorous discussion of what has happened, why it has happened, and how. The war, however, will not interfere with the Review's established policy of supplying the best general reading available in periodical publication. Criticism of contemporary literature and contemporary literary movements of a quality not common in recent years in America, which was brilliantly inaugurated in 1914, by Robert Herrick and Bliss Perry, will be continued with equally notable articles. Essays which on a foundation of sound scholarship erect an edifice full of charm and interest for the general reader, a field in which the Review has been especially fortunate, will be given liberal space. And in spite of the pressure of the great war, the forthcoming numbers will find room for an important discussion of educational problems, scientific articles of clarity and breadth, distinguished poetry, full reviews of many significant books, and studies of the new movements in politics and letters that will follow the establishment of peace.

The YALE REVIEW was founded to satisfy the growing desire for a magazine that should be neither too special nor too general in its appeal. It proposes to interest its readers by means of essays that are literature without being merely literary, articles that are authoritative without technicality, discussions vital in contemporary thought, though not sensational, poetry that interprets life, and criticism that respects the best judgment of the time. For a rapidly increasing class of Americans, interest is best awakened and longest held by such work, and for such a community of good readers the YALE REVIEW is edited.

## SPECIAL SUBSCRIPTION OFFER

The January number sent free with one year's subscription beginning April, 1915

DETACH COUPON AND RETURN TO

YALE REVIEW,  
New Haven, Conn.

Enclosed find check (money order) for \$2.50 for which please send me the Yale Review for one year beginning April, 1915. It is understood that I am to receive the January number, complimentary, with this subscription.

tagonistic to expansion toward the south, the outbreak of the Civil War put a sudden end to the tendencies in that direction, and also served to create a readier sympathy with countries afflicted with domestic dissensions. The attitude of the United States underwent an instantaneous and profound change. The government of Costa Rica, when discussing with the government of Colombia in 1862 a proposal for a "Continental League," observed that there were not always at the head of the great Republic of the North "moderate, just and upright men such as those who now form the administration of President Lincoln." This utterance is highly significant, not only of the impression that had so long prevailed, but also of the change which was taking place. The feeling of sympathy was also quickened by the sense of common danger which followed the French invasion of Mexico. And later, when Spain went to war with the republics on the west coast of South America, the good offices of the United States were employed for the purpose of bringing about a termination of the conflict.

This was done by means of a conference, which was opened at the Department of State at Washington, on October 29, 1870, under the presidency of Hamilton Fish, who was then Secretary of State. Representatives of Spain, Peru, Chile and Ecuador attended. And on April 11, 1871, the contending parties agreed upon an armistice which was to continue indefinitely, and which could not be broken by any of the belligerents except after three years' notice given thru the government of the United States of its intention to renew hostilities. During the continuance of this armistice all restrictions on neutral commerce which were incident to a state of war were to cease. Mr. Fish signed these articles "in the character of mediator."

This important act affords a notable illustration of the change which had supervened in the relations between the United States and the other independent nations of this hemisphere. But it was only an augury of what was to take place in the future.

Toward the close of the decade in which the perpetual armistice was signed, there broke out what is commonly known as the War of the Pacific, between Chile on the one side, and Peru and Bolivia on the other. This unfortunate conflict naturally revived the thoughts which had so often been cherished of the formulation of a plan for the preservation of peace among the American nations. A step in this direction was taken when, on September 3, 1880, the representatives of Chile and Colombia, on the initiative of the latter, signed at Bogota a treaty by which they bound themselves "in perpetuity to submit to arbitration . . . all controversies and differences" of every nature whatsoever which could not be settled by diplomacy. And it was further agreed that if they should be unable to concur in the choice of an arbitrator, the arbitral function should be

discharged by the President of the United States—a provision which bore eloquent testimony to the growth of friendly sentiments. The two governments further engaged at the earliest opportunity to conclude similar conventions with the other American nations to the end as they said, "that the settlement by arbitration of each and every international controversy shall become a principle of American public law." On the strength of the signing of this treaty, the Colombian government, on October 11, 1880, issued an invitation for a conference to be held at Panama; but, as Chile and Peru continued at war, action upon the invitation was deferred.

#### THE FIRST INTERNATIONAL AMERICAN CONFERENCE

The project, however, was not abandoned. On November 29, 1881, James G. Blaine, as Secretary of State, extended, in the name of the President of the United States, "to all the independent countries of North and South America an earnest invitation to participate in a General Congress to be held in the City of Washington on the twenty-fourth day of November, 1882, for the purpose of considering and discussing the methods of preventing war between the nations of America." "To this one great object," Mr. Blaine declared it to be the desire of the President that "the attention of the congress should be strictly confined." The continuance of the war between Chile and Peru led to the subsequent withdrawal of this invitation. But, in reality, the accomplishment of its great design was only postponed; for, after the submission and consideration from time to time of many proposals, the Congress of the United States, at length, by an act of May 24, 1888, authorized the President to invite the Republics of Mexico, Central and South America, Haiti, Santo Domingo, and the Empire of Brazil, to join the United States in a conference to meet at Washington on October 2, 1889. The subjects proposed for the consideration of the conference were: (1) Measures tending to preserve the peace and promote the prosperity of the American nations; (2) measures toward the formation of a customs union; (3) the establishment of frequent communications between the various countries; (4) uniform customs regulations; (5) a uniform system of weights and measures; (6) laws for the protection of patents, copyrights and trade-marks; (7) extradition; (8) the adoption of a common silver coin; (9) the formulation of "a definite plan of arbitration of all questions, disputes, and differences that may now or hereafter exist" between the American nations, "to the end that all difficulties and disputes between such nations may be peaceably settled and wars prevented."

When the conference assembled, Mr. Blaine again occupied the post of Secretary of State. His address of welcome to the delegates was worthy of the occasion, and he was chosen to preside over the deliberations of the as-

## Fateful Forty-five!

Success usually begins at the age of forty-five—jobs are apt to end there.

The ordinary business virtues will carry a man over the early stages of a career. Loyalty, diligence and intelligence win promotion up to thirty—but not at forty-five. At that age, a man must have everything or he has nothing. The ladder of promotion is really a moving stairway—when you get to the top you get off.

Almost any young man can *hold* a job—but is he good enough for the next one? Will the next job be the top of the moving stairway?

Is he acquiring a grasp of the fundamental principles of business? Will he, at forty or forty-five, be ready to take hold of bigger work and become a leader—or will he get off?

### The Modern Business Course and Service of the Alexander Hamilton Institute

is a course of study which covers the whole range of organized business knowledge. It reduces the experience of all business men to working principles which supplement your necessarily limited experience. Every department and phase of business is covered. The financier learns of organization—the engineer, of finance. The corporation lawyer learns of transportation, distribution, sales, advertising, accounting; the business man learns business law.

The Alexander Hamilton Institute is planned and conducted by recognized authorities under the supervision of an Advisory Council composed of the following educators and business leaders:

JOSEPH FRENCH JOHNSON D.C.S., Dean of New York University School of Commerce, Accounts and Finance.  
FRANK A. VANDERLIP, LL.D., President of the National City Bank of New York.  
ELIJAH W. SELLS, M.A., C.P.A., Senior Member Haskins & Sells, Certified Public Accountants.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,219,045,826.00
Received premiums thereon to the extent of.....	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers.....	89,740,400.00
Of which there have been redeemed.....	82,497,340.00
Leaving outstanding at present time.....	7,243,060.00
Interest paid on certificates amounts to.....	22,585,640.25
On December 31, 1913, the assets of the company amounted to.....	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

sembly. This was the first of what have come to be distinctively known as The International American Conferences, of which four have already been held, and the fifth of which would now be in session but for the breaking out of the unfortunate conflict in Europe.

### A PLAN OF ARBITRATION

The first conference continued to sit until the nineteenth of April, 1890. Various important international agreements were formulated. Among these, one of the most notable was the plan for international arbitration, which was adopted on April 18, 1890. By this plan it was declared that arbitration as a means of settling disputes between the American nations was adopted "as a principle of American international law"; that arbitration should be obligatory in all controversies concerning diplomatic and consular privileges, boundaries, territories, indemnities, the right of navigation, and the validity and enforcement and construction of treaties; and that it should be equally obligatory in all other cases, whatever might be their origin, nature or object, with the sole exception of those which, in the judgment of one of the nations involved in the controversy, might imperil its independence. But it was provided that even in this case, while arbitration for that nation should be optional, it "should be obligatory upon the adversary power." As yet this plan represents but an aspiration, since it failed to receive the approval of the governments whose representatives adopted it. In connection with it, there was also adopted a declaration against the acquisition of title by conquest which was designed to form, in effect, an integral part of the arbitral plan.

### DEFINITE ACHIEVEMENTS OF THE CONFERENCE

An agreement destined to produce practical result was that by which was constituted the Bureau of the American Republics, now known by the short title of the Pan-American Union. This organization, after twenty years of active usefulness, had the good fortune four years ago to be installed at Washington in a building which is one of the finest examples of architecture in the country.

Another measure that has yielded definite results was the agreement for the prosecution of surveys for what is popularly known as the Inter-Continental Railway. Altho it is not probable that such a railway will, in the near future, furnish an actual means of transportation between, for instance, New York and Buenos Aires, yet the various links in the chain of railways to which the name of Inter-Continental is applicable have been steadily progressing and many of them are in actual use for purposes of transportation.

A notable event of the first International American Conference was the transformation of the Empire of Brazil into the Republic of Brazil. This transition from a monarchical to a republican form of government was

## Nervousness

—a Symptom, NOT a Disease

Nervousness is due largely to habits which may be corrected by giving attention to their causes. This is fully explained by Dr. John Harvey Kellogg in his new book—"Neurasthenia"—giving results of his experience with thousands of cases treated during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg's book is not dry. He has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from nervousness—exhaustion—sleeplessness—or any other form of Neurasthenia, get this book and study it. It shows you the way out—how to obtain relief from the dread fangs of nervousness.

The book contains 250 pages, printed with plain type on fine book paper. There are several full page illustrations, diet tables and valuable instructions as to exercise, relaxation, rest and sleep. The regular price is \$2.00 but, to give the work widespread distribution, Dr. Kellogg has permitted an edition in library paper covers at only \$1.00 a copy. Order today. You take no risk sending money because, if you are not entirely satisfied, the book may be returned for prompt refund. Order at once and get relief from nerves. Address—

brought about by a revolution which was substantially bloodless. The wise and patriotic ruler, Dom Pedro II, scarcely more eminent as a statesman than as a student of science and of philosophy, retired without a contest before the demonstration on the part of his people of a desire for a change in the form of their government. There was thus fulfilled the aspiration, manifested in Brazil just a hundred years before, when, in 1789, a movement for independence was started in the State of Minas Geraes by a group of Brazilian students, one of whom had met and talked with Thomas Jefferson in France in 1786. And in this relation it is interesting to note that, by the constitution of Brazil, the republic is forbidden to undertake, directly or indirectly, a war of conquest either by itself or in alliance with another government.

#### LATER CONFERENCES

Between the first and second International Conference of American States, an interval of more than eleven years elapsed. The second conference sat in the City of Mexico from October 22, 1901, to January 31, 1902. One of its notable results is the fact that, by means of it, the American nations became parties to The Hague Convention of 1899 for the pacific settlement of international disputes. Moreover, a project of a treaty was adopted for the arbitration, as between American nations, of pecuniary claims. This treaty was signed by the delegations of all the countries represented in the conference. It obligated the contracting parties for a period of five years to submit to the Permanent Court at The Hague all claims for pecuniary losses or damage which might be presented by their respective citizens, when such claims were of sufficient importance to justify the expense of arbitration; but it also permitted the contracting parties to organize a special jurisdiction in case they should so desire.

The Third International American Conference was held in Rio de Janeiro in 1906, and resulted in the conclusion of certain treaties or conventions, two of which may be specially mentioned. One was the convention for the renewal of the treaty concluded at Mexico for the arbitration of pecuniary claims. The other is the convention providing for the creation of what is known as the International Commission of Jurists, to formulate codes of international law for the American nations. This commission held its first meeting at Rio de Janeiro in the summer of 1912, and is to hold a second meeting at the same place in the summer of 1915. At the first meeting the commission was divided into committees, to each of which is entrusted the preparation of drafts of statutes on certain designated subjects. The work of the commission is to be submitted, for final approval, to the governments concerned, or to the International American Conference, and, so far as its provisions may be of general application, it is not improbable that they may be brought before the Peace Conference at The

Hague when conditions are such as to admit of the revival of that assembly.

The Fourth International American Conference was held at Buenos Aires in 1910. It was notable for having finally dealt with all the subjects on its program, including treaties relating to patents, trade-marks and copyrights. A treaty was also made for the indefinite extension of the agreement for the arbitration of pecuniary claims. In the report of the delegates to the Fourth Conference, special reference is made to the harmony which characterized its deliberations. There can be no doubt that, quite apart from the actual work accomplished, the free interchange of views in friendly conference between representative men from all parts of America cannot fail to create a better understanding and to draw closer the relations between the countries concerned. This is indeed one of the chief benefits of the International American Conferences. The process of assimilating or harmonizing legal rules and remedies in countries whose systems of jurisprudence are derived from different sources is necessarily slow and uncertain. But this by no means implies the existence of a serious obstacle to the promotion of a free and beneficial intercourse.

New York City

Mask—Who is that fellow coming out of your room with a suit?

Wig—That's my press agent.—*Pennsylvania Punch Bowl.*

Sunday School Teacher—William, what must we do before we can expect forgiveness of sins?

William—Sin.—*New York World.*

"Was your Christmas present in the nature of a surprise?"

"I should say so. It was just what I wanted."—*Judge.*

"If there were four flies on a table and I killed one, how many would be left?" inquired the teacher.

"One," answered the bright little girl—"the dead one."—*Exchange.*

Judge—Officer, what's the matter with the prisoner—tell her to stop that crying—she's been at it fifteen minutes (more sobs).

Officer—Please, sir, I'm a-thinking she wants to be bailed out.—*Nebraska Awgwan.*

Anybody can write a story about college life. If he has not attended a college, so much the better. His imagination is less trammelled. A few simple rules must be observed, however.

1. All heroes are named Jack, Stanley or Dick.

2. All college men wear sweaters *always* and smoke short, fat-bowled pipes.

3. There is always a "Fatty," who is a funny fellow.

4. Any four college men make up a quartet, which can sing "Merhileeee we ro-hull alonnnng" at any time.

5. All college men are wooing a girl named Dorothy or Betty, who is "sweet and pure as an angel."

6. All college men address each other as "old hoss."

7. College men never study, but spend their time in tossing repartee back and forth.

8. All college rooms are adorned with pennants.

9. All college men call their fathers "Pater" and speak of the "honor of the dear old school" in a husky voice.—*Harvard Lampoon.*

*"The best weekly, not only  
in America, but in the world."*

JAMES BRYCE.

*"The Nation maintains its  
undisputed supremacy among  
the literary journals of the  
world."*

T. W. MOFFAT, Secretary

# THE MARKET PLACE

## FACING THE NEW YEAR

The new year finds conditions in the financial world improved to a degree greater than any of us would have dared to hope three months ago. When the war broke out with a suddenness disconcerting beyond belief, it was natural that all kinds of disasters should loom large in expectation. But in this very human world it is the expected disasters that do not happen. It is not when men see danger ahead that panics, so largely psychological in their causes, fall with blighting effect. It is when men let the reckless intoxication of high prosperity get to their heads and blind them to the possibilities of disaster, that the crash is most likely to come. With danger clearly outlined above the horizon, men gird up their loins and set themselves to create conditions that will safeguard them along the way.

The war, unbelievably great in extent and incalculably dangerous in potential effect, set men working with a will to ward off and to minimize the impending perils.

This country was going to find it hard to pay its debts abroad. Foreign investors were going to flood our market with frantic liquidation. The war, which must inevitably mean to the warring nations of Europe the pouring out of blood and treasure, was to mean to us the no less disastrous spending of the life blood of commerce and the draining of our precious gold supply.

But the expected did not happen. For we gathered ourselves together not to let it happen.

A fine spirit of coöperation has thus far enabled us to pay our debts abroad as they came due. A ticklish point was the indebtedness of New York City to foreign investors. The banks pledged themselves to make up a gold pool to use in redeeming the city's obligations; and before anything like the last of the subscribed gold was needed, the banks found it cheaper to buy foreign exchange to make up their quotas.

Trading in securities was resumed with extreme caution and commendable hesitancy and the dreaded flood of foreign selling did not break over the barriers set up to check its onrush. The Stock Exchange is open, tho still under emergency restrictions, and prices are holding steady. There has been as yet no panic rush on the part of foreign investors to realize upon their holdings.

Foreign exchange has steadily receded from an impossibly high level to the wonted line of normal times.

For it is what we should have expected, not what we were driven to dread, that has really happened. Europe was certain, as soon as the first

period of stress was over, to want more and more goods from us. The balance of trade was bound to swing over in our favor. The debts to Europe, which we were wondering how we were to pay without too great a cost, were sure to be not only balanced, as time went on, but overbalanced by Europe's newly accrued debts to us. We would not always need to pay our debts in gold, for Europe was inevitably to allow us to pay them in goods—the goods it was more necessary than ever in time of war that Europe must have.

The New Year has dawned gratifyingly bright in comparison with the Egyptian darkness of September. Clouds will yet cross the sky. We have yet to suffer much, as the whole world will suffer, from the clash of national ambitions on the battlefields of Europe.

But every day will add to our preparedness. Every month that the disaster is put off, makes its seriousness, if it does come, progressively less. We are learning all the time to adjust ourselves to the dislocated conditions. If only we do not react too soon and too far; if only we remember not to fling caution to the winds and not to let ourselves be blinded by false and glittering hopes, we may have every reason to expect in the new year a sober and increasing prosperity.

The British Government, following the accustomed usage of belligerent nations as each new war reveals new conditions in relation to the usefulness of materials for warlike purposes, has revised its lists of contraband. Sulfur and glycerin are transferred from the status of conditional contraband to that of absolute contraband. In addition, a long list of articles, largely made up of ingredients useful in the manufacture of explosives, has been included in the category of absolute contraband. The list is as follows:

"Ingredients of explosives, namely, nitric acid, glycerin, acetone, calcium acetate and all other metallic acetates, sulfur, potassium nitrate, fractions of distillation products of coal tar between benzol and cresol, inclusive; aniline, methylaniline, dimethylaniline, ammonium perchlorate, sodium perchlorate, sodium chlorate, barium chlorate, ammonium nitrate, cyanamide, potassium chlorate, calcium nitrate, mercury; resinous products, camphor and turpentine (oil and spirit); ferro alloys, including ferro tungsten, ferro molybdenum, ferro manganese, ferro vanadium, ferro chrome; tungsten, molybdenum, vanadium, selenium, cobalt, manganese; wolframite, scheelite, molybdenite, manganese ore, zinc ore, lead ore, bauxite; alumina and salts of aluminum; antimony, together with sulphides and oxides of antimony; copper, part wrought, and copper wire; submarine sound signaling apparatus; tires for motor vehicles and for cycles, together with articles or materials especially adapted for use in manufacture or repair of tires; rubber, including raw waste and reclaimed rubber, and goods made wholly of rubber."

The shipment of cotton to Germany has been resumed. It is made possible by the definite declaration of Great Britain and

its allies that cotton will not be treated as contraband. On December 24, 6600 bales consigned to Germany were landed at Rotterdam from the American steamer "A. A. Raven." The cargo was shipped from Wilmington, North Carolina. On December 25 a cargo of 6550 bales, valued at \$455,000, left Galveston for Bremen on the American steamship "Pathfinder." The reports of the hazardous conditions of navigation in the North Sea have driven the freight rates on such shipments as these to five times the normal figures.

An official of one of New York's largest banks is reported by the *Commercial and Financial Chronicle* as saying recently: "An event has recently occurred in South America which in its broadest aspect may be called epoch-making. Recently, in paying for a hide shipment purchased in Argentina, the seller asked for bills drawn on New York in dollars instead of on London in pounds. This is the first time in the history of Argentina that American exchange has been accepted in payment of an American purchase. I believe it to be the forerunner of greater things to come. It means direct intercourse between the United States and Canada and South America, with New York the great money clearing house of the Western Hemisphere. It is just in this quiet, unostentatious way that some of the great turning points of economic history have been written." There is unquestionably a great opportunity for us in South America. It must be looked upon as a financial opportunity with distinct financial responsibilities, as well as a trade opportunity. New York ought to be the banking center of the Western Hemisphere as London is now the banking center of the world. But to make it so, even in the extraordinary conditions now confronting us, will mean hard, conscientious, painstaking work. Neither trade nor exchange is diverted into new channels by a word.

If we are going to have to assume an increasingly large share in the provisioning of the world, made hungry by the ravages of the war, we are in a fair way to be able to do it. The Secretary of Agriculture reports that the aggregate value of all farm crops, farm products and farm animals sold and slaughtered in 1914 was nearly ten billion dollars, or about eighty-three million dollars more than in 1913, and over double the value of all farm products a decade and a half ago. Despite a loss of over \$300,000,000 in the value of the cotton crop, the value of all crops was only eighty-eight millions less than in 1913. The corn and wheat crops were the most valuable ever produced in the United States. The wheat crop was valued at \$878,680,000, and the corn crop at \$1,702,539,000. We shall certainly be able to do our share.

The Cotton Loan Fund is all but complete, nearly \$97,000,000 of the \$100,000,000 specified having been subscribed. The first applications for loans have been received. They come from banks in the state of Alabama. The loans, however, cannot be made until the fund is complete, but there is every reason to believe that this consummation will be effected without delay.

The following dividends are announced:

East River National Bank, semi-annual, 2 per cent, payable on and after January 2.

Associated Gas & Electric Company, preferred, 1½ per cent, payable January 15.

Wells Fargo & Company, 3 per cent, payable January 15.

Citizens' Savings Bank, semi-annual, 3½ per cent per annum, payable on and after January 18.

Franklin Savings Bank, semi-annual, 3½ per cent per annum, payable on and after January 18.

Union Dime Savings Bank, 3½ per cent per annum, payable on and after January 21.

Westinghouse Electric & Manufacturing Company, preferred, quarterly, 1½ per cent, payable January 15; common, quarterly, 1 per cent, payable January 30.

New York Central Railroad Company, 1¼ per cent, payable February 1.

First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710. \$25 Certificates of Deposit also for saving investors.

PERKINS & CO. Lawrence, Kans.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

### FROM STOCK TO MUTUAL

Last week, Chancellor Walker of New Jersey, at Trenton, signed a final order authorizing the Prudential Insurance Company to purchase the outstanding 40,000 shares of its capital stock at \$455 a share, the price placed upon it by the commission of appraisers appointed by the court some months since. This action brings the work of mutualizing the Prudential Company to the beginning of its final stages. Minority stockholders may if inclined obstruct the procedure during thirty days succeeding the issuance of the Chancellor's order, but there are no indications of opposition. One representative of stockholders who own 24,000 shares, recently said that he knew of no appeal in contemplation in any quarter. Certainly there is no reasonable cause for such action by any stockholder.

It is to be presumed that the owners of this stock realize that they are receiving a handsome price for their holdings, and it is certain that the observing public do. In this view of the matter I fully concur. At the same time, I hold that the object sought greatly exceeds the present money value of the price agreed upon. The object is to remove this fund of hundreds of millions, which is constantly increasing and may reach a billion within the next quarter of a century, from the control of private individual owners, who have little more than a mercenary interest in the business, to the custody of the millions of policyholders whose contributions have made it what it is and who are in truth the only parties in interest. Such a transfer of ownership is worth, in my humble opinion, the payment of a sum which some critics may regard as fabulous.

In considering a subject of this kind it becomes necessary to look actual conditions squarely in the face. A stock company is owned by its stockholders. A majority of them control its business policies. They cannot, if I understand the rights of property, be compulsorily and unwillingly divested of their titles. In the Prudential case, the large-brained and large-souled men, happily controlling a majority of the stock, realize the menace to the institution which the years, increasing assets and changing ownership among the stockholders hold, and I am convinced that they desire to put it beyond the raids of stock-jobbers while the opportunity exists. I know that this was the dream of the late John F. Dryden, the founder and builder of the company, during the last three or four years of his life.

Here is the situation: They hold the whole—they control and operate it. In these privileges they cannot be estopped. They are willing to take a part

of what is lawfully theirs and resign all their rights. The only question to be determined is this: Is it a good bargain for the policyholders? As it costs them nothing which is legally theirs we should conclude it is; as it endows them with the power of governing their future affairs we should be certain on the point.

### NOW THEY KNOW

Public opinion in respect of the fire insurance business seems to have undergone radical changes in Missouri since, as the result of drastic restrictive legislation in 1912 and 1913, the fire insurance companies suspending business there precipitated a condition which resulted in the appointment of a commission charged with the duty of investigating the entire matter. It was a truce between the companies and the state government.

After six or eight months' work, the commission has made a report and, measuring by the standard prevailing before the inquiry was undertaken, the findings are astonishing. One of the so-called reforms passionately contended for two years ago, embodied in the new law, the rigorous enforcement of which was attempted, was the making of rates by the state. The commission virtually condemns this proposition. It recommends that companies be formally endowed with the privilege of maintaining at their expense their own rating bureaus; or, in individual cases, if preferred, of making their own rates, coupled with the provision that all rates, however made, be and continue open to public inspection and to be adhered to without discrimination between buyers of policies.

This is but one of many features representing a complete reversal of policy by the governing powers. I single this one out because rate-making in my judgment is vital in equal proportions to the success of the companies and the security of the protection bought by policyholders. The insurer, above all else, must maintain its solvency. It must know how this is to be achieved. No one, so well as the insurer does, knows how to do it. Upon proper and intelligent ratings hangs adequate income for paying losses and defraying expenses of management. We carry out the spirit of our institutions in supervising all corporate activities, but we violate both the spirit and the letter when we usurp the functions of their managements. We should regulate, not operate, private business enterprises.

During October, 1914, there were 656 deaths among members of the New York Life Insurance Company, on which was paid \$1,833,315. As to causes, consumption led with 74; Bright's disease followed with 72 and heart disease third with 66.

## NEW RED CROSS MEMBERS

Each Contribution of Two Dollars or more constitutes the giver a Member of the American Red Cross for the current year, with a free copy of the *Red Cross Magazine*. The Independent will send—by authority—to each contributor a Certificate of Membership and a Red Cross Button.

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is \$5,750.47.

The following list covers the contributions of the past two weeks:

A Friend, \$3; A Friend, \$2; Mrs. A. H. Andrews, New York, N. Y., \$2; Mrs. David C. Baleson, Pigeon Cove, Mass., \$2; Miss Stella E. Campbell, Northampton, Mass., \$2; Mrs. L. E. Canfield, Academy, S. D., \$6; Miss Judith Delvalle, Curacao, West Indies, \$2; Edgar E. DeCou, Eugene, Oregon, \$2; Miss Stella Ellis, Lyndonville, N. Y., \$5; Ermin F. Hill, Hughesville, Pa., \$3; John F. Ihli, Morgantown, W. Va., \$2; John P. Ilsley, New Brighton, N. Y., \$2; Miss Mary F. Leavitt, Newport, R. I., \$2; Miss Susan M. Lelless, Wind River, Wyo., \$2; Miss Eleanor McClaine, Silverton, Oregon, \$10; McLachlen Building, Washington, D. C., \$2; Miss Mary K. Miller, Washington, Pa., \$2; Rawdon W. Myers, Hartford, Conn., \$2; Peoples National Bank, Waynesboro, Pa., \$17.50; Presbyterian Church (Broadfield), D. C. Cowan, pastor, Paston, Mont., \$6; Mrs. Helen N. Perry, treasurer of Fay-Robinson Chapter D. A. R. of Reedsburg, Wis., \$3; Miss Eleanor Pierson, Lexington, Ill., \$2; Mrs. J. S. Robertson, Urbana, Ohio, \$2; Miss Anna Scattergood, Mansfield, Ohio, \$2; Mrs. J. Kinsey Smith, Pittsburgh, Pa., \$4; L. L. Van Slyke, Geneva, N. Y., \$2; Miss Watts, Asheville, N. C., \$20; Mrs. P. White-worth, Marion, Mass., \$3.

Allen Andrews, Presbyterian S. S. of Chili, N. Y., \$10.50; Alfred Becker, Elgin, Minn., \$2; Ella I. Bowker, Ames, N. Y., \$2; C. S. Campbell, Derry Village, N. H., \$2; Albert Copershenksi, Ivanhoe, Minn., \$2; Mrs. A. B. Cutter, Los Angeles, Cal., \$2; Mrs. A. W. Drury, Dayton, Ohio, \$2; F. A. M. Elwain, Faribault, Minn., \$2; Emery Mills Baptist Church, Springvale, Maine, \$6; A Friend, 50 cents; Mrs. A. Johnston, Troy, N. Y., \$2; Grace E. Jones, Carbondale, Ill., \$2; A. M. Kotowski, Ivanhoe, Minn., \$2; Ben Maiben, Palmyra, Neb., \$15; Members of Morningside College, Sioux City, Iowa, \$18.25; H. A. Moran, Osceola, Ind., \$2; N. B. D., Portsmouth, N. H., \$2; Herbert D. Newell, Hermiston, Ore., \$5; Herbert Nimme, Rosendale, Wis., \$2; No name, Waynesboro, Pa., \$15; L. P., Morristown, N. J., \$5; Mrs. J. B. Pawson, Sidell, Ill., \$2; Paul D. Peltin, New York, N. Y., \$2; John R. Persons, Oak Harbor, Wash., \$5; Austa Reisinger, Franklin, Pa., \$5; O. B. Riegel, Snyder, Okla., \$2; W. L. Rogers, Cohoes, N. Y., \$2; J. M. Sawyer, Miles City, Mont., \$25; Frank Schroeder, Ivanhoe, Minn., \$2; R. M. Squires, Mrs. Squires and Julia Squires, Lexington, Ky., \$6; V. W. S. Trippett, Princeton, Ind., \$5; H. S. Voorhees, Yonkers, N. Y., \$2; B. H. Voris, Newton Falls, Ohio, \$2.

You can't get anything done unless you do it yourself. And usually you can't do it yourself very well.—*E. W. Howe's Monthly*.

"Will you marry me?"

"But I love another from the bottom of my heart."

"You dear girl! There's always room at the top."—*Columbia Jester*.

I asked a friend the other night  
To get for me some dynamite;  
He tripped while coming up the stair—  
Where is my friend now? Ask me where!  
—*Harvard Lampoon*.

## The Joy of Owning a Boat

FIFTY LEADING BOAT BUILDERS have joined with the Gray Motor Company in issuing a catalog, showing the specialties of each concern.

A catalog of "specialized boats,"

from a complete little fishing or pleasure launch at \$110.00 to a solid mahogany express launch equipped with a modern 6-cylinder, self-starting, 4-cycle Gray Motor—or a snug, safe, roomy, little cruiser, with all the comforts of a home—in fact, a range to select from that can satisfy every individual who is wanting a small boat—we help you to experience the "Joy of Owning a Boat." Write for the Boat Builders' Catalog today.

A New Gray Model

4-Cylinder, 4-Cycle, 16-20 H. P., (guaranteed to develop 25) with every feature you have ever hoped for on a Boat Motor. \$210.00 and upward—depending on equipment.

Complete Power Unit and Instrument Board

Standard on all 4 and 6 Cylinder Model "C" Motors. These 4-Cycle Gray Motors are shipped from the factory complete—the most Complete Power Plants ever manufactured for a boat—not one thing to buy or add. Self-starting, of course. Write for complete catalog of Gray 4-Cycle motors.

## GRAY 2-CYCLE

are standard the world over—Powerful, Smooth-Running, Thoroughly Reliable, made of the best material and workmanship money can buy. Manufactured in quantities by the largest builders of 2-cycle Marine Motors in the world.

3 to 36 H. P. Gasoline or Kerosene **\$55 and Upward**

**GRAY MOTOR COMPANY, 156 Gray Motor Bldg., DETROIT, Mich.**

### WELLS FARGO & COMPANY

A dividend of 3% upon the capital stock of this Company has been declared out of earnings of the past six months (1% from express and 2% from investment earnings), payable on January 15, 1915, at the office of the Company, 51 Broadway, City of New York, New York, to stockholders of record at the close of business December 30, 1914.

The Transfer Books will close at the close of business on December 30, 1914, and be reopened at the opening of business January 16, 1915.

C. H. GARDINER, Secretary  
New York, December 24, 1914.

### MERCHANTS EXCHANGE NATIONAL BANK OF THE CITY OF NEW YORK.

December 7, 1914.

The annual meeting of the stockholders of this bank for the election of Directors for the ensuing year will be held at the banking house, No. 257 Broadway, on Tuesday, the 12th day of January, 1915, between the hours of 12 m. and 1 p. m.

E. V. GAMBIER, Cashier.

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

# THE MOVING WORLD

## A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

### ETHNOLOGY IN ACTION

IT was thought to be a great educational advance when the American Museum of Natural History and the Smithsonian set up groups of Indians modeled in wax and clothed in their everyday or gala costumes. But now a further step of equal importance has been taken by Edward S. Curtis in presenting to us all phases of the life of the tribes of the north Pacific coast region in *The Land of the Head Hunters*. In this way we are brought to see a meaning in their magic; we understand the heraldic significance of the totem pole; we realize the hardships and terrors of savagery. The masks and costumes of the eagle and the bear which seemed merely grotesque when we saw them hung up in rows in the showcase at the museum become effective, even awe-inspiring, when seen on giant forms on the prow of a canoe filled with victorious warriors. The bird and animal dances are not unworthy to be regarded as the precursors of Rostand and Maeterlinck.

We have long delighted in the marvelous still life photographs of Indians which Mr. Curtis has produced and now we see that he is equally skilful in handling this new form of photography. In accordance with the taste of the times he has adopted a dramatic framework. It is rather too difficult for us to get into sympathy with the sorrows and struggles of a head-hunting hero

and a heroine with a ring in her nose, but the story gives a chance for a greater variety of scene and action than would be otherwise attainable. Mr. Curtis appreciates the effectiveness of the silhouette and the shadow and he is not afraid to point his camera in the face of the sun, contrary to the instructions of the kodak primer. The scenes that elicited most applause from the audience were after all not those of Indian combats, but those of waves and clouds at sunset, the herd of sea lions leaping from the rocks and the fleet of canoes being driven swiftly forward by paddles dipped as regularly as by a college eight. (*World Film Corporation, New York.*)

### DAMON AND PYTHIAS

The classicists have a new ally. They have labored in vain to get the public to listen to them when they lectured about Odysseus, Hannibal, Cæsar, Cleopatra, Damon and Pythias, but now people are flocking by the thousand to the theater to see what they would not read or hear about in the classroom. Teachers may now be seen on a Saturday afternoon leading school-boys who have refused to be driven.

The story of *Damon and Pythias* as presented in the photoplay is ingeniously introduced by taking us first thru Athens as it now is and showing us the ruins of the Acropolis, the Temple of Vulcan, Erechtheum, the Par-

thenon, the Theater of Dionysius, tinged by the glow of the southern sunset. Then in a flash we are transported to classic Greece in the days of her splendor. We follow the valorous Pythias with spear and shield, at the head of his vast army; we watch the burning city and fleeing populace, go with him in his galley, and see him as a charioteer and share with him the vision of his bride in his imprisonment. The plotting Dionysius, in deliberation with Philistus, in the senate and before Pythias in disguise, the execution block and the breathless Damon, Hermion and Calantha weeping and rejoicing—all this is visualized for us. The grouping and costuming are admirably handled and southern California makes a very acceptable substitute for Greece as a setting. (*Universal Film Company, New York.*)

### VEGETABLE LIFE

We have been told and in a vague way believe that plants are alive as much as animals but we can never realize it except by means of the cinematograph which magnifies motion by reducing time. The *Bud, Leaf and Flower* film reduces the twenty-four hour period to six seconds and we actually see the plant sleeping and waking with the regularity of human respiration. The bud literally bursts into bloom before our eyes and the tendrils grope about like the tentacles of an octopus. (*General Film Company, New York.*)

THE CRUISE OF THE HEAD HUNTERS

Motana's war party setting forth to attack Yaklus, the Short-Life-Bringer. In the canoe on the right are seen the wings of the Thunder-bird medicine man. From the Indian photo-drama of Edward S. Curtis.

## JUST A WORD

The testimony which is constantly flowing to the desk of our Circulation Manager as to the use of The Independent in schools and colleges is one of the most satisfactory evidences of growing appreciation that we enjoy. The following letter is from Professor Fred C. Winship of the Kansas Agricultural College: "In my English composition classes during six weeks last term we used The Independent as the basis of our work, and the results were highly satisfactory. Of one hundred and seven pupils only four disapproved of the system. I noticed a constant increase of interest shown by the students. In my estimation the inspiration resulting from mental contact with live issues was worth more to my pupils than was the technical rhetorical knowledge gained; tho the latter was developed perhaps as well as it usually is by study of textbooks. That is not saying much perhaps unless it be supplemented by the statement that the work was much more pleasant than the usual study of rhetoric."

The best war correspondence is the private letter—and this with the greatest regard for our own profession. A British officer has thus lately described to his friend how it feels to be under German fire: "I don't believe there is a man living who, when interviewing an eleven-inch howitzer shell, is not pink with funk. After the first ten one gets quite used to them, but, really, they are terrible! They hit a house. You can see the great shell—a black streak—just before it strikes, then, before you hear the explosion, the whole house simply lifts up into the air, apparently quite silently; then you hear the roar, and the whole earth shakes. In the place where the house was there is a huge fountain spout of what looks like pink

fluff. It is the pulverized bricks. Then a monstrous shoot of black smoke, towering up a hundred feet or more, and, finally, there is a curious, willowlike formation, and then you duck, as huge pieces of shell and house and earth and haystack tumble over your head."

The New York Times concludes an admirable editorial on the rapidly arriving return of business prosperity in this country with these timely words: "If we do not thrive it is because we are not equal to the occasion, and Americans who do not accept good business are in such a minority that they do not count. Our bankers, our manufacturers, our traders should take off their coats and get busy without waiting for the skies to drop larks or for Government to do something for them in the way of buying ships or passing more laws." And let all the people say Amen!

The familiar jibe that it is the common soldier who is killed or hurt in war and the aristocracy which escapes is having its equally familiar refutation in this greatest of all wars. The roll of casualties in England, or Germany, or France, or Russia, contains a long list of representatives of the First Families, and any suggestion that crown princes or belted earls avoid the firing line is simply ridiculous. The son of the Imperial Chancellor of Germany, Lieutenant von Bethmann-Holweg, for instance, was shot on horseback in Poland the other day, and was supported by two of his comrades until they rode out of range and discovered that his wound was fatal.

## PUBLIC BUSINESS

Health Commissioner Goldwater of New York City announces that the Department of Health thru its Bureau of Public Health has made plans providing for a sanitary inspection of every factory and workshop in the city. A system of voluntary sanitary control will be developed for each industry.

A traveling health exhibit consisting of two railway cars fitted up by the Louisiana State Board of Health toured fourteen southern cities for a month in connection with the meetings of the Southern Medical Association and the American Public Health Association. This tour was the result of the coöperation of three railroads.

"Snow-fighting" is the expressive name given by Street Cleaning Commissioner Fetherston of New York City to his new method of blockade-prevention—clearing away snow during the storm. It is estimated that instead of taking 168 hours as in the past, only four hours will be necessary with the snow-fighting force, and instead of costing \$222,438 per million square yards, the cost will be only \$53,600.

WOODROW WILSON—ANIMATED CONSERVATIVE

# The Independent

VOLUME 81

MONDAY, JANUARY 18, 1915

NUMBER 3450

## THE ANIMATED CONSERVATISM OF WOODROW WILSON

**W**HEN President Wilson, in his Jackson Day address at Indianapolis, described himself as an animated conservative, he struck off a phrase that is vivid and telling. The passage in which he elaborated the thought is equally effective. "Being a conservative I understand to mean a man not only who preserves what is best in the nation, but who sees that in order to preserve it you dare not stand still but must move forward. For the virtue of America is not static; it is dynamic. All the forces of America are forces in action or else they are forces of inertia."

Therein lies Mr. Wilson's strength and the keynote to his popularity with the American people. He is essentially—tho it is perhaps entirely natural that he should prefer his own expression of the fact—a progressive. He wants to go forward. He bases his program of political action solidly upon the fundamental fact of American life, the preëminence of the people both as the source of power and as the logically exclusive beneficiary of political action.

Mr. Wilson is by conviction and intention a democrat in the broad sense of the term. He would have the people rule; he would have them rule for the benefit of the people. His campaign utterances, subsequently gathered together under his own title "The New Freedom," and his official utterances as President, are infused with this spirit and express this determination.

**H**IS Indianapolis speech, his first important public, has distinguished from official, utterance in many months, illustrates again this quality of his mind and heart. But it illustrates as well one of his most serious drawbacks. He is all too prone to misunderstand the position of his opponents, to misinterpret their convictions, and to fail to give them credit for their achievements.

Mr. Wilson is a Democrat as well as a democrat. He is, entirely frankly, a partizan. He believes profoundly in the Democratic party; and he has no word or thought of approval for the Republican party. It is necessary and proper that a party leader should be a partizan. But he should be a fair partizan. And this Mr. Wilson is not always willing to be. It showed itself in his campaign, it showed itself again in "The New Freedom," it has again been demonstrated in this latest address.

Mr. Wilson says, "The trouble with the Republican party is that it has not had a new idea for thirty years." In making this statement he declares that he is speaking not as a politician but as a historian. With all respect, Mr. Wilson is a better politician than historian. The progressive movement which has characterized the last decade of American political life began not in the

Democratic party but in the Republican. It was the revolt of a group of Republicans whose eyes were fixed upon the future that put a definite end to the rule of reaction in Congress, that led to the formation of the Progressive party—an organization which however ephemeral has already had a powerful influence on American political life—that brought about in the last analysis Mr. Wilson's nomination at Baltimore. To claim the progressive movement as the exclusive achievement of the Democratic party is to go wide of the mark.

**M**R. WILSON in his political career has been exceptionally fortunate. In New Jersey he was elected Governor because of an aroused and educated public opinion created not by his own party but by progressive leaders in the Republican party. As Governor Mr. Wilson, supported by this body of opinion, was able to bring about enlightened legislation on several subjects which were cardinal planks in the platform of the Progressive Republican movement.

He has had a similar experience with the Presidency. The pioneer work of preparing the public mind and arousing the public enthusiasm for measures of progress had already been done when Mr. Wilson entered the White House—and done by Republicans and Progressives. He did not need to be a pioneer. His logical work was that of constructive legislation, of building upon the foundations laid by those who had gone before.

In his address Mr. Wilson inadvertently recognizes this fact when he says, "At every turn the things that the progressive Republicans have proposed that were practicable, the Democrats either have done or are immediately proposing to do." It would have done no harm for Mr. Wilson to add that in most cases the Progressive Republicans proposed them first—tho it would perhaps have been too much to expect of a party leader.

There is one concrete example that we would cite from the President's address to show how he takes the partizan viewpoint rather than that of the historian.

In referring to the conservation bills now pending in Congress, he says, "What we are trying to do . . . is to carry out, for the first time in the history of the United States, a system by which the great resources of this country can be used instead of being set aside so that no man can get at them."

Does not Mr. Wilson, as historian and as political student, realize that it would have been an absolute impossibility a decade and a half ago when the conservation movement was started, even to consider such legislation as that now proposed? Does he not know that before the resources of the public domain could be "used," instead of being recklessly and selfishly exploited as they had

been for years, it was necessary to bring it about that they should "be set aside so that no man can get at them"? Does not the very use of the word conservation give credit to a Republican head of the Forest Service, Gifford Pinchot, and to a Republican President, Theodore Roosevelt?

It is natural that Mr. Wilson should be partizan. But he should be fair.

Mr. Wilson is an independent man, and he has the courage of his independence. But it may well be questioned whether he has not too much of an attitude of complacent toleration for public opinion and the press.

On these points what he has to say is significant:

With all due respect to editors of great newspapers I have to say to them that I never take my opinion of the American people from their editorials. So that when some great dailies not very far from where I am temporarily residing thundered with rising scorn at watchful waiting, Woodrow sat back in his chair and chuckled, knowing that he laughs best who laughs last.

There may come a time when the American people will have to judge whether I know what I am talking about or not. But at least for two years more I am free to think that I do, with a great comfort in immunity in the time being.

The American press undoubtedly has its shortcomings. It is at times unfairly partizan, at times actuated by ulterior motives, at times blind to the facts of the public mind. But, on the whole, to ignore it is an index of the public opinion of the country, is shortsighted and unwise.

If one were to take what Mr. Wilson says about his relation to the American people literally, one would have to assume that he believed a public officer to be responsible to those who elected him only when he seeks reelection. We cannot believe that he seriously holds this view. We cannot believe that he considers "immunity" from consequences as a warrant for ignoring the common judgment of the country.

The President of the United States must be both a follower of public opinion and a leader of it. He is in office to represent the people, to carry out their desires. His responsibility to them is paramount. No "immunity" can relieve him from it. But he must not be a slavish follower of the popular will. He must lead the people toward a more enlightened opinion.

The two duties are not antagonistic, they are complementary. Sometimes a President emphasizes too much the one duty—keeps his ear too much to the ground. Mr. Wilson, if we may believe his words, is too much inclined to ignore it.

## THE LAND BEYOND THE FOREST

THE Russians are reported to have entered the passes leading thru the Carpathian Mountains into Transylvania and Rumania is mobilizing with apparent intent to do the same. This extends the shadow of the Great War over a new territory and one whose population is composed of such discordant elements that its effect can scarcely be imagined. This little corner in the Carpathians, about the size of West Virginia but with twice the population, is divided among six races speaking as many different languages and professing as many different religions. Divided, we say, for these ethnic elements do not dwell together in peace and harmony as do

the similar or the same mixture of peoples in the United States. Altho they have been closely associated for hundreds of years racial antipathies and mutual jealousies are as strong as ever. The color of a kerchief, the shape of a hat, the use of a word marks a barrier which if overstepped means ostracism. The young men of Transylvania are all off fighting under Austrian officers, but half of them at least would rather fight on the other side or against each other. The dominant race in Transylvania is composed of those who boast descent from the hordes of Attila. But the Hungarians are in the minority and only retain the power to impose their language and laws upon the majority thru their unscrupulous use of suffrage restrictions and the gerrymander. The process of Magyarization has been carried out since 1848 as ruthlessly as the Russification of Finland and has aroused the same resentment on the part of those under the steam-roller.

The situation is curious. In the midst of the Magyars is a compact body of a million and a half Rumanians. In the midst of these Rumanians is a compact body of 350,000 Saxons. The presence of this Teutonic group in an ocean of alien races is so surprising that we might be tempted to accept the explanation given in Browning's "Pied Piper" if it were not on record that these so-called Saxons were colonized here in the twelfth century by invitation of King Geza II. And they came not "Out of Hamelin town in Brunswick land" but mostly from that same Flanders, which the Germans are now trying so hard to re-Germanize.

Here the colonists from the lower Rhine and Moselle established the seven fortified cities which have given to Transylvania its other name of Siebenbürgen. The map betrays this Teutonic element in Hermannstadt, Klausenburg, Kronstadt and the like. They are more German than the Germans, sticking not only to the language but also to the customs and costumes of five hundred years ago. Their churches are fortified as of old and in them are still stored grain and bacon as tho to stand a siege against Turk or Tartar. It is to be feared, however, that these provisions are too stale by this time and the big round stones piled in front of the churches to be used as missiles would be of little avail against eleven-inch shells. But the Saxons may put up as stiff a fight as they have in the past whenever their language or religion was attacked. Neither Russia nor Rumania would be likely to tolerate their Protestantism. The Jews of Transylvania would also find it hard to choose between the invaders, for they have been massacred and oppressed in Rumania as well as in Russia in spite of the guarantee of equal treatment which Rumania gave to the Congress of Berlin in 1878.

More than half of the population of Transylvania consists of those who call themselves Rumanians, tho what they are is still an ethnological puzzle. They claim to be descendants of the Roman legionaries whom Trajan placed here in A. D. 105 to guard his Dacian conquests, but since Aurelian withdrew the troops to the hither side of the Danube in 274 we may question whether the race is so largely Roman as they claim. But it does not matter in the least how much Roman blood is in their veins or what percentage of Latin words is in their language, the Rumanians believe themselves Latins and that is enough. They claim affinity therefore with the French rather than with Slav or Teuton. Bu-

charest is a little Paris, a rival of its prototype in gayety and vice.

The Rumanians dream of the days when Michael the Brave conquered Transylvania three hundred years ago or of a more remote and glorious past when the Emperor Domitian paid tribute to Dacian kings. As Servia longs to bring under her wing the Serbs of Bosnia so Rumania seeks her lost tribes on the other side of the Carpathians. But if Russia conquers Hungary unaided there will be no hope for a Greater Rumania. None knows better than Rumania that when the bear puts his foot down on a piece of ground it stays there. In 1877 Rumania aided Russia in the conquest of Turkey and as a reward Russia took Bessarabia away from her altho it is populated by Rumanians. The southern part of Bukowina, which touches Rumania on the north, has just been occupied by Russian troops and the Rumanians living there have fled over the border. No doubt Rumania would prefer not to enter the war until spring, but the Russians are not waiting for warm weather and unless she enters now she is likely to lose her chance at Transylvania. Here Rumania is adopting the same tactics as a year ago in the Balkan troubles. She keeps up her watchful waiting until both parties are spent with war then enters the field with fresh troops to get a share of the spoil.

### THE URBANE NATIONS

EVER since civilization dawned in the valleys of the Euphrates and the Nile, there have been relatively urbane peoples, and peoples picturesque by contrast. The contrast has not yet ceased to play a part in the drama of history, nor lost anything of its interest for the reflective mind.

The urbane people, like the urbane man, is a product of that tolerant association in the struggle for existence which arises when men of different races, languages and religions are thrown together in a restricted environment, or otherwise are brought into contact, as by commerce or travel. The adjective itself tells the history of the urbane mind, as a product of city life.

On a large scale, migrations, wars and commercial rivalries have created mixt populations which, thru generations of assimilation of languages and manners, followed by more or less amalgamation of blood thru intermarriage, have produced peoples that are urbane in spirit. France, Italy, Spain, Belgium, Holland and England are the best modern instances. The people of the United States are the best example of an unfinished product, now undergoing the assimilating process.

Nations, as peoples politically organized, are more or less urbane in their relations with one another, as the history of diplomacy now humorously and now tragically exhibits them. Those that have had a good deal of experience with the world in general, like individual men of the world, have acquired a way of doing things that is distinctive and unmistakable. It may or it may not include the element of duplicity, but in any case it is marked by a comprehension of the many minds of many men. It approaches them with a fairly accurate knowledge of how they are likely to behave under given circumstances, and even under the stress of provocation it keeps within the forms of speech customary among gentlemen.

Like the rustic individual, the nation that has long

been isolated, either by geographical position or by its unbending pride and self sufficiency, is likely to fail in urbanity. There have been exceptions, but these, like the exceptional back countryman who has the instincts of the man of the world and takes to urbane ways when he removes to town, are products of ancestral experiences. Somewhere, back of such men and such nations, there have been social contact and the awakening of human understanding. The nations and the individuals whose forebears no more than themselves have been in touch with alien stocks, can never see problem or interest from a viewpoint different from their own. They cannot put themselves in the other man's place.

It is not to be denied that the conditions which prevent the development of urbanity may give important, if not quite compensating, advantages. Isolation means a relatively high degree of homogeneity, and homogeneity is favorable to the development of patriotic solidarity, self reliance, and collective efficiency. A nation that has these qualities without urbanity, inevitably becomes, in proportion to its population and its wealth, powerful and aggressive, and, as inevitably, egotistical and insolent.

Yet, sooner or later, in the age-long tryout of the ways and means of human progress, in that large struggle for existence in which peoples and empires are the competitors, the nation that fails in urbanity comes to grief. The hour arrives when decisions must be made which call for comprehension of the foreign mind, for human insight, more penetrating and more discriminating than folk-insight or race-insight. Lacking these, the decision is wrong.

We forbear to make application of this philosophy to our neighbors across the oceans. It is more profitable for us to apply it to ourselves. We may count ourselves fortunate that we have not been spared the trials and the struggles that come with the contact of races, the clash of traditions, and the conflict of ideals. We have paid a high price for our education, and it is by no means complete or paid for yet, but at least we have gained the larger view. We are not likely ever to make the mistake of failing altogether to understand the other man, or to guess how he will behave in a crisis. With breadth of view, we have gained also somewhat of tolerance and somewhat of sympathy. It will take time, but we are in a way to become urbane.

### SCIENCE AND CIVILIZATION

IN an address before the Massachusetts Unitarians the other day ex-President Eliot told them that Christianity had not created the present civilization, but that science has the credit of it. President Eliot is by old profession a scientist; as a scientist he was called to the presidency of Harvard University. We greatly admire and respect him. So we also respect and admire his son, who as the official representative of the Unitarian body devotes his talents to the growing influence of Christianity in our American civilization. Doubtless science must have credit for its part, as well as the Christian religion in the complex which we call civilization.

Science gives physical comforts and pleasures and knowledge of facts which feed the mind. We cannot have too much knowledge of the substances and forces

of nature. Religion cannot give this. It cannot run a laboratory or a factory. Religion has to do with goodness, and Christianity has done more and better for goodness, thru Christ's teachings of the love of man as well as the love of God, than has any other religion. Nations with other religions have had their sorts of civilization, but neither Dr. Eliot nor any of us would like to exchange life within this our Christian civilization for that of ancient Egypt or Greece or Rome, or of Turkey or China. Even now it is science that rules the present fearful war, which the Christian religion, thru its trusted spokesmen at the Vatican or here, or even in the fields of war itself, deplores and detests. A leading German authority has lately told us how much war has done for science; it has done nothing for Christianity, only to fight peace on earth and good will to men.

The better part of civilization is the making of rich and poor happy and helpful to one another. It is those who love and follow the dictates of religion who are the leaders in all that makes life really noble and worth while in our civilization, and which sheds gleams of sunshine even over the black desolation of war.

### THE GROWTH OF UNIVERSITIES

THE loyal alumnus usually has some idea of the size of his Alma Mater, but he cannot keep track of all the other universities, so the registration statistics annually published in *Science* have surprises for almost everybody. If we look for the three universities which a generation ago would have stood at the head of the list or near it, we find Harvard the sixth in size; Yale wedged in between Texas and Nebraska is seventeenth, and Princeton is twenty-sixth. Yet their drop in numerical rank does not indicate in any sense a decline. In worth and reputation these three institutions never stood higher and their growth in numbers shows that they are not being injured by the newer and larger institutions that are springing up all over the country. Harvard, for instance, has 784 more students than last year, an accretion big enough in itself to make another college, but this only raises her rank one point in the list. The other university of the former Big Four, Columbia, now stands at the top of the list with the unprecedented number of 11,294 students, considerably ahead of its nearest rivals in point of size, California with 8180 and Chicago with 7131.

The astonishing growth of higher education in recent years has affected the universities of the country whatever their type or situation. State or endowed, eastern, western, northern or southern, classical or utilitarian, all are gaining and this year more than usual because of the business depression when the temptation toward money-making is lessened. There is comparatively little change in their relative rank from year to year. Comparing the list with that of ten years ago the most striking changes are the rapid rise of New York University, Ohio State University and Pittsburgh, the last of which gained over a thousand students this year.

On the other hand the development of vocational and technical departments has been so rapid and unequal that few persons would be able to tell which are the largest schools in each field. If the reader thinks himself well informed let him take the following quiz:

Which has the largest law school? Harvard, followed by New York and Michigan.

Which has the largest medical school? New York, followed by Michigan and Johns Hopkins.

Which has the largest divinity school? Northwestern, followed by Chicago and Yale.

Which has the largest engineering school? Illinois, followed by Cornell and Michigan.

Which has the largest non-professional graduate school? Columbia, followed by Chicago and Harvard.

Which has the largest school of education? Columbia, followed by Pittsburgh and New York.

Which has the largest school of agriculture? Cornell, followed by Wisconsin and Ohio.

Which has the largest school of commerce? New York, followed by Pennsylvania and Pittsburgh.

Which has the largest school of journalism? Columbia, followed by New York and Wisconsin.

Which has the largest school of architecture? Cornell, followed by Michigan and Columbia.

Which has the largest body of undergraduate students? California, followed by Harvard (including Radcliffe) and Michigan.

In any such discussion as this one must always be careful to state that these figures must be taken for just what they mean, no more, no less. They show simply which institutions are giving regular instruction to the largest number of individuals. The standards of admission and method of enrollment differ so that the statistics are not strictly comparable. In the case of the professional schools the difference is considerable since some are graduate and some undergraduate, some part and some full time. In ordinary college work there is less difference between institutions than is commonly supposed. It cannot be safely assumed that a student, at least during his earlier years, will have better facilities or be under the instruction of men of any greater ability in a large than in a smaller university, nor, on the other hand, is it certain that a student will receive more individual attention in a small than a larger institution.

### A WELCOME DECISION

TO the Federal Court of Appeals for the Ninth Circuit, those interested in the preservation of Japanese-American friendship owe a vote of thanks. The Arizona alien labor law, forbidding the employment in any work of more than twenty per cent of unnaturalized labor, has been declared unconstitutional. The protests of Great Britain and Italy that the rights of their citizens were invaded by the statute have been upheld. The power to regulate the number of foreign laborers that may be employed is tantamount, says the court, to declaring that if the state sees fit none at all can be employed. Such a doctrine is a plain infringement of the right to work guaranteed to every man.

The opportuneness of the decision, however, lies in its application to the situation in California. Altho for the sake of her expositions California has established a polite truce in the agitation against the nation that is to be her chief guest, it is openly admitted that a similar statute was the next goal of the anti-Japanese labor agitators. Happily this further trouble making by Sacramento legislators may now be forestalled and another slight avoided to the dignity of a sensitive people.

# THE STORY OF THE WEEK

## THE GREAT WAR

*January 4*—French take village of Steinbach, Alsace. Italian marines take possession of Durazzo, Albania. First Ottoman army corps destroyed at Ardahan, Transcaucasia.

*January 5*—Germans renew effort to approach Warsaw on the north from East Prussia. French making strong efforts to regain Lille.

*January 6*—Russians pursue Austrians to Uzsok Pass in Carpathian Mountains. Ninth Ottoman army corps defeated at Sari Kamish, Transcaucasia.

*January 7*—French within two and a half miles of Altkirch, Alsace. Turks defeat small force of Russians near Urumiah, Persia.

*January 8*—Russians occupy southern Bukowina. Rumania and Italy partially mobilized.

*January 9*—French take Perthes-les-Hurlus in Champagne. German airships and aeroplanes dropping bombs in Dunkirk.

*January 10*—Russians seize passes leading from Bukowina into Transylvania. Germans massing on Bzura for another attack on Warsaw.

The Balkan Crisis That all of the Balkan states and Italy will be drawn into the conflict becomes more probable every day. The war began with Serbia and Montenegro. Rumania is mobilizing and is said to have asked the United States to take charge of her nationals in belligerent territory. Bulgaria is hesitating. Greece and Italy are partially mobilized and already operating in Albania. Active negotiations are going on in the hope that some bargain may be struck that will satisfy all parties. King Ferdinand of Bulgaria and King Ferdinand of Rumania have arranged to meet for a conference with a view to renewing the Balkan League in some form.

Bulgaria is in a particularly difficult situation. She is ambitious to regain the territory that she lost on all sides in the second Balkan war, namely, Adrianople and Thrace as far as the Tchatalja lines which Turkey regained, those portions of Macedonia which were to have been hers by the original agreement but which Greece and Serbia afterward took by force, and the Dobrudja territory south of the Danube delta that Rumania seized. The loss of this last is most keenly felt in Bulgaria since it comprized her most fertile land and its population was mostly Bulgarian and not Rumanian. The anti-Russian party is in the ascendant in Sofia, but the expulsion of the Austrians from Serbia makes it dangerous for Bulgaria to come out against

the Allies. With Rumania on the east, Serbia on the west and Greece on the south, all siding with the Allies, Bulgaria would not stand much chance.

Italy has taken under her protection the chief ports of Albania. On December 25, seven hundred Italian bluejackets were landed at Avlona, which is on the eastern side of the Strait of Otranto, only forty miles from Italy. Italian warships are also in the harbor of Durazzo in order to protect this city, which was the capital of Albania during the brief reign of Prince William of Wied. It is now threatened by Albanian tribesmen from the north, armed

and officered, it is said, by Austrians. The Austrian Government has formally protested against the Italian invasion of Albania.

Italy seems likely to break with Turkey over a point similar to that which caused the United States to send troops to Vera Cruz. On November 11 the Turks entered the Italian consulate at Hodeida, Arabia, and seized the British consul-general. The Italian Government dispatched warships to Hodeida and demanded an apology as well as the release of the British consul and the dismissal of the officials who arrested him. The Turkish Government complied with all these demands, but

### DEATH FROM THE SKY—A NEW AND TERRIBLE ARROW

Not since the long bows twanged at Crécy has France felt so deadly a missile that needs no aid from gunpowder. This little steel pencil, dropt from great heights, is said to be capable of piercing a man from head to foot. An American manufacturer declined an order for 100,000 of them

THE INVASION OF HUNGARY

The recent victories of the Russians in Galicia and Bukowina have given them command of the passes leading thru the Carpathian Mountains and they are likely to invade Hungary as soon as the weather permits. The Rumanian army of half a million, now mobilizing, is likely also to cross the Carpathians in order to secure Transylvania, whose population is largely Rumanian

when the Italian Government further insisted that the Turkish soldiers salute the Italian flag when it was again raised over the consulate, this was refused on the ground that no insult had been offered to the flag.

#### The Attack on Warsaw

There has been very little change of position in the forces before Warsaw. The Germans have established themselves in a semicircle of about twenty-five miles radius to the west and southwest of the Polish capital. Their left rests on the Vistula and their front is in part protected by the Bzura and Ravka rivers. The Russian lines parallel the German at a distance of half a mile or less. Both sides are strongly entrenched. The ditches are eight feet deep with barb wire entanglements in front, and the men live in dug-outs cut into the front wall of the trench and protected from the cold by straw and bagging. The fighting goes on by night as well as day, for the parachute rockets of the Germans hang balls of fire in the air which light up a large field sufficiently to direct the shrapnel, which they are still using lavishly. A single Russian position often receives 3000 shells a day. The slaughter in this region has been terrific. According to Percival Gibbon, who recently visited the Russian front, one of their regiments, which

has borne the brunt of the German attack for five months, has lost 5500 men, its normal strength of 4000 being kept up from the reserves. He also states that on the night of January 2 the Germans sacrificed 30,000 men killed and three times as many wounded without gaining a yard of ground. The Germans are now making use of portable steel shields in their field attacks. They have put armed steamboats on the Vistula for the purpose of patrolling the river and conveying supplies from Thorn up the river to the front. Their effort to clear the territory north of the Vistula of Russian troops by forces advancing toward Warsaw from Thorn and Mlawa is making slow progress owing to the mud.

#### Transylvania Threatened

Hungary is now invested with enemies, actual or potential, on every side except the west. All the way around the Carpathian wall from Cracow to Belgrade extends the hostile territory, first Galicia, then Bukowina, both held by Russia, next Rumania, now arming for the attack, and finally unconquerable Serbia, again aggressive. No wonder the Hungarian Premier, Count Tisza, has openly declared to the Emperor-King that the time may soon come when Hungary will have to exercise her right to withdraw

her troops from Austria to protect their own land.

The Russians report the pursuit of the scattered fragments of the Austrian army defeated in Galicia and the capture of prisoners at the rate of a thousand a day, often without resistance. They do not seem disposed, however, to renew their attack upon Cracow, but have instead turned their attention in the other direction and completed the conquest of Bukowina. They captured Czernowitz, the capital, early in the war, but pursued their way up the Dniester toward Lemberg without bothering about the rest of the duchy.

Now they have occupied all of Bukowina down the southern boundary, where their outposts are said to be fraternizing with the Rumanian frontier guards. The population of this part of Bukowina is chiefly Rumanian and the soldiers sent here are Rumanians from Russian Bessarabia, which lies just east of Rumania and belonged to that country until 1878. The Ruthenians, who predominate in the northern part of Bukowina and much of Galicia, belong to the Ukrainian or Little Russian race and have for some years shown a disposition to shift their allegiance from Austria to Russia, a disposition that has been stimulated by an active pro-Russian propaganda financed from Petrograd.

By pushing their way to the lower end of Bukowina the Russians have gained possession of the Borgo and Rodna passes leading thru the Carpathians into Transylvania. This, however, is territory which Rumania has long coveted, since it is largely inhabited by Rumanians, and the possibility of the seizure of Transylvania by Russia has caused the Rumanian Government to mobilize the army with a view to taking an active part in the war, tho whether it will be directed against Transylvania, Bulgaria or Turkey remains to be seen.

#### Turks Defeated in Transcaucasia

The Turkish invasion of Russian provinces between the Black and Caspian Seas has met with a disastrous repulse. The invasion was undertaken from two directions. The First Army Corps from Constantinople augmented by bashibazouks and other irregular forces crossed the border about twenty miles from the Black Sea with the object of taking Batum in the rear and so cutting the railroad and pipe line which connect it with Baku on the Caspian. Batum is the chief Russian port in the Caucasus and the outlet for the petroleum from the Caspian oil fields. The American and Mexican oil supply is largely shut off from the

belligerents and Baku is their chief reliance for the liquid fuel necessary for their submarines, motor cars and aeroplanes. The first Turkish army crossed the mountains at an altitude of 10,000 feet in spite of zero weather and penetrated about fifty miles into Russian territory and captured Ardahan (Ardaghan). But on January 3 the Russians attacked the Turks at this point on front and flanks, and since they were not able to retreat over the mountain passes, the corps was completely crushed in a two days' battle. The Russians report burying over fifteen hundred Turkish soldiers at Ardahan.

The second army of invasion, starting from the neighborhood of Erzerum, entered the Transcaucasus from the south with Kars as the objective. Kars, situated at the entrance of a deep river gorge, has been for a thousand years one of the chief strongholds of the Caucasus. In the war of 1855 it was held for six months by the Turks under the command of an English general, but in 1877 the Russians took the city by storm.

The army advancing on Kars was composed of the Ninth Corps, the best in the Ottoman army, supported by the Tenth and other troops. The strategic railroad which was extended by the Russians in 1913 from Kars to the frontier to facilitate an attack on Erzerum, was followed up for about twenty miles, but at Sari-kamish the Turks found themselves entrapped by the Russians. For two days they strove to fight their way out, but could not, and finally the entire

#### THE CAMPAIGN IN TRANSCAUCASIA

The Turks took the offensive against Russia and despatched two armies into the Transcaucasian province, aimed respectively at the port of Batum and the fortress of Kars. Both have suffered disastrous defeats; the one at Ardahan and the other at Sari Kamish. The Turks claim some success against the Russians near Lake Urumia in Persia.

Ninth Corps was, according to the Petrograd report, captured or killed. The frozen bodies found in the snow could not be buried, so were burned in great pyres. The entire artillery, all of the generals and three hundred other officers, German and Turkish, were taken by the Russians.

The Campaign in the West The accounts of the fighting in Flanders, France and Alsace read more like a football game than war as it was at first. Gains of a few hundred yards are reported as great victories, and such indeed they are of we consider the effort made to attain them.

In the Argonne region to the west of Verdun the French have made some progress by undermining and blowing up the trenches of the enemy. On January 9 they captured the village of Perthes-les-Hurlus, about twenty miles northeast of Châlons, which has been the object of a fierce struggle for several weeks. The French claim to have advanced their lines at this point a quarter of a mile. On the eastern side of the Argonne forest the Germans stormed a French trench and took 1200 prisoners. Two grandsons of Garibaldi, volunteers in the French army, have fallen in the Argonne battles, and this has increased the disposition of the Italian people to enter the war.

In upper Alsace the French succeeded in taking the village of Steinbach, near Thann, after six days of hard fighting. Every house and garden wall had been made into a fortress and had to be taken separately. When they entered the French found 2300 German dead and wounded. The victory, however, was shortlived,

## AN AUTOMATIC NEUTRAL ZONE

Wire barriers on the German-Russian front. This form of defense was first used on a large scale in the Russo-Japanese war

for the Germans retook the town five days later, driving the French back to Thann with great loss.

**The Japanese Question** Has Japanese participation in the war ceased with the capture of the German enclave of Kiaochow? That is the question now being hotly discussed in France and seriously considered elsewhere. All sorts of rumors are afloat; that Japanese troops have been landed at Vladivostok for transportation by the Trans-Siberian railway to the seat of war, and that Russia has ceded to Japan the northern half of the island of Sakhalin in return for Japanese siege guns. Sakhalin, it will be remembered, was claimed by Japan as one of the fruits of her victory over Russia, but the Treaty of Portsmouth compromised the matter by dividing the island equally between the two. Both Tokyo and Petrograd deny these rumors, but there is no doubt that the two former enemies are now drawing closer together and developing a common policy in northern China, where the elimination of Germany gives them freedom of action.

There is a manifest disposition on the part of Japan to retain possession of all the territory she has taken from Germany. The German railroads extending into the interior of China from Kiaochow have been taken over by the Japanese. The principal islands of the Marshall, Caroline, Marianne and Pelew archipelagoes have been placed under military government and plans made for their colonization by Japanese. It has been commonly assumed that

Japan was pledged to return to China the German territory of Kiaochow, but Baron Kato, the Japanese Foreign Minister, in reply to an interpellation in the Diet, stated that Japan had made no promise to any country concerning Kiaochow, and that the Government had not yet decided upon its action in the matter. In the ultimatum to Germany, Japan demanded the surrender of Kiaochow in order to restore it to China, but since Germany refused to surrender it peaceably, Japan is under no obligations in regard to it.

Now that Kiaochow has been captured at the cost of many lives and some fifty million dollars, a government which proposed to give it up would encounter a very hostile public opinion.

When the Japanese Diet assembled on December 7, the Cabinet of Count Okuma presented a budget calling for an expenditure of \$278,000,000, and a decrease of \$40,500,000 in the revenues. This was attacked because of its increase in army and navy appropriations, and the opposition was so strong that on December 25 the Emperor dissolved parliament. The elections are to be held in March.

In France an agitation started by M. Pichon to secure Japanese aid in Europe has received the support of prominent men in various parties. M. Clémenceau, whose newspaper *L'Homme libre* (The Free Man) has, since its suppression by the censor come out as *L'Homme enchaîné* (The Manacled Man), has espoused the cause with his customary vigor, urging that the 250,000 men that Japan might send to France would

materially assist in expelling the Germans from France and bringing the war to a close. Japan could be compensated by the war indemnity to be imposed upon Germany after she is conquered. The suggestion that Japan be rewarded for her aid by the cession of French Indo-China has been unfavorably received. The British Government does not share the enthusiasm of the French for Japanese participation. Such action would tend to alienate the loyalty of Australia, New Zealand and Canada, where anti-Japanese feeling is strong.

**Our Supplies for the Armies** The German Government does not expect us to prohibit the shipment of war supplies. This assertion was made last week, upon authority, by the chairman of the House committee before which Representative Bartholdt of Missouri and Representative Vollmer of Iowa have been speaking in support of a resolution directing the President to forbid such shipment. Germany could not be beaten, they said, and by prohibiting the exportation of supplies we could end the war in ninety days. But we preferred to "sell our neutrality for British gold."

Owing mainly to exports of this character, our excess of exports over imports has risen from \$57,000,000 in October and \$79,000,000 in November to about \$110,000,000 in December. We are now sending cotton to Germany, and wheat is going out in such quantities that the exportable surplus of the greatest crop on record may be exhausted in two or three months. Charles M. Schwab, president of the Bethlehem Steel Company, who has cancelled his British order for twenty submarines, says he knows that orders for \$300,000,000 worth of war supplies have been placed in this country. His own orders for armor plate, projectiles, guns, etc., are said to exceed \$50,000,000. At Kansas City \$5,000,000 worth of horses and mules have been marketed, and a contract was signed there last week for 50,000,000 feet of lumber, mainly for railroads and mines. Factories in four cities are at work on an order for 6,000,000 kegs of horseshoes. Among recent orders in addition to those mentioned heretofore in these pages are the following: 8000 kitchen wagons, for the French army; at New Kensington, Pennsylvania, 500,000 aluminum canteens; at Pittsburgh, \$4,000,000 worth of barbed or plain wire, and 60,000 tons of steel for shrapnel shells; in New York, 2,500,000 pairs of woolen socks, 200,000 overcoats, 200,000 blouses and 200,000 pairs of

trousers; in Philadelphia, 2,500,000 pairs of socks. It is said that Russia is in the market for 5,000,000 yards of cloth for uniforms, and that the British Government is preparing specifications for 6500 motor trucks, for which something more than \$10,000,000 will be paid.

Two rejections are reported. Clarence H. Howard, president of a steel company whose works are at Granite City, Illinois, refused an order for \$2,000,000 worth of shells for field guns because he would not help warfare. An order for 100,000 steel arrows (used by aviators) was turned away by William C. Collins of Peoria, Illinois, because he thought the execution of it would be against neutrality.

#### British Reply to Our Protest

The British Government's reply to our protest concerning interference with ships and cargoes on their way to neutral European countries was published on the 11th. It is a preliminary statement, to be followed by a longer one. In tone it is friendly and conciliatory. Conceding that there should be no interference unless it is necessary for the belligerent's national safety, the reply emphasizes the legitimate desire of Great Britain to prevent Germany from getting supplies apparently destined for neutral ports. It points out that November's exports from New York, compared with those of November a year ago, increased about as follows: to Denmark, thirteen times; to Sweden, seven times; to Norway, four times, with large gains for Italy and Holland. As to copper, it is shown that the exports to Italy have more than doubled in the war period, while those to several other neutral countries have been multiplied by five. The presumption is, the reply says, that "the bulk of this copper was intended for the use of a belligerent [Germany] who cannot import it direct." As to four detained consignments to Sweden, Great Britain has "positive evidence" that they were "definitely destined for Germany." Interference with such shipments is imperatively required, and our Government will not, Great Britain believes, question the propriety of interference.

Of 773 steamships on their way to the five neutral countries named, forty-five have had consignments or cargoes taken to the Prize Court. Where there is real ground for suspicion, a vessel must be brought to port for examination. In several instances rubber has been shipped under another name, and only by search in a port could the deception

be brought to light. There has been no interference with cotton, although there has been warning about the concealment of copper in cotton bales. The British embargo on crude rubber was due partly to the appearance of "a new trade in exporting rubber in suspiciously large quantities from the United States to neutral countries"; but now there is a new agreement which permits exportation under licenses and with proper guarantees. There is a growing danger that neutral countries contiguous to the enemy will become bases of supply for the enemy's armies. Great Britain seeks only to interfere with contraband destined for the enemy, is ready to explain her action in any case, to enter into an agreement for the prevention of mistakes, and to make prompt reparation for injury improperly caused.

Our Government has decided to certify American cargoes as to their exact contents, and has asked for the coöperation of exporters.

#### Arizona's Law Against Aliens

Arizona's new Anti-Alien law, approved at the November election, has been pronounced unconstitutional by a court of three Federal judges, sitting at San Francisco. An injunction to prevent enforcement of it was obtained by Italian, Japanese and other alien residents, and this injunction has now been made permanent. But there will be an appeal to the Supreme Court. The law provided that at least eighty per cent of those in the service of a person or corporation having five or more employees must be American citizens. Protests had been made at Washington by Great Brit-

ain and Italy. The court says that, under the guise of police regulation, the State sought to deprive men of their right to labor, which is a property right, and as such is guaranteed to aliens by the Fourteenth Amendment to the Constitution. If it could prohibit the employment of more than twenty per cent, it could reduce the number of aliens to five per cent or exclude them altogether.

Representatives of the Japanese Government have given some attention to this case, and some expect that California's Alien Land law, for a long time the subject of controversy, will now be tested in similar proceedings. Great Britain and Italy held that the Arizona law was at variance with treaties. This was Japan's main contention in the California case. But the provisions of the Constitution were not overlooked. No new anti-Japanese legislation has been proposed in California, but in Washington there will be much support for a bill providing for a State referendum on a law to prevent the leasing of land to Asiatics. This is aimed at Japanese gardeners. The State's Fish Commissioner, it is said, has refused to give fishing licenses to aliens.

#### Filipino Government

Much interesting testimony has been given before a Senate committee concerning the pending Jones bill, relating to government in the Philippines, which the President approves. Ex-President Taft, formerly Governor of the Philippines, said that no bill could be framed that would be better calculated to cause trouble. If independence should be granted a few years hence, as some

Paul Thompson

WAR TURNS A CHURCH INTO A POST-OFFICE

Christmas gifts follow the German soldiers by parcel post, to Mirunskev, East Prussia, for example

had proposed, there would be demoralization and bloodshed. Either a dictator like Diaz would arise, or the condition of the island would be like what is now seen in Mexico. Preparation of the islanders for self-government must be gradual. For their own welfare we should retain control, giving good government as an object lesson, and allowing them to participate in it. The work of educating and preparing the people should be continued for more than one generation, and probably two generations would be required. Dean C. Worcester, Secretary of the Interior at Manila for several years, said that if independence should be granted to the Filipinos they would quarrel among themselves about the offices; elections would soon become a farce; bloodshed and anarchy would follow; attacks upon foreigners would compel intervention, and the islands would be taken by some foreign power. Not less than two generations would be required to qualify the people for self-government.

W. Morgan Shuster, formerly in the Philippine Commission, and afterward the Persian Government's financial adviser, said Japan did not want the islands, but would make a treaty for their neutralization. He thought the Filipinos were competent to govern themselves, but not according to our standards. Newton W. Gilbert, formerly vice-Governor, said there should be a permanent American protectorate. The bill's preamble was wicked and misleading. It should be cut out. Colonel George S. Young, who has served in the Moro country, said that if the Filipinos should gain independence they would never be able to control the Moro province.

**Mexican Border Agreement** After long delay, an agreement concerning Naco and other points on the northwestern Mexican border has been signed by Villa and General Hill, the Carranza commander. This settlement was due to the labors of General Scott. Villa came north—at a sacrifice, he said—to meet him, and the conference took place on the international bridge at El Paso. Villa at first asked to be allowed to fight, saying that in eight hours he could clear away all the Carranza men along the border. This, however, would have required firing across the boundary, at least for a few hours.

The agreement provides that Hill shall evacuate Naco; that the town shall be occupied by neither Hill nor the Villa forces; that it shall be neutral and closed to commerce; that the

boundary towns of Nogales, held by Villa's men, and Agua Prieta, held by Carranza, shall not be attacked; and that Maytorena's (Villa's) forces shall go to Cananea or Nogales and shall permit Hill's men to march from Naco to Agua Prieta. It averted a crisis, and is said to have the approval of President Wilson and Carranza. General Scott looks for no further trouble. The reinforcements brought up from the south by General Cabral will go to Guaymas. Villa went southward, intending to attack Tuxpam and Tampico.

**The Situation Elsewhere** There has been little news from the Mexican capital. Gutierrez is said to be virtually a prisoner in the palace there, because of suspicion that he has been plotting to join Carranza. His brother is one of Carranza's generals. A curious statement has been given to the public by Gutierrez, who says that plans for pacification, approved by all the armed groups, have nearly been completed. But the fighting continues. In the absence of Villa and Angeles, Zapata's forces suffered a serious reverse between the capital and Vera

Cruz. Carranza regained Puebla, after a hard struggle, and with it took many prisoners and guns. The Cathedral of Guadalupe was wrecked by shells. In the streets the bodies of 700 Zapata men were found. It is evident that Zapata is no match for Obregon, Carranza's commanding general.

As to the fighting elsewhere there were conflicting reports. It appeared, however, that Villa was successful at Saltillo and at Victoria, the capital of Tamaulipas, but suffered reverses in the vicinity of Torreon. The Zapata leader in Michoacan has gone over to Carranza. The latter has been repudiated by the Governor of Yucatan, who says he will be neutral. In Vera Cruz there is an epidemic of black smallpox.

The British Government has repeatedly complained at Washington on account of the treatment of British subjects and their property. Carranza, being in favor of the government ownership of oil fields and wells, a majority of which are in territory which he controls, has issued a decree suspending the operation of the wells and virtually annulling the grants or concessions by which foreigners hold them. He has also abolished all lotteries. The destruction of the tunnel and several bridges on the line of the Tehuantepec railroad affects the Pearson British interests. In the Senate, last week, Mr. Lodge sharply criticized and denounced the course of President Wilson with respect to Mexico.

MADE IN GERMANY

The Fatherland, too, will be independent of Paris in fashion. But the German attempts at nationalism in dress, with the animosities of war to urge their adoption, may be more successful than the sporadic revolts of American modistes

**Paraguay's Revolution** The revolution in Paraguay had a very short life. It began at day-break on the 7th and ended at sunset on the same day. President Sherer was in captivity for twelve hours, but it is said that his authority is now recognized thruout the country. The rebel soldiers, led by Colonel Escobar, recently Minister of War, took possession of the artillery barracks at Asuncion. There they were attacked by the police. A gunboat shelled the barracks and demolished them. Surrender followed. The National Theater was wrecked by shells. About seventy-five men were killed.

Guillermo Billinghurst, driven from the presidency in Peru last February by a military revolt, and deported, has for some time been in Chile. Another refugee there was Dr. Durand, who is said to have planned the uprising against Billinghurst, whom he intended to succeed in office. He was exiled in November. The Chilean Government has now ordered both of them to leave the country within eight days.

# THE COMPENSATIONS OF MILITARISM

BY THE AMERICAN WIFE OF A TITLED GERMAN

THERE is an old saying that out of evil may spring good. In the opinion of mankind the army organization of Germany is something as wrong as it is wonderful. But there are compensations.

It is wrong, for one reason, because it represents the abuse of the virtue of obedience on a prodigious scale. By force of discipline exercised thru the school, the church, the police, innumerable restrictive laws and compulsory army service, the German Government, for the purpose of magnifying the greatness of the Crown, has aimed to make of men obedient soldiers. In war, millions of these men are led to slaughter. If the gamble with their lives wins success, the extent and the revenue of the empire may be increased and the Kaiser rule over additional subjects. The average man is no better off. He has been made obedient not for his own sake. But—and here emerges the compensation that Emerson looked for in everything—the habit of obedience proves good in the main for the social welfare of the incompetent. The habit of obeying makes men reliable workmen and dependable agents; and such subordinates oil the machinery of organizations.

So true, indeed, is this fact, that Nemesis may have smiled at the creation of mass-obedience by the Kaiser; inasmuch as thru the past years his imperial policy has been affording able Social Democratic leaders, for instance, their very best foundation for party cohesiveness.

How many writers marvel over the fact that, whereas the adherents of socialism are relatively few in other countries, as registered by vote, they compose the second largest political party in the German Empire. Such writers advance every other reason for the phenomenon, and overlook the chief one, which is no other than the Prussian policy of training men to exchange individuality for the herding spirit. Should a master revolutionist ever capture this spirit, the tables would be turned with terrible effect. The abuse of popular obedience would revenge itself in the destruction of the Prussian régime.

Meanwhile, in private life, much good ensues also from the spirit of obedience, as it infects the young. The longer I lived in the Fatherland the more I became aware of the fact that in every class of society parents were calm about the future of their sons, if the boys were of normal health and ability. The course of life of each son was laid out in the parents' minds, and the sons

*This is the third and last of a series of articles written by an American woman who lived in Germany thirty years in close contact with the system whose ramifications she discusses. In The Independent for November 16 appeared "Militarism in German Social Life," on December 14 "How Prussianism Warps Men and Women."—THE EDITOR.*

trudged along the course, each under the feeling that so they must go, and there was no help for it. You see, all boys are feeling the same way, so there is no example of insubordination, and almost no temptation to deviate from the appointed career—a blessing, in the majority of cases, to sons and families alike; because it spares the energy and time wasted in drifting, or in unfruitful experimenting in a variety of pursuits. The obedience of the children has encouraged the parents to demand vocational schools, and such have been amply supplied.

In every instance, of course, the obligation resting upon their sons of serving a term with the colors is taken into consideration. Wealthy families arrange to enter their sons into the service as "one-year volunteers," or as subalterns. This means of rescuing boys from the drudgery of barrack life is, however, utterly beyond the means of the poorer classes, who fix their ambition upon one of two other alternatives: a post in the regimental musical bands, or a position as orderly, that is, as the personal servant of an army officer. In both of these positions some drill is required, but it is less than that endured by other men of the line. Moreover, a band player or orderly stands the chance of making a little money—the orderly in the way of tips, the musician by taking part in evening concerts. For every one aspirant to musical education whom Nature raises in the Fatherland (according to my experiences among the poorer classes) conscription raises a hundred.

Another by-product of the all pervading military spirit is the practise of chorus singing, so popular especially among men. Singing, it will be remembered, was first popularized by the patriot warrior, Jahn, who preached its exercise to German youth as the best means of expanding the chest and fitting them for soldiering. The art is pleasant, no matter what its instigation. I count also good the influence of the example set by military men of holding

the body erect. Civilian youth, seeing this carriage all about them, are apt to model their own after it, with the result that slouching deportment disquiets comparatively few homes.

ONE day, in the mountain village of Schreiberau, I was watching from the window of my hotel a peasant unloading firewood, when a *gens d'armes* galloped into his yard from the highway. The rider's manner was commanding and the peasant pulled at his cap, all obsequiousness; yet he was still grumbling to himself and shaking a feeble fist occasionally in the direction of the departed officer, when we descended for our walk.

"What's the trouble, my old one?" I paused to ask.

"Ach; he told me to pile up the wood with proper neatness, or he would fine me on his next round of inspection," was the reply. "Easy enough to order a body to pile neatly! How is it to be done, when one's woman is sick abed and no other hand to help!"

The incident started my attention upon a new cue. Thereafter, whenever similar cases turned up I would inquire into them. They all seemed to lead to the police. In Dresden an American girl was reported to the police for leaving a bicycle standing in a hallway; it came to light that the jurisdiction of the police extends from the street into the passages of apartment houses. How much further does it penetrate?

"Doctor," I inquired once, "what is the condition of rooms in the houses of the common people? You are Circle Physician. You see the inside of every possible kind of home. Tell me: is tidiness as universal inside of houses as it is outside? What I am trying to get at is whether the people are naturally tidy, or police-made tidy."

"Ha, 'the people!' *Das Volk*, Baroness, is a *Lumpenpack* (good-for-naught)," exclaimed the irascible little man. "It wouldn't be tidy, nor anything else it ought to be if it were not for the police. If you had asked whether our peasants are cleaner than the Polacks, it would be easy to answer. They are. But—well, I'll say this: most houses I suppose would pass muster. Then, again, I've had to visit cottages no pig could snout a way thru. They chuck inside what the police won't tolerate outside. And that," he wound up in a tone of fresh indignation, "by fellows, too, who have been in the service and *know better*."

"The service"—here was another clue. And this time I felt the clue to be adequate at last for solving my riddle. The police could not have been responsible alone, for the police played their rôle in German states long before the advent of anything like German tidiness. The police, under the traditional Metternich régime, were ubiquitous enough and powerful enough, in all conscience. Yet German cities and hamlets remained as untidy as those of most other countries. The change dates back only three decades or less—to a period of time corresponding with the growing completeness of Prussian influence over the German people. In other words, more or less public slovenliness obtained in the Fatherland until the time when to the old political and regulative aims entrusted to police activity there was added an ingredient of militarism.

Both the men who command and the police patrolling the country nowadays have served their terms in the service. Having become infected with barrack ideals, they enforce everywhere parade-ground conditions on the people. Not merely *sanitary* conditions, mind you, for a zigzag wood-pile is as sanitary as a cone-shaped one. No, it is a uniform regularity that is insisted upon, and that chiefly for its own sake. The element of picturesqueness goes by the board, of course, under such regulation—nothing is picturesque in Germany that is modern. But inasmuch as the enforced tidiness saves the property of decent householders from depreciating in value because of slovenliness on the part of untidy neighbors, spares offense to the eye and obviates slums, what can one do except to count it good?

WHEN General von der Goltz wrote of his countrymen as *Das Volk in Waffen* (The People in Arms), he characterized his people. And my conviction is that no student of German institutions, whether social or economic, pierces to the origination of them, who fails to take into account the sovereign German avidity for means to perfect the power of its military arm, in order to accomplish its sovereign military aims.

How have foreign writers on social reform, moved by the public utterances of ministers and speeches from the throne, praised the "benevolence" that founded, for instance, the German institution of national insurance! I remember well how I, too, was moved at the time by those same utterances as published in the native

press. Then one day the Landrat returned from an official visit in Berlin.

"We shall pass the Insurance Bills," he remarked in a dry, business-like tone. "Bismarck said to me that insurance was a way to keep our men at home."

In the Reichstag strong opposition was being waged against the bills in the form presented by the Government, especially by the Social Democrats, the representatives of the working classes who were to be insured. But, true enough, the measures were passed. And equally true, the effect of the measures was the effect hoped for by the Iron Chancellor: emigration decreased (that to the United States fell from 115,000 to 39,000 between the years 1891-1894) while a corresponding increase took place in the number of men available for service in the event of quick mobilization. Nor had the fact been overlooked that the billions of marks to be accumulated from the people's savings in the way of contributions to the insurance fund would be a material prop to the national finances in case of war.

From a minister of state we heard on another occasion that the closing of so many churches under the action of the Falk laws had proved the wrong policy, inasmuch as countrymen going into the towns on Sundays and finding their houses of worship closed were the more inclined to listen to Socialists holding forth in the taverns. And as priests were preferable to Democrats, the Government would modify the church laws. And presently, sure enough, Bismarck began yielding to Rome.

Another instance of the all pervading influence of military considerations (the Socialists preached against militarism) concealed in legislative measures that appear purely social is presented by the Sunday observance laws. How it vexed country people, accustomed to doing their weekly shopping after attending church services, to find shops closed on Sundays, obliging them to spend their time in coming to town on some week day! And how landowners grumbled over the prohibition against working their hands in the fields on the seventh day! Only the few were aware that it was the General Staff, and not pietists, who had initiated the "reform." And among the considerations that moved the General Staff to originate it was that by forcing landowners to take on an additional laborer or two (in order to make good the decrease of fourteen hours in the length of the working week) more men would be hardened by field work to endure the hardships of army ser-

vice. The seventh day of the week is a military asset, looked at rightly, and to be held for use in national emergencies.

THAT policy of this sort ramifies every measure accepted by the Government is my firm conviction. Where a social or other movement which this policy can turn to account arises among the people, the measure is adopted; when, on the other hand, the people's demands are inimical to military interests they are suppressed: demands for liberty of individual action are severely suppressed. Given an organization already formed, a private or public corporation, for instance, and it is likely to be attached to the great organization of government, as a wheel is geared to a machine. The shipping interests, the export business, charitable institutions—the eye of the militaristic government has surveyed them all. Where they have been found useful to itself they have been helped. Schemes strengthening the empire, particularly those pertaining to industry and commerce, have for this reason sometimes taken on a vastness and efficiency resembling the vastness and efficiency of the military organization itself.

In so far as the spirit of militarism saves waste of human energy and results in better collective efficiency it must, of course, be pronounced good. The maximum of good, however, has been obtained too often in Germany under false pretenses of benevolence and at the expense of individual freedom. The amount of good, however imposing it may look, rests upon an unsound basis—it is not founded on the initiative of the people. The only enduring factor of a nation is, after all, the soul of the people. That remains, while governments perish; governments devoted to the sword, tho the sword be turned toward outer places "in the sun," are apt to perish by the sword. What, then, would be the real stage of social evolution revealed in a people, the individuals of which have been held in slavish subordination for the sake of the ambitions of the few? Man was not made for the Sabbath, but the Sabbath for man. Citizens are not made for the state, but the state for citizens; and a citizen is unworthy of the name who is not a free individual; who acts from compulsion exercised from without, instead of from a self-disciplined spirit within.

Militarism, despite the good it produces by the way, fails in producing the best things known to man—justice and liberty.

GOVERNOR LUTHER E. HALL, OF LOUISIANA

## THE LAST BATTLE BETWEEN ENGLISH AND AMERICANS

**T**HE Hundred Years of Peace are reckoned from December 24, 1814, when the Treaty of Ghent was signed, but the last fighting of the war occurred two weeks later, on January 8. The English under Sir Edward Pakenham, attacking the city, and the Americans under Andrew Jackson, who defended it, had not heard of the end of the war and clashed at Chalmette, near the city. Jackson's success helped him to the Presidency. The Louisiana Historical Society had arranged an impressive international celebration of the centennial, and

altho the war prevented the carrying out of the plan in its original form, January 8, 9 and 10 were filled with commemorative exercises, which culminated in a ceremonial pageant repeating the "Crowning of Old Hickory" after the battle, and a grand pontifical mass and Te Deum in the St. Louis Cathedral, as in the original thanksgiving ceremony. Governor Hall and the state government coöperated. The old print which is reproduced below shows the death of Major-General Pakenham. It was published in Philadelphia in 1817.

BATTLE OF

AND DEATH OF MAJOR

NEW ORLEANS

GENERAL PAKENHAM

# THE COMMAND OF THE SEA

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

EVER since the days of Queen Elizabeth it has been the settled policy of Great Britain to acquire and hold command of the sea; for upon that command she has always recognized that her national existence depends. "Who-soever commands the sea," says Sir Walter Raleigh, amplifying on Thucydides, "commands the trade; whosoever commands the trade of the world commands the riches of the world and consequently the world itself." Assured command of the sea is not obtained until the opposing naval force is reduced to a state of complete inferiority. To accomplish this as against all the world, Great Britain has kept her naval strength somewhat in excess of that of the two foreign powers having the largest navies. Up to the present time no other nation has built capital ships in sufficient numbers to challenge this preëminence; because it has been plainly recognized that as fast as other nations increased their strengths, Great Britain would correspondingly increase hers, and in the end competition would reduce itself merely to a question of the longest purse. It may be noted in passing by the good people who have lately become timorous over our naval insufficiency that no naval preparedness by ourselves will ever be effective against Great Britain until we are ready to embark in this financial rivalry to the bitter end.

In the great naval wars of the past Great Britain's principal opponent was France. That country never effectively sought the command of the sea. While such farseeing statesmen as Richelieu and Colbert perceived plainly enough the importance of acquiring such command, the French navy continued to be rather a defensive than an offensive arm, and was used chiefly as an auxiliary for the promotion of territorial acquisition. Its sea fights were mainly the result of military expeditions and not of naval strategy aimed at the destruction of the enemy's fleet. They were land fights on the ocean with no idea of securing dominion over it. In this policy lay the causes of French defeat. The German navy, on the other hand, manned, not by Latins, but by men of the same stock as the British navy, is openly designed to challenge that power which asserts that its frontiers lie but three miles from every one else's coast.

The breaking out of the present war found Great Britain's naval force largely preponderant over that

of Germany. It was open to Germany to fight, to concede inferiority and surrender, or to evade, which last is a practical admission of inferiority for the time being. She has chosen to evade, and thus has made the admission. The necessary consequences were, of course, fully known to her from the beginning. Therefore her position is in substance one of acquiescence in those consequences, which are simply corollaries of the existing preponderance of her enemy.

The chief consequences of admission of inferiority by evasion—shown in the present instance by the refusal of the German fleet to leave its harbors and protected waters—are loss of colonies, the sweeping of the inferior party's commerce from the sea, either by destruction or capture of merchant vessels or by their internment in neutral ports, and the cutting off of all water-borne supplies. These are deprivations, and all have been and are being borne by Germany. Besides this, she must submit to direct aggression incident to the transport of British troops across the Channel, and even when her land forces take a port which from its proximity to her enemy's territory is obviously available as a base for naval attack by submarines or airships, or if they approach near enough to the shore to get within range of naval guns, she must expect attack on such land forces from her enemy's warships, without power of effective retaliation.

It is incumbent upon the larger navy not only to possess preponderating power, but the ability to accomplish the ends above stated, and, of course, all the steps which lead to them. The greater fleet must keep sleepless watch upon the harbors in which its antagonist is interned, so that the latter cannot elude conflict in an attempt to escape. The containing ships are stationed either directly off the harbors to be observed, or in flanking positions which the enemy's fleet must pass, and these positions must be sufficiently near to the enemy's bases so that news of the escape can be quickly obtained from the smaller craft left on guard. At the present time, the indications are that Great Britain's capital ships are massed north of Ireland. This position is nearly midway between the two possible avenues thru which the German fleet could reach the Atlantic—the British Channel and the passages north of Scotland—while at the same time, it is far enough off to render the danger of submarine

attack less than if the ships were kept in the North Sea. The work of watchful waiting is imposed upon the destroyers and small cruisers, which are always in wireless touch with the main force, and in constant motion before the beleaguered ports.

It is also incumbent upon the larger navy to prevent raids upon its own shores by enemy's vessels.

Meanwhile the Germans hope that conditions will supervene or be artificially produced which will enable the German fleet to sally forth and fight with a reasonable prospect of success.

The supervening conditions are mainly those incident to exposure and wear of men and ships on one side, and their conservation on the other. In the French and English naval wars, the prevailing opinion was that to keep the sea, to fight wind and water while constantly alert, was a better training for the inevitable conflict than lying in the idle security of harbors. That was Nelson's contention, and also that of Jervis. "I will not lie here," wrote the latter from Lisbon in 1795, "a moment longer than is necessary to put us to rights: for you well must know that inaction on the Tagus might make us all cowards." If, however, the British capital ships are themselves safely ensconced, and are equally idle, except for occasional drill or target practise, such as it is asserted was in progress when the "Audacious" was sunk, then the conditions of the two fleets are more nearly equalized, with the advantage, however, in favor of the British, since at least their ships can get out on the Atlantic and exercise, while the Germans remain practically tied up to docks and anchorages. The real watching strain comes upon the small craft which lie close in to the German harbors; but as long as there are enough of these to furnish ample relief and rest periods, the last few months' experience has shown that the work, while severe, is not unbearable.

The conditions that are artificially produced are those due to the attack of one belligerent upon the other, and here an unprecedented state of affairs reveals itself. Command of the sea always imposes the offensive on the power possessing or seeking to possess it. This is axiomatic. Since Great Britain has held this command she has never omitted to follow the rule, until now. It may be that the protection of the German fleet is so

strong that it would be madness to seek to break it down; but that does not impair the force of the rule nor the result of inability to comply with it. A command of the sea in which the offensive cannot be taken by the party claiming it is not assured.

With the exception of the raid on the British coast towns, which was offensive warfare, the German navy has stood on the defensive, using both kinds of defense, passive and active. The first, which simply strengthens itself and awaits attack, depends on mines, fortifications and the like which oppose assaults or entrances into harbors by the enemy. The second includes all those means and weapons which go to meet the enemy's fleet whether it be near by or far distant in order to strike blows which will tell—not in wresting the command of the sea from the superior party, but in damaging or demoralizing it, and in the hope of creating conditions favorable to a battle which may reverse the sea control.

The effect of the German offensive-defense upon the aggregate British force is hardly possible now to estimate, since the exact strength of the latter is not known, and to essay any comparison between the naval forces of the belligerents as modified by the events of the war is little more than guesswork. In tonnage, England's loss in ships is about seventy per cent greater than that of Germany. On the basis of battleships presumably built to date, her strength is a little less than twice as great. In gun power, England's loss is about three per cent; but within the next six months she will have eight new superdreadnoughts, besides four from France and two from Japan also available—all vessels of the most formidable type. Germany is also actively adding to her fleet, but to what extent is not definitely known. It cannot be asserted, therefore, that the relative conditions of the antagonists in point of material have undergone any very material change, or that by the past naval operations the end of the war has been brought measurably nearer.

The loss of naval officers by both sides is, however, a very different matter. It takes thirty months to build a battleship and ten years to produce a lieutenant fit to stand watch on her bridge. The thing cannot be put in figures, but none the less it may well be that either the sinking of the "Scharnhorst" and "Gneisenau" by the British or the "Audacious" and "Formidable" by the Germans worked greater damage to both countries in the loss of officers than it did in loss of ships.

The Germans design sooner or later to deliver an attack and are preparing therefor by trials and experiments. Submarines have essayed mined ports, have made longer and longer voyages, destroyed battleships as opportunity afforded, and have driven the larger cruisers away from the watch lines. Coast raids have been made not for military advantage, but to cause panic and terror of invasion, and this disquiet has been systematically fostered by threats of aerial attack. The sinking of the British battleship "Formidable" by a submarine is especially troublesome, since it not only demonstrates what the Germans have always maintained—that submarines can and should do their best work in the worst weather—but it creates a demoralizing insecurity in the transport of troops across the Channel. It will be of no avail for Great Britain to raise and prepare a great army on her own soil if she is obliged to keep it there, and that is what will happen if the Germans can make the Channel passage unsafe. Some months ago they blew up a passenger steamer in the Straits of Dover, and there was plenty of apprehension following, but it was not believed that submarines could elude the Channel mines and ships and destroy vessels close to the great naval station at Portsmouth.

The public always thinks in navies and contemplates fights between entire national forces. These do not occur. What actually happens is a contest between a certain group of units arriving at a particular place and time as a sequence of more or less arbitrary events, and another group, equally governed by similar though not the same fortuitous conditions. Admiralty is largely devoted to trying to mold these conditions strategically, so that one side will have the advantage when the opposing fleets come in contact and tactics begin. The cardinal principle of naval strategy is to "get there first with the biggest force." Small fleets have overcome large ones piecemeal in this way. This is what Germany must do, since she cannot overcome the whole odds against her, and it may be expected that her onslaught will be maintained simultaneously on, under and over the water. If it fails, the time when Germany will be starved out will be greatly hastened. If it succeeds—

The foregoing shows the confusion in the recent recommendation of the New York Peace Society to the President that "we shall maintain a powerful navy as our natural means of defense, but never for aggression." No one advocates that we should be

aggressive in beginning wars, no matter by what means. But the navy is a weapon offensive and not defensive—and given the war, aggressive action is of the law of its being. Fights are not won by parrying blows. One or the other of the warring navies must command the sea. The beaten force has but two places to go—the bottom of the ocean or its own protected harbors. In either case, it is out of action.

If this be the fate of our "means of defense" we must face the loss of the Philippines, Hawaii and Porto Rico, with such sea-borne trade as we have, exactly as Germany has now lost her colonies and ocean commerce. Supposed impregnable forts in Europe have fallen before land guns less powerful than the naval guns which can be brought to bear against the Panama Canal forts. If Admiral Mahan was right in his conclusion that these fortifications will need aid from the fleet, then if this aid become impossible the Canal is lost. The Monroe Doctrine becomes non-enforceable. And what *morale* can we expect among men whom we ask to fight for us under conditions which imply only defeat? Therefore we have either got to yield the command of the sea—with all its consequences—or fight for it with an adequate force. Whether we are aggressive or not in the sense of seeking battle is of no moment. If we do not go after the enemy, the enemy will come after us. After that we will not be aggressive because of our benevolent intentions but because we are sunk or shut up.

If shut up, we can hardly carry on the offensive defense which Germany is now practising with the enemy's harbors and roadsteads 3000 miles instead of 350 miles distant; nor does that defense alter the command of the sea. All we can do is to hope, as the Germans are now hoping, that the ever varying fortunes of war may give us a chance to get out and renew the contest.

Logically we can have no naval preparedness against Great Britain unless we are prepared to push our naval expenditure beyond her point of exhaustion. This apart, our navy to be adequate must be capable of wresting the command of the sea from any other nation from which reasonably we may expect attack. And here, in all the complex conditions of ocean distance, relative strengths, chances and revelations of the present war, and the certain fertility of American invention, it is less a question of our preparedness to fight other nations than of their preparedness to fight us.

#### A PSYCHOLOGICAL BOMBARDMENT FROM THE AIR

ALONG THE FRENCH AND GERMAN LINES IN FRANCE A WAR BY PROCLAMATION HAS BEEN WAGED. BOTH ARMIES ARE SHOWERED WITH HANDBILLS DROPT BY AIRMEN, DENYING THE CUSTOMARY CHARGES OF CRUELTY TO PRISONERS WHICH ARE COMMONLY MADE TO DISSUADE THE MEN IN THE RANKS FROM SURRENDERING. HERE IS A FRENCH BILL WHICH READS AS FOLLOWS: "TO THE GERMAN SOLDIERS—IT IS NOT TRUE THAT WE, FRENCHMEN, SHOOT OR ILL-TREAT GERMAN PRISONERS. ON THE CONTRARY OUR PRISONERS OF WAR ARE WELL TREATED AND OBTAIN PLENTY TO EAT AND TO DRINK. THOSE OF YOU WHO ARE DISGUSTED WITH YOUR MISERABLE CONDITIONS MAY, WITHOUT FEAR, UNARMED, INFORM THE FRENCH OUTPOSTS. THEY WILL BE WELL RECEIVED THERE. AFTER THE WAR EVERYONE WILL BE ALLOWED TO RETURN HOME." THE DESPATCHES DO NOT INFORM US WHETHER THIS INGENIOUS PROPAGANDA HAS ANY MORE EFFECT THAN THE FIRE-BALLS WHICH SHELLEY SET OFF AT LYNNMOUTH WITH HIS REVOLUTIONARY "DECLARATION OF RIGHTS"

# IS THERE A LATIN AMERICA?

BY JOHN BASSETT MOORE

NO doubt one of the chief impediments to the development and preservation of relations of amity and intimacy between the United States and the other independent nations of this hemisphere is the want of real information as to the conditions which actually exist in the various countries and the erroneous impressions that consequently prevail in regard to those conditions. As the result of the fact that the countries to the south of the United States have not all a common origin, and that, while all but one formerly belonged to Spain, the largest of them all, Brazil, was once a colony of Portugal, it has become the fashion to group them indiscriminately as "Latin America." The employment of this phrase, altho it may be necessary, has tended to confirm two radically erroneous impressions, one being that all the countries called Latin are really Latin; and the other, that all the countries called Latin are alike. In saying this, I do not advert to the fact that the impression seems widely to prevail that Spanish, and not Portuguese, is the language of Brazil. What I mean is that it seems to be generally supposed that in population, in institutions and in administration, they are all alike. In reality, in these respects, and particularly in the constituents of their population, they exhibit as between themselves differences more pronounced than those that exist between the United States and some of them. The circumstance has already been mentioned that Brazil, on severing her connection with Portugal, continued, till 1889, under a monarchical form of government—a fact that constituted not the slightest hindrance to the maintenance of the most cordial relations with that country.

## LATIN-AMERICAN STABILITY

As a result of the misapprehensions to which I have adverted, little has been understood in the United States of the causes of the internal disorders by which some of the American republics have been afflicted. Regarding all Latin-American countries as one, a tendency has existed to assume that government in all of them is equally unstable. That this impression is altogether erroneous may be demonstrated by a few examples. In more than one of the states of Central America, for instance, revolutions have been frequent and have seemed at times to be chronic, but the very opposite is the case in Costa Rica,

*In the last number of The Independent Mr. Moore outlined the history of Pan-American diplomacy. In this paper he analyzes the present situation in the South and Central American republics in so far as it affects our own relations with them and challenges the superficiality of our attitude to these neighbors of ours.—THE EDITOR.*

sometimes called the "Athens of Central America." No change in government by revolution has taken place in that country since 1870. Habits of statesmanship have developed there, and when, two years ago, a question arose under their local law as to the presidential succession, the problem was solved in a manner that would have done credit to any country. Her people are intensely devoted to the maintenance of their national independence and are proud of the skill which they have achieved in government. In Chile there has been only one serious civil disturbance in a long stretch of years, namely, the Balmacedist or Congressional Revolution in 1891. Chile has justified the prediction of Bolivar that the spirit of liberty there would never be extinguished. In Argentina one government has for many years followed another in orderly succession. Her capital is one of the world's finest cities, and boasts of a press which may well share our admiration with that of Rio de Janeiro. In Brazil, since the sudden governmental change of 1889, there has been but one civil disturbance of serious proportions, and this lasted only a little more than six months. Nor should we forget that there is no country that can boast a constant and assured immunity from disturbances, either domestic or foreign.

I have already adverted to the bloodless character of the transition in Brazil from monarchical to republican government. This fortunate issue may largely be ascribed to the element of idealism which has so often distinguished the political conduct of American statesmen, an idealism which can be fully appreciated only when we reflect upon the struggles in which they at times have been compelled to engage, in their efforts to maintain liberal institutions, such as exist in the United States. The same tendency accounts for the peaceful abolition of slavery in South America, and particularly in Brazil, where the system, having gained a strong foothold,

tended to linger, but where it was eventually destroyed without forcible resistance. While it would be going too far to say that those whose material interests were directly affected accepted emancipation with universal gratitude, they at any rate accepted it intelligently as a duty to country and to humanity.

## LATIN-AMERICAN STATESMEN

Another misconception that more or less prevails in regard to the countries of Latin America is that which relates to the personal integrity of their statesmen. Certain bad examples, which it is unnecessary to enumerate, have served to spread the supposition that the chief cause of revolutions in those countries is the desire for the possession of the custom houses. Here, as elsewhere, it is necessary to exercise discrimination. Perhaps there is no country in which the desire for the emoluments of office has not more or less influence on the conduct of individuals, or where the desire for illicit gains does not furnish an occasional motive. The existence of such conditions and the extent to which they prevail necessarily depend upon the character of the society and the general state of the population. The supposition, however, that in the countries of Latin America a want of integrity in public officials is general, involves an error of fact and a serious injustice. Personal integrity is the rule, and not the exception, among the statesmen of the American republics, even outside the United States. I have often thought of one of my colleagues in the Fourth International American Congress, Señor Gonzalo Ramírez, as one of the finest examples I have ever known of public integrity, and I feel at liberty particularly to mention him because since the adjournment of the Conference he has past away. He had spent nearly all his life in the public service; was a jurist, and a professor at the University of Montevideo; and was also a diplomatist, holding at the end of his life the important and responsible position of Uruguayan Minister at Buenos Aires. I saw his modest home at Montevideo, whose dimensions betokened a life in which fortune had been sacrificed to fame, and private interest to public duty. At the conference at Buenos Aires he was appointed chairman of the committee on the renewal of the treaties between the American republics for the arbitration of pecuniary claims. At that time he was in the last stage of his fatal illness. In consequence of his

infirm physical condition, regular sessions of the committee could not be held, and it was agreed among the members that its meetings should be held at his lodgings at any time during the day or evening when he might notify us that he should be able to preside. He did his share, and indeed, more than his share of the work of the committee, making himself the first draft of its report. I can see him now before me, seated in an invalid's chair, his mind alert, his interest eager, his sense of duty supreme, devoting the last efforts of his fast-ebbing life to the promotion of justice, mutual respect and friendship among the American nations.

Many other illustrations might be given, but I will mention only one—the case of the late Baron Rio Branco, of Brazil, who died in February, 1912, after having held the post of Minister of Foreign Affairs for a longer period than a similar position has been held by any other person in this hemisphere. At the time of his decease he was serving under his fourth President. Having past many years in the public service, it was a well known fact that, altho he was the son of another eminent Brazilian statesman, he was destitute of private fortune and depended for his support upon the rewards which had been voted by a grateful nation. After his death, his library was purchased by the government for the benefit of his family, as an additional mark of the national gratitude.

#### LATIN-AMERICAN POLICY

Lastly, I desire to refer to the misapprehensions which have existed in regard to the Monroe Doctrine. The Third International American Conference, which sat at Rio de

Janeiro, was held in what is known as the Monroe Palace, named in honor of the enunciator of the famous American policy. Brazil was one of the first, perhaps the first, of the American nations to applaud that doctrine. The Baron Rio Branco, of whom I have just spoken, was a strenuous assertor of it. But he asserted it, not as the exclusive concern of any one nation, but as the direct and immediate concern of all the American nations. When, therefore, a so-called Anglo-American syndicate, incorporated in one of the states of the United States, proposed, in the exercise of extraordinary political powers and commercial privileges granted by a neighbor of Brazil, to introduce European colonists into the upper reaches of certain affluents of the Amazon, he protested against what he called "the first attempt to introduce in our continent the African and Asiatic system of chartered companies," or government by foreign "semi-sovereign entities," and took the necessary measures to obtain from the syndicate the renunciation of all rights and claims under its concession, the effect of which was thus completely nullified.

So far as the Monroe Doctrine is held to guard the political system of this hemisphere against external subversion or attack, the American nations cordially accept it and look to the United States as its author and mainstay. In this sense it is eulogized by the statesmen of Latin America. In closing the Fourth International American Conference in 1910, one of Argentina's great orators, who, as Minister of Foreign Affairs, presided as honorary president at the final session, paid an eloquent tribute to American solidarity and to the United States as the proponent of the Monroe Doctrine. "In this year," said Dr. Rodriguez Larreta, "the majority of our republics complete a century of independent life. We can now say, with Washington, 'America for humanity,' because we are sovereign nations and the place we occupy in the world we owe to the strength of our own arms and our blood heroically shed. But let my last words be to send a message of acknowledgment to the great nation which initiated these conferences, which preceded us in the struggle for independence, which afforded us the example of a fruitful people organized as a republican nation, which, on a day memorable in history, declared 'America for Americans,' and covered as with a shield our hard won independence."

In this sense the Monroe Doctrine is received in South America with

sentiments of the most friendly and cordial concurrence. But there is another sense in which the other independent nations, and especially such powerful states as Argentina, Brazil and Chile, find themselves unable to accept it. This sense, which is said to represent the view of the "man in the street," was expressed not long ago in an editorial utterance in one of our journals in the following terms: "Whatever its interest at stake or wrong suffered in Latin America, we sternly enjoin every European power to keep its hands off of what we make our international business and what we decree must be the business of nobody else." In other words, it is said we have decreed not only that the international relations of all the independent states of America are subject to our control, but also that other nations can deal with them only thru us or under our supervision.

Of this view it is to be observed that it must, in the first place, arouse resentment in the independent countries of America, since it places them all in the subordinate position of protectorates, subject to our dictation. And it must, in the second place, provoke the opposition of all other powers, since they are naturally unable to admit that they cannot conduct their affairs directly with states which are professedly, and in law and in fact, independent.

#### THE MONROE DOCTRINE AND THE FACTS

Let us consider for a moment what such a conception as that above defined really signifies. The area of the United States embraces less than 3,000,000 square miles. We often have difficulty in preserving order and insuring the protection of foreigners in our own jurisdiction, over

Paul Thompson

PRESIDENT LUCE OF CHILE

© Underwood & Underwood

SR. DE LA BARRA OF MEXICO

Paul Thompson

PRESIDENT GOMEZ OF BRAZIL

which we possess exclusive legal control. The countries of Latin America comprize an area of more than 8,000,000 square miles, or almost three times our own; and over these more than 8,000,000 square miles we exercise no governmental control. And yet, within this vast area, it is asserted that we are to assume the protection of aliens and the redress of their grievances as a matter that concerns us, to the exclusion of all other foreign governments. Does not this assumption appear to be somewhat superficial and extravagant?

Again, the passage above quoted speaks of Latin America. On this phrase I have already commented, and I can only repeat that no one possessing the slightest acquaintance with the American countries called "Latin" would think of putting them all in one category of political and international treatment. Even in regard to population they differ radically. While Mexico has a population chiefly composed of indigenous races, Argentina, on the other hand, has a population almost wholly European. Brazil, altho possessing a far larger indigenous element, has had a strong government and has produced many able, enlightened and progressive statesmen. Chile has had, since 1850, few years of civil war. The record of Costa Rica has already been mentioned. Uruguay boasts of the large proportion of her revenues spent on public education. I advert to these things merely as illustrations of how a want of information leads the way to misconception.

Examined historically, the assumption that the independent states of America are to be regarded as mere protectorates of the United States is even more destitute of foundation.

From the first dawn of the independence of American states down to the present, our Government has never denied the right of other powers to conduct their relations directly with the nations of America. In numerous instances, indeed, force has been employed—a contingency to which even we ourselves might conceivably be exposed. In the fourth decade of the last century, France and Great Britain blockaded the ports of Buenos Aires and Uruguay. France resorted to reprisals against Mexico in the same decade. We ourselves were at war with Mexico for the redress of our own grievances from 1846 to 1848. In 1861, France, Great Britain and Spain resorted to reprisals against Mexico without protest on our part. Later, when France (Great Britain and Spain having withdrawn) essayed to set up and maintain a monarchy in Mexico, we rightfully and necessarily protested and eventually brought the attempt to an end. I have already adverted to the war between Spain and the republics on the west coast of South America in the sixties. In 1894 Great Britain seized the port of Corinto, in Nicaragua, to collect an indemnity. In 1903, Germany, Great Britain and Italy blockaded the ports of Venezuela, with the acquiescence of this Government, it being expressly understood that there should be no permanent occupation or acquisition of Venezuelan territory. Altho I mention these incidents, I am not to be understood as advocating or justifying the employment of force in any particular instance, or as intimating that the United States is not justified in exhibiting special concern in regard to what may tend to jeopardize the independence of states for whose preservation it has as-

AMBASSADOR NAON OF ARGENTINA

sumed a contingent responsibility. I refer to them, on the contrary, for the purpose of showing the baselessness of the supposition that our statesmen have understood that the Monroe Doctrine involved a diminution of the primary rights and liabilities of the independent states of this hemisphere.

Within the past year we have witnessed a remarkable incident in the relations of the United States with the American republics. I refer to the mediation of the representatives of the so called A B C powers of South America—Argentina, Brazil and Chile—in the conflict between the United States and Mexico, beginning with the occupation of Vera Cruz. This proceeding was purely international in character, and did not embrace the settlement of the domestic questions which continue to produce disturbances in our southern neighbor. It resulted, however, in the relief of the strained situation between the United States and Mexico, and set a precedent which must have a pronounced effect upon the attitude of the mediating powers toward the United States, for not only did it recognize the equality of those powers with the great republic of the north, but it impliedly admitted that differences which gravely menace the relations of individual American states are matters of concern to all the American nations.

Let us hope that the principle thus acknowledged will continue to produce beneficent results, till it shall have realized the aspirations which generous minds have entertained for the establishment of the relations between the American nations on the basis of confidence, respect and friendly coöperation.

New York City

# TWO YEARS OF DEMOCRACY

## SIGNIFICANT EXTRACTS FROM WOODROW WILSON'S JACKSON DAY ADDRESS AT INDIANAPOLIS, JANUARY 9, 1915

**B**EFORE the Chamber of Commerce of Indianapolis on Jackson Day, January 9, President Wilson made his first important public address in many months. Coming near the midway point of his administration, Mr. Wilson evidently felt it appropriate to utilize the occasion to speak of the achievements, the purposes and the ideals of the Democratic party as exemplified by its record under his leadership.

We print here certain of the more significant portions of the address. Editorial comment on the address as a whole will be found on another page.

### MILITANT DEMOCRACY

Andrew Jackson was a forthright man, who believed everything he did believe in fighting earnest. And, really, ladies and gentlemen, in public life that is the only sort of man worth thinking about for a moment. If I were not ready to fight for everything I believe in I would think it my duty to go back and take a back seat. I like, therefore, to breathe the air of Jackson Day. I like to be reminded of the old militant hosts of Democracy, which I believe have come to life again in our time.

### A PARTY WITHOUT AN IDEA

The trouble with the Republican Party is that it has not had a new idea for thirty years. . . . They have had leaders from time to time who suggested new ideas, but they never did any thing to carry them out. I suppose there was no harm in their talking, provided they could not do anything. Therefore, when it was necessary to say that we have talked about things long enough, which it was necessary to do, and the time had come to do them, it was indispensable that a Democrat should be elected President. . . . The Republican Party is still a covert and refuge for those who are afraid; for those who want to consult their grandfathers about everything. Most of the advice taken by the Republican Party is taken from gentlemen old enough to be grandfathers. They will not trust the youngsters. They are afraid the youngsters might have something up their sleeve.

### THE INDEPENDENT VOTER

Politics in this country does not depend any longer upon the regular members of either party. There are not enough regular Republicans in this country to take and hold national power; and I must immediately add there are not enough regular Democrats in this country to do it either. This country is guided and its policy is determined by the independent voter; and I have come to ask you how we can best prove to the independent voter that the instrument he needs is the Democratic Party, and that it would be hopeless for him to attempt to use the Republican. I do not have to prove it, I admit it. What seems to me perfectly evident is this—that if you made a rough reckoning, you would have to admit that only about one-third of the Republican Party is progressive, and you would also have to admit that about two-thirds of the Democratic Party is progressive. Therefore, the independent progressive voter finds a great deal more company in the Democratic ranks than in the Republican ranks.

### ANIMATED CONSERVATISM

There are Democrats who are sitting on the breeching-strap; there are Democrats who are holding back. There are Democrats who are nervous. I dare say they were born with that temperament.

And I respect the conservative temper. I claim to be an animated conservative myself; because being a conservative I understand to mean a man not only who preserves what is best in the nation but who sees that in order to preserve it you dare not stand still, but must move forward. For the virtue of America is not static; it is dynamic. All the forces of America are forces in action or else they are forces of inertia.

The Democratic Party is still on trial. The Democratic Party still has to prove to the independent voters of this country not only that it believes in these things, but that it will continue to work along these lines and that it will not allow any enemy of these things to break its ranks. This country is not going to use any party that cannot do continuous and consistent team work. If any group of men should dare to break the solidarity of the Democratic team for any purpose or from any motive, theirs will be a most unenviable notoriety and a responsibility which will bring deep bitterness to them. The only party that is serviceable to a nation is a party that can hold absolutely together and march with the discipline and with the zest of a conquering host.

### TO HELP THE WORKINGMAN

Don't you think it would be a pretty good idea for the Democratic Party to undertake a systematic method of helping the workingmen of America? There is a very simple way in which they can help the workingmen. If you were simply to establish a great Federal employment bureau, it would do a vast deal; by the Federal agencies which spread over this country men could be directed to those parts of the country, to those undertakings, to those tasks, where they could find profitable employment. The labor of this country needs to be guided from opportunity to opportunity. If I were writing an additional plank for a Democratic platform I would put that in.

I am not one of those who doubt either the industry or the learning or the integrity of the courts of the United States, but I do know that they have a very antiquated way of doing business. I do know that the United States in its judicial procedure is many decades behind every other civilized government in the world; and I say that it is an immediate and an imperative call upon us to rectify that, because the speediness of justice, the inexpensiveness of justice, the ready access of justice, is the greater part of justice itself.

If you have to be rich to get justice, because of the cost of the very process itself, then there is no justice at all. So I say there is another direction in which we ought to be very quick to see the signs of the times and to help those who need to be helped.

### THE DEMOCRATS AND PROGRESSIVE PROPOSALS

At every turn the things that the progressive Republicans have proposed that were practicable, the Democrats either have done or are immediately proposing to do. If that is not our bill of particulars to satisfy the independent voters of the country, I would like to have one produced. There are things that the progressive program contained which we, being constitutional lawyers, happened to know cannot be done by the Congress of the United States. That is a detail which they seem to have overlooked. But so far as they can be done by state legislatures, I for one, speaking for one Democrat, am heartily in favor of their being done.

I do not want the independent voter too proud of himself, but I have got to admit that he is our boss, and I am bound to admit that the things that he wants are, so far as I have seen them mentioned, things that I want. I am not an independent voter, but I hope I can claim to be an independent person, and I want to say this

distinctly, I do not love any party any longer than it continues to serve the America. I have been bred in the Democratic Party; I love the Democratic Party, but I love America a great deal more than I love the Democratic Party. And when the Democratic Party thinks that it is an end in itself, then I rise up and dissent.

### PUBLIC OPINION AND THE PRESS

With all due respect to editors of great newspapers I have to say to them that I never take my opinion of the American people from their editorials. So that when some great dailies not very far from where I am temporarily residing thundered with rising scorn at watchful waiting, Woodrow sat back in his chair and chuckled, knowing that he laughs best who laughs last; knowing in short what was the temper and principles of the American people. . . .

There may come a time when the American people will have to judge whether I know what I am talking about or not. But at least for two years more I am free to think that I do, with a great comfort in immunity in the time being.

### THE LONELY INDEPENDENT

I want to make every independent voter in this country a Democrat. It is a little cold and lonely out where he is because, tho he holds the balance of power, he is not the majority and I want him to come in where it is warm. I want him to come where there are great emotions. That is what I miss in the Republican Party, they do not seem to have any great emotions. They seem to think a lot of things, old things, but they do not seem to have any enthusiasm about anything. Now there is one thing I have got a great enthusiasm about, I might say almost a reckless enthusiasm, and that is human liberty.

### MEXICO'S EIGHTY PER CENT

I hold it is a fundamental principle, and so do you, that every people has the right to determine its own form of government, and until this recent revolution in Mexico, until the end of the Diaz reign, eighty per cent of the people of Mexico never had a "look-in" in determining who should be their governors, or what their government should be. Now I am for the eighty per cent. It is none of my business, and it is none of your business how long they take in determining it. It is none of my business and it is none of yours how they go about the business. The country is theirs. The government is theirs. The liberty, if they can get it, and God speed them in getting it, is theirs. And so far as my influence goes while I am President nobody shall interfere with them.

### THE STATE OF MIND OF BUSINESS

I have been talking with business men recently about the present state of mind of American business. There is nothing the matter with American business except a state of mind. . . . I never was in business, and therefore, I have none of the prejudices of business. I have looked on and tried to see what the interests of the country were in business, and I have taken counsel with men who did know, and their counsel is uniform, and all that is needed in America is now to believe in the future. I believe, I always have believed, that American business men were absolutely sound at heart, but men immersed in business do a lot of things that opportunity offers to do which in other circumstances they would not do; and I have thought all along that all that was necessary to do was to call their attention sharply to the kind of reforms in business which were necessary and that they would acquiesce, and I believe they have heartily acquiesced. There is all the more reason, therefore, that great and small, we should be confident in the future.

# ESSENTIALS AND NON-ESSENTIALS IN RELIGION

WHAT I BELIEVE AND WHY—EIGHTEENTH PAPER

BY WILLIAM HAYES WARD

THERE are many doctrines, or dogmas, that cannot be included in so restricted a series of papers as the present on "What I Believe and Why," because it is not important to have any belief about them; and of some of them it is impossible to have evidence, other than that which is drawn from a mechanical view of Scripture; and others as to which we may profitably leave knowledge to God, as the knowledge can have no concern to us, but only to Him.

Of those of which it is not important that we should have any belief, we may take one commonly held in the Catholic Church, that of the Assumption of the Virgin Mary, that is, the doctrine that came into vogue about the time of the Nestorian controversy, and the development of honor to Mary as "the Mother of God," but which had its origin in a Gnostic heresy, and held that she was taken up, both body and soul, by angels into Heaven. There is not a bit of evidence for it from Scripture or from any other source. It is a pure invention of fancy.

Equally of no importance to us, and equally without biblical or other evidence, is the dogma of the Immaculate Conception of the Virgin Mary, a belief which grew out of the notion that the Mother of our Lord must have been too immaculate to have inherited any stain of original sin from our first parents. It depends on another doctrine, that of the original inherited corruption of human nature from Adam, which itself needs proof.

Some other doctrines taught in certain creeds have no proof whatever, but would be of importance if true. Such is that propounded by the Vatican Council declaring the infallibility of the Pope in his official declarations of doctrine. If he is thus infallible it is important that we should know it. But there being no proof of it, and its unlikelihood being very great, it is not important to dwell upon it. In a similar class we may cite the value of indulgences and the doctrine of Purgatory.

It is desirable for us to know as many true things as possible, but we cannot know them all. Some are important and some unimportant. As to some, if we do not know them correctly it is death to us, while as to others we may err without mischief. It is also desirable that we should do as many good things as possible, but some good things it is of much more importance that we should do than

that we should do others. It is more important to save a child's life than a dog's.

In the field of theology, which has to do with beliefs, and in that of religion, which has to do with character and conduct, there are doctrines or duties of various grades of value, some important, some of little importance; and, what is more to the purpose, the duties relating to conduct are vastly more important than the beliefs. We value the ignorant man, if good, vastly more than the knowing man, if bad. Virtue is more than learning, but the complete man has both.

## DUTY DEPENDS ON KNOWLEDGE

We may not be under obligation to have knowledge; we are under obligation to have character. And character is simple, within the reach of everybody. It is nothing more than to do the most good things we can, but only within the limits of one's knowledge. His knowledge may be very imperfect and his belief quite wrong, but a man must follow according to what he knows. Abraham, as the story goes, thought it his duty, because he believed God required it, to kill his firstborn, and he prepared to do it, as thousands of Canaanites actually did. It was his duty. Of course, God never commanded any such thing—He could not do it, but that did not make it wrong; his ignorance made it right to lift the knife. Thus a thousand cruel acts in pagan worship are made pious and praiseworthy, and are doubtless acceptable to God. It is a comfort to think so, while we try to enlighten their ignorance and make the world happier and better.

As all conduct and duty depend on our relations to others, to God or our fellow men, our duties will depend on what we know or believe about them. If our circumstances have allowed us to believe in God, we shall have very serious duties toward him; and our duties toward our fellow men will vary in importance according to what we know of them. Fortunately, our principal duty toward God coincides with our duty to our fellow men, for it must be His wish, implanted in our consciences, that we should do them good. That is the larger part of our duty to God; and the obligation to do it for Him adds immense emphasis to our mere sense of obligation of the natural virtue of altruism. The bare stoical acceptance of altruism instead of self-love will seem frail and cold un-

less it is stimulated by belief that it is the will of God. Religious people ought to be, and I think they are, the leaders in all service for good order and public welfare.

## SERVICE AND SACRAMENTS

Duties directed immediately toward God alone are comparatively few, and, I may say, less essential. We have done our best for Him when we have done our best for His creatures. We cannot add to His goodness or wisdom or happiness. All we can do is to tell Him that we love Him and will do His will, and we can also ask Him to do what we know He will do wisely. He has made laws for the conduct of His world, and those laws He will not break, but I do not see why He cannot guide their operation, even as we can, and as I believe He has done thru the whole process of the evolution of this and all worlds.

Beyond such prayer and grateful praise I can think of no special act of service we can do directly for God alone unless it be in certain forms of public worship, and even those have their advantage in fellowship with others. We can observe the Sabbath because we believe He commanded it; or we can engage in certain ceremonies or sacraments as ordained by Him, but these are all mere forms and ordinances, appointed for their value to us and not valuable in themselves. If the value fails then the observance vanishes. They are but of secondary importance, for the one essential worship toward God is to worship Him in the spirit and in truth.

## GRADATIONS OF ASSURANCE

When we pass from the realm of conduct and duty to that of knowledge and belief, the case is not so simple. There are many grades of evidence leading to more or less assurance of belief, and grades of importance of our theological doctrines. In his remarkable *Self-Review*, written in his old age, Richard Baxter, after telling how his own beliefs had been modified since youth, makes the following very instructive gradation of certainties:

My certainty that I am a man, is before my certainty that there is a God, for *quod facit notum est magis notum*: my certainty that there is a God, is greater than my certainty that He requireth love and holiness of His creature: my certainty of this, is greater than my certainty of the life of reward and punishment hereafter: my certainty of that, is greater than my certainty of the endless duration of it,

and of the immortality of individuate souls: my certainty of the Deity, is greater than my certainty of the Christian faith: my certainty of the Christian faith in its essentials, is greater than my certainty of the perfection and infallibility of all the Holy Scriptures: my certainty of that is greater than my certainty of the meaning of many particular texts, and so of the truth of many particular doctrines, or of the canonicalness of some certain books. So that as you see by what gradations my understanding doth proceed, so also my certainty differeth as the evidences differ. And they that have attained to greater perfection, and a higher degree of certainty than I, should pity me and produce their evidence to help me.

In this quotation it is suggested that there is a gradation also of the relative importance of various doctrines which have found a place in creeds.

#### THE FUNDAMENTAL BELIEF

The first by far in importance of all religious beliefs is belief in the existence of God; for on belief in God all other religious beliefs rest, and, what is more important, all religious duties of conduct. While it is of much more importance to be good than to believe correctly in God, or to believe at all in Him, yet a belief in an infinite God of boundless goodness and holiness must have the effect which the vision had on Isaiah, who replied to the call of God and the cry of the world, "Here am I; send me."

Following Richard Baxter, I recur to some of our more or less accepted Christian doctrines which depend on our belief in God. Just as our belief in God must rest on good, rational evidence, so all our religious beliefs which depend on it must be supported by evidence. Reason is always arbiter. For children, and for those who are children in faith, fed with milk and not with meat, it is enough to take the word of the Church, but not so for the teachers of the Church nor for any one else who has learned to think for himself and has the opportunity to do it. I take it that those who formulated our creeds were mere men like us, and did not know as much as we do and could not possibly know as much. We have more science, more knowledge of history and philosophy than they, and can judge and criticize on matters of belief better than they. I reject and resent the idea that my belief is to be dictated to me by anybody or by any Church. To my own Master, God, and to Him alone, I stand or fall. In matters of morals as well as of fact I must stand on my own conscience, no matter what the Church says, or what the law says, or what the Bible says, or what I am told anywhere or by anybody that

God says. I will search and get evidence from all these and from every source, but in the end my best decision is final and supreme; and so is every man's.

#### THE AUTHORITY OF THE BIBLE

For illustrations of more or less accepted Christian doctrines let us take the authority of the Bible. I take it that the important thing in it is its truth, or the true things in it. Some hold that it is so fully inspired from God that everything in it is true. If such were the case it would be a great saving of thought. But we know that cannot be so, for the world was not made in six days, and there was no such universal flood as is described, and the multiplicity of languages did not originate in Babel, and the second coming of our Lord did not occur "in this generation," and God did not send "a lying spirit" to deceive Ahab, and they were not blessed who dashed the "little ones against the stones." But there may be a degree of divine guidance and inspiration which does not wholly swamp a man's idiosyncrasies and ignorance, and it is the truth in the Bible that is of enormous value; and what is truth and what is error we have to judge for ourselves; and so far as I can judge, no one doctrine of inspiration is of much importance, for we always have to check its statements by our own study of historical evidence and our ethical sense. For the important thing is the real truth, not the way God told the truth or allowed the error to be mixt with the truth. That is his knowledge and not ours; and a stiff doctrine of inspiration has driven not a few souls away from the Christian faith.

#### THE NATURE OF GOD

Believing in God, the belief in His absolute goodness and love is of the greatest importance. Jesus taught that God is to be addrest as our Father rather than as King. His love to us is a Father's love. Trusting in His love, other doctrines taught of old and even now are of no serious importance, particularly if they do not at all affect us or our conduct, but relate to subjects on which God only has knowledge. Such is the doctrine of the division of the divine nature into three persons, each of which is the fullness of God, as taught in the Nicene and Athanasian creeds. Whether this is true or not God only knows and we know not. We can have no knowledge of it except from the Scriptures as believed to contain a revelation on the subject from God. But students of the Bible differ as to what it teaches, and various views as to its teaching can honestly be held. If we believe in

three persons after Athanasius, or in three phases after Sabellius, or in one undifferentiated God after Arius, makes no serious difference, for if we love and serve God just the same, God will surely love us, however we may have mistaken in a matter that does not concern us, but concerns only God. There is a creed which sends to Hell those that differ from its doctrine, but its statement that such will without doubt perish everlastingly is an impious lie, an insult to God, a denial of His goodness.

#### THE TRINITY AND THE ATONEMENT

Closely allied to this is the doctrine that Jesus while on earth was the second person in the Trinity, containing in himself full Godhead, and this teaching many draw from the Bible. As to whether this is a fact Christians differ, altho on this, as on the matter of the Trinity, the large majority accept it. Whether true or not is a question partly of history, partly of psychology, and the evidence is wholly found in Scripture, and is variously interpreted; and our conclusion is affected by the weight we put on a doctrine of inspiration. As a matter of history or psychology, this question of the nature of Jesus Christ, whether fully or only mediately and partially divine, or whether he was only an extraordinary human teacher of religion, is very interesting, but cannot be of supreme importance to us; for whichever view we take of it, our duty remains the same, and the honest believer, whatever his conclusion, must be equally acceptable to a good God. God must love goodness wherever it is and whatever its intellectual mistakes, and he cannot help loving it. It is not necessary for us to know just how much divinity was in Jesus. That is God's affair rather than ours.

And this connects itself with the doctrine of the Atonement, on which theologians have guessed so much and have imposed so much on others. The question which the doctrine of the Atonement presumes to answer is, How does God manage to forgive sin? What satisfaction for sin does God require? Men have differed immensely on this subject, defending, all of them, their view from the Bible. But only God knows, and we have pretty much ceased to discuss this question, and we are coming to leave it to God. The question is not important, except as it assumes, to begin with, that some satisfaction is necessary. There may be; there may not be, any more than the father in the parable of the Prodigal Son required satisfaction before he should welcome the son with a ring and the fatted calf.

The doctrine of the immortality of the soul is one of vital importance, not because our duty to be good would be any different if we believed the soul not to be immortal, but because disbelief in it would lead a multitude of careless souls, perhaps most of us, to say with Paul's too hasty language, "If the dead are not raised let us eat and drink, for tomorrow we die." But yet the nature of that future life is something that we can know very little or nothing of from any light of nature, and the purely figurative language of Scripture leaves us with little more than the conclusion which nature gives us, that the God of all goodness will do what is just and right. It is a remarkable fact, accordingly, that teachers of the Christian religion have very nearly ceased to preach Heaven and Hell to the people; and it must be because they think the doctrine of future rewards and punishments less important and less definitely certain than their fathers did. They now emphasize other persuasives to a right life.

#### "OUR BUSINESS IS TO BE GOOD"

The doctrines much discussed years ago of the Freedom of the Will and the Divine Decrees appear to me of little practical importance. They divided the Methodists from the Calvinists, and now nobody is much interested in them; and yet the old division of the denominations continues, when the occasion for it has past. It was thought that if God decreed all our acts, then our responsibility was all gone, and with it virtue and vice; but we know better. We see that there was a flaw somewhere, and where it was we care little, for the conflict is over. As with so many of these questions, it is none of our business how God made His plans or what He planned. That is all God's business. Our business is to be good like God.

There was an old doctrine of congenital total depravity, of inherited sin that came down to us by human nature corrupted in Adam. I don't hear it much preached now, but it is yet in venerated creeds. One reason for its disappearance is because we have ceased to believe that there was such a man as Adam, or if there was, that we could possibly have sinned in him. And we find it impossible to believe in total depravity from birth, resulting from a nature corrupted by one disobedience of Adam. At any rate, the series of doctrines related thereto appears to me to be, for the Christian life, of little practical importance. We know that we are free, and we know the obligations of right and the criminality of wrong; and that is important. We do not need

## Brightening the Lives of your Children's Children

**W**ONDERFUL as is its record of triumphs, MAZDA Service strives toward even higher accomplishment in electric lighting.

For the mission of MAZDA Service is to develop not merely a better lamp, but the best illuminant that mankind can devise. For this, a corps of scientific pioneers in our Research Laboratories at Schenectady delves unceasingly into the hidden ways of science—exploring the whole world for new materials, new methods, new thoughts and supplying the results of this

search to the makers of MAZDA lamps so that they may bring the perfect light always a little closer.

For this, too, thro' all the years to come, MAZDA Service will go on and on, ever seeking to improve the lamps of tomorrow as it has improved the lamps of yesterday. And thus as the mark MAZDA etched on a lamp means to you the best lamp of today, so to your children's children, MAZDA will mark the lamp that sums up in their day all this endless search for the perfect light.

## Constipation —Man's Deadliest Enemy

Constipation kills more people than war, pestilence and famine combined. It causes Appendicitis, Bright's Disease, Cancer and other deadly diseases. Yet—Constipation can be relieved without drugs. This is fully explained in a recent book by Dr. John Harvey Kellogg, who gives you results of his treatment of thousands of cases of Constipation during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg teaches you how to avoid sickness and keep well. Dr. Kellogg's books are not dry or technical. His writings are intensely interesting and so clear and concise they can be understood by anyone. In his book on Constipation, Dr. Kellogg tells you how to be rid of this affliction and stay rid of it. The book is not large—only a little over 125 pages—but its contents are worth many times the price. In board covers, the price is \$1.50 but, to give the work widespread distribution, Dr. Kellogg permits an edition bound in library paper covers at only \$1.00. Order today. You take no risk sending money because, if you are not entirely satisfied, you may return the book for prompt refund. Order NOW. Get relief from this danger. Address—

GOOD HEALTH PUBLISHING CO.

301 W. Main Street,

Battle Creek, Michigan.

## WHAT 15¢ WILL DO

The little matter of 15c in stamps will bring you the **Pathfinder** for 13 weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

any more to argue, as Dr. Emmons did, that sin consists in sinning. Of course it does, and in nothing else.

### IMPORTANCE OF THE NON-ESSENTIALS

When I say that in my thinking I distinguish essentials from non-essentials, in belief as well as in duty, and that only duty is supremely essential, I do not mean to say that these less essential, less important beliefs or questions are not worth serious thought, whether mine or others'. Anything as serious as religion is worth serious thought. To one who sees in the Bible much more of revelation and much less of evolution than I do, it will seem of much more importance than to me to study the last hidden meaning there is in that revelation, and the last just deductions from it. Such a one will be much more concerned than am I to understand the mystery of the Trinity which he draws out of its language, or the wonder of the Atonement, or the divinity of Christ, on which the Atonement rests. Equally one who holds that the voice of the Church in its councils and creeds is as binding as inspiration on our beliefs, will regard as very important dogmas which I hold to be of little value or none at all, or even as untrue. Yet even so, as Richard Baxter teaches us, the belief in the Council, or the Church, or the Inspiration is of a nature higher than the belief in its pronouncements, and it is best for them, and for me, to consider very carefully the arguments on which that higher belief rests. Especially the doctrine of Inspiration, which in its stricter form binds us to believe as true and right, on the authority of God, whatever we find in our Scriptures, requires at this day renewed and impartial study.

He—Could you learn to love me?  
She—I learned to speak Chinese.—*Jack O'Lantern.*

Waitress—How did you find the apple pie, sir?

Diner—I moved the bit of cheese aside and there it was.—*Pennsylvania Punch Bowl.*

Prof. (in history)—How was Alexander III of Russia killed?

Fresh.—By a bomb.

Prof.—How do you account for that?

Fresh.—It exploded.—*Pennsylvania Punch Bowl.*

When a man refuses to marry a girl because he "is not worthy of her," there is something else the matter; never on the face of the earth was there a man who refused to marry a woman because she was too good for him.—*E. W. Howe's Monthly.*

Two college students were arraigned before the magistrate charged with hurdling the low spots in the road in their motor-car.

"Have you a lawyer?" asked the magistrate.

"We're not going to have any lawyer," answered the elder of the students. "We've decided to tell the truth."—*New York Times.*

## THE IMPERIAL ENIGMA

Whether or not the German Kaiser is responsible for the Great War, he is certainly the most illustrious and enigmatical character connected with it. In the last twenty-five years, as sovereign of a nation continuously at peace, he has been engaged in more warlike preparations and has stirred up more perilous international situations than his contemporaries who have openly resorted to the sword. His pronouncements on peace have been as exceptional and as enthusiastic as his devotion to the arts of war. He has gained the admiration and confidence of his people by the lavish display of his court, the keenness of his business instinct, his influence in technical education, his emphasis upon religion, his patronage of art and learning, his spectacular journeys, his startling speeches, his care for the industrial classes, and his manifest love for the fatherland and its ancient institutions. In many ways he presents the embodiment of the influences and forces of the conflicting elements of his nation's make up. It is impossible to understand him apart from the history and institutions of the fatherland. Hence the bewildering judgments pronounced upon this royal person by both friends and foes.

That the enigma of his life has so far not been solved is easily seen from a perusal of the new books that attempt to give pen pictures of him. The pen is distinctly aided by the camera in Asa D. Dickinson's illustrated volume, *The Kaiser*, which is largely a compilation. In *The War Lord* we are left to make our own picture from the choice paragraphs selected from the Kaiser's speeches, letters and telegrams. A writer, who claims to have had exceptional opportunities to prepare for his task, essays a portrait of *The Real Kaiser*, which is carefully drawn and evinces intimate knowledge of the subject, altho the English proclivity of the author is not at all suppressed. Finally Mr. George Saunders, for many years a valued newspaper correspondent in Berlin, gives a fruitful and illuminating study of Emperor William's character and foreign policy under the expressive title *Builder and Blunderer*, which sufficiently indicates the trend of his conclusions.

After reading these four volumes one realizes why the Kaiser has captured the imagination of the world as no other personality since Napoleon, but the reader will be more than ever inclined to think that this "vain, versatile and indiscreet" ruler has so far

## Annual Sale at McCutcheon's

## Zane Grey's New Novel THE LONE STAR RANGER

A rushing story of the wild border days of Texas in the early seventies, with their desperate contests between outlaws and rangers. Incident after incident crowds upon another—hairbreadth escapes, deeds of thrilling adventures, manly chivalry, and devoted love.

*Frontispiece. Post 8vo, Cloth, \$1.35 net.*

### The Great Mirage

By  
James L. Ford

The eyes of youth, looking toward the City, see a glittering horizon, and Mr. Ford—who knows his City as few men know it—tells with skill and a good humored brilliance what is behind the reflections of the great mirage.

*Frontispiece. Post 8vo, Cloth, \$1.35 net.*

### California: An Intimate History

By Gertrude Atherton

The California of today, and the California of yesterday with its picturesque story, are set forth in this only complete short history of the State by the one writer who could bring to it the skill united with that love for the task of a Californian-born—Gertrude Atherton. *The only short history available.*

*Illustrated. \$2.00 net.*

### The Auction Block

By Rex Beach

This new novel is written with all the author's well-known virility of style, and in regard to its humor the *St. Louis Republic* says, "Mr. Beach's book stands out, also, by virtue of the humor which he finds in the wicked metropolis."

*Illustrated by Gibson.*

*\$1.35 net.*

### The Sunny Side of Diplomatic Life

By Mme. L. de  
Hegermann-Lindenchrone

Further reminiscences by the author of "In the Courts of Memory" this new volume of her unusually interesting life as a diplomat's wife in five great capitals.

*Fully illustrated. \$2.00 net.*

## HARPER & BROTHERS

eluded the most determined analysts of his character and has reserved the secret of his power for future historians to puzzle over and possibly discover. If an obituary sketch of the German Emperor had been written five years ago it would have been very different from one that would be written today and we may suppose that an estimate of his character made five years hence would be very unlike either.

### THE STORY OF THE DELUGE

Dr. Poebel has for two seasons been employed by the Museum of the University of Pennsylvania to copy and translate a series of Babylonian texts secured by the university in its excavations at Niffer. Of these three latest volumes of the series Vol. IV is a transcription, translation and discussion of historical texts; Vol. V contains very fine autograph copies of Babylonian texts with photographs of the tablets; and Vol. VI transcription and comment on the bilingual grammatical texts for the use of the pupils in the ancient temple. It is greatly to the credit of the university that this important work has been undertaken. Dr. Poebel is fortunate in having found a number of tablets giving agglutinative Sumerian verbs with the corresponding Babylonian forms, material of the first value.

But the chief interest belongs to Dr. Poebel's discovery of the fragmentary text giving the earliest known version of the Creation and Deluge myths. The tablet has six columns, but two-thirds of each column is lost, so that the story is in much worse condition than that which gives the story of the Flood in the Gilgamesh Epic. From the new tablet as translated by Dr. Poebel we gather that the creator of mankind was the Great Goddess Ninkharshag, associated in the work with the three eldest gods, Anu, Enlil (Bel) and Ea, and later she created the four-footed animals. This is not the order of Genesis. The men built five cities, each sacred to its god, as Erida to Ea, and Sippar to Shamash, the sun-god. In the next column we seem to learn that the gods determined to destroy mankind and the goddesses Ninkharshag and Ishtar howled with grief. Ziusgaddu, the Noah of the story, built a huge boat to save himself and his family. Like Noah he was a pious man, "in humility prostrating himself, in reverence daily and perseveringly standing in attendance, instructed by dreams, and conjuring by the name of Heaven and Earth." At the side of a temple wall he heard the god speak to him: "O my holy one, open thine ear to me. By our will a rainstorm will be sent; a windstorm will be sent, to destroy the seed of mankind. This is the de-

### Fresh Air Without Draft

Increase your efficiency by having a constant supply of fresh air in office and home.

Pat. apl'd for

### NO-DRAFT VENTILATOR

The latest development in scientific ventilation, slips in window without nails or screws, is inconspicuous and efficient. Made of solid brass, handsomely finished in oxidized copper. Schools, hospitals, offices and homes use them extensively, including Johns Hopkins Hospital, Enoch Pratt Library, etc. Size 1 fits any window 24 to 36 in. wide, \$2.50; size 2 fits any window 30 to 52 in., \$3.50. Sent postpaid on receipt of price. Money back if not satisfied. Booklet FREE. Reference: Union Trust Co., Baltimore. Order today.

No-Draft Ventilator Co., 534 Union Trust Bldg., Baltimore, Md.

## BROWN'S Bronchial TROCHES

### For Hoarseness

A convenient and effective remedy for throat troubles. Popular among public speakers and singers. For coughs, loss of voice, irritation or soreness of the throat. Brown's Bronchial Troches are better than syrups.

Can be carried in pocket or purse and used freely whenever needed. They contain no opiates.

Sold only in Boxes—never in bulk. 25c, 50c, and \$1.00. Sample Free.

JOHN I. BROWN & SON Boston, Mass.

cision, the word of the assembly of the gods, the command of Anu and Enlil." The fifth column tells how the mighty windstorms came together and the rainstorms raged with them for seven days and seven nights. According to the legend in the Gilgamesh Epic it was six days only, while in Genesis there are two versions welded together, one of which makes it forty days while the other increases it to one hundred and fifty days. The huge boat was driven by the windstorm, but after seven days the sun-god came forth, and Zuigiddu opened an aperture in the boat and let the sunlight into it. Before the sun-god he prostrated himself and sacrificed an ox and a sheep. Here comes another break in the tablet, and the story concludes with Ziu-giddu again prostrating before Anu and Enlil, and he receives the promise that he shall receive the name "Preserver of the Seed of Mankind" and shall be made immortal like the gods, and dwell with them on the mountain of Dilmun. It is a great pity that two-thirds of the poem is lost, but the reader can compare what is preserved of it, thanks to Dr. Poebel, with the biblical story and with the parallel stories of Berosus and the eleventh chapter of the Gilgamesh Epic as they are given in any good Bible dictionary.

*Historical and Grammatical Texts.*  
Vol. IV, part I; Vols. V and VI.  
By Arno Poebel. The University of Pennsylvania.

#### TWO CHAMPIONS OF EFFICIENCY

In his *Fundamental Sources of Efficiency*, Fletcher Durell, Ph. D., attempts to reduce fitness to its first principles, but the philosophy he formulates applies to wider fields than mere industrial proficiency. The book is intended as a supplementary text for vocational and cultural courses, and will have little interest for the general reader. *Keeping Fit*, by Orison Swett Marden, applies the doctrine of physical efficiency to the individual in fifteen chapters of commonplace dietary counsel.

Lippincott's. \$2.50.

#### THE PESSIMIST ABROAD

Insurgency characterized chiefly by blindness of thought and chaos of expression, under which, however, there is still a modicum of truth, makes John Curtis Underwood's *Literature and Insurgency* but a slight contribution toward bridging the void in American literary criticism. Except for the brief and brilliant flames of Frank Norris and David Graham Phillips, his impatient spirit finds little relief from the dreary wastes of American life and letters.

Kennerley. \$2.

#### THE UNCONQUERABLE HUMAN SPIRIT

A message of inspiration is *A Beacon for the Blind*, by Winifred Holt, the well-written and fascinating biography of Henry Fawcett, Professor of Political Economy and Postmaster General of England. Tho blind at twenty-four, he lived a joyous and strenuous life with which he would not allow his infirmity to interfere. Befriender of the

### Wild Woods and Waterways

By WILLIAM CHALMERS COVERT, author of "Glory of the Pines." Illustrated \$1.35 net.

This is a book which appeals to those who love to be out of doors and take pleasure in the woods and the streams. It is full of the spirit of the forest and the music of the water. It has the freshness of the air and the quiet of the solitude far from town and city.—*Reformed Church Messenger*.

### The Growth of the Christian Church

By ROBERT H. NICHOLS, Ph.D., Professor of Church History, Auburn Theological Seminary. Two Volumes, \$1.00 each net.

Volume 1, Ancient and Medieval Christianity.  
Volume 2, Modern Christianity.

### Intimate Letters on Personal Problems

By J. R. MILLER, D.D. Selected and arranged by JOHN T. FARIS, D.D. \$1.25 net.

Many of those who are privileged to read these letters will feel that a personal message is coming to them.

### Living Bread from the Fourth Gospel

By WILLIAM HIRAM FOULKES, D.D. \$1.25 net.

Devotional literature receives a notable addition in an attractive volume arranged for daily use through a year in *Living Bread from the Fourth Gospel*, by William Hiram Foulkes. A verse is chosen for each day, followed by a short exegetical and devotional comment and a brief prayer. The author has the rare gift of condensed writing and epigrammatic expression. In each page some sentence may be found which might well be treasured in the mind as a motto for the day.—*Congregationalist*.

### What Clarkson is Doing for the Book Buyer

In several hundred thousand libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Editions artistically printed and bound—almost every book was bought from me. WHY? Because, I have no agents and sell you just the books you want—all new—many at a saving of from 50 to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return them at my expense—and owe me nothing.

### Sample Prices:

The Eyes of the World, 90c	Messages and Papers of the Southern Confederacy, 3-4
Their Yesterdays, 35c	Morocco, publisher's price \$15—my price, 85c
Winning of Barbara Worth, 35c	Home Library, 8 vols. cloth, publisher's price \$4—my price 85c
Calling of Dan Matthews, 35c	Wild Animals of North America, publisher's price \$3—my price 45c
Library of Oratory, 15 vols., publisher's price \$15—my price \$4.75	Orations, Addresses and Club Essays, publisher's price \$1.60—my price 42c
Shakespeare, 40 vol. full flexible Morocco, largest type and best notes of any Shakespeare published, publisher's price \$36—my price \$24.	

Here are De Luxe Editions, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Scott and scores of others.

### Get My Big, New Catalog

My new catalog, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

IT'S HEALTH, IT'S COMFORT, IT'S PLEASURE  
PINE TREE INN, - LAKEHURST, N. J.

## RHETORIC

"It certainly gives me great pleasure to recommend to teachers everywhere the special merits of The Independent for schoolroom work. We use it weekly in connection with our regular Rhetorical work. One-third of our Rhetorical period time is used for Current Events. Outlines of the week's events are prepared from the magazine. We find the news to be concise and very readable. The special articles are especially good, and the debate outlines are excellent. I am glad to commend it."

Send for free pamphlet called "How to Use The Independent in the Teaching of English."

THE INDEPENDENT, 119 West 40th Street, New York

poor in England and of the ryot in India, Fawcett, like Lincoln, was the man whom the common people loved.

Houghton Mifflin. \$2.50.

### A REPLY TO SOCIALISM

*Your Own Pay Envelope*, by John R. Meader, is a series of letters addressed to John Smith, Workingham. While exposing minor Marxian fallacies, it is not itself entirely free from sophistry and argumentative pettiness. Its homely examples and lack of rancor, however, give a certain value to its consideration of socialism's more simple problems.

Devin-Adair. \$1.

### THE HUMAN SIDE OF A STATESMAN

A study of a statesman's personality is *The Life of Thomas B. Reed*, by Samuel W. McCall. The biographer has not escaped entirely a natural extollation of a man who was his friend; it is fortunate, however, that so much intimate detail of the human side of the famous Speaker has been put into a book. To one who knows little of his reflective nature or fine literary sense the work will be of more than usual biographical interest.

Houghton Mifflin. \$3.

### THE EVOLUTION OF SIN

In *Christianity and Sin*, Robert Mackintosh has outlined the difficult and much debated doctrine of sin historically as it emerges in the Biblical literature and later Christian thought. The modifications made by the theory of evolution are emphasized. The author then makes a constructive study of the more important aspects and elements of the doctrine. The volume is well worked out and suggestive.

Scribner's. 75 cents.

### INVOICING UNCLE SAM

Capsule essays, that have already delighted some five million newspaper readers, go to make up George Fitch's trenchant *Sizing Up Uncle Sam*. Their ingredients are bits of political history, national biography, economics, fads, drawbacks and bragging points, put together with dry humor and a deft pen.

Stokes. \$1.

### THE SEARCHING QUESTION OF THE TIMES

According to Professor Walter Rauschenbusch, Christianity demands that love be made supreme among social forces and that the life of humanity be "organized on the basis of solidarity and love." His striking booklet *Dare We Be Christians?* is a stirring call to the followers of Jesus everywhere to substitute freedom and fraternity for coercion and class strife in social movements.

Pilgrim Press. 35 cents.

### THE QUEST FOR GOLD

*The Treasure Finders*, by Oliver Clay, is a well-written supplementary historical reader, containing accounts of the principal voyages of discovery and exploration. There are ten chapters, including an account of the searovers of the Far North like Lief Ericson. The environment in each chapter is excellently maintained. The style is direct.

Duffield. \$1.25.

EFFICIENCY  
QUESTION BOX

CONDUCTED BY  
EDWARD EARLE PURINTON  
DIRECTOR OF THE  
INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

14. Mrs. M. P., New Jersey. "My problem is this: How are magazine reading and efficiency to live in the same house? The literature of the day is heavy with waste, because unused; and demoralizing for the reason that what one hopes or expects to do and does not effect is more enervating than accomplishment would be. Do not passing thoughts in great numbers tend to scatter the intellect? How shall we keep our minds from becoming waste-baskets?"

Your point is a good one. The bane of education is too much reading—too little thinking, too little feeling, too little doing. This chronic tendency of the student, toward mental gluttony and psychic paralysis, we are endeavoring to overcome by publishing a chart or test or table, forcing action, with each article of our series. I, personally, would rather see a man lift a little finger to help himself or his neighbor than read a library of pale, proud, theories—and stay glued to his chair. We all need power—not pedantry; and shall welcome suggestions accordingly. The Service recommends few books, only those likely to meet a specific need; aiming rather to form personal connections between inquirers and the most able Efficiency leaders.

15. Mr. C. W., Georgia. "I should like to ask about the space and attention you are going to give to the Efficiency Movement in the future. Our company is interested, and would like to get all the information possible on this subject."

The amount of space that we shall give to this subject will be largely determined by our readers' interest in what we present.

A series of articles, giving the newest and best ideas on Personal Efficiency, written by the Director of the Service, will be published, one a month. A synopsis of these articles has just been published, in a booklet containing the symposium on Efficiency from our November 30th issue, and also a reprint of "The Triumph of the Man Who Acts"—for which so many of our friends have been asking. The price of the booklet is 10 cents. Order as many copies from the Service as you care to distribute. Just write "Send Efficiency booklet," and enclose amount due.

The Question Box will be continued, and made as varied, interesting and helpful as possible. New features are under way and will be announced from time to time in these columns.

16. Mr. R. E. K., Wyoming. "Can you refer me to a good mail course in stenography? I find myself handicapped by the time I have to consume at the typewriter, in making out reports, estimates, etc. I am a civil engineer, and am greatly interested in your Service."

Write the International Correspondence Schools, Scranton, Pennsylvania, for details on this matter. Stenography is hard to learn by mail instruction—the knack of using your hands and the machine is largely observation and imitation. If you are

Total .....\$80,397,796.46

# 6% \$100 Certificates

Bearing interest at 6 per  
cent. Due two years from  
date and payable on demand at  
any time thereafter.

Amplly secured by first mortgages  
on improved property deposited in  
trust for the protection of Certificate  
holders.

An ideal investment for savings  
or idle funds.

Interest checks mailed promptly  
July 1st and January 1st.

Write for the book

THE CALVERT MORTGAGE CO.  
1048 Calvert Bldg. Baltimore, Md.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A Dividend of Two Dollars per share  
will be paid on Friday, January 15, 1915,  
to stockholders of record at the close of  
business on Thursday, December 31, 1914.

G. D. MILNE, Treasurer

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

### Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their  
terms on January 1, 1915, at the office of the  
Treasurer in New York will be paid by the  
Bankers' Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer

keen and deft, you may succeed. Go ahead  
and make the trial.

Is there no public stenographer in your  
town who would suggest the right books  
for home study, and who would coach you  
for a slight fee? Always look around you  
before asking help from a distance.

Have you investigated stenotypy, the  
new short-hand system using English let-  
ters only? Write the Stenotype Company,  
220 West Forty-second Street, New York  
City.

17. Mrs. R. B. S., Virginia. "Your first arti-  
cle was like an open door thru which a great  
light shone. The writer desires for herself, hus-  
band and three sons the most practical methods  
of studying Efficiency. Who are the publishers  
of your books?"

Will you pardon us for suggesting that  
in your plan of study your own efficiency  
comes first, that of your children next, that  
of your husband last? You are the mold-  
ing influence on the lives of your boys—  
you must be their example, in strength of  
heart, head and hand. If you wish to help  
your husband in his work, you might read  
the late issues of *The Ladies' Home Jour-  
nal*, Philadelphia, showing methods that  
wives have used in helping to make and  
save money for the home. But as mother  
and housewife you are chiefly responsible.

Are your children small? Then write  
to Mrs. Mary Pamela Rice, Hotel Bruns-  
wick, Boston, Massachusetts, for details  
of the Fathers' and Mothers' Club, of  
which she is president and founder. The  
National Child Welfare Committee, 200  
Fifth Avenue, New York City, may give  
you important references on child train-  
ing and protection.

Is there a mothers' club, or a woman's  
club, in your town? If so, join it. If  
not, write to the Editor, *American Club  
Woman*, 35 West Thirty-ninth Street,  
New York City, for suggestions on how  
to form such a club. Then organize it.

Where is the nearest branch of the Na-  
tional Housewives' League? Headquarters  
are at 25 West Forty-fifth Street, New  
York City; and you will inquire, if in-  
terested in pure food, sanitary shops, fair  
prices, and right relationships between  
dealers and housewives. Excellent ideas  
may be had from the Secretary of the As-  
sociated Clubs of Domestic Science, care  
of *National Food Magazine*, 45 West  
Thirty-fourth Street, New York City.

Do you read *Good Housekeeping Mag-  
azine*? If not, send fifteen cents for a  
copy, to the publication offices at 119 West  
Fortieth Street, New York City. And  
now if, perchance, your house be not over-  
run with literature and the patience of  
your husband exhausted, we will refer you  
to books and magazines on woman suf-  
frage—of which there be a sufficient num-  
ber to make every fossilized man in your  
town wish for the old days of woman's in-  
efficiency. To some women efficiency is  
peace, to others it is revolution. Which  
does it mean to you?

Regarding my writings, they have had  
several publishers, but most of the various  
editions have been exhausted. New edi-  
tions will soon be on the press. You will  
be notified when they are ready.

18. Rev. W. C. J., Washington. "Is there lit-  
erature on the application of the principle of  
scientific management to church work, and is  
any of this literature of value?"

Scientific management has not yet been  
satisfactorily applied in church work. To  
my knowledge, there are no adequate books  
on the subject.

You have made a fine beginning, in your  
"Civic and Religious Federation," on  
whose letterhead you wrote us. A union  
of this kind, formed among the churches  
of various denominations and the civic and  
business clubs of your city, has in it won-  
derful possibilities for making the church  
practical and the world spiritual—a com-  
bination devoutly to be desired.

Social service features, hygienic advice,  
household helps, and psychological train-  
ing, should be integral parts of every

church program. The human soul cannot  
function properly in a weak or ailing  
body, with an unbalanced or unused brain.  
Hereditary influence, wrong associations,  
ill-chosen food and drink, poor circulation  
and impoverished blood-supply, make more  
havoc with our lives than "original sin"  
ever dreamed of. Let your church be a  
social service center, where the great ques-  
tions of the day—such as poverty, unem-  
ployment, health, vocational training, busi-  
ness principles, may be freely discussed;  
and where the real problems of individu-  
als, inside and outside your particular  
church, may be squarely met and solved.

Write the American Institute of Social  
Service, 82 Bible House, New York City,  
for particulars of their unique work along  
these lines, also for list of the books by  
Dr. Josiah Strong. A book, *Health and  
Happiness*, by Bishop Samuel Fallows,  
2344 Monroe Street, Chicago, describes  
some of the remarkable results of the  
church clinic founded by Bishop Fallows,  
which aims at spiritual growth by means  
of a strong body and a clear mind. Rev.  
W. John Murray, of 113 West Eighty-  
seventh Street, New York City, conducts  
a Men's Efficiency Club under the auspices  
of his church, and might be willing to give  
details of its formation and scope.

I do not know of any better way to en-  
list the support of the men of your city  
than by organizing such a club. We will  
help you, if desired, in drawing up a tenta-  
tive plan, and will coöperate to the fullest  
possible degree.

19. Mr. J. W. E., New York. "A friend of  
mine, twenty-eight years of age, has been con-  
nected with the legal department of a large cor-  
poration. He has been successful in his work,  
but does not like the law. A reputable character  
analyst tells him he is not built for the law. Is  
he too old to change his work? He is a uni-  
versity graduate."

No man is too old to change his work.  
Some of the world's greatest men did not  
begin their real work till they were past  
forty.

However, a sudden or open change would  
be unwise, particularly if your friend has  
a family to support, or other personal ob-  
ligations to meet regularly. A large cor-  
poration shows many avenues to effective  
work, apart from the law. Why not investi-  
gate other departments, with a view first  
to blending the legal occupation with a  
more congenial one—then gradually drop-  
ping the law and transferring?

Your friend might study on this plan out-  
side of office hours—then offer to help the  
chief of the department he selects, without  
remuneration. This, however, should be en-  
tirely a personal matter between these two  
men—the corporation should not be in-  
formed of the arrangement until a vacancy  
occurs in the new line, and the lawyer is  
ready to fill it. Most employers are opposed  
to innovations among their employees—a  
short-sighted policy, but one to be reckoned  
with.

20. Rev. C. J. B., Ohio. "I have been very  
much impressed by your Efficiency program; it  
gives a good view of the needs and capacities  
of human nature. But has the moral element  
no place in that scheme? Can our life be fairly  
developed and utilized without the spiritual prin-  
ciple? When Paul said 'I can do all things thru  
Christ Who strengtheneth me,' did he not realize  
the highest ideal of human efficiency? I am sure  
that your work will be very useful and well  
appreciated."

There can be no real efficiency without  
spirituality. And every technical method  
must be founded on a moral principle. But  
the spiritual life is not a thing of dogmas  
—it is a thing of deeds. Too many people  
think of religion as a kind of emotional  
balloon, in which they can float lazily  
among the dream-clouds of moral supine-  
ness. Spirituality is energy, or it is noth-  
ing. The Bible is the greatest book ever  
written because it is the record of the  
greatest deeds ever done. What we are  
trying to find and use is the power at the  
source of all true religion. But we add  
science, we practise health, we teach psy-  
chology, and we administer commonsense  
in large doses.

LIBRARIES AND LIBRARIANS

"A book destroyed thru legitimate use has fulfilled its destiny," says Paul Lodewig in his *Katechismus der Bücherei*.

Seven members of the staff and two porters of the Public Library, Birmingham, England, are at the front with the British army.

The first regularly organized library school in Germany was opened on October 12, 1914, in the Hoch Schule für Frauen in Leipzig.

The Municipal Reference Library of New York City, which is a branch of the New York Public Library, issues a weekly magazine for circulation among the officials and employees of the city of New York. It contains a classified list of recent additions to the library and notes on matters of current interest.

The Public Library of Jersey City, New Jersey, has published three pamphlets describing the form of government of the state, county and city in which the library is situated. These monographs outline the form of government and explain the duties and powers of officers in the city, county and state.

Recently in this column it was stated that the Hotel Sinton, Cincinnati, is the second hotel to install a library for the use of its patrons. It appears that other hotels besides the Sinton and the Touraine, notably the Parker House in Boston, the Biltmore in New York and the Hotel Statler in Detroit, each have valuable libraries and are issuing lists of books to be placed in each guest room.

At the Conference of Teachers of Journalism held at Columbia University on December 30, Mr. H. M. Lydenburg, Reference Librarian of the New York Public Library, presented a plan for preserving newspaper files, which on account of the wood-pulp paper used now disintegrate in about ten years. A committee was appointed by the Conference to examine and report on the various plans suggested.

At a recent meeting of the League of Library Commissions held in New York City it was stated that the New York State Library is preparing a list of books for use in prison libraries. The New York Library Association has had a Committee on Libraries in Prisons and Reformatories for several years, and librarians generally are interesting themselves in the movement, which tends to make prisons reformatory rather than punitive.

To those users of libraries who have been appalled by the size of public card catalogs, the discussion at a recent conference of eastern college librarians, held at Columbia University, would have been interesting. Several means by which the size of the catalog might be reduced were suggested, among them the possibility of publishing a title-a-line linotype slug catalog in book form, to be revised quarterly, just as the telephone directories are revised.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,219,045,826.00  
Received premiums thereon to the extent of.....282,298,429.80  
Paid losses during that period 141,567,550.30  
Issued certificates of profits to dealers.....89,740,400.00  
Of which there have been redeemed.....82,497,340.00  
Leaving outstanding at present time.....7,243,060.00  
Interest paid on certificates amounts to.....22,585,640.25  
On December 31, 1913, the assets of the company amounted to.....13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

## DEFERRED DIVIDENDS

There recently appeared in *Best's Insurance News* the record and results of a life policy which will serve our readers as an illustration of what is generally known as the "deferred dividend plan."

The term itself is expressive: the dividends, instead of being declared and distributed annually among policyholders, are retained by the company and remain uncomputed until the policy terms (ten, fifteen or twenty years) are completed. The arrangement is a modification, adapted to life insurance dividends, of the scheme invented by Lorenzo Tonti, the seventeenth century Italian banker, and which, in the life insurance business, flourished so prodigiously in the United States from 1870 to 1905, since which time, as the result of its proscription in the state of New York, has fallen into disrepute. It is not obsolete, however, for many of the younger companies in the South and West practise it.

The case recorded in *Best's* is summarized below: The policy was for \$2000, at an annual premium of \$168.60; the age of the assured was sixty-one at the time—December, 1893; the dividend distribution was to occur in December, 1913. The assured died in November, 1913—one month in advance of the distribution date. We are informed that the dividend would have amounted to about \$1900; but that must be mere conjecture, for this element cannot, under the terms of the policies, be calculated until their anniversary dates are passed, the dividends belonging to insured survivors only. But there was, of course, a dividend of comparatively substantial proportions. The assured's death at a date in advance of the distribution date canceled his claim to dividends.

Altho he paid all the premiums, twenty of them, and came to within four weeks of fulfilling the contract as to time, he lost all claim to a share in the savings made by the company for the policyholders in his class. The company was powerless; it was compelled to discharge its duty in accordance with the terms of the contract. But no such contract should ever have been made. We can understand why many active companies which did not approve of the system adopted it. Once started, it became immensely popular. The gambling instinct, inherent in human nature, made it so; and the company which refused to issue tontine policies—as a few did—were left at the post in the race for new business.

It will be asked: Wherein is this plan of life insurance objectionable? In this: The premium on an old line policy—that is, a policy under which a reserve is maintained—is "loaded."

In other words, it is considerably in excess of the amount which demonstrated experience requires; but security is an all important factor and this margin, exacted against possible contingencies, is taken under the condition that if not used it will be returned to the owner. That element becomes surplus. It is money which is not required in maintaining the insurance. Under the tontine system policyholders could not withdraw it. It became a gambling stake, subject to forfeiture in the event of death or the discontinuance of the policy, the total amount of the accumulated fund going to those who persisted and lived. What does this mean? That the strong—those who live and those who can pay—become the beneficiaries of the savings of the weak. Life insurance is a beneficence and it is revolting that it should be yoked up with a game of chance so iniquitous.

If policyholders can afford to leave their dividends with the companies year after year: good. If they leave them to be converted into additions, payable with the policies: grand. But to gamble with them, to come within a month's time of fulfilling all the conditions, as did the man in the illustration, and then lose all but the bare insurance—folly and wickedness.

## NOTES AND ANSWERS

S. L. R., Chicago, Ill.—Under the circumstances, I cannot advise you. As you are on the ground it would not be difficult for you to secure information of a more intimate character than that obtainable from reference books and compilations made once a year. It is a new company, the expense ratio is excessive and the management has not demonstrated the possession of unusual ability.

J. K., Bridgeport, Conn.—Marveling at the taste of the organizers in the matter of nomenclature, it must be admitted that there is a concern bearing the word Boosters' Accident Association of Minneapolis, Minn. It is a small accident and health company of the fraternal assessment kind.

S. A. R., San Antonio, Tex.—The reserve would approximate \$3900; impossible to estimate accumulated surplus; don't count on to exceed \$1800. All deferred dividends of that period were overestimated.

J. Q. H., Elgin, Ill.—The company you mention, tho comparatively small, is excellent in every respect. It ranks among the oldest in the country, having commenced business in 1858. But it is not aggressive. It stands well as a dividend-payer and is purely mutual.

W. S. S., Brooklyn, N. Y.—See New York Insurance Report, Part I, 1914, page 108, "General Interrogatories." You will find that of the \$6,000,000 capital stock, but \$260,600 is held by the directors. It is not a "close corporation."

The Toledo Life Insurance Company of Toledo, Ohio, which began business in April, 1911, has sold its outstanding business to the Ohio National Life of Cincinnati and will go into liquidation. The assets of the latter are about \$825,000 and its insurance in force, about \$7,000,000.

# Peace Centenary Prize Contest

## For American Schools

**T**HE INDEPENDENT, as its contribution to the Celebration of the Centenary of the Treaty of Ghent, which was signed on Christmas Eve in the year 1814, offers a Peace Centenary Medal for the best Essay from any school, public or private, in the United States on the Hundred Years of Peace between Great Britain and the United States. The Independent will publish, beginning February 15th, 1915, and ending April 5th, 1915, eight articles covering the chief controversies between Great Britain and the United States which were settled by diplomacy or arbitration during the past Hundred Years, which will provide ample material for the essays to be prepared. These articles have been prepared by Preston William Slosson, of Columbia University, and will tell the story in simple and direct language, each article occupying two pages of The Independent. The series will show how great were the issues at stake and how high the tension of popular feeling in both countries, and how, nevertheless, patriotic and honest statesmanship did not fail to find a satisfactory solution without recourse to war. The titles of the Articles are as follows:

### THE GREAT TREATY

The first article will tell the story of the Treaty concluded at Ghent, 1814.

### THE BOUNDARY OF PEACE

The story of the boundary from the Atlantic to the Rocky Mountains a boundary unfortified by nature or man, and yet in bitter dispute for many years.

### "FIFTY-FOUR-FORTY OR FIGHT"

The story of the greatest of our territorial disputes with Great Britain over the question of the ownership of the Oregon country.

### THE ALABAMA CLAIMS

A sketch of our difficulties with Great Britain during the War between the States, also describing the peaceful solution of the Alabama Claims.

### PRESIDENT CLEVELAND AND THE VENEZUELA DISPUTE

The story of the eventful incidents that brought the United States and Great Britain to the verge of war.

### THE ALASKA BOUNDARY QUESTION

A history of the negotiations surrounding the solution of the disputes concerning the Alaskan boundary.

### FISHERMEN AND STATESMEN

The seventh article treats of the many questions which have arisen as to American fishing and sealing rights along North American coasts.

### THE CLAYTON-BULWER TREATY AND PANAMA CANAL

Dealing with the disputes which have arisen at one time or another in regard to the project of the interoceanic canal.

## Half a Dozen Letters Concerning the Prize Contest

FROM NICHOLAS MURRAY BUTLER.

President, Columbia University, The City of New York.

As Chairman of the Committee on Historical Review of the Peace Centenary Committee, I am glad to say that the Prize Contest of The Independent meets my cordial approval—both as a means of informing the boys and girls of the country as to the history of the past hundred years, and showing them how conference and common sense have been more effective than war.

FROM A. M. DEYOE.

Supt. of Public Instruction, State of Iowa.

We are interested in the Peace Centenary Contest which you propose to conduct for the benefit of children attending the American schools. We heartily endorse your plan.

FROM R. H. WILSON.

Supt. of Public Instruction, State of Oklahoma.

I take pleasure in endorsing "The Independent Peace Centenary Prize Contest for American Schools." At this time while the European nations are experiencing the horrors of war, we should appreciate the peace that prevails in this land. I am sure that your contest will strengthen the cause of peace throughout this country by showing to young and old alike the satisfactory settlements of international disputes in the past, and suggesting indirectly the thought that few international disputes

are of such a character that they cannot be settled by peaceful means.

FROM NATHAN C. SCHAEFFER.

Supt. of Public Instruction, Commonwealth of Pennsylvania.

Please accept my thanks for the copy of The Independent. I approve prize contest on the "Peace Centenary."

FROM H. A. DAVEE,

Supt. of Public Instruction, State of Montana.

I received your letter and a copy of The Independent containing your proposition for celebrating the Hundred Years of Peace existing between this country and Great Britain. I think your idea a splendid one and it ought to meet with the hearty cooperation of the school people of the country. I shall be glad to cooperate in any way that I can.

FROM MASON S. STONE.

Supt. of Education, State of Vermont.

Allow me to commend the Peace Centenary Contest of The Independent, which, in my opinion, will bring the peace propaganda definitely before the schools of the country and will acquaint the pupils therein with the knowledge of the blessings of Universal Peace and stimulate them to activity in working therefor.

THE INDEPENDENT PEACE CENTENARY PRIZE CONTEST DEPARTMENT, 119 West 40th Street, New York:

We wish to enter The Independent Peace Centenary Prize Contest for American Schools. Please send full details.

## Uncle Sam's Job for 1915

*The New York "Evening Mail" has recently published a series of illustrated editorials infused to an unusual degree with the forward-looking spirit. Thru the courtesy of the editor of the "Mail," Mr. Henry L. Stoddard, we are able to reproduce some of these editorials in The Independent. This is the first of the series. The second will appear next week.—THE EDITOR.*

**T**HE one voice heard 'round the world today is that of Uncle Sam—farmer, manufacturer, salesman.

It is cordially welcomed everywhere.

It has meant more than \$100,000,000 to the good in our foreign trade this month. The January figures will be twice as high. So will every month of 1915.

A war-paralyzed world is looking to us to sell it all the food and manufactures we can spare. "Made in U. S. A." is the hope of other nations for 1915. We can girdle the world with our products.

That much is settled beyond doubt.

It means work and wages for thousands now idle—and work and wages mean a big buying power at home.

Everywhere thruout the country we are picking up the threads of prosperity. Mill owners are calling their men back, furnaces are lighting up anew, factories beginning to turn out increased product.

Men of confidence, of grit and of farsightedness have forgotten 1914, with its troubles. It is in the past. They are looking to 1915. It is new. It is full of hope—of opportunity.

We begin it with basic conditions as sound as a gold dollar; with our own 100,000,000 people ready to engage spiritedly in the peaceful conquest of the world's trade, determined to win it for all time.

We have only to be equally determined about creating a home trade in order to make that what it should be.

Everybody agrees that prosperity is on the way to the United States. Opinions differ only as to the time of its arrival.

Why wait? Why not fix today as the time; and plan, and work, and struggle for it NOW?

Prosperity does not come by waiting for it. The tomorrow that you wait for never comes. Today is the time that counts; today is the gong that strikes twelve.

In these last hours of 1914 let us think of 1915 only as a year of good times, of success, of achievement far greater than the conquests of war.

"Straight ahead" is the starting signal for the new year. The road is not cleared of obstacles. No worthwhile road ever is. It is your work to clear it—to look beyond the obstacles and vision the sure reward of effort.

Mr. Big Business Man, Mr. Financier, give up those doubts that have loaded you down thru 1914!

If you don't the Little Business Man will get ahead of you before 1915 is out.

He is today the advance agent of prosperity, pushing ahead everywhere, taking a risk now and then, never looking for a dead certainty, but moving steadily on toward bigger things all the time.

He does not talk hard times; he talks good times.

His is the voice that the country wants to hear, that the whole world is listening to and heeding.

## PEBBLES

The Flirt—I wonder how many men will be made unhappy when I marry?

The Homely One—How many do you expect to marry?—*Princeton Tiger*.

"Does your wife neglect her home in making speeches?" "Not a bit of it," replied Mr. Meekton. "She always lets me hear the speeches first."—*Washington Star*.

"Dinah, did you wash the fish before you baked it?"

"Law, ma'am, what's de use ob washin' er fish what's lived all his life in de water?"—*Philadelphia Leader*.

"The waw? Oh, yes, the bally waw—such a nuisance, and deuced hard on a fellow, too. Only fancy having to confine oneself to domestic vestings!"—*Harvard Lampoon*.

Lawyer (to timid young woman)—Have you ever appeared as witness in a suit before?

Young Woman (blushing)—Y-yes, sir, of course.

Lawyer—Please state to the jury just what suit it was.

Young Woman (with more confidence)—It was a nun's veiling, shirred down the front and trimmed with a lovely blue, and hat to match—

Judge (rapping violently)—Order in the court!—*New York Sun*.

A missionary was returning to Basel from Patagonia, bringing with him for the purposes of science a collection of Patagonian skulls. The Custom House officers opened the chest and informed the owner that the consignment must be classed as animal bones and taxed at so much the pound.

The missionary was indignant. So the officials agreed to reconsider. When the way-bill had been revised, it appeared in the following form:

"Chest of native skulls. Personal effects, already worn."—*New York Evening Post*.

## J U S T A W O R D

The net gain in paid subscribers to The Independent for January 8 and 9 was eleven hundred and nineteen. Let the good work go on!

The London *Daily Chronicle* recognizes the importance of the newspapers of the United States with this recital of the figures: The daily papers in the United States number 2472, the weeklies 16,269, and the monthly and other publications bring the total up to 22,806. The combined circulation of these is about 59,000,000, or enough to provide a daily paper, a weekly paper, and a monthly magazine for every family in the country. There is a newspaper to every 4100 of the American population; in Great Britain there is one for every 4700; in France, one for every 5900, and in Germany, one for every 7800.

In connection with The Independent's present circulation growth it is interesting to note its growth as an advertising medium. The record for the month of December in the current number of *Printer's Ink* shows The Independent among the first four national weeklies in volume of advertising, with a total of 24,182 lines for the month. In the issue of December 15, The Independent appears second on the list, with only the *Saturday Evening Post* showing a greater volume.

At Aix-la-Chapelle there is in the museum a newspaper whose pages measure 8½x6 feet, each page containing 13 columns 48 inches long. Naturally it did not live long. The Independent had, when it started in 1848, a page 22½ inches by 27¾ inches in size, divided into eight columns. From that the page descended to 6¾ by 9¾ inches—the standard magazine size—and then it started upward again in October, 1913, with the present size of

8½ by 12½. This seems about right—but who shall say that it will be permanent!

Where the British line is holding the trenches in Flanders there is no regiment more daring than the London Scottish. A lieutenant in that regiment has written a letter that tingles with the nerve-racking experiences of actual service at the battlefront. He illustrates it with sketch-maps and photographs of his own making. The article will be published in an early issue.

An interesting recognition of The Independent's progress is contained in a letter just received from the President of one of the leading Trade Journals of the country, who writes: "I have been enjoying The Independent very much indeed. The transformation which you have made in The Independent seems almost marvelous and I want to congratulate you. I do not feel like missing a single number and I notice it is being quoted quite generally everywhere."

## T H E R E D C R O S S

The readers of The Independent have sent to this office for the Red Cross something over six thousand dollars. The contributors are perhaps two thousand in number, and each one is now, by the fact of making the gift, a member of the American Red Cross. There is acute need of more and larger contributions, and the need will not lessen while the Great War continues. The gifts received since the latest report are as follows:

A Friend, \$5; A Friend, New York, N. Y., \$20; H. W. Boone, San Bernardino, Cal., \$2; Ezra Bovee, Sturgis, S. D., \$2; C. M. Bryant, care Christian Endeavor Society of New Lebanon Congregational Church, New Lebanon, N. Y., \$10.50; Geo. P. Denison, Honolulu, Hawaii, \$25; W. H. Dixon, Ambia, Ind., \$5; Rev. J. H. Edwards, Seattle, Wash., \$2; Mrs. B. Foster, Brooklyn, Iowa, \$2; Arthur G. Gehrig, Cristobal, C. Z., \$2; Charles F. W. Hare, East Orange, N. J., \$2; Geo. W. Henderson, Holy Trinity Church, Wilberforce, Ohio, \$4.35; Adam Hirn, Spencerville, Ohio, \$2; A. B. J., North Adams, Mass., \$3; Ben Johnson, White Bird, Idaho, \$2; R. Julian, Manderson, S. D., \$2; Miss Helen L. Kay, St. Niles, Mich., \$2; Mrs. A. R. Kiracafe, Winona Lake, Ind., \$2; G. D. Kline, San Diego, Cal., \$2; Knights of the Cross, S. S. Class of Methodist Church, Sturgis, S. D., \$4.60; Knights of the Round Table, Emlenton, Pa., \$6; Miss Sarah E. Lakeman, Ipswich, Mass., \$2; Methodist Sunday School, Jonesburg, Mo., \$26.60; H. H. Mitchell, Jamestown, N. Y., \$3.50; J. D. Riggs, Middletown, Ohio, \$2; Chas. W. Riseley, Trenton, N. J., \$2; Mrs. Ella B. Stewart, Moylan, Pa., \$2; Miss Clemence L. Stiltz, Balls Ferry, Cal., \$2; Miss Ada Stormont, Cedarville, Ohio, \$5; Mrs. T. B. Thomas, Pittsburgh, Pa., \$2; Ellen B. Van Deusen, Los Angeles, Cal., \$2; Ethel L. Van Deusen, Los Angeles, Cal., \$2; Marjorie Van Deusen, Los Angeles, Cal., \$2; Miss Lydia Grace Walter, Bellevue, Ohio, \$2; Josephine Lindsten Wegner, Long City, Kuby, Alaska, \$2; Mrs. F. M. Wilson, Ellensburg, Wash., \$10; W. Birch Wilson, Ada, Ohio, \$2; Mr. Fred Windle, Bradford, Mass., \$2; Philathea Class of the Congregational Church, Monticello, Iowa, \$7.

# The Health Inventory

**W**HAT far-sighted business man allows a year to pass without an inventory of stock?

Who, among careful housekeepers, permits her house to go uncleaned longer than six months?

Yet—important as is business—and important as is housekeeping—there is still another matter which is of far greater importance to every man and woman.

This is the matter of bodily or physical resource.

Wise business men do not embark in large undertakings without first reviewing all their financial and other material resources and planning that none shall be overstrained.

This they consider but "business foresight."

Yet—these very same business men may start upon long business journeys without first learning whether they have the strength and endurance to take them through to the end of the road.

Thus, their most important asset—their very most valuable resource—is overlooked and neglected.

Apply this to yourself.

Do you know your aggregate strength?

Do you know your capacity for endurance?

Do you know how long your present physical condition gives you a right to expect to live?

Why not?

You should know these things. For the sake of your family—for the sake of your business—for the sake of yourself and for the sake of what you are planning this present moment to do tomorrow or next week.

Possession of knowledge of physical resources—just as a mere matter of business precaution—is an absolute necessity *to the man of foresight*.

You know that a Life Insurance Company would not insure you without first giving you a thorough physical examination—to find out whether you are a good risk. Why? Ordinary business precaution—that's all.

Then—should not you, yourself, know how good a risk you are—for the sake of your own business and its success?

This is worth your immediate consideration—your very immediate and very serious consideration—NOW.

\* \* \*

At the Battle Creek Sanitarium—amid pleasant and home-like surroundings—where people are taught to get well and keep well—you find the most extensive facilities in existence for taking a complete inventory of your physical resources.

First—You are examined from head to foot. An expert goes over the outside of your body to gain all items of information possible to gain from its condition.

Then—by means of scientific apparatus, the strength and endurance of every muscle in your body is tested, measured and charted.

After this, your blood pressure is taken and a sample of your blood is chemically analyzed to discover the normality, or abnormality, of the relations of its constituent parts.

An electro-cardiograph shows the exact condition of your heart—whether it beats regularly, irregularly or indicates any condition other than normal.

A fluoroscope reveals the size of your heart and the inside condition and action of your lungs.

Chemical analyses of the secretions of your body show the condition of your digestive apparatus, liver and kidneys.

If further information is necessary, the X-ray may be employed to reveal almost everything but your inmost thoughts.

Thus you have a complete inventory of your health resources. You know your strength—your power of endurance—and how your energies may best be conserved and utilized.

In thousands of cases, this knowledge has enabled the possessor to greatly increase the length of his or her life.

Nowhere else in the world do you find so complete equipment brought together in co-ordination as at the Battle Creek Sanitarium. Its operation is directed by over forty physicians, who are assisted by hundreds of specially trained nurses, dietitians, masseurs and others who have specialized in some branch of "Preventive Medicine." This is the teaching of how to get well and keep well, through the agency of natural means—by cultivation of natural health habits.

The cost of gaining this knowledge at Battle Creek is nominal—in fact a very small fraction of the cost of a business inventory covers all the expense.

## Easily Reached

One of the best and fastest trains out of Grand Central Station—"The Wolverine"—leaves New York City at five o'clock every afternoon, including Sundays, and arrives in Battle Creek the following morning at ten o'clock—right after breakfast.

All through trains between New York and Chicago over the main line of the Michigan Central Railroad and between Detroit and Chicago over the Michigan Central and Grand Trunk Railroads stop at Battle Creek and are met by a limousine from the Sanitarium.

Here, those seeking quiet are carefully guarded from all annoyance, while those who wish acquaintance find the cordial and home-like atmosphere of the place most agreeable.

The Main Building of the institution accommodates over six hundred guests—a nearby "Annex" four hundred more. Nearly thirty other dormitories and cottages provide further accommodations.

You may rest in simple home-like quiet or have accommodations equal to a modern hotel.

Prices are in keeping with the character of accommodations. You may live very well or very modestly—whichever you choose, or your pocketbook dictates.

Full particulars and terms may be had by writing to 301 Administration Building, The Battle Creek Sanitarium, Battle Creek, Michigan.

A large illustrated book is sent FREE and fully postpaid upon receipt of your request.

VOLUME 81

MONDAY, JANUARY 25, 1915

NUMBER 3451

## STRICKEN ITALY

THIRTY thousand dead—men, women and children. The earth opened and swallowed them up. Their homes were shattered above their heads. They were buried beneath falling walls.

Twice or thrice as many are bruised and bleeding, homeless and hungry. They are in dire need of help to bring them back to the possibility of life.

A score of towns and villages are swept from the face of the earth.

The earthquake disaster in Italy is the most stupendous in her history—except only the destruction of Messina.

The American Red Cross—always ready and always prompt—cabled twenty thousand dollars for immediate relief. Many times that sum is needed.

Readers of The Independent have contributed thousands of dollars to the Red Cross for the merciful side of the Great War, and money and supplies for Belgian relief are crossing the Atlantic every day in generous volume.

To meet this new and crushing disaster in stricken Italy there is instant and pressing need of large contributions.

The Independent invites its readers to send their gifts, great or small. All that are received will be transmitted to the American Red Cross, to be forwarded by cable to the Italian Red Cross, thus becoming instantly available for healing the wounded, feeding the hungry, and sheltering the homeless in the land to which every American owes so much.

Every contributor to this Italian Relief Fund of an amount not less than two dollars will become a member of the Red Cross, and will receive from The Independent a Red Cross button. Acknowledgment of each gift will appear in The Independent.

Peace hath her tragedies no less than war. The great heart of the American people, already vibrant with pity for the victims of man's hate, will be stirred afresh by this awful calamity of nature's making.

### THE ACT OF GOD

"INJURY from the Act of God or the King's enemies always excepted" reads the old English insurance clause. When we find this quaint wording embedded in modern legal documents like a fossil in a rock it takes us back to the days when a narrower conception of God prevailed and man was willing to concede to the Almighty only such catastrophic display of natural forces as earthquakes, floods and storms. Now that we have learned more we have grown humbler and no longer claim that whenever man can understand, predict or control a thing it is thereby removed from the jurisdiction of Omnipotence. So when we moderns use the term "the Act of God" it must be in a sense which includes silent and beneficent phenomena like the falling of dew or the opening of a flower as much as a disaster like that of Italy.

Still it is to be expected that a superstitious peasantry will regard the earthquake as a judgment on them and will endeavor to determine which of their national sins has incurred the divine displeasure. Will the Italian people take it as a punishment for their desertion of the Triple Alliance, for their delay in taking up arms against Austria, or for their intention of soon doing so? Will the suffering caused by the earthquake serve to deter them from entering upon a war which must entail still greater distress?

In mere sacrifice of life the earthquake cannot of course compare with many engagements in the Great War. The loss reported amounts probably to an army corps, doubtless not so many as the Germans lost at Lodz, the Russians at Tannenberg, the Austrians on the San, the French on the Marne, or the British on the Yser. But there is after all something more appalling, more heartrending, about the sudden destruction of a whole town full of inoffensive men, women and children, than in the slaughter of an equivalent number of armed men by each other.

In spite of our advance in knowledge and power thru modern science, the earthquakes remain as mysterious and awful as ever. We can only dimly understand their cause, we are still unable to predict them, and we can never hope to control them.

### A VICTORY FOR COMMON SENSE

DR. JOHN H. FINLEY, Commissioner of Education of New York, has directed the New York City Board of Education to reinstate those teachers who had been removed because they became mothers. So ends a stupid piece of bureaucratic reaction.

Dr. Finley's reasoning is simple and direct. Since the Board may not discharge teachers who marry, it ought not to discharge them for bearing children. He declared himself ready to give every possible aid to promote devotion to duty, zealous service and efficiency on the part of teachers, to prevent neglect of duty and inefficiency and to eliminate incompetence. But he says with convincing force that "these ends and purposes will not be served by selecting, or seeming to select, for stigma or reproach such a reason for temporary absence from school duty, as is offered in this case, or inferring, or seeming to infer inefficiency from the mere fact of motherhood."

This is such sound sense that it is difficult to com-

prehend how any body of intelligent men could ever have seen the matter in any other light.

New York City is to be congratulated that it no longer is compelled to stand as a community that puts a premium on childless marriages.

### OUR DUTY IN MEXICO

FROM the beginning of his administration we have supported the President's Mexican policy. We have done so because we believed it to be founded on a perfectly sound basis. We believe with the President that every people has the right to determine its own form of government. We sympathize with the aspirations of the Mexican people to rule themselves. We hope that they will ultimately achieve political liberty. We would not have the United States interfere with their endeavors to work out their own political destiny in their own way.

But is that all there is to the matter? The President, in his Indianapolis address, speaks as tho it were. He pictures himself as sitting back in his chair and chuckling at the critics of his policy of watchful waiting. This shows self-confidence. But it is hardly taking the problem quite seriously enough.

Mr. Wilson has set up watchful waiting as the keynote of his Mexican policy. But he has repeatedly, tho spasmodically, acted in quite another way. As one result of his actions, as distinguished from his beliefs, seventeen American fighting men died, and more than a hundred Mexicans have been killed by American arms. As another, there is in the United States Treasury a considerable sum of money belonging to the Mexican people. As another, the American navy has captured a Mexican city, and the American army has ruled that city for months. As another, three great South American powers have intervened to save us from war with a Mexican administration. Is all this watchful waiting?

But with all this, have we lived up to our duty, as the big brother of the Mexican people and as the guardian of American interests and, under the Monroe Doctrine, of international interests on the American continent?

The Mexican people have the unquestioned right to work out their own salvation. But they have the broader responsibility, while they are working it out, of respecting the rights of other nations and other people within their borders. It is the duty of the United States, as Mexico's "next friend," to see that they do it. The Monroe Doctrine estops other nations from interfering on the American continent. If other nations are not to be allowed to protect their citizens and their interests in Mexico, the United States must do it itself. The logic is unescapable.

We send the American navy to Mexico waters to demand redress for an incidental insult to the American flag. What have we done to protect the lives and property of foreigners—Americans and otherwise—in Mexican territory?

We have firmly protested to Great Britain on behalf of American shipping inconvenienced by the British navy in the exercise of its undoubted right to keep contraband of war from its enemies. What protest have we made to Mexico on behalf of American and British and French and German owners of property there, imperiled by Mexico's civil warfare?

The United States needs a broad, clear-sighted, firm

program for the protection of American and international interests in Mexico. It is the President who must outline and carry out the program.

### WHEN A COMMUNITY MUST TAKE ITS MEDICINE

ON another page we print the portrait of the newly appointed member of the Massachusetts Public Service Commission, Mr. Joseph B. Eastman. This is the kind of appointment that justifies the experiment, if it is still an experiment, of commission regulation of public utilities.

An interesting contrast is afforded by the present experience of New York City. New York has what is probably the most complete public service commission law in the country. The New York City commission, as originally appointed by Governor Hughes, was of an unusually high order of ability and character. Since then it has been steadily and consistently Tammanyized. Whereas in the first years of its existence it comprized five men with high standards of public service and unquestioned ability as administrators, four of its members at the present time are more notable for their political and corporation affiliations than for sensitiveness to the public welfare or outstanding capacity for public service.

New York is at present stirred up over serious subway and elevated accidents and a general laxness of service on the city's transit lines. There is a growing demand that the Public Service Commission be abolished and some body be substituted which will be a better guardian of the public interest.

The agitation is natural and desirable. The remedy proposed is absurd. The "ripper" bill has no place among legitimate governmental expedients, even when it is used for a good purpose. The proposal is born of an entire misconception of what is wrong with the Commission.

There is nothing the matter with the law. There is a great deal the matter with the personnel of the Commission. The fault lies with the people of the state who at two elections chose to put Tammany Hall in power. From Tammany Governors they had no right to expect anything but Tammany commissioners. No political stream can rise higher than the source. Administration will never be better than the intentions and desires of the people that elect the administrators.

The remedy? There is no immediate remedy, except as an aroused public opinion may work upon even Tammany officials. New York City must dree its weird. There is, however, one thing that Governor Whitman can do. He can and should reappoint Milo R. Maltbie, the one surviving Hughes appointee and one of the most experienced, level-headed and high-minded public service experts in the country. Mr. Maltbie is a Democrat; but this gives Mr. Whitman a fine opportunity to show his determination to put the public welfare above partizan-ship.

The people of New York City can now, if they will, learn a valuable lesson for the future. If they want efficient and public spirited commissioners, they must elect Governors who will appoint that kind of men. The best law in the world will give results no better than the men

who administer it. Massachusetts has a fine public service commission because the people of Massachusetts elect a Governor like David Walsh, who will appoint a commissioner like Joseph Eastman. There lies the remedy, disappointingly remote, it is true, but satisfactorily fundamental. Every state which attempts commission regulation of public utilities may find in New York City an example to avoid, in Massachusetts a pattern to follow.

### REWARDS FOR THE DESERVING

IN a letter just made public, to the American receiver of customs for Santo Domingo, the Secretary of State of the United States wrote, in 1913, as follows:

Can you let me know what positions you have at your disposal with which to reward deserving Democrats? . . .

You have had enough experience in politics to know how valuable workers are when the campaign is on and how difficult it is to find suitable rewards for all the deserving.

This is sheer spoils politics. The enlightened people of the United States have been trying for years to get away from just this debasing conception of political appointment. It is disheartening to have a man of Mr. Bryan's character and aspirations put himself thus frankly among the spoilsmen. It is shocking to have the chief of the President's advisers look upon public offices as "rewards" for "deserving" political workers.

This is bad enough, but worse remains behind. The salaries of the offices which Mr. Bryan sought to use as rewards for the deserving are paid out of the Dominican treasury. It is an astounding proposal to pay American political debts with the money of a country which is in a very real sense our ward.

### THE CRAWLING CLAY

THE Panama Canal may not be opened in March because it is not open altho it has been opened several times already. This sounds funny, but it's true. Many times in the last thirty years has the earth been removed from the same place in the Canal prism and still it flows in. A year and a half has been spent in digging out dirt that was not there when the work began, and still there is land where man has willed that water come.

It is a phase in the eternal strife between man and Nature. When the tourist stands upon the top of Gold Hill and looks down upon the Culebra Cut, it is, for all his pride in the great achievement, something of a shock to see this gaping wound in the heart of the hill, this raw, red gash cut thru the lush green covering of the land. So felt Nature and she set about healing the wound in her own quiet and persistent way. She mobilized the land. Two hundred and twenty acres of it have been on the march, steadily moving forward year after year, pushing in the sides, and raising up the bottom. This perpetual avalanche has at times advanced at the rate of fourteen feet a day, and the giant steamshovels, hustling their hardest, could not keep their footing clear. Two hundred miles of track in the Culebra Cut has been overwhelmed and carried away.

The stuff of which the hills are made is stiff and hard enough when first struck, but once exposed and soaked with the rain falling at the rate of ten inches a month, it softens up and begins to slip and slide, to creep and

crawl down into the Cut of the Snake. When prest down in one place by weight of earth on the bank, it rises in another, like one of those pneumatic mattresses on which boys sport at Coney Island. Sometimes the bottom of the Canal has been heaved up suddenly to a height of twenty feet by the downward pressure at some distant point. The top width of the Canal has been widened at Culebra from 840 to 2000 feet and still the angle of the bank is not low enough for stability. If we had tried to dig down eighty-five feet deeper, as would have been necessary for a sea level canal, we should have had to use up most of the ten mile zone to get a slope shallow enough.

We should not be sorry to have the proposed Panama pageant abandoned. It has always seemed to us wrong that when a tunnel was opened the faithful "sand-hogs" who had done all the work should have to stand aside when the headings meet and let a lot of politicians, stockholders and editors, have the honor of passing thru the hole first. We are quite content that the little French tug boat "Louise," which has stuck by the job for thirty years, should have been the first to pass over the great divide by the water-bridge, and we are delighted to see the stream of ships laden with wheat and oil that have used the new route since. The Canal was mostly built for them and they are using it, more of them than was expected. Let the "Oregon" and the rest of the warships wait till some emergency calls them to the Pacific—which we hope will not be soon. The only way to "open" the Panama Canal is to keep the dredges going till the banks settle down.

### ENGLAND AS RULER OF THE MOSLEM WORLD

AN illustration of good which is not unlikely to come out of evil in this war is the effect it will have on Islam. Turkey has taken part in this great war against the Allies, and the titular head of the Mohammedan faith is a subject of Turkey, and has summoned Moslems to join in a holy war for the destruction of Christians, meaning principally English and French subjects in southern Asia and northern Africa. To be sure the effect of his call is not yet discernible, and it is to be noticed that the Moslems in India and Egypt and Algeria do not seem to be paying any attention to it. But it is another matter to which we would call attention. Turkey is likely to be dismembered as the result of her folly, and to lose her primacy in the Moslem world. The Mohammedan sacred places, Mecca and Medina, are in Arabia. Thither goes the stream of pilgrimage. Now Arabia faces Egypt on the west and India on the east, and Britain already has strengthened her hold to the east on the valley of the Euphrates. She holds the protectorate of Aden, the southern point of Arabia and on the west her steamboat lines give her control of Jiddah, the port of Mecca. If as the result of the war the Germans should lose control of the projected railroad to Baghdad, it will probably be taken by England, which will strengthen British influence in both Persia and Arabia. Should the Allies win and Turkey be dismembered, it will be very strange if Arabia does not pass under the control of Great Britain, which will then possess the sacred cities of Islam, as already she governs the larger part of the population that hold to

the faith of Islam. The dread of a holy war will then pass away, with England as protector of the Moslem shrines and ruler of the Moslem world.

### THE CASABIANCA TYPE

SHOULD soldiers and policemen obey orders literally or should they use their brains? There is a difference of opinion on this point. For instance a Russian soldier named Popoff—and most inappropriately so named—was recently stationed to guard the regimental treasure chest of a Siberian convoy train when attacked by the Germans. The officer who posted him was killed in the engagement and the devoted sentry refused to budge from his post unless the order were countermanded by the officer who gave it or the Great White Czar himself. For six days and nights he stuck to it until a telegram from the Emperor, relieving him from the duty, was handed to him. As an example of the sublimity of blind obedience the name of Popoff and his act have been read with the orders of the day to all the troops in the Russian army.

But let us consider another recent instance, this time of no Russian soldier but a New York policeman. The other day when the insulation of the feed wires in the Subway burned out and two hundred passengers were overcome by acrid fumes of the rubber, a few men and women fought their way to one of the ventilator shafts leading up to the street and tearing away the grating that covered it, began to climb out. A policeman caught sight of them and running up, ordered them to stop. This was no exit and it was contrary to the regulations for passengers to come out this way. So the policeman replaced the grating and stood on it, regardless of the hundreds of suffocating people below, until a Subway official arrived on the scene and made him get off. Here was an example of obedience to law, a virtue surely none too common in our municipalities, yet somehow the policeman gets commendation from nobody.

The fatal charge of the Light Brigade is held up to our admiration, but so also is Nelson for putting the telescope to his blind eye and so ignoring the order to withdraw from the fight. Efficiency experts tell us that individual initiative and a willingness to assume responsibility on the part of subordinates will win the commendation of employers, yet on the other hand there is the story told of the elder Vanderbilt. The captain of one of his vessels despatched to a certain port in Europe found on crossing the ocean that his cargo would bring a higher price at another city, and, since this was before the days of telegraphy, he took it there instead. When he returned and reported with pride that he had made ten thousand dollars for his employer, the old Commodore heard him in silence, then wrote out two papers, and handed them to the Captain. One was a check for ten thousand dollars and the other was a discharge. It is easy to see what was in Vanderbilt's mind. His servant had this time gained by the disobedience of his orders, next time he might lose as much or more.

So we come back to the previous question of whether the Balaclava and Casabianca type of mind is to be commended or condemned. Cases may be quoted on both sides. It seems to be one of those questions especially designed to give employment to a debating society, since nobody else is capable of deciding it.

# THE STORY OF THE WEEK

The Battle of Soissons In September, when the Germans were forced to retire from the Marne, they took up positions along the northern bank of the Aisne and here they established themselves so securely among the hills and quarries that there has been little change in the lines ever since. For instance, Soissons, on the south side of the river, has been under fire of the German guns in the grottoes of Pasly ever since September 13, and there have been German trenches within a quarter of a mile of the city hall. Soissons has seen much fighting in the course of its long life, tho nothing like the present. It was here that Clovis overthrew the Roman power and so undid the work of Cæsar. In 1870, the Germans took it after a bombardment of only four days; this time they have bombarded it for four months and have not got it yet. The cathedral, dating from the twelfth century, they had not hitherto damaged seriously, but during the heavy firing of last week they hit it seventy-five times. The population of Soissons previous to the war was about 14,000, but of these only 2000 civilians have remained, and they are in dire distress.

The French have thru persistent effort been gradually gaining ground on the north side of the Aisne. They

## THE GREAT WAR

*January 11*—Austrians defend Nida River position against Russian attacks. Germans claim capture of 1600 and killing of 3000 French in Argonne in last two days.

*January 12*—Germans resume offensive north of Soissons. Turkey yields to Italian demands for a salute to the flag at Hodeida.

*January 13*—Turks occupy Tabriz in Russian Persia. Count Berchtold resigns as Austro-Hungarian Foreign Minister and is replaced by Baron von Burian, a Hungarian. Earthquake in central Italy kills 35,000 people.

*January 14*—Near Perthes and Beausejour in Champagne French undermine and carry German trenches. Russians pushing attacks on German lines near Gumbinnen and Mazurian lakes in East Prussia.

*January 15*—French driven south of Aisne at Soissons. French continue attacks near St. Mihiel and Verdun.

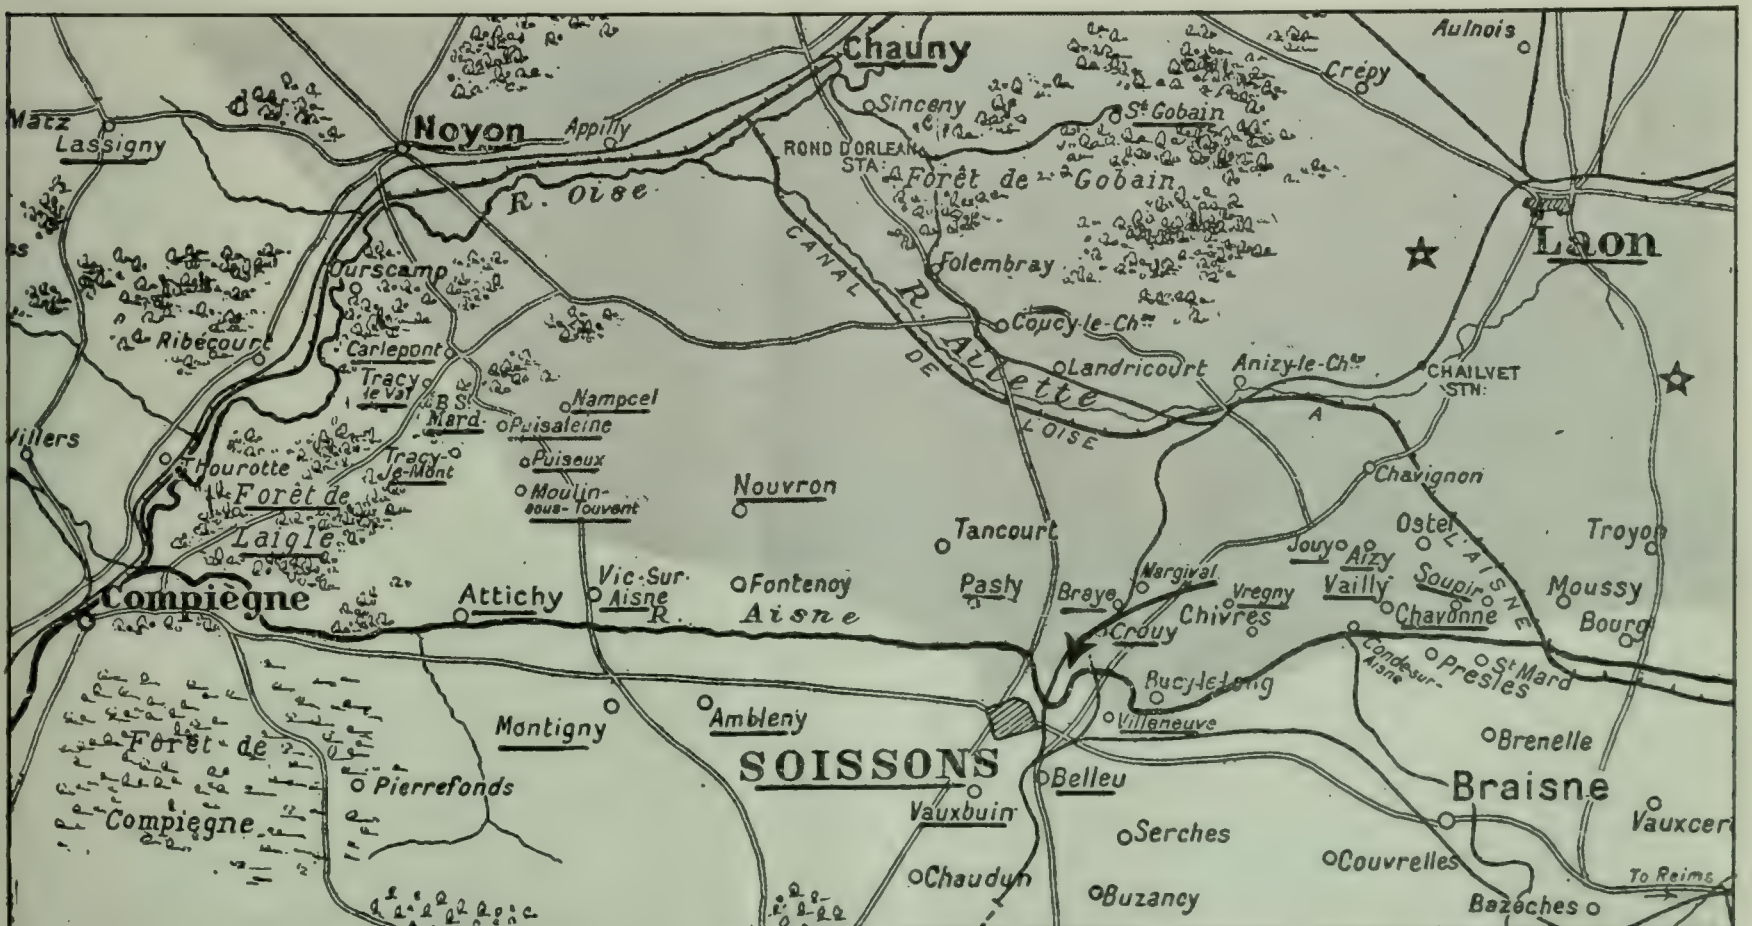

*January 16*—Russians advance in force north of Plock, Poland. Trenches taken and retaken near Arras, France.

*January 17*—French gain two hundred yards near Nieuport. Russians rout Turkish troops in Armenia.

have occupied most of the forest that lies between the Aisne and the Oise and had extended their lines northeast of Soissons to include the villages as far as Vregny. On January 12, however, the Germans took the offensive and in three days had cleared the north bank of French

troops. The movement was regarded as so important that the Kaiser appeared upon the scene and watched his soldiers storm the heights of Vregny. On this plateau they stationed their artillery and pushed the attack night and day against the French, who tried in vain to make a stand at the village of Crouy. The floods in the river had swept away the temporary bridges, so reinforcements could not be sent from the south side and the French were forced to retreat, leaving many of their guns and losing heavily as they crossed the river under fire of the German artillery on the bluffs overlooking Soissons. The Germans claim to have taken 5200 prisoners, fourteen big guns and six rapid firers and to have killed 5000 or more of the enemy.

Whether the Germans will attempt to cross the river and again take Soissons, perhaps even make another dash toward Paris sixty-five miles southwest, or whether they will remain content with holding the Aisne, remains to be seen. There are rumors that the Germans are abandoning the coast towns in Flanders almost to Ostend. In the Argonne forest near Verdun and in the Woëvre near St. Mihiel there has been heavy fighting, but no decided advantage on either side.

THE CENTER OF THE FIGHTING IN THE WESTERN THEATER

At Soissons the Germans, who have held the trenches north of the Aisne for four months, resumed the offensive last week and cleared the French out of their advanced positions north of the river. The Germans attach much importance to this movement

THE THREAT OF THE GRAND DUKE NICHOLAS

The advance of a new Russian army down the right bank of the Vistula, as shown by the arrow above Plock, may have serious consequences. It threatens the rear of two German armies

#### New Movements in Poland

It is reported from Petrograd that the German troops are no longer scattered over Poland but have been concentrated at centers of communication and that all passenger trains have been suspended as in the days of the first mobilization while the railroads are used exclusively for the transportation of the military. There is much speculation as to where the Germans will strike their next blow. One theory is that they will undertake the conquest of Serbia at which the Austrians have so lamentably failed and upon which the entrance of Bulgaria into the war depends. Another supposes that the German troops are to be shipped to France to make another drive at Paris or Calais. Others suppose that they are intended for the defense of Hungary or East Prussia which the Russians are preparing to invade. Marshal von Hindenburg is, however, continuing his efforts to reach Warsaw. The 11-inch howitzers have been brought to the front in spite of the mud and snow and have been established on concrete foundations in the positions now held by the Germans on the Bzura and Ravka rivers about thirty-five miles west of Warsaw.

There is greater activity on the northern side of the Vistula where the Grand Duke Nicholas has interposed an army said to consist of a million men between Mlawa and Novogeorgievsk for the protection of Warsaw. This force has advanced westward toward the German fortress of Thorn as far as Sierpc on the Skrwa River, defeating the minor

forces opposing them. This is a strategic movement of the greatest importance, for if he can hold this ground or move on to the border he will be in a position to strike the Germans in the flank by directing an attack either north or south. If he turns north he might cut off or compel the retirement of the Germans in East Prussia. If he turns south and crosses the Vistula when it freezes over he could take the German army before Warsaw in the rear.

The freezing of the Mazurian lakes and bogs which form the natural defenses of East Prussia has permitted the Russians to make some gains in this region. The Germans are using ice-breakers to keep the lakes free for the use of their gunboats.

Notwithstanding the enormous losses of the Russians their army grows continuously by the natural increase in population. The young men who come of age to enter the service this year number over 700,000, but this is more than are needed or can be equipped, so the ukase just issued calls to the colors only 585,000.

#### The Austro-Hungarian Situation

The intense cold and heavy snows in the Carpathian Mountains have checked activity in this region, but north of the Vistula, which here forms the boundary between Poland and Galicia, the Russians have continued their efforts to push forward toward Cracow. The Austrian forces entrenched behind the Nida River have, however, foiled all their attempts to cross the river and have indeed in-

flicted heavy losses upon them in return.

Przemysl, the chief fortress of Galicia, which the Russians have besieged almost continuously ever since August, is still holding out and judging by the frequent sallies the garrison is far from despair. According to Vienna the besiegers have lost over ten thousand men thru these sorties during the last few weeks.

Russian forces are concentrating in the southern end of Bukowina next to the Rumanian border with the apparent design of forcing their way thru the passes of the Carpathian Mountains into Transylvania. But Borgo Pass, thru which the railroad goes, consists of deep defiles and a mile-long tunnel, so it should be easy to protect Transylvania from an attack from this quarter. Hundreds of the Austrian officers and soldiers were cornered in lower Bukowina by the Russian drive and to escape capture had to cross the boundary into Rumania, where they were interned.

Rumania has not yet called her reserves to the colors, but the army is being steadily strengthened and the Rumanian students in Swiss universities have been called home. Everything points toward the participation of Rumania in the war by spring if not before.

It is rumored that Austria has made overtures to Serbia for peace, offering to cede a port on the Adriatic. This was the main object of the Serbs in starting the Balkan war and they reached the Adriatic without difficulty, but thru Austrian intervention they were shut out from the coast by the formation of Albania. Now, it is said, Serbia refuses to be satisfied with a port and demands the whole of Bosnia, Herzegovina and the Dalmatian coast.

The Balkan policy of the Dual Monarchy has been under the direction of Count Berchtold and it cannot be said he has made a success of it. He has alienated Rumania and thrown her into the arms of Russia. He encouraged Bulgaria to precipitate the second Balkan war and then suffered her to be robbed of her territory by Serbia, Greece, Turkey and Rumania. His attempt to establish an independent Albania under a Prussian prince was a ridiculous failure. He irritated Serbia so as to bring on a European war which now threatens the existence of the Hapsburg monarchy and in which the Austrians have been decisively defeated by the Serbs in two campaigns. Whether these blunders are due to his own lack of diplomatic skill or to his submission to dictation from Berlin does not matter. It is no wonder that the Emperor-King has at last decided to

dismiss him, but it is something of a surprise that he should have appointed in his stead a Hungarian. Baron Stephen von Burian, who now becomes Foreign Minister of Austria-Hungary, is a close friend of Count Tisza, the Hungarian Premier, and is a son-in-law of Baron Fejervary, formerly Hungarian Minister of National Defense. His appointment, tho favored, it is said, by the Kaiser, is interpreted as meaning the ascendancy of Hungarian over Teutonic influences in the Dual Monarchy. He is now over sixty-three years old and distinguished himself in the administration of the Slavic provinces of Croatia, Bosnia and Herzegovina. It is undeniable that Bosnia and Herzegovina have been more prosperous and made greater progress in industry and education than has independent Serbia, tho the same race peoples both countries.

**Turks Take Tabriz** Altho disastrously defeated in the Caucasus the Turks are taking revenge by invading the Russian part of Persia. A force of Ottoman troops and Kurdish irregulars marching eastward from Van have occupied Tabriz, the capital of the province of Azerbaijan and the second largest city in Persia, and are said to be moving on toward Teheran, the capital. The American con-

sul at Tabriz, Gordon Paddock, arranged the plan of occupation and it was carried out peaceably. The Russian consul and garrison withdrew in advance and only 600 Turkish troops entered the city, the 25,000 Kurds remaining at a distance.

The Turkish Ambassador at Teheran assured the Persian Government that its only object was to free Persia from the Russian yoke, and that as soon as the Persian Crown Prince arrives in Tabriz he will be placed in charge of the province. According to the Anglo-Russian agreement of 1906, Russia was to have the northern part of Persia and England the southern as their respective "spheres of influence." Against this partition of their country the Persian parliament protested in vain, and since then the troops of both powers have been gradually taking possession, the British about the Persian Gulf and the Russians in Azerbaijan and the Caspian coast. The Russians established a large force in Tabriz and ruled the city without regard to the constituted authorities. Complaints by the Persians of Russian cruelty and oppression of the inhabitants such as have been published in *The Independent* and elsewhere brought no help because Great Britain was bound by her agreement to give Russia a free hand in northern Persia.

From Tabriz it may be possible for the Turks to invade the Transcaucasian province from the Caspian side, which is unfortified, and perhaps they may secure the help of the Persians in such a movement. The troops sent out from Erzerum to the assistance of the forces defeated at Sari Kamish were checked and turned back near the frontier. The attempt to bring reinforcements by Black Sea steamers from Constantinople to Trebezond was prevented by the Russian fleet, which sank eight transports filled with troops.

**Earthquake in Italy** A number of towns in central Italy were destroyed on January 13 by an earthquake of almost unprecedented severity. The loss of life so far reported is somewhat less than 40,000, which is only about half the fatalities of the Messina earthquake of 1908, which were officially reported as 77,283. But the present earthquake affected a very much larger area and damaged more historic edifices. The first shock came about eight o'clock in the morning and lasted half a minute. This was followed by other shocks the same day and afterward which greatly increased the casualties.

The earthquake was felt all the way from Naples to Florence and

#### HOT-FOOT ON HIS TRACKS

A remarkable photograph from the region of St. Die in the Vosges. A French despatch rider stumbled into a group of Germans who were as surprised as he. He fought, and when his horse was shot in the leg he leaped to his feet and dashed for a nearby house. He escaped the Germans' bullets and found a detachment of French infantry in the building. The pursuers in turn were trapped.

from shore to shore, but the center of disturbance was in the Apennine mountains and Abruzzi forest east of Rome. The town of Avezzano, about fifty miles from Rome, suffered the worst, for it is estimated that 11,000 out of its 12,000 inhabitants were killed and almost every house demolished. Among the victims were all of the government and municipal officials and many of the soldiers and police, so it was difficult to get relief work organized quickly enough to save the thousands buried in the ruins. A normal school containing 150 girls was overthrown and many of them killed. Near Avezzano was Lake Fucino, which Roman emperors had tried in vain to drain, but which was provided with a tunnel outlet in 1875 at a cost of \$8,000,000 and the site converted into farming land. This district suffered greatly from the earthquake.

At Sora, south of Avezzano, a convent was thrown down and seven Sisters of Charity who were receiving communion and the priest at the altar were all crushed. Only one sister escaped alive and she was severely wounded.

The Italian Government showed itself as slow and inefficient as in the Messina disaster, and it was forty-eight hours before some of the towns were reached, altho they are all within sixty miles of the capital.

The frail construction of the homes of the people is the chief reason for the extent of the disaster. Many houses are built of unhewn stones, often laid up without mortar. The modern structures of ferro-concrete stood the shaking without injury. In Rome, 755 buildings were more or less injured, but only one person was killed. He was struck by the marble statue of Judas Iscariot, which fell from the row of Apostles on the top of St. John Lateran. The great statue of the Savior on the front of St. Peter's was split and 150 windows broken in the dome and elsewhere. The mosaics, which form the chief attraction of the modern basilica of St. Paul's Outside the Walls, were badly broken. The column of Marcus Aurelius, which gives the name to the Piazza Colonna, was twisted around.

**The Week in Congress** In the House, last week, after ten hours' debate, a vote was taken upon a resolution for a constitutional amendment giving suffrage to women. The resolution was rejected, 174 to 204. A two-thirds majority is required. A conference report upon the immigration bill was accepted in both branches. It elimi-

#### APPOINTED FOR MERIT

Joseph B. Eastman, who has just been appointed a member of the Massachusetts Public Service Commission. For ten years he has been actively engaged on the people's side in the campaign in Massachusetts for the more complete control in the public interest of the State's public utilities. The year after his graduation from Amherst he became secretary of the Public Franchise League, an organization founded by Louis D. Brandeis and his associates in the Boston franchise fight. He was active in the New Haven hearings before the Interstate Commerce Commission and in 1913 was assistant counsel to the labor union in the Boston Elevated Railway's arbitration. His fine service gained him the confidence of the railway employees, which with his very thoro knowledge of franchise matters qualifies him for distinguished service on the State commission.

nated the Senate amendments for the exclusion of negroes and the exemption, for a time, of Belgians from the literacy test. This test was retained, and the bill was sent to the President. Some expect a veto, on account of it. The Navy Bill, as prepared by the House Committee, provides for two battleships, six destroyers, and seventeen submarines. It abolishes the so-called "plucking board" and does not increase the number of enlisted men.

Mr. Wilson earnestly desires the passage of the Ship Purchase Bill, and a Senate Democratic caucus has decided to give it all possible support. There will be vigorous opposition and a long debate. The Senate's decision, by a vote of 41 to 34, that a two-thirds vote is required for suspension of the rules, probably prevents action at this session on the proposition, favorably reported as an amendment to the District of Columbia appropriation bill, ordering liquor prohibition in Washington. Senator Lodge has made a plea for larger expenditures for the army, the navy, and the fortifications. Sen-

ator Borah, in a political speech, sharply criticized the President's address at Indianapolis.

**The Sullivan Inquiry** Much testimony has been taken in New York, before James D. Phelan, Senator-elect from California, concerning the charges made by Walker W. Vick, formerly Receiver of Customs in Santo Domingo, against the American Minister, James M. Sullivan. That part of it which has especially excited public interest and comment is a letter sent to Vick, in August, 1913, soon after his appointment, by Secretary Bryan. Vick, who had been assistant secretary of the Democratic National Committee, displaced William E. Pulliam, a Democrat, who had held the office for several years, under Republican Administrations. The Receiver (under the fiscal protectorate) employs about 200 men, but only fourteen of them are Americans. Secretary Bryan's letter, dated August 20, 1913, at the State Department, was as follows:

MY DEAR MR. VICK: Now that you have arrived and are acquainting yourself with the situation, can you let me know what positions you have at your disposal with which to reward deserving Democrats? Whenever you desire a suggestion from me, in regard to a man for any place there, call on me.

You have had enough experience in politics to know how valuable workers are when the campaign is on, and how difficult it is to find suitable rewards for all the deserving. I do not know to what extent a knowledge of Spanish is necessary for employees. Let me know what is required, together with the salary, and when appointments are likely to be made.

Sullivan will be down before long, and you and he together ought to be able to bring about such reforms as may be necessary there. You will find Sullivan a strong, courageous, reliable fellow. The more I have seen of him the better satisfied I am that he will fit into the place there and do what is necessary to be done.

Mr. Vick sent a list of the fourteen places, but he made no changes in the force. After his resignation, several of the subordinate officers were displaced by men from Nebraska. The Dominican Minister of Finance remarked that his people were accustomed to reward political workers with their own money. The salaries of these Americans are paid by Santo Domingo. Referring to his letter, Mr. Bryan said, last week: "I am glad to have the public know that I appreciate the services of those who work in politics, and feel an interest in seeing them rewarded. I think that is the only charge that can be based on that letter, and, as Mr. Vick received his appointment as a reward for political work, I

thought he was a good man to address in expressing my opinion on the subject."

The testimony thus far, relating to the transfer of deposits from one bank to another by Sullivan's order; his cousin's interest in contracts; the manners of Sullivan, who offended the Italian Minister and British Chargé by receiving their official visit while he was clad only in underclothing; the influence of the favored bank, etc., tends to show that Sullivan was unfit to be Minister of the United States. Witnesses asserted that the evidence had been laid before Mr. Bryan and that he ignored it.

#### Mexico's New President

While Villa and General Angeles, his intimate friend, were in the north, making the agreement for the protection of Naco and directing military operations at Saltillo and Monterey, the convention took up its work at the capital, declining to wait for their return. General Roque de la Garza was made presiding officer. He had been Villa's purchasing agent at Juarez and was said to be a member of his staff. There was a report also that he was Zapata's candidate for the Presidency.

Dispatches from the capital said that the convention on the 13th reelected Gutierrez, to serve for a year, but under restrictions which gave to the convention control of the Government, with power to name members of the Cabinet and to remove the President by a two-thirds vote. It was said that Zapata had withdrawn his forces to Cuernavaca. A part of his army had been whipped by Obregon, Carranza's chief com-

mander, at a point midway between Puebla and the capital.

The report about the reelection of Gutierrez was not contradicted, but on the 16th the convention elected Roque de la Garza provisional President, or "executive of the convention," at the same time claiming supreme executive, legislative and judicial power. The man thus chosen was evidently to be a mere figurehead. Martial law was proclaimed. Gutierrez and three members of his Cabinet, Generals Blanco, Robles and Vasconcelos, fled from the city. It was reported that they did this to avoid assassination. De la Garza was Madero's private secretary and a member of his provisional Cabinet. Villa and Angeles began a hurried journey to the capital.

It is understood that for some time Gutierrez had been at variance with both Villa and Zapata. Carranza, at Vera Cruz, says that Gutierrez recently sent three messengers to him and a letter proposing a union for the elimination of Villa, "whose policy of robbery and desolation causes disgust." These words are quoted from the letter, together with others in which Villa is accused of ignoring Gutierrez's authority by ordering assassinations and in other ways. There were reports that Blanco was seeking to induce Obregon to join him in setting up a government of their own. Carranza ordered a court martial for Gutierrez's three messengers, and it was expected that they would be shot.

#### The Tampico Oil Wells

After compelling a suspension of work at the Tampico oil wells, and forbidding the exportation of oil, because the oil companies de-

clined to pay heavy assessments for the support of his army, Carranza, by decree, nullified all sales of lands, waters or forests made since 1876. At Tampico 1200 employees of the companies were idle. British and American capital is invested there. The British Government, which had been looking to the Pearson oil wells at Tampico for oil to be used by its navy—certain other sources of supply being no longer available—sent vigorous protests to our Government and also directly to Carranza. In our protest there is said to have been a sharp warning. On the 16th it was announced that Carranza had yielded and that the embargo had been raised. The Spanish Government has complained at Washington about the harsh treatment of Spaniards at Puebla and elsewhere.

It has been difficult to ascertain the results of the battles. Usually the story told by one side is a flat contradiction of the report from the other. In the South Obregon has continued to be successful, and his progress toward the capital has not been checked. Villa has repeatedly promised to attack Tuxpam and Tampico, but has failed to do so. It is not denied that his forces took Saltillo after a three days' battle, but there have been conflicting reports about Monterey. Salazar's small army is said to have been annihilated, near Casas Grandes, in the north, by Villa's forces, under Cabral. The agreement concerning Naco has been signed by both parties. Palafox, one of Zapata's men in Gutierrez's Cabinet, has withdrawn his charge that Mr. Silliman and Mr. Canova, representatives of our Government, were bribed to promote the escape of General Iturbide.

#### A JAPANESE CONTINGENT TO JOIN THE REDCROSS FORCES AT THE FRONT

This party of twenty-one nurses and doctors sailed from New York on the 13th to complete their journey from Japan to the battlefield. The head of the group is Dr. Jiro Suzuki, seated in the center, retired surgeon-inspector of the Japanese Navy

# WOMEN FOR PEACE

## THE ORGANIZATION OF THE FIRST WOMAN'S PEACE PARTY

### DECLARATION OF PRINCIPLES

**W**E, WOMEN OF THE UNITED STATES, assembled in behalf of World Peace, grateful for the security of our own country, but sorrowing for the misery of all involved in the present struggle among warring nations, do hereby band ourselves together to demand that war should be abolished.

Equally with men pacifists, we understand that planned-for, legalized, wholesale, human slaughter is today the sum of all villainies. As women, we feel a peculiar moral passion of revolt against both the cruelty and the waste of war.

As women, we are especially the custodians of the life of the ages. We will not longer consent to its reckless destruction. As women, we are particularly charged with the future of childhood and with the care of the helpless and the unfortunate. We will not longer accept without protest that added burden of maimed and invalid men and poverty-stricken widows and orphans which war places upon us.

As women, we have builded by the patient drudgery of the past the basic foundation of the home and of peaceful industry. We will not longer endure without protest, which must be heard and heeded by men, that hoary evil which in an hour destroys the social structure that centuries of toil have reared.

As women, we are called upon to start each generation onward toward a better humanity. We will not longer tolerate without determined opposition that denial of the sovereignty of reason and justice by which war and all that makes for war today renders impotent the idealism of the race.

Therefore, as human beings and the mother half of humanity, we demand that our right to be considered in the settlement of questions concerning not alone the life of individuals but of nations be recognized and respected.

We demand that women be given a share in deciding between war and peace in all the courts of high debate; within the home, the school, the church, the industrial order, and the State.

So protesting, and so demanding, we hereby form ourselves into a national organization to be called the *Woman's Peace Party*.

We hereby adopt the following as our platform

*On Sunday afternoon, January 10, 3000 women crowded into the Grand Ball Room of the New Willard Hotel at Washington, D. C. They formed themselves into the "Woman's Peace Party," the first in the world. They issued a manifesto, unsurpassed, we think, in power and moral fervor by anything that has been issued here or abroad since the Great War began. They adopted a platform radical, sound, statesmanlike, constructive.*

*Tho not a line about the conference appeared the next morning in five of the six leading New York newspapers, which found space to devote sixty-three of their valuable columns to the man-killing in Europe and the alleged reasons why the United States should increase her army and navy, we think the conference so important that we publish in full the final document issued by it, and we urge every one of our women readers to join the party.*

*John Ruskin said long ago that women could stop all wars if only they were determined to do so. We rejoice that the voice of woman is to be heard against the "greatest scourge of mankind," for all wars are primarily waged on women and children.—THE EDITOR.*

of principles, some of the items of which have been accepted by a majority vote, and more of which have been the unanimous choice of those attending the conference which initiated the formation of this organization. We have sunk all differences of opinion on minor matters and given freedom of expression to a wide divergence of opinion in the details of our platform and in our statement of explanation and information in a common desire to make our woman's protest against war and all that makes for war vocal, commanding and effective. We welcome to our membership all who are in substantial sympathy with that fundamental purpose of our organization whether or not they can accept in full our detailed statement.

### APPLICATION BLANK

I hereby apply for membership in the WOMAN'S PEACE PARTY for

myself } as a } sustaining } member  
this organization } local group }  
and enclose \$.....for my Dues.

Name.....

Address.....

Until the appointment of a Treasurer, dues and contributions may be sent to

JULIET BARRETT RUBLEE,  
1105 Sixteenth Street, Washington, D. C.

### PLATFORM

The purpose of this Organization is to enlist all American women in arousing the nations to respect the sacredness of human life and to abolish war. The following is adopted as our platform:

1. The immediate calling of a convention of neutral nations in the interest of early peace.

2. Limitation of armaments and the nationalization of their manufacture.

3. Organized opposition to militarism in our own country.

4. Education of youth in the ideals of peace.

5. Democratic control of foreign policies.

6. The further humanizing of governments by the extension of the franchise to women.

7. "Concert of Nations" to supersede "Balance of Power."

8. Action toward the gradual organization of the world to substitute Law for War.

9. The substitution of an international police for rival armies and navies.

10. Removal of the economic causes of war.

11. The appointment by our Government of a commission of men and women, with an adequate appropriation, to promote international peace.

The conference further adopted the following resolution:

Resolved, That we denounce with all the earnestness of which we are capable the concerted attempt now being made to force this country into still further preparedness for war. We desire to make a solemn appeal to the higher attributes of our common humanity to help us unmask this menace to our civilization.

### THE PARTY ORGANIZATION

The members shall be: 1. Local groups wherever they can be organized, each to pay \$5 annually into the national treasury. 2. Sustaining members, who shall individually pay \$1 annually into the national treasury.

These officers were elected: Chairman, Jane Addams, Hull House, Chicago; honorary chairman, Carrie Chapman Catt, New York City; vice-chairmen, Anna Garlin Spencer, Meadville, Pennsylvania; Mrs. Henry Willard, New York City; Mrs. Louis F. Post, Washington, D. C.; Mrs. John Jay White, Washington, D. C. Headquarters, Hull House, Chicago.

# WOMEN AND WAR

BY ANNA GARLIN SPENCER

**T**HIS is the first great war in which the voice of women has had power to make itself heard. During the last one hundred years a radical change in the educational, legal, economic and social condition of women has given them a new sense of sex solidarity and of responsibility in public affairs. This change in women's position has given men a new respect for the moral and intellectual initiative of women, and is preparing them to welcome women's aid in the solution of world problems.

The awful conditions in Europe today have sharpened that new social consciousness of women to an eager demand on their part to be used in some new and mighty effort to make this war end war. Up to this point the attitude of women in general toward the organized peace movement has been less morally earnest, and less intellectually instructed, than that which they have shown in other great movements for social progress. Altho the cause has been supported by a few women of exceptional breadth of training, it has seemed to many a remote or academic propaganda. The too exclusively masculine directorships and too undemocratic methods of the peace societies and foundations are

*Mrs. Anna Garlin Spencer has been a public speaker on educational and reform subjects since 1870. From 1891 to 1903 she was minister of the Bell Street Chapel, an independent parish in Providence, Rhode Island. She is now professor of sociology and ethics at the Meadville Theological School, Meadville, Pennsylvania. At the organization meeting at Washington she was elected a vice-chairman of the Peace Party.—THE EDITOR.*

largely to blame for this indifference of otherwise public-spirited women to the war against war. There is, however, a far deeper reason. Had women been as earnest to abolish war as they have been earnest to do away with other social evils, they would either have stormed the existing peace societies in such membership numbers as would have compelled suitable recognition on governing boards, or else have started a women's peace movement of their own, of such imposing power as to win the respect of men's associations.

The reason why women have come so much more slowly into the peace cause than into other less fundamental social reforms is clear to the

thoughtful. It roots far down in the biologic foundation of human society. Dr. Giddings has aptly described the fundamental element in the development of social structure as "the sense of kinship." It works in primitive human society to make the horde, the clan, the tribe, the group dominant within "the ancient city," and the racial or national nucleus intensely loyal to their own "kin"; intensely murderous and hostile toward their "alien enemies." Women, like men, have felt this double attraction and repulsion of the law of kinship. As that law reinforced itself by religious rites, customs and "commandments" from the tribal or the racial or the national gods, women became active instruments in intensifying its power of control. Deborah's song of revengeful victory, still called "sacred"; the public honors paid to a woman who slew an enemy whom she had lured by treachery, as recorded in the Old Testament, into her home; the historic praise of women, of all ages and countries, who by any form of deceit and cruelty destroyed the "alien enemy"—all these show the power of this narrow kinship idea over the idealism of women, as of men. Modern patriotism that is sure God is on its side, that would uphold "my

THE WELL-LOVED LEADER OF HULL HOUSE WAS MADE PRESIDENT OF THE  
WOMAN'S PEACE PARTY AT THE WASHINGTON MEETING

country, right or wrong," and "My race and its culture divinely ordained to be supreme over all," this, which is but a newer form of the old limitations of the kinship sense, lies in the hearts and lives of men and women alike.

The growth of true civilization is marked by the ever-widening area of those esteemed as "kin," and to whom, therefore, helpful service is due. But yesterday many of us felt that this ring of kinship encircled the world: today we see it shrink back to the savage area, and to worse than savage expression of fear and hatred. Women, like men, have been submerged by this upsurging of outgrown but deep-rooted sentiments. It is therefore pathetically absurd to say with a recent speaker that "if women had voted we should have had no war." Yet it is true—and the significance of that truth will be increasingly perceived—that for the short period in which women have had the discipline of world interests they have exhibited an amazing rapidity of assimilation of world ethics. It is scarce a hundred years since democracy began to work in women, to develop in them an individual relationship to affairs outside the home; and already the women of many countries have united for moral reforms and philanthropies, and to wipe out the disqualification of sex in the franchise, in a way that augurs well for their speedy growth in the international point of view in all the high concerns of life. Men, with ages of political experience, professional leadership and world commerce behind them, have been far slower to respond to that spirit of race unity which transcends national and class limitations. Hence there is reasonable hope that when women have had full citizenship and equal opportunity of social training in longer discipline, they will mightily reinforce men's tardy effort to organize the world's moral forces for general human welfare.

Meanwhile the present situation calls for immediate and effective union of all the work of broad-minded and brave-hearted men and women in a great popular propaganda for world peace. To this end, not chiefly to add to the numbers of those engaged in the war against war, but far more to give vitality, freshness, organizing ability among the common people, power of popular appeal and a more ardent passion of protest against human slaughter, the entrance of women in great numbers into the organized peace movement is the supreme need of the hour.

To stir them to such effort, let the

women of the United States and of the world call to mind the special reasons why women should hate war and should fight that militarism that makes for war. All the indictments against these evils that men pacifists have made, women pacifists can make as earnestly. In addition, women have other and still more damning indictments.

Women can charge to the account of war their bitterest slavery to men in the household. The alien man, in the older ages, captured in war, had no rights his victorious enemy was bound to respect. He might be killed, mutilated or condemned to perpetual servitude at will. But the alien woman, torn from her kindred to become the concubine, the slave or the outraged prey of the victor in war, learned what is worse than death, and what is more hopeless than manual servitude. That kinship feeling that in primitive times made women, indeed, the vassal of her clan, but protected her from the unmitigated horrors of personal ownership by a single tyrant, war destroyed, leaving her utterly unprotected. When women trace their long struggle upward from domestic slavery, thru legal but perpetual "minority" to their present direct relation to the state in "contract power" and in citizenship, let them not forget the part war has played in their subjection. All the forces which have worked toward the emancipation of women from domestic bondage root themselves in social order, in peaceful industry, in reason and in law made just and regnant. And all these forces are rendered feeble and impotent in the clash of arms. It is for this cause that women should hate war with a peculiar hatred.

Moreover, women should hate war for its disastrous effect upon their special functions as wives and mothers. Women bear the chief burden of personal care of the young, the undeveloped, the frail and sick, the aged, the feeble-minded, the socially incompetent. They have had to bear that burden ever since social sympathy forbade the strong to kill the weak by fiat of the state. This process of social protection of the incompetent has unquestionably lowered the average standard in human quality where it has worked unmodified by some science and art of race culture. War—and all that makes for war—is the worst hindrance to the attempt to relieve women of this overmastering burden of administering philanthropy, and to give her time and opportunity for her organic function of teaching and developing the normal and super-excellent specimens of the race. Not only

does it destroy uselessly all the common wealth of humanity so terribly needed for projecting and realizing the social control that can truly advance individual life, but it deliberately and monstrosly aids that "breeding downward" which is the bane of civilization.

Economic exploitation, bad as it is, destroys the weakest first. War destroys the strongest first. Not only that, but preparation for war in the form of vast armies and navies on a peace footing increases the social diseases most inimical to family life, unfits men for civic usefulness, and tends in all its influences away from that devotion of life and treasure to the higher interests of human progress on which future generations depend. It is because of women's peculiar functional relation to the social demand for race integrity and race culture that enlightened women must hate war and all that makes for war.

Furthermore, women who know their past in primitive life, and have some realizing sense of the long struggle which has brought women in the more enlightened countries where they are, must join the war against war because of its power to plunge them back in a moment of social chaos to the foot of the hill up which they have so painfully climbed. War, this incredible war, after all the centuries of so-called civilization, puts the women under its mailed fist back in the area of ceaseless, life-killing drudgery, from which the modern woman has but just emerged. It binds again upon her back—less able in muscle and in nerve to bear the burden than was the primitive woman who had not yet learned she had a mind—that ancient burden of beginning an ordered social life once more.

War, and the alien slave-women whom war furnished to ruling households in the older life, gave, indeed, to a select "lady" class the first leisure which women ever gained for intellectual growth and social command. In this sense a privileged caste among women, as among men, escaped, by way of war and the slavery of war captives, from the hardest labor. How few, however, the members of the "lady" caste; how innumerable the mass of women of the common people, those mothers of the race, whose overwork and cruel abuse have been the most appalling social waste of all the blundering prodigality of human life!

Man's inventive genius and his superb organization of industry have released the mass of women from that ancient drudgery that

warped the body and dwarfed the brain. War plunges women back again into complete absorption of their life in the ruder services to the social need. War makes of woman again, as of old, the "breeder" and the drudge. Witness the announcements of the Associated Press that high dignitaries of state churches in the warring nations offer "great reduction in the cost of marriage ceremonies to all enlisted men who will marry before leaving for the front"; some even suggesting "free services" of this sort. What does this mean? It must often mean wives and mothers bearing the double burden of self-support and child support in widowhood, or helping the state in caring for maimed or invalid men after the war is over.

Man's unbridled passions, his clumsy blundering in statecraft, his greed for lands and gold and markets, his autocracy in government and his secret diplomacy made so often of lies, man's willingness and power in his ruling castes to plunge the common people into misery, have combined thus to set back the onward moving mothers of the race. It

is these things all women of light and leading should oppose with all their new-gained power.

Finally, all enlightened and free women, especially those of neutral countries, should make a protest, compelling in its solemn appeal, against war as the supreme outrage on the moral nature of humanity. On a sure sense of ethical values rests all the permanent progress of the race; war, and the things that make for war, give a dual and self-contradictory direction to the idealism of youth, and to the ethical judgment of maturity.

In civic life one is already required by conscience to be truthful in word and deed, to have respect for others' rights, to be just and honorable and humane in all relationships, to conserve and add to the common wealth of material gains and mental achievements for the benefit of all humanity. In war and in the training that leads toward war it becomes a duty to cheat the enemy without scruple, to "kill him first" whether or not it is certain that he means to or could kill you; to harry his wife and children and his aged parents;

to loot and burn and destroy all that he has earned by generations of peaceful toil. It was said before the Civil War in the United States, "A nation cannot exist half slave and half free." Can a world of civilization exist with its moral life half human and half fiendish? The dependence upon "the judgment of battle," among nations as among individuals, has long been the supreme atheism; it denies the sovereignty of truth and justice. That atheism undermines all faith in spiritual values; and by this process it not only destroys by violence the temples of law and culture and worship which man has builded, but, most subtle destruction of all, it sinks under waves of bestiality and passion those ideals on which respect for womanhood and tender regard for the child have fibered the later progress of the race.

It is because of this blasphemy against the Holy Spirit of truth and righteousness and love that all women should utter

A curse from the depths of womanhood,  
That is very salt and bitter and good,  
on war and all that makes for war.

#### TWO EUROPEAN WOMEN WHO URGED AMERICAN WOMEN TO WORK FOR PEACE

*Paul Thompson*

On the left Mme. Rosika Schwimmer, of Austria, organizing press secretary of the International Woman Suffrage Alliance, who came here on behalf of the women organized in thirteen European countries to ask our aid in bringing peace. She said to the delegates assembled at Washington: "Today in the spirit of this meeting you have laid a foundation for a new Europe. You have set the greatest record for women ever set in the history of the world. You have always been a teacher to the women of Europe, and now you are teachers of the men. . . . We European women think suffrage, when it does come, will end all wars." Mrs. Pethick Lawrence, the English suffragist, on the right, moved her hearers to tears by her vivid description of war suffering, and commended the spirit of the American women's peace plan, saying "It is founded on a great moral idea, based on the sacredness of human life." War, she said, was made by "international gamblers and degenerates"

# PLAY AND EFFICIENCY

## THIRD ARTICLE IN THE SERIES ON EFFICIENCY AND LIFE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**T**HE efficient man plays in order to work more and work better.

Our idea of amusement should be to enjoy it while we play, but employ it after we play. And if we would analyze the holidays that give us most pleasure, we should find them carrying out this idea. The "morning-after" headache belongs to the man who didn't use his head the night before. A pastime is like a meal, we spoil it by thinking while we take it—or by failing to think before we take it.

Every sensible man or woman should possess an *Efficiency Amusement Chart*, the construction and use of which we will now describe. It is based on a close analysis of our work, surroundings, health, temperament, ideals; and of our amusement in relation thereto.

Let us be concrete. Let us take for illustration a manager of a modern city store, and see how he should plan his recreation. (The same principle and method apply to any worker anywhere.)

The store manager is on duty from eight a. m. to six p. m. He is surrounded by the hum of voices, the clatter of typewriters, the din of street noises. He rides to and from his work on a rattling, rumbling street-car; he cannot sleep normally—with crying children, theater parties, newspaper scareheads, pianos next door, late-staying visitors, and early morning milkmen, all pulling at his nerves. But the man's job depends on his being as regular, punctilious and reliable as a clock—therefore he shouldn't have any nerves. He gets no outdoor exercise. He subsists chiefly on restaurant and delicatessen near-food. He must dress up to the minute. He makes his living by attending minutely to all the superficialities. He has no time for music, no taste for art, no touch with the world's great literature. Life is to him a bundle of overwrought nerves connecting a feverish brain, a rebellious stomach, and a pocketbook whose sole function is to disgorge.

What does the man do, in his leisure hours? He joins a poker party

with "the boys," where cigars and drinks further knock out his nerves; or he jabs more sounds into his ears at a crazy musical comedy for the "tired business man"; or he goes motoring and tries to push the speed limit off the map. Yet he fondly believes he is quite sane. And we are all as foolish in our own way.

How should this man order a scientific rest period?

First. Let him write down the influences and ingredients of his daily work and life. They are: noise, hurry, sociability, regularity, responsibility, confinement, fashion, convention, financial worry, sleeplessness, brain fag, muscular weakness, emotional atrophy. Certain physical disorders must proceed from the man's unnatural mode of life; suppose they are eye strain and indigestion.

Second. Let him write down the exact *opposites* of these—a list of the lacking elements in his make-up or environment, whose presence would balance, normalize, refresh and energize him. (See chart below.)

Third. Let him now make a list of all his available sources of amusement—from an evening's fun to the yearly vacation of a month or a fortnight. He will probably have twenty or thirty of these—certainly a wider choice than he imagines before taking inventory, the average person being narrower in nothing than in his routine of pleasures.

Fourth. Let him now take each amusement in List B and compare it with each requirement in List A, noting in the spaces opposite how far his customary mode of enjoyment supplies the elements to increase efficiency—or decrease it. A thoughtful, conscientious building of this chart should mean the breaking of a great light on the store manager.

Fifth. Let him then form the habit of consulting the chart whenever he plans a day or a week or an hour of recreation, until he chooses by instinct and reason the kind of play that makes a new man of him. (The chart for a doctor, a minister, or a college president, would of course be entirely different in many, or all, of the aspects here given.)

The amusements should be marked plus (+) where they increase efficiency, minus (—) where they decrease it, and zero (0) where they have no special effect either way. List B is not complete, but merely illustrative.

Adding the plus marks, then cancelling each minus with a plus, we have the largest plus remainder (12+) for the mountain tramp, and the largest minus remainder (13—) for the dinner party. Hence the former is the best, and the latter the worst recreation, of those here given, for this particular manager of a city store. But all those marked + in the column of values are good for him, and all those marked — are likely to be bad. If any item in List A is of special importance, that should count double, in figuring the totals; two + or two — marks, as the case may be.

Now I am not so foolish as to suppose that a sane man will, for the rest of his days, consult a dry table of Efficiency Values whenever he wants to play chess or frolic with the baby. I do believe, however, that a shrewd, ambitious man will construct this chart for himself, will study it carefully, and will form the habit of choosing his games from the plus side of the efficiency ledger.

The efficiency principles embodied in the Chart may be stated in a few words. A scientific recreation should include:

1. Complete break in routine activities and obligations, with specific rest for overworked organs, nerves, brain-cells and muscles.
2. Exercise for unused faculties and functions, to the point of wholesome fatigue of a kind seldom known.
3. An element of surprise, mental, emotional or spiritual, to reawaken interest in everyday life.
4. Absolute freedom, inner and outer, during the recreation period.
5. Temperamental uplift and renewal.

Change of work is not rest. We delude ourselves with the notion that it is, merely because we do not know how to rest. The American disorder is nerve-strain, for which the only cure is perfect relaxation.

Long ago the nation's richest man learned that a siesta following lunch put him in condition for a new

day's work in the afternoon. Great factories now hold a recess about three p. m. for a quarter of an hour, to give their employees a rest, with reading, music, games, and so forth. This practise should become universal, not for charity but for efficiency. Concentration follows relaxation; and the time will come when the great business men, like the great authors, do their day's work in three hours.

Thinking with your whole brain means playing with your whole body, loving with your whole heart, longing with your whole soul. Efficiency is wholeness, specialized by turns.

Husbands and wives, however, should make it their solemn duty to be silly together. The man who finds his chief pleasure in business or the club, and the woman who finds hers in matinee thrills or the fashion parade, are slumping toward marital inefficiency at an alarming rate. Every household should have a home gymnasium, in attic or cellar, with an assortment of games for the dining-room table, including the favorite of each member of the family. Our pastimes should center in the home, and we should become uneasy when parents and children no longer enjoy the same things. One reason why every family should have at least

two children is that the parents may have an excuse apiece for going to the circus.

It is just as needful to escape and forget the family at least once a year. The Lord never made two people who could live together sanely and sweetly three hundred and sixty-five days at a stretch. Every wife knows this—but nearly every husband has it to learn. From what I have seen of married life, I believe it is the religious duty of every man to disappear once a year. Not only depart—disappear! And twice a year is twice as good as once. Get beyond the reach of mails, telegrams and telephones. Leave no address behind, merely keep an accident card of home directions in your pocket. Don't let yourself write home, no matter how much you feel like it. Sleep late every morning. Read nothing. Revel in irresponsibility. Roam where you will. Let your watch run down, and refuse to wind it up. Be so anxious for freedom that you forget dinner-time and miss a few meals (your stomach also needs a vacation). In short, return to primitive existence, with all the obligations of home and business wiped out for two weeks or a month. And if you aren't glad to be a regular family man again, loaded down with responsibili-

ties on all sides, then of a truth I don't know men!

Having given your wife, your children and your clerks an equal chance twice a year for respite from the brutal chains of the habitual, you will have supplied a leading factor in efficiency—a scientific period of play.

"But," you protest, "I can't stay away that long, my business would be ruined." Very well, you are lucky. A series of week-ends at play does more for the busy man than a whole month of leisure. The only condition is that you be able to erase your work from your mind in an hour, instead of a week or a month. To master the art of relaxation is to gain more from your short Sundays of freedom than most people gain from a month's pleasure jaunt. Recreation is not geographical, it is mental. We do not work too much for our health and happiness—we think too little.

During the writer's four years in college he held the tennis championship of the school. He was much elated over this. He should have been much deprest. What he needed was to be champion of quoits, or checkers, or hide-the-handkerchief, or some other leisurely, meditative sport. The game of tennis is for fat, rich,

phlegmatic gentlemen; the game of golf is for thin, poor, fidgety ones; but the overfed ones won't play tennis and the underfed ones can't play golf—so why go to all the trouble of this psychological diagnosis? Response to nerve-stimuli is the key to a man's appropriate game. If he is quick, nervous, excitable, he should avoid polo, tennis, high diving, racing of all kinds. Fun, like food, may be meat to one man—poison to another.

In a deeper way temperament is crucial. Ever so often we should leave our work in order to renew the motive or incentive that makes us work. What is your motive? Is it love, or ambition, or altruism, or self-devel-

opment, or the creative impulse? When you feel yourself losing it (and your labor growing dull and monotonous), can you re-discover it soonest by the sea, or on a hilltop, or amid the crowds, or in silent communion with a loved one? A poet and a politician can no more take their recreation together than a lark and a lion could. An accurate measure of a man is the number and variety of his chosen modes of recreation. Their diversity mark his extensivity. To be leader of something is less a goal than to be lover of everything.

The tests for a scientific amusement are few and easy. It should be natural, simple, unconventional. It should combine emotional expression

with nervous relaxation and muscular exertion. It should result in mental and physical balance. It should restore the child in us. It should make us frank, honest, loyal, democratic, whole-hearted. It should give us perspective, and a saner view of ourselves and the other fellow. It should transfer the grip on our game to the grip on our job. It should develop tolerance, patience, keen judgment, fair play, sure method, fine team work. It should leave body stronger, heart bigger, mind clearer, soul finer.

Does your favorite pastime do all these things for you? Then you can make it a "hobby" and ride to the top of the world!

New York City

## THE HOTEL DE GINK

BY BRONSON BATCHELOR

**N**O longer are hoboes to be the stray wanderers of the earth. The romance of the open road and care-free spirit, celebrated from the days of Chaucer to Harry Kemp as the joy of vagabondage, has played out.

In all the vast fraternity of the United Hoboes of America, no one could explain the disquieting unrest, the inexpressible depression that weighed upon the spirits of these itinerant workers of the world.

Then one day Jeff Davis made a great discovery.

Down at the corner of Center and Worth streets, in New York, in a big, empty, five-story building, there

*This winter New York faces the worst unemployment problem in its history. How one man, with the coöperation of the city's Committee on Unemployment, of which Judge Elbert H. Gary is head, is trying to meet the situation for his fellow-unfortunates is told in the following story. Similar "hotels" have been established by Jeff Davis in Seattle and Tacoma, and this latest experiment will be watched with no little interest.—THE EDITOR.*

is the merry ring of hammers and the busy buzz of saws—busy, that is, as men long unused to work could

make them. To Manhattan's 275 hotels is shortly to be added another, euphoniously known as the "Hotel de Gink," and its promoter, chief backer, manager and clerk is Mr. Jeff Davis, hailed by the hoboes as "king."

"You see," says this slim, kindly eyed, wise, young-old man, with the beard of youth still on his face, "we 'boes found we was missin' somethin'. We didn't know just what it was, but it was somethin' we wanted pretty bad. So we started in to investigate ourselves, an' we found what we wanted was a home."

Over beyond the deal table, where the "king" had established his tem-

GETTING READY TO OPEN THE "HOTEL DE GINK"

"A group of 'subjects' were shuffling cans of rubbish, paper, and dirt toward a stairway, down which they disappeared in a cloud of dust and riot of rattle. . . . What happened to the cans or the dirt below nobody seemed to care"

porary office, a group of "subjects" were shuffling cans of rubbish, paper and dirt toward a stairway, down which they disappeared in a cloud of dust and riot of rattle. Another group languidly followed with brooms and shovels. What happened to the cans or the dirt below nobody seemed to care.

But none of the "ginks" could keep his eyes long off the king. Whether going thru the motions of work or "overseeing" the job—and the overseers outnumbered the workers at least five to one—their faces were turned constantly to the royal precincts ruled off from the rest of the hall by a cord. It was as tho they were still dazed in admiration of their king's achievement.

From the city authorities "for and in consideration of one dollar" King Davis leased the Center street building, which had formerly been occupied by a button making concern, to be used as a home by the out-of-works indefinitely. Then, by royal edict, King Davis himself promulgated the following rules:

Only real hoboos admitted here; no cranks nor preachers talkin' reform.

Any one lookin' for sympathy will find it in the dictionary under the S's.

This is a gent's hotel; don't do nothing you wouldn't do in your own mother's home.

"People ought to take a lesson from us," the king continued, a cup of steaming coffee poised in midair, ready to follow the last of a roll. "When we found somethin' was wrong we started in to find out what it was. We didn't keep puttin' off and puttin' off. That's the trouble wi' society. Everybody's tryin' to put somethin' on somebody else, tryin' to put it on the city, on the church, on their folks, anything so 'George'll do it' and not them. When you pull the wires right, you c'n always get what you want," he added significantly; then turned to his followers.

"Come on, 'boes, get busy; what you'se think this is? We ain't got all night to clean out this floor."

"Yes, sir, when you're wise how to pull the string it's dead easy. This buildin', do you think it costs us anything? The city gives it to us. It's goin' to be a real dump, too. Goin' to have a loungin' room on this floor, upstairs a clothes-pressin' place, and a

shoe-shinin' stand down below. We're goin' to have a barber shop, too—all kinds of men among the 'boes, you know—carpenters, plumbers, barbers, masons, printers—we can fix up the whole place ourself. On the top floor we're goin' to have shower baths, and say, you ought to see the fumigator for their clothes the boys 'a made. Got to keep sanitary these days, you know. Why, this place when we get it fixed 'll be slick's a hospital.

"This ain't goin' to be any hang-out for cranks, either. No 'bugology' or socialists, or anarchists. You treat the public right, and the public 'll stand by you, 's our motto.

"Why, just look at this," and a grimy hand waved toward the morning mail. "Here's an offer to give us a thousand hand towels, here's another for a carpenter brace, some hammers and some ——" a look of sudden responsibility swept the royal countenance.

"Say, Utica, you an' Seattle beat

it over t' Avenue D and get them carpenter braces an' tools. Frisco, you take this 'ere fiver that come in the mail and get a little 'coffee and'. Bring back the change. Red, you better take a look in at that restaurant up on Cherry street tha' they moved out o' the sidewalk. Andy says we c'n rustle somethin' there."

"An' say, I almos' forgot to tell you, this afternoon we're gettin' a pianner. Lot of the boys can tickle the ivories.

"We're willin' to work for what we get, too. Some o' the boys tried the municipal employment agency, but they ain't nothin' in that. We're goin' to have one of our own. Standin' down there all day waitin' for a guy to sing out your name, maybe 'e does, an' maybe 'e don't, an' no thanks fo' you' pains. Here you can be nice an' comfy, an' then when some nice lady wants the snow shoveled, or a commission merchant's got some stuff he wants moved, we're Johnny on the job."

"What? Are the hoboos organized? Betcher life we're organized. Incorporated in the State of Indiana. Our headquarters 's in the Labor Temple at Indianapolis. D' you ever hear the oath that every good 'bo has to take? Well, here it is:

"'I (insert name) d' hereby sol'nly swear t' do all 'n my power t' aid an' assist all those willin' t' aid an' assist themselves. I pledge myself t' assist all runaway kids, and t' try an' induce them to return t' their homes an' parents. I sol'nly swear never t' serve as a scab or a strikebreaker 'gainst any labor organization, an' do all 'n my power fo' the betterment o' myself, my organization, an' organized labor, so'elp'me Gol.' You see, we 'boes have got some heart, after all."

The king leaned forward with almost boyish enthusiasm. Conscious of what mention of the latest of Manhattan's hotels in the press had already done for the "de Gink" in the way of donations, he was eager with hope. In the brown, friendly, smiling eyes there was a touch of wistfulness.

"Say, 'bo, I never like askin' favors of nobody, an' everybody's been mighty kin' to us. But, when you're writin' this up, if you wouldn't min' mentionin' it, we do need a couple of billiard tables pretty bad!"

"KING" JEFF DAVIS

# FAIR PLAY ON THE HIGH SEAS

BY SYDNEY BROOKS

LONDON CORRESPONDENT OF THE INDEPENDENT

IT is never an easy matter to get the British people worked up over any Anglo-American dispute or difficulty. They always take it for granted that, whatever it is, it will be settled. That is so even when the international sky in all other quarters is comparatively clear and when a controversy between London and Washington is thus thrown into greater and therefore more contentious prominence. It is trebly so at a time like the present when Great Britain is fighting for her very existence as an independent nation and when she has neither time, energy nor inclination to worry over secondary issues. All British comments on the American note should therefore be read in the light of this profound and universal assumption that Anglo-American relations, while from time to time they may be ruffled by passing differences, can never be gravely disturbed.

Whenever the United States makes a move in foreign politics in an anti-British direction there are always some Englishmen who put it all down to "politics," those mysterious American politics which the outside world has long given up all hope of ever understanding. To some extent the familiar explanation has been forthcoming in this case, too. I have come across Englishmen who have assured me that the Southern cotton planters have put pressure upon their Congressional representatives, who in turn have put pressure upon President Wilson, who is most anxious to relieve his Administration of the charge of being hostile to business and an obstacle to prosperity; and that this, coming on the top of the propaganda of the German agents and emissaries in the United States, and reinforced by the influence of the Western copper interests and by the desirability of capturing the German vote, is the true cause and origin of the stand. There may be something in all this, something, but not, I should judge, very much. In any case very little importance is attached to it in the British press.

There is, however, one aspect of the question which the English newspapers have enlarged upon with much satisfaction to themselves and possibly with some effect on American opinion. They have pointed out that, even from the standpoint of American interests, the contraband question is relatively a small matter and that far greater issues, with a far deeper influence on American fortunes and policies, are on the an-

vil than the more or less of American trade with neutral countries. "The Old World," said the *Daily Mail* on December 31, "is in process of violent demolition; the British Empire is fighting for its very existence; every ideal of international justice, of democracy, of social equity which is dear to American sentiment, has been challenged and assaulted by Prussian militarism; and in a victory for the Allies the security and well-being of the United States and the triumph of American conceptions of society and government are unescapably involved."

That I believe to be a view very generally entertained by the British people. Moreover the larger interests of the two powers are looked upon over here as being in many other respects substantially identical. It is inconceivable to Englishmen that any American with the smallest political instinct or foresight should desire or do anything to promote the calamity of a German victory, the effects of which would make themselves disastrously felt thruout the whole of the United States. It is equally inconceivable to Englishmen that Americans should not be as anxious as they are themselves to bring the war to a close at the earliest possible moment and that they should not realize that while a few individual American traders may gain by its prolongation, the great bulk of American trade must necessarily suffer. Englishmen in short assume both that the British Government has no desire to hamper American exports needlessly and that the American Government has no desire to weaken the economic pressure of British sea-power when legitimately exercised. Two practical and businesslike peoples, thus agreeing on essentials, ought not to take long in adjusting their minor differences on points of detail.

The presentation of the Note came as a surprise to British opinion and also, I fancy, to the Foreign Office, for the reason that we understood the contraband question to be well on the way to settlement. About a fortnight before it was handed in there was an announcement in the British press that a quasi-official arrangement had been come to between the two Governments, by which Great Britain agreed to forego the right of search in the case of vessels whose cargoes had been inspected before leaving port by British Consular officials. We had high hopes that this in time would lead to a workable so-

lution, and that American traders who were not shipping contraband goods would find it to their advantage to fall in with it. The trouble was they could not be forced to do so. There appears to be no executive authority in the United States capable of ordering the officials at American ports to issue certificates guaranteeing the character of a ship's cargo and the trustworthiness of its manifest. A further complication was that Mr. McAdoo had issued an instruction that manifests were not to be made public until thirty days after the vessel had sailed. In British eyes this order, whatever may have been its intention and purpose, amounted to an invitation to American merchants to send to Germany as much contraband as they pleased and promised them the assistance of the United States Government in concealing their operations. It certainly made it necessary for the Admiralty either to lay down altogether its weapon of commercial pressure or to search very vigorously and thoroly every vessel carrying an American cargo. The Secretary of the Treasury must therefore bear the blame for some of the difficulties that have since arisen. No one in England expected that these difficulties would be wholly removed by the permission given to British Consuls to examine cargoes before leaving port. What, however, we did hope was that the plan might develop into some system of joint inspectorship by which representatives of both the British and the American Governments might issue certificates guaranteeing the innocence of a cargo and its immunity from search, seizure or detention. If this could be done most of the friction and delay would disappear and American traders who continued to export contraband goods would do so at their own risk. It is quite clear, and President Wilson has frankly admitted it, that fraudulent manifests are responsible for a good deal of the trouble.

On the British side there have been some undoubted errors both of commission and of omission. Stopping a ship on the high seas and ordering it off to a port that is not its destination is an unpleasant proceeding; and it is quite possible that now and then a British naval officer may have shown some lack of tact and consideration. But where British officialdom has grievously failed is in supplying full and prompt information as to the fate of the cargoes in the vessels thus seized. It has hap-

pened time and again that while the American owners of the ship or its cargo knew that it had been detained, but knew nothing else, and while the American Ambassador in London was calling for particulars, the Foreign Office would be absolutely ignorant of the whole occurrence. A great deal of this delay was certainly avoidable, but the Foreign Office, having of course much weightier affairs to attend to, neglected to speed up the workings of the departmental machine and failed to realize the bad effect produced in America by its dilatoriness and reticence. The British Foreign Office, moreover, while an admirable institution, has very little conception of the uses of publicity. If it had issued a simple and temperate explanation of the British policy of contraband, and if it had followed this up by seeing that the American press was promptly informed of the circumstances of each seizure, I believe much of the irritation would have been avoided.

When the full text of the American Note was published on January 1, it was recognized in Great Britain that the difference between the two Governments was one not of principle, but procedure. President Wilson did not challenge our right both to search vessels and to detain them. His case was that our "present policy toward neutral ships and cargoes exceeds the manifest necessity of a belligerent, and constitutes restrictions upon the rights of American citizens on the high seas which are not justified by the rules of international law or required under the principle of self-preservation." He expressly acknowledged the right of a belligerent to search on the high seas, and, "when there is sufficient evidence to justify belief that contraband articles are in their cargoes," to detain, American vessels or neutral vessels carrying American cargoes. But he objected to American ships or American cargoes being deflected to British ports as a matter of course and there searched for contraband on the off chance or the vague suspicion that contraband might be found. There should be, he contended, a presumption of innocence in favor of a cargo between two neutral countries and not a presumption of guilt against it. To this the British answer—the popular, not the official answer—is first that it is not merely impossible to search a modern merchant vessel thoroly on the high seas, but that, in view of the radius and efficiency of the submarines, it would be an exceedingly hazardous undertaking even if it were practicable; secondly, that the

diversion of the ship to a British port offers the only chance of really overhauling its cargo; and thirdly that as American manifests, on President Wilson's own admission, are often not to be relied upon, Great Britain can hardly be blamed for looking upon all goods shipped from the United States to neutral countries bordering on or adjacent to Germany and Austria-Hungary with a certain amount of suspicion. Once more the great desirability of a strict official supervision of cargoes before sailing and of the issue of official certificates guaranteeing their innocence is made clear.

The American Note requested, and very naturally, such a declaration of our policy as would clear up the ambiguities which have surrounded, for instance, our treatment of copper. Copper is as necessary in modern warfare as gunpowder and has quite properly been placed on the contraband list. But the President complained that we interfered with the export of American copper to Italy even tho Italy was a neutral country and had placed an embargo on its re-exportation. The truth of the matter is that these embargoes placed by neutral countries on the re-exportation of commodities that are sorely needed in Germany are absolutely valueless. We thought at first that the Scandinavian, Italian and Netherland Governments could enforce the prohibitions they enacted. We soon found that, with the best will in the world, they could not; that the ingenuity of the private dealer, sharpened by the prospect of making a fortune at a stroke, beat them every time; and that goods consigned to Holland, Norway, Sweden, Denmark or Italy, might just as well have had "Germany" written on their labels. I do not know whether it is realized in America that we have been obliged to prohibit the export of a number of British goods and products to these neutral countries, simply because we found that, in spite of the embargo on their re-exportation, they were finding their way into Germany. In September and October, 1913, the United States exported to Italy, the Netherlands, Norway and Sweden, 10,900,000 pounds of copper. In September and October, 1914, they sent to the same countries 62,100,000 pounds, or nearly six times as much. Is there a single man in or out of the United States who doubts that practically the whole of this increase went to Germany and that American traders were materially contributing to the prolongation of the war? Is it also, I wonder, understood in the United States that the British Government

pays promptly the prevailing market value of any cargo which it confiscates and that American shippers of contraband goods suffer no actual loss, but only the loss of the inordinate profits they would have realized had the cargoes reached, and been sold in, Germany?

When I say that all thinking Englishmen realize and profoundly regret the hardships and damage that American trade is suffering I am saying what I believe to be the exact truth. There is absolutely not the least desire in this country, on the part either of the people or of the Government, to add to those sufferings, but on the contrary every desire to mitigate them; and if they can be mitigated without weakening the pressure of the British navy's thumb upon Germany's economic wind-pipe, everyone in Great Britain will be unreservedly thankful. There is certainly a keen appreciation among Englishmen of America's difficulties; it is hoped there is an equally keen appreciation among Americans of our own. We hold it to be essential to the success of the Allies, which involves, it must be remembered, our very existence as an independent state and of the British Empire as a corporate organization, that the raw materials of her war factories should be kept as much as possible out of Germany's hands; but in so keeping them, we have no wish whatever to injure America's or any other nation's non-contraband trade with neutral lands. When this is the spirit on our side of the Atlantic and when the American Note shows a similar spirit of reasonableness and good-will to exist in the United States, it is impossible not to believe that a settlement of this very vexed and contentious problem will be reached. The raising of the embargo which is at present imposed on the importation of many raw materials, especially wool and rubber, from the British Empire into the United States; the institution of a special Court of Claims, with an American assessor sitting on it, and adequate means at its disposal for the prompt despatch of all cases involving American owners or consignors; and in particular such an improvement in American manifests and in the official supervision of their contents as would automatically reduce the risk of search and seizure to a minimum—all these expedients have been suggested as possible ways out of the difficulty. Meanwhile Americans may rest assured that we in Great Britain are just as anxious as they can possibly be to have the whole question satisfactorily settled.

## A BIT OF EGYPT FOR NEW YORK

*Photographs by Charles Phelps Cushing*

MERELY A RAILROAD BRIDGE APPROACH--BUT WITH A BEAUTY OF ITS OWN

**W**ITH the addition of a few hieroglyphs, the new concrete piers of the approaches to Hell Gate Bridge, New York City, would be unmistakably Egyptian. They defile for three miles; and the piers are broad enough on top to carry four lines of railway tracks. Some of the piers are seventy-five feet high, and as you look down thru the archways, the vista makes you think you are standing in the portico of a mammoth unfinished temple.

Picturesque as they are, the approaches to the bridge have attracted less attention than the huge arch which is to span the channel. It is to be the largest steel arch in the world. The present record holder is across Niagara Gorge, 840 feet. The Hell Gate span will measure 1017 feet.

The four-track line which is to cross the Hell Gate structure will furnish a short cut and direct land connection between the railways of New England and those of the

THE VISTA THRU MONSTER ARCHWAYS

South—uniting the New York, New Haven & Hartford Railway with the Pennsylvania system's East River and Hudson River tunnels. The link of connection, known as the "New York Connecting Railroad," is only twelve miles long. When it is completed express trains can be run from Boston and other New England points direct to the South and West—making New York a way-station for the first time in its history. Hitherto such thru trips as have been made have necessitated the use of train-ferries or a roundabout routing.

Taken in connection with the Bridge of Cabrillo at the San Diego Exposition, recently pictured here, these photographs show how superbly concrete is adapted for simple, massive construction on beautiful lines. Other buildings at the San Diego Exposition prove that this same versatile medium may be used successfully in producing the most ornate and intricate decorative detail.

# A Number of Things by Edwin E. Slosson

HOW many of us neglect to utilize all our daily opportunities for self development? How many of us are living below our Highest Efficiency? How many of us have failed to acquire The Perfect Figure and the well-known *mens sana in corpore sano*? The answer to these questions will be found in the latest census report on the line marked "Grand Total."

Yet we editors are never weary of telling the people what more they ought to do and how to do it. Day after day, week after week, or month after month, according to the periodicity of the periodical we continue to pour out good advice upon an unheeding world and we will never cease our efforts, however little the effect, so long as we get paid for them.

It has recently become necessary for an editor to take on Physical Culture as a side-line. Accordingly I have devised a system of gymnastics that has certain advantages over anything ever before seen in print. It requires no apparatus except that provided free by the public service corporations of every town. It takes no time that could be more profitably employed otherwise. It does not mar the walls or shake down plastering on the flat below. Faithfully followed it will add ten years to any man's life. By using these exercises night and morning for the past three months I have added ten years to my life and I expect to add another ten before the winter is over.

## STREET CAR GYMNASTICS

### Exercise I. The Two-Step

First movement. Stand on one foot, preferably your own, in the middle of the aisle and put the hands in the pockets, preferably your own. As the car starts take two quick steps backward, balance while you count three on the forward foot with the other suspended in the air, then recover former position.

Second movement. When the car stops take two steps forward in the same fashion, bow or curtsy, and recover, if possible.

### Exercise II. The Liver-Squeezer

First movement. Seize the strap with the right hand and rest the tip of the left foot on the floor if there is room for it. This will serve as a pivot on which the body may turn freely. When the car stops you revolve until the strap and you are twisted to the limit of resiliency and feel like a tether ball. The starting of the car untwists.

Second movement. To avoid a permanent spirality of the vertebral column, move to the other side of the aisle and change off the hand and foot. Perhaps that sentence

is not clear. What I mean is change from the right hand to the left hand and from the left foot to the right foot.

### Exercise III. Chinning

This is not done with gum or conversation, both of which are out of place on the street car. Face toward one side of the car and, watching your chance when some one gets off, seize hold of two adjacent straps. Then bending the arms at the elbows, taking care to bend them inward, never outward, draw yourself up until your hat touches the soup or the soap as the case may be. The knees should not be bent as the swaying of the car is likely to land you in the lap of a man larger than yourself. Repeat the movement five times a block, the short blocks, for five blocks. This exercise strengthens the biceps and the philogastriciveness.

### Exercise IV. The Giant Swing

Stand in the middle of the aisle facing forward. Grasp a strap on both sides of the car with each hand, no, I mean grasp a strap on each side with both hands, or rather a strap on both sides with both hands—this is really easier to do than to explain. Grasp a strap in the manner indicated and if instead of straps they have these new fangled enameled iron ewer handles so much the better because they squeak in time to the movement and so increase the sense of Rhythmic Vibration. Set yourself in motion by kicking the floor or whatever may be behind you and continue the swing of the body until the old cat dies or you are interrupted. This is an excellent exercise but not suitable for rush hours.

I am giving my System freely to the public without hope of reward in this world. I want it distinctly understood that I take no private pupils, but I give a public exhibition of these exercises every day except Sunday from 8:30 to 9 a. m. and 5:30 to 6 p. m. in the Broadway cars. Admission five cents, and go as far as you like.

I saw a ring of little girls dancing in the street and reciting rhythmically as tho it was a ritual:

A B A B  
All boys are bad.

Probably they will be suffragets when they grow up, or, if there are no suffragets then for lack of a ballot-box to conquer, some equally annoying aberrance of the feminist movement. I wish they had chanted instead:

A G A G  
All girls are good.

It would have been quite as true and much less offensive.

## PROCLAMATION BY ANY NATION

This war is purely defensive on our part. We stand in the forefront of civilization. We have long labored to preserve peace. It found its inception in the humiliation which was forced upon {Servia } by a ruthless and barbaric foe. Altho we could not see a proud nation to which we were bound by every tie of humanity conquered and laid prostrate before ruthless hordes of {Huns } we still faithfully strove to keep western Europe out of the quarrel. While our peaceful negotiations were going on the foe was mobilizing on our frontiers. This necessitated prompt action. We demanded that mobilization cease and threatened to mob-

ilize ourselves (for purely defensive reasons) if it did not. The foe then violated the neutrality of Belgium by invading it in force from the {east } {west }

with {Uhlans } {automobiles } and also crost the {aeroplanes }

{French } {Prussian } {Russian } {Austrian } {Servian } frontier without warning.

It will thus be seen by a perusal of our {orange } {white } {yellow } {gray } paper that we have

acted thruout solely on the defensive.

But it is not only or even chiefly upon this ground that we demand the support of the civilized world whose peace we are defending with our breasts.

As apostles of {Latin } {German } {Slavic } {Anglo-Saxon } culture

the task devolves upon us to protect the world from {Russian } {Prussian } militarism and autocracy, from the insane ambi-

tions of the {Hohenzollerns } {Hapsburgs } {Romanoffs } {Mikados }, from the

aggressive and ruthless traditions which have been handed down from the

time of {Karageorge } {Bismarck } {Napoleon } {Metternich } {Genghis Khan } {Jimmu Tenno } Think of how

our foes have treated the {Bosnians } {Poles } {Finns } {Boers } {Alsations } {Armenians } {Koreans }

and imagine our fate at the hands of this ruthless enemy who, as all the world knows, regards none of the rules of civilized warfare and uses dum-dum bullets; who is inflamed with jealousy and hate and to whom the most solemn obligations and treaties are as waste paper! Our whole past history reveals us as the torchbearers of European civilization, liberty and democracy. Do not permit this light to be trodden under

foot! Let not the world be {Anglic- } {Slavic- } {Mongol- } {Teuton- } {Moslem- } ized!

(Signed) \_\_\_\_\_ [S]

An epigram is a new-born commonplace. A commonplace is an epigram that has succeeded.

A "civilized nation" means merely a nation where there is an occasional civilized person.

The good die young—even in those cases where they live to grow old.

# YOUR Chance Will Come

Born in a one-room log cabin on the Kentucky frontier, Abraham Lincoln had very little chance to acquire an education. But he was determined to succeed. "Some day," he said, "my chance *will* come." So he studied and got ready. And his chance *DID* come.

Your chance will come. Some day you'll be considered for promotion or for a good job in some other line of work. If you are ready, you'll go up—there will be no limit to your chances to advance if you are ready to meet them.

And you *CAN* get ready. No matter if your schooling was limited—if you do have to work long hours. If you really want a better job, the International Correspondence Schools can train you for it at home during your spare time.

Every month more than 400 I. C. S. Students voluntarily report promotions or salary increases due to the help of the I. C. S. What the I. C. S. have done for these men they can do for *YOU*.

### Mark the Coupon NOW

Just mark on the attached coupon the position or occupation you most like and mail the coupon to the I. C. S. This will not obligate you in the least—but it will bring you the facts that may change the course of your life.

## BOOKS OF OUTSTANDING WORTH

**Ralph Connor**

### THE PATROL OF THE SUN DANCE TRAIL

Like THE SKY PILOT, Connor's latest novel lives on, not merely in the book-shops but in the hearts of its readers, because of its drama, its tenderness of young love.

"The spirit of the open spaces; the beauty of the frontier that holds men surely under its subtle spell, in a story of crowding incident."—*Boston Transcript*.

Decorative jacket and end-papers.

Net, \$1.25

**Marie Corelli** **INNOCENT: Her Fancy and His Fact**

Because for years Miss Corelli has made this her labor of love, it promises to keep on appealing to her readers as has THELMA.

"With consummate skill, the whole heart of a woman is shown to us. Innocent is one of the heroines that will never be forgotten."—*W. Robertson Nicoll*.

Net, \$1.35

**Gilbert Parker** **YOU NEVER KNOW YOUR LUCK**

The months merely increase the popularity of this new tale of the Northwest, in which Parker has added to the strength of THE RIGHT OF WAY a new sweetness in the picture of Kitty Tynan.

Illustrations, end-papers and jacket in color.

Net, \$1.25

**Hugh Walpole** **THE DUCHESS OF WREXE**

That the permanent popularity of FORTITUDE does not indicate that Walpole is a "one-book man" is proven by the growing vogue of his latest novel, THE DUCHESS OF WREXE, the story of democracy's triumph over age-rotten aristocracy.

Net, \$1.40

**Horace Annesley Vachell** **QUINNEYS'**

The best salesmen for QUINNEYS' are the thousands of people who are reading it, talking it, pushing it with that irresistible force which can come only from their loving it.

Net, \$1.25

**Baroness Orczy** **THE LAUGHING CAVALIER**

The story of the ancestor of THE SCARLET PIMPERNEL, a slashing, rollicking, courtly blade of 1600, with the author's remarkable power of making a past age real.

Net, \$1.35

**J. D. Beresford** **THE HOUSE IN DEMETRIUS ROAD**

There are about 50,000 people in the United States who definitely appreciate a profound realistic novel. This story of a man's fight against losing his grip on himself is such realism. Are you one of the 50,000? If not, you are so unfortunate as to lose the delight of seeing the spectacle of life itself.

Net, \$1.30

**Irvin S. Cobb** **EUROPE REVISED**

The merriest travel chronicle, and a shrewd picture of what Europe really is.

Illustrations by JOHN T. McCUTCHEON.

Net, \$1.50

**Mrs. Parnell** **CHARLES STEWART PARNELL**

This is the famous story of the great romance of Ireland's uncrowned king, by his widow, which has daily been arousing greater admiration and more bitter protests.

Two vols., illustrated. Net, \$5.00

**G. A. Birmingham** **FROM DUBLIN TO CHICAGO**

Pleasant pictures of America by the famous Irish humorist, author of GENERAL JOHN REGAN.

## TUSCULUM COLLEGE

Beautifully and healthfully located in full view of the Great Smokies of East Tennessee. Founded in 1794, Tusculum is true to the ideals of its founders. The influence of the College has always been Christian. In scholarship Tusculum ranks with the best colleges in the country. Entire cost for the year only \$125, including board, room, and tuition. Six college buildings, four dwellings, campus of 75 acres and endowment of approximately \$180,000. Electric light, steam heat and all modern conveniences.

Write personally to the President, C. O. GRAY

Greeneville, Tennessee

## Independent Opinions

### A BIBLICAL PRECEDENT

In none of the books and papers, White, Blue, Yellow, Gray or any other color, have we seen cited the precedent to which our correspondent calls attention. Certainly there is a strong similarity between the cases of King Sihon and King Albert and we commend Deut. II, 33-35, as a text to ministers who are preaching on the fate of Belgium. As for our own opinion we will merely remark that the armies of those days seem to have paid little attention to the Hague Rules or the Geneva Convention.

Referring to the excitement now going on all over about the trespassing of the infringement of the neutrality of Belgium, let me refer you to the fifth book of Moses, chapter II, verses 24 to 34, and I especially like to ask you to consult those eminent divines in your organization. In this connection it is perhaps interesting to note that even in England voices now are heard that if Belgium was treated shamefully by anybody it was by its King, who forced the poor Belgians to sacrifice themselves for his pecuniary benefit and for the still greater perfidy of England to accept this sacrifice rather than to protect the Belgian's neutrality herself. The horrible cowardice and the heinous cruelty of the British authorities to force the unfortunate Belgians to stand up against an overwhelming foe apparently is lost on the honorable men in your office who simply prove that honor and decency is in your office a very scarce commodity.

E. G. HOTHORN

New York

### SOCIALISTS AND THE WAR

A letter from an old friend of The Independent, W. J. Ghent, author of *Our Benevolent Feudalism* and *Mass and Class*, contains a sharp retort on the criticism of the European Socialists for not preventing the war:

To me the universal howl about the failure of the Socialists to stop the war is a crowning proof of the latent hypocrisy in millions of men. This howl is raised by men who have bitterly fought the Socialist party, who have striven to keep it weak in numbers and influence and therefore impotent to obstruct a war. It is raised by men who are fully aware of all that the Socialists did in behalf of peace. It is raised by men who know that the Socialist strength in the Reichstag is less than one-third of the total, and that even the Reichstag as a whole is a body without power. It is raised by men who know that a general strike in the face of the mobilization of an army of millions would be sheer madness. It is

raised by so-called Socialists who—placed in like circumstances—would have done exactly what their European fellows have done. It is raised by men who would never think of charging a like failure upon Catholics, Protestants or freemasons, peace societies or the Hague Tribunal.

"Oh, for a forty-parson power,  
Hypocrisy! to chant thy praise,"  
sang Byron, and humbly I echo his  
song. W. J. GHENT

Los Angeles, California

#### TREITSCHKE AND BERNHARDI

Several of our friends who are well acquainted with German literature and German thought have called our attention to the exaggerated importance now given in England and America to such ultra-patriotic and jingoistic writers as Professor Treitschke and General Bernhardt. One of them quotes the following statement by Dr. Rade, editor of the *Christliche Welt*, the most eminent religious weekly of Germany:

Neither Treitschke nor Bernhardt has played a part in shaping the present convictions of Germany. Treitschke's *History of Germany* is known to educated men, but this historian died in 1896 and he no longer plays any leading part with us. Bernhardt's book, tho printed in four editions, has not gone much beyond the circle of professional military readers. Certain papers praised it; far more repudiated it. Both writers seem to have won a far greater political significance in other countries than they have with us. Here in Marburg I found it impossible to borrow Bernhardt's book, *Germany and the Next War*; I have now ordered it.

#### THE RHINE AND THE VISTULA

Any one who attempts a geographical justification of Germany must look both right and left or he will find himself in deep water. Dr. Dernburg in his *Independent* article brought up in defense of Germany's proposed annexation of Belgium the following argument:

Geographically, Belgium does certainly belong to the German Empire. She commands the mouth of the biggest German stream. Antwerp is most essentially a German port and the main outlet of the trade of western Germany. That Antwerp should not belong to Germany is as much an anomaly as if New Orleans and the Mississippi delta had been excluded from the Louisiana Purchase, or as if New York had remained English after the War of Independence.

A correspondent turns table upon him neatly by applying the same argument to the eastern frontier where Germany holds the mouth of the Vistula:

Does he not know that Germany commands the mouth of Poland's greatest river? Does he forget that Danzig is the most important Polish harbor and the principal outlet of Poland's commerce?

Stuyvesant High School, New York City

## It's so much easier to Inter-phone!

Old ways quickly give place to better methods. Nowadays to strain one's voice by undignified loud calling to the maid is entirely unnecessary. So is the tedious stair-climbing when the maid can't hear.

How much easier and how indicative of a well-ordered household to pick up the Inter-phone and quietly give directions! The maid can hear distinctly and you can hear her replies.

## Western Electric Inter-phones

can be quickly and easily installed in any home—old or new. The illustration shows Inter-phones installed in bedroom and kitchen. Such a set costs only \$15, and can be purchased at your local electrical store or direct from us. Send us the \$15 and we will ship the outfit by parcel post, together with full directions for installing.

*If you wish to know more about these great little step-savers, write for our illustrated booklet, "The Way of Convenience," asking for booklet No. 24-BJ.*

GOODYEAR BOOK CO., Room 200, 339 Fifth Ave., New York

Made in U. S. A.  
of New Domestic Rags

Construction  
Bond is made in  
white and eight  
attractive colors,  
in various fin-  
ishes, with Enve-  
lopes to Match.

## No Wonder He's Proud—

You ought to be proud, too—proud of the fact that there is one bond paper made in America of American materials—prouder still that this thoroughly American paper is the leader in quality and value.

For ten years Construction Bond has been made of new American rags—clean factory clippings. Most other makers of similar grades have used “cheaper” imported rags—gathered from goodness knows where. And in those ten years Construction Bond has become the most widely used bond paper in the United States—the leader in quality among moderate priced papers.

Now in spite of the war its continued quality is a certainty—the materials for its making are safe at home. That's the beauty of using products made in America of American materials—you are sure of continued quality.

### CONSTRUCTION

is a less expensive paper than any other of equally well assured quality. American efficiency in manufacturing and distribution has made it so. Instead of selling this paper through jobbers to any printer who will buy a ream or so, we market it exclusively in large quantities to the most responsible printing and lithographing firms in 196 of the principal cities of North America. You can see the expense

and loss we save by this direct method. You can see why Construction Bond offers *better value* for your money than paper marketed in the usual manner through jobbers.

Those substantial printing and lithographing firms who produce stationery on Construction Bond know how to do good work at fair prices—that's what made them big. They know how to turn out stationery that you can be proud of. The fact that they use and recommend Construction Bond is final evidence of its satisfactory quality and unusual value for the money.

Write us on your letterhead for our portfolio of specimen letterheads on various colors of Construction Bond. They will give you valuable suggestions for your own stationery.

1006 S. Michigan Avenue, Chicago, Illinois

## The New Books

### THE NEW ORIENT AND THE OLD

NOT every one, alas, has a seeing eye, a discriminating taste, and—what is best of all—the gift of talking simply and pleasantly on paper. Mrs. Anderson has.<sup>1</sup> As the wife of the American Ambassador, she had an unusual opportunity to see Japan at its most official and at its best, and she has justified her good fortune by more than one timely good word for our friends of Nippon and their courtesy and restraint toward Americans at a time when restraint was not always easy. Further than this, she has enlarged our sympathies by a really charming recital of her own experiences and a particularly appreciative—because simple—account of customs, amusements, religion, poetry, and art in the Islands of the Rising Sun. She runs the gamut, all the way from the solemnities of the Court and dinner with the Mikado, to the story of the Embassy dog, who rode solemnly in a 'ricksha, chief mourner at the funeral of the local veterinary.

She also repeats significantly the Japanese maxim: “When in danger, smile; when angry, smile; when sad, smile,” adding, “It is always etiquette to smile. In so many ways the Japanese are an admirable race, and in none more so than this.” But she does not forget to remind us that in Japan they speak of a “white peril” and the elevation of might above right by the nations of the West.

Mr. Cooper begins and ends his book<sup>2</sup> with the same tragic cry, from the lips of a Japanese teacher: “If only the nations of the West could convince Japan of the need to put more money into education and less into battleships!” But how far are the nations of the West, today, from doing that!

Mr. Cooper had unusual opportunities for studying the Orient. He met men of influence. He saw education not merely from the outside. And he took with him an interest in the moral forces at work beneath civilizations, and, withal, a breadth of view, which make his conclusions well worth while. The wisest of them all, perhaps, is that ready-made Western criteria do not fit the peoples of the East. Mr. Cooper takes us from the Hill Country of North Africa, thru Egypt, India, the Philippines, and China, to Japan, recognizing frankly how unsatisfying is much of the Orient's adoption of European civilization; how barren the education of the West until assimilated and modified by the East to fit its own needs; how dangerous, after all, the sudden breaking from age-long traditions and the attempt to force alien forms upon peo-

### Steel For Permanency and Protection

Wonder why some men will erect a modern fire-proof building of steel and concrete, then fill it with inflammable furniture.

If steel is best for buildings, why not for desks and tables? A long list of nationally known organizations, headed by the U. S. Government, have adopted U. S. Steel Desks as the most logical and modern.

U. S. Steel Desks insure the fullest measure of enduring protection against fire, water and vermin, and a long life of usefulness.

Sizes, styles and finishes to suit every purpose and every purse.

Write for descriptive catalog.

U. S. Steel  
Furniture Co.  
Syracuse, N. Y.

New York Show Rooms, 346 Broadway

## U. S. STEEL DESKS

ple unready for them. That the Orient will work out satisfactory forms he believes, but these forms will be true to its own ideals and history, whether they be religious, educational, or governmental. So much promise is there in education in all the Orient and, at the same time so much of peril, that there is illumination as well as humor in the story of the Indian student who wrote "Failed B. A." after his name, recognizing the pecuniary value of even an unsuccessful attempt at securing a diploma.

From this modern ferment in the East it is something of a far cry to the art of the days gone by. Yet the temple treasures of Japan are still many and wonderful. Mr. Pier<sup>3</sup> has made their acquaintance from end to end of the islands; has carefully studied the pictures, sculptures and carvings themselves; and has brought to the task an artistic appreciation and an extensive technical knowledge of the development of both Chinese and Japanese art. As a handbook for one making a first-hand study of the objects themselves, the book should be almost invaluable. It is unfortunate that the necessity for taking up the works temple by temple, and not chronologically, and the very small illustrations—valuable for little more than identification—should so far limit a treatise which contains a mass of valuable and suggestively handled information.

That "for some of us, Orient-born, China lies at the heart of many habitual emotions," is the *raison d'être* of the series of little stories in *Bamboo*, by Lyon Sharman.<sup>4</sup> They are reflections of the old China, in some respects passing away. "If any one supposes," says the author, "that a person can spend his childhood in the Orient, and afterward live wholly as if that childhood had been different, the following tales will perhaps set him right."

<sup>1</sup>*The Spell of Japan*, by Isabel Anderson. Illustrated. The Page Company, Boston. \$2.50 net.

<sup>2</sup>*The Modernizing of the Orient*, by Clayton S. Cooper. Illustrated. McBride, Nast & Co. \$2 net.

<sup>3</sup>*Temple Treasures of Japan*, by Garrett Chatfield Pier. Frederic Fairchild Sherman, New York. \$2.50.

<sup>4</sup>Paul Elder & Co., San Francisco. \$1 net.

#### THE GLORY THAT WAS GREECE

What the Greeks were, their gifts to civilization in religion, politics, philosophy and art, their decadence and a discussion of our contrasted life, are topics ably discussed in *The Greek Spirit*, by Miss Stephens, who speaks from full knowledge garnered by years of study and teaching the Greek language and literature as well as textual criticism of a high order. The book is the product of ripe scholarship and a thoughtful survey of the civilization of Greece.

Sturgis & Walton. \$1.50.

#### ASSAYING LIFE'S VALUES

A young man starting life has the choice of paths leading to material advancement or the more difficult ones which wind up the hill of spiritual growth. *The Captain of His Soul*, by Henry James Forman, is a story of a man who followed the first rather joy-

*"Promise me that  
you will try  
Sanatogen—"*

AND at last he does promise. He tries Sanatogen, he takes it three times a day. Skeptical at first, his doubts soon vanish, for gradually but surely there is wrought a change which spells better health, a new happiness to himself and those dearest to him.

The kindly, tonic effect of Sanatogen arouses the nervous system, not by falsely stimulating it, but by persistently feeding cell and tissue with its own concentrated, pure nourishment.

Now, also a relish for food returns, digestion is wonderfully improved—for remember, nerves and digestion depend on each other, and Sanatogen by aiding digestion and strengthening the nerve centres, restores harmony to both.

Such is the action of Sanatogen, well-known to thousands and thousands of grateful people to whom Sanatogen has brought better health, stronger nerves, improved digestion, renewed efficiency of body and mind.

The world's most famous people know Sanatogen's effects from personal experience—the medical profession of five continents know them—and no less than 21,000 physicians have so testified in writing.

When will *you* know and *feel* the good Sanatogen is capable of doing?

Grand Prize International Congress  
of Medicine, London, 1913

Hon. Wm. E. Chandler, former Secretary  
of the Navy, ex-Senator from New Hampshire, writes:

"Sanatogen is a pleasant nutriment for cases of impaired digestion. It strengthens without irritating and promotes vitality in feeble folk."

Sir Gilbert Parker, M.P., the eminent  
novelist-statesman, writes from London:

"Sanatogen is to my mind a true food-tonic, feeding the nerves, increasing the energy, and giving fresh vigor to the overworked body and mind."

### LET'S LIVE

IN THE BIG PINE WOODS

IT'S HEALTH IT'S COMFORT IT'S PLEASURE

PINE TREE INN, LAKEHURST, N. J.

fully until he found himself in a jungle and then after a hard struggle, with the aid of a woman who loved him, got back to the other road. As a mere recounting of the fight of a man in a big city this book is well done, but the style is dull and commonplace.

McBride Nast. \$1.35.

### ENGLAND'S GOLDEN AGE

*Elizabethan Literature*, by J. M. Robertson, is a careful, straightforward review of the prose and poetry of the men who wrote at the time of the great Elizabeth. The drama of the period, both before and after Shakespeare, and the verse of Spenser and Sydney beside the products of many other lesser men are commented upon with a style which is clear and forceful. This is an excellent book for the student or for the man who wants to get a rounded idea of the entire period.

Henry Holt. \$1.50.

### THE ROMANCE OF A STATE

Gertrude Atherton has called her book *California: An Intimate History*, which is an admirable title for the state that has tasted deep sorrow and sweet joy. There is a picture of the Missions and tales of the Spanish and Mexican governors; there are throbbing anecdotes of the rushing gold-diggers and graphic accounts of the earthquake. The thread of narrative is drawn from the earliest days to the present and told in a style which grips the attention.

Harpers. \$2.00.

### GERMS OF AN AMERICAN DRAMA

It is at the universities, notably Wisconsin, Harvard and Dartmouth, that close observers profess to see signs of promise for American drama. Under the guidance of Professor Thomas H. Dickinson the Wisconsin Dramatic Society has already developed a considerable repertory, of which three one-act dramas under the title of *Wisconsin Plays* have just been published. Of the three, most noteworthy is Zona Gale's *The Neighbors*, with its harsh setting and close study of illiterate rural life. Professor Dickinson contributes *In Hospital* and William Ellory Leonard an Indian drama called *Glory of the Morning*.

Huebsch. \$1.25.

### THE ARGONAUTS OF FORTY-NINE

An unusually human document is the *Diary of Nelson Kingsley*, member of the New Haven Joint Stock Company, kept on his journey round Cape Horn to California with the company in the days of the Gold Rush. The diary is issued as one of the publications of the Academy of Pacific Coast History, and the humorous misspellings and lack of punctuations have been carefully left just as the author made them.

Univ. of California Press.

### THE TEXTURE OF LIFE

*In Deep Places*, by Amelia Josephine Burr, is often *In High Places*, for many a queen and king are set forth by Miss Burr to be judged on their own testimony. Miss Burr has the word-gift, tho not supremely, and is flaming in Fiametta or trenchant in

Queen Mary as the needs demand. The collection has the added charm so often lacking in collections, of variety in form as well as in substance.  
Doran. \$1.

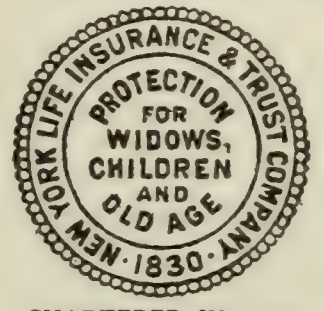

**A NEW LIFE OF DISRAELI**  
It has been two years since the second volume of William Flavelle Money-penny's *Life of Benjamin Disraeli* was published within ten days of the author's death. The third volume, written from Mr. Money-penny's notes by George Earle Buckle, covers the decade from the downfall of Sir Robert Peel to the Crimean expedition. The many heretofore unpublished papers of Disraeli and letters written by him to Queen Victoria add an intimate value to a very detailed consideration of English politics of the time.  
Macmillan. \$3.

**A NEW POET OUT OF THE EAST**  
Essayist, dramatist, poet, religious mystic, serving France in consular offices thruout the East, Paul Claudel wrote for twenty years unknown except to a handful of French literary artists. *The East I Know*, translated by Teresa Frances and William Rose Benét, the first of his work to appear in English, is a collection of delicately phrased sketches, moods set to words, cameos cut from Oriental landscapes, half-mystic reflections on life and death.  
Yale University Press. \$1.25.

**WHITHER AND WHY?**  
Perhaps the mid-Victorian girl, discontented, groping in those vague beginnings of feminism, could not be expected to make friends as easily as Emmy Lou. But if all the febrile disturbance in *Selina* produced one tangible result the book would be more satisfying, tho perhaps less consistent with the period. George Madden Martin's chameleon-like style is more effective in its twentieth century coloring than in that of the early 60's.  
D. Appleton & Co. \$1.30.

**ON THE COAST OF BRITTANY**  
René Bazin is a realistic story teller and like *Redemption* and his other works, *Those of His Own Household* shows his serious, thoughtful touch. The story sternly progresses along its path of sequence with no leisure for humor or for any spark of appeal that lies outside strength of situation and incisive portrayal of Breton poverty. As a result the characters, except Mme. l'Héréec, loving and hating bitterly, fail to demonstrate their individuality.  
The Devin-Adair Co. \$1.25.

**FIT SETTINGS FOR A GREAT AGE**  
So well did the great Florentines and the princes of Papal Rome understand life as a fine art that ever since their day the Italian gardens which formed a large part of its setting have been synonymous with magnificence and wealth. This is the background for Julia Cartwright's appreciative description of the *Italian Gardens of the Renaissance*. With a wide knowledge of the life and literature of the time she has given her book a wider scope than is disclosed by the title.  
Scribner's.

January 29, 1915. Transfer books will not close.

A. H. PLATT, Secretary

# THE MARKET PLACE

## SENATOR LA FOLLETTE AND THE RAILROADS

It was intended that the increase of freight rates granted to the Eastern roads by the Interstate Commerce Commission should become effective, for the greater part of the territory, on January 14, and for the remainder on February 1. Some delay was caused by the action of Pennsylvania's Public Service Commission. The roads were permitted by the national commission to publish the new rates on only ten days' public notice. This was accepted by New York, Maryland, West Virginia and other states, but Pennsylvania's commission unexpectedly insisted upon thirty days.

At Washington, Senator La Follette would like to prevent the roads from taking action in accordance with the commission's decision. He has introduced a joint resolution prohibiting the increase which the commission has allowed. There is a long preamble in which he asserts that it was not shown that the old rates were unjust or unreasonable, and that the commission acted in defiance of law. Undoubtedly the resolution will be the text of a very long speech, the character of which is foreshadowed by an article, signed by the senator, in his own weekly paper. The decision, he says, placed a burden of \$50,000,000 a year upon the people. He ignores the fact that the best current estimates of the additional revenue do not exceed \$30,000,000. "Vague and specious generalities," he continues, were the basis of the decision, which made successful "a raid of the railroads upon the public." The commission regarded the railroad business as "something sacred," which must be protected, even if the companies were "squandering their income in speculation," and were "eaten up by corruption on the inside." He sees the "banker poking the high railroad official in the ribs and with a chuckle exclaiming: 'Easy money, old chap! Easy money!'" The decision, he thinks, is a body blow to regulation, and he sees government ownership in the near future.

Fortunately, the senator's resolution and the speech that is to accompany it will not prevent execution of the commission's orders. The grant, as we have said, does not exceed \$30,000,000. More might justly have been allowed.

While much weight was given by the commission to the effect of the Great War, the roads were fairly entitled to an increase before the war began. Expenses had been growing steadily, owing to state legislation (such as the full crew laws), higher taxes, and large increases of wages awarded by arbitration proceedings which the national Government promoted.

In sharp contrast with Senator La Follette's attitude and assertions were the following remarks made by Mr. Redfield, the Secretary of Commerce, at a meeting in New York on the 13th:

In recent weeks there have been a number of events, all on the helpful side. First and foremost of these I would put the advance in freight rates. Too long, in my judgment, have the railways, our largest employers and our largest buyers, been cramped within too narrow limits of income. I earnestly hope that for them the dawn of a better day has come, one of more general public appreciation of their valuable services to the nation, and of the remarkable efficiency with which, upon the whole, they perform that service. It is good for us, also, that there has been going on, too little noticed, what one may call the democratization of the railways in their ownership, so that one great system boasts, and may justly boast, of a hundred thousand shareholders with average holdings that are but small. In a lesser degree this is true of others.

The need of the Eastern roads is shown by reports published last week by the Interstate Commerce Commission, to the effect that their gross revenue in November last was \$100,705,000, against \$113,947,000 in November, 1913. Altho by rigid economy they had reduced their operating expenses from \$88,572,000 to \$76,595,000, their net revenue had fallen from \$25,375,000 to \$24,109,000.

## THE GOLD POOL

Dissolution of the so-called "gold pool" of \$107,000,000 which was made by contributions from the national banks of the country last autumn to assist in the liquidation of pressing foreign obligations, following the outbreak of war, appears now to be at hand. Only a small part of the first instalment, which was to be deposited in Ottawa, was sent to that city. It was on account of these foreign obligations that Sir George Paish came to this country, as a representative of the British Treasury. Before he returned to England, however, the growing balance of trade in favor of the United States was making a natural settlement of the differences.

The excess of our exports over our imports has risen from \$57,000,000 in October to \$79,000,000 in November, and about \$110,000,000 in December. It is understood that trade balances, with the aid of the fund for the New York City municipal obligations, and of private arrangements of persons and corporations, have almost wholly extinguished the European debt, with the exception of that part of it which is represented by foreign holdings of American securities. Exchange between this country and Great Britain is now practically normal, and some are beginning to expect imports of gold. Prob-

ably, however, such exports, to any considerable extent, will be prevented by some plan to be devised by committees of bankers appointed here and in London.

The situation has been affected, of course, by the large expenditures here for our war supplies. There should also be mentioned a very recent transaction, virtually a loan of \$25,000,000 to the Russian Government by a group of New York banks and banking houses. In this loan, J. P. Morgan & Co. are assisted by the National City Bank, the Chase National, the Mechanics' and Metals National, and the Guaranty Trust Company. The money is to be expended in the purchase of supplies here for export.

### WHEAT

For some time the prices of wheat and flour have been rising. At Chicago, wheat was sold last week for nearly \$1.50 a bushel. Probably the price will continue to advance, and our people must expect that the war will greatly increase the cost of bread. So far as can be learned—and the Government has been making an inquiry—the advance has not been due to speculation or manipulation. The situation may be briefly described as follows:

On July 1 our supply of wheat, with 76,000,000 bushels carried over, was 967,000,000 bushels. About 618,000,000 are required for food in our own country, and for seed. Of the 349,000,000 remaining, 190,000,000 have been exported, and 80,000,000 more have been sold for export. As wheat is going out at the rate of more than 1,000,000 bushels a day, it can be seen that the entire exportable surplus will be exhausted by the end of March or the middle of April. There will then be a gap of two or three months before the new crop is available.

Who are the buyers? Among them are five European governments. Large purchases are made by organizations for the relief of Belgians and others. It should be borne in mind that there was a wheat shortage, outside of the United States; that Russia's surplus is "bottled up," and that Australia is not exporting. Moreover, if the war continues, it will be impossible to grow a normal crop this year in Europe, owing to a lack of farm labor. A representative in Congress from Indiana, Mr. Farr, asks that exportation be prohibited. We do not expect to see an embargo on the shipment of wheat. In the near future consumers may be in favor of it. They will be opposed by our agriculturists.

Bills have been introduced at Albany for the repeal of the railroad full crew law passed nearly two years ago, when the Democratic party was in control. It may be recalled the similar law in Missouri was repealed in November last by popular vote.

The following dividends are announced:

American Light & Traction Company, preferred, 1½ per cent; common, 2½ per cent, and 2½ shares common stock on every 100 shares common stock outstanding, all payable February 1.  
Westinghouse Electric & Manufacturing Company, common, 1 per cent, payable January 30.

H. H. POWELL, Cashier.

#### GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY

Geo. E. Ide, President.

256 BROADWAY

NEW YORK

For 16 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710. \$25 Certificates of Deposit also for saving investors.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,219,045,826.00
Received premiums thereon to the extent of.....	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers.....	89,740,400.00
Of which there have been re-deemed.....	82,497,340.00
Leaving outstanding at present time.....	7,243,060.00
Interest paid on certificates amounts to.....	22,585,640.25
On December 31, 1913, the assets of the company amounted to.....	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

## THE VIRTUE OF RESERVES

Many of our older readers remember the days of the old Mutual Reserve Life Association, the great exemplar of assessment life insurance. It had innumerable imitators. The country was populous with organizations formed for the purpose of furnishing life insurance on what was called the natural premium plan. They were all coöperative. They flourished under the guise of mutuals. Their promoters taught the credulous that their affairs were completely in the hands of the members. They had, as never before, grafted the principles of democracy on the life insurance plant. "Natural premium" assessment insurance was recognized by the uninformed as the inevitable protest, regularly evolved, against the gigantic and menacing evils resultant from the old line legal reserve system, with its "unnecessarily" heavy premiums and constantly accumulating funds. The slogan was: "Keep your reserve in your pocket." It sounded well, it seemed logical and it was effective. Hundreds of millions of so-called insurance responded to this rallying cry. Men of little scientific knowledge, and less conscience, promoted it and laid up fortunes.

Where are these institutions now? And more to the point, what is the condition of those, its deluded supporters, who grew old and uninsurable before time proved the system a snare—the insured who survived their insurers? Assessmentism at its best remains only among the younger fraternal orders, while the older ones are tottering to their fall. The powerful among them, the Knights of Honor and the American Legion of Honor, are fast fading memories. Those which yet struggle bravely onward do not advise their members to keep their reserves in their pockets; on the contrary, they have a wholesome respect for the practical virtues of a reserve which reposes in the fraternal treasury.

These reflections are induced by noting the case of a policyholder in the Massachusetts Mutual Life Insurance Company, whose death occurred at an advanced age last October. He entered the company sixty-one years ago, at the age of thirty-five, taking a policy for \$1000, at a premium of \$22.80 a year. He used his dividends each year to reduce the payment he had to make to the company, the aggregate net sum thus invested being for the whole time \$722.47. Sixty-one premiums at \$22.80 would be \$1390.80, so we find that the amount of the dividends used was \$668.33. His first premium, at age thirty-five was \$22.80; his sixty-first, \$3.45, the difference of \$19.35 being the dividend that year. When the policy of \$1000 was paid to his heirs, the latter

also received, in addition, a mortuary dividend of \$12.97, a total of \$1012.97.

Now here is the point: At age thirty-five the "natural" or assessment premium would have been the mortality cost, plus such sum as was used for expenses. The mortality rate at age thirty-five under the American Experience Table is \$8.95. But it does not remain stationary. Twenty-three years later it is \$22.94; at age seventy it is \$61.90; at eighty, \$144.47, and at ninety-one, the age at which this policyholder died, it is \$532.47. In sum, had this man possessed the opportunity during sixty years to keep his life insured on the "natural premium" plan—and no man ever will, because no organization using that plan could last that length of time—he would have paid less than he did to the Massachusetts Mutual for about one-fourth of the time, after which the cost would have heavily increased each year as indicated. During the last year, as we see, the actual death cost was in excess of fifty-three per cent of the insurance. During the last five years it was \$2032.58, or more than 203 per cent.

Assessment insurance, like many other fallacies, has not been without value. It has furnished needed benefits to thousands of families—at inequitable prices, be it noted. But its great service lies in the fact that it has educated millions to the necessity of keeping their lives insured. It has been a kindergarten for the masses. But it can never provide permanent protection at an equitable cost until it accumulates proper reserves, and by proper is meant adequate. No man is insured—that is guaranteed—who holds that sort of protection unless it has behind it the reserve that will care for the growing mortality which accrues with age. If in good health, the sooner that man gets old line life insurance, the better off will be his dependents.

## NOTES

The annual balance sheet of the Home Insurance Company, of date December 31, 1914, shows total assets, \$35,313,539 and a policyholders' surplus of \$18,703,474. The reserves maintained are: premium fund, \$14,268,024; unpaid losses, \$1,554,385; reinsurance treaties, \$437,656; taxes, \$250,000; against conflagrations, \$2,000,000. During the year the assets increased \$1,596,464 and the policyholders' surplus \$2,053,295.

In an address delivered recently before the Fire Insurance Club of Chicago, Arthur Hawxhurst, insurance manager for Marshall Field & Co., adverting to the attack made on the insurance companies by Insurance Superintendent Potts of Illinois, denied that the latter were making excessive profits out of the business and asserted that the cost would be reduced only when a reduction was made in the waste by fire. He pronounced state fire insurance a fallacy. He predicted that the improvement which would be made in the conduct of the fire insurance business would come thru the expense account.

SUMMARY OF 70th ANNUAL REPORT

OF THE

New York Life Insurance Company

346 & 348 BROADWAY, NEW YORK

DARWIN P. KINGSLEY, President

NEW INSURANCE PAID FOR IN 1914

Exclusive of Revivals and Increase in Old Policies

	Total.....\$126,266,574.64

## Make It a "Happy New Year!"

**T**OMORROW marks a new year.

For many it ought to mark a new vision, a new realization of the possibilities in a 100,000,000 country.

1914 was not what it should have been, largely because so many men insisted on darkening their horizon instead of rimming it with brightness.

They lacked the pluck to fight hard times, to swim up stream. It seemed harder, and a little more dangerous, than floating down stream with the current. So they drifted and doubted, and went backward when they might have gone forward.

Who ever gained by looking back? The man who takes new ground is the winner—his is the spirit that conquers.

He is not fearful that it isn't fertile ground because it is new; he has the courage to try, the grit to do his own ploughing.

His thoughts are not fixed on the poor results that might possibly follow; he is not seeking failure—he is hunting success. He will dig it out, somehow.

That spirit should prevail everywhere in this country as the New Year comes into being.

The greatest nation in the world now at peace has no real reason to doubt its prosperity, to lack faith in itself. It ought to feel very sure of its future.

It has great tasks ahead of it—bigger, more far-reaching and more enduring in their influence than any nation ever faced.

They are the problems of good fortune, of new opportunities, of new roads to national wealth and strength.

We shall not solve them by timidly attacking them, or by wondering whether we are equal to them.

That was the spirit of 1914—and we all know how dearly it cost manufacturer, financier, and workingman.

Let it go with the passing year. Talk no more of hard times, of doubtful

results, or plans for decreased production.

Begin the New Year with faith. Make it a "Happy New Year" in fact as well as in phrase, by going at it confidently, hopefully, courageously.

If you do, you can make 1915 a winner.

*This is the second of the series of forward-looking illustrated editorials which we are reprinting from the New York "Evening Mail."—THE EDITOR.*

### PEBBLES

The world is so full of a number of kings,  
I'm sure we should try to get rid of the things.

—*Harvard Lampoon.*

Bonny English child at mother's knee:  
"—and please God make me a good girl.  
Amen. How would it be, mother, to give  
the Germans cigarets filled with gunpow-  
der?"—*Punch.*

Lily—"I wish ye'd quit yer cryin', Vio-  
let. Yer face is gettin' all muddy."—*Life.*

Stude (to house-party queen)—Shall we  
dance or talk?

Queen—I'm so tired let's dance.—*Penn  
State Froth.*

British Village Worthy (discussing possi-  
bilities of invasion)—"Well, there can't  
be no battle in these parts, Jarge, for there  
hain't no field suitable, as you may say;  
an' Squire 'e won't lend 'em the use of 'is  
park."—*Punch.*

Mrs. Frost—We have a French waitress,  
and so we always speak French to each  
other at our meals.

Mrs. Snow—Why so?

Mrs. Frost—Well, we don't want her to  
know what we're talking about, do we?—  
*Life.*

The nicest women have a feeling that  
whatever a man wants to do is opposed to  
the best interests of women. Women have  
the same feeling about men that Afro-  
Americans have about the whites, who  
were formerly their masters.—*E. W.  
Howe's Monthly.*

Lady Book-Buyer (rather difficult to  
please)—I like this one, but—I see it is  
printed in Germany.

Salesman—Well, if you like it, madam,  
I wouldn't take too much notice of that  
statement. It is probably only another  
German lie.—*Punch.*

### THE MOO-COW-MOO

My pa held me up to the moo-cow-moo  
So clost I could almost touch,  
En I fed him a couple of times, or two  
En I wasn't a fraid-cat—much.

The moo-cow-moo's got a tail like a rope  
En it's raveled down where it grows,  
En it's just like feeling a piece of soap  
All over the moo-cow's nose.

En the moo-cow-moo's got deers on his  
head

En his eyes stick out of their place,  
En the nose of the moo-cow-moo is spread  
All over the end of his face.

En his feet is nothing but finger nails  
En his mamma don't keep 'em cut,  
En he gives folks milk in water pails  
Ef he don't keep his handles shut.

'Cause ef you or me pulls the handles, why  
The moo-cow-moo says it hurts,  
But the hired man he sits down clost by  
En squirts en squirts en squirts.

—*Edmund Vance Cooke, in "Chronicles  
of a Little Tot."*

## J U S T A W O R D

Among the new and striking features  
provided for in The Independent's ed-  
itorial plan for 1915, none will be more  
interesting and popular than the "In-  
ner Numbers," to be published from  
time to time thruout the year. A sec-  
tion of four pages, bound in the center  
of The Independent, will be devoted to  
one important subject of wide popular  
interest. This section will add substan-  
tially to the interest and scope of the  
number in which it appears, without in-  
terfering with the regular weekly pro-  
gram, or reducing the space allotted to  
the editorials, articles, pictures and de-  
partments which every week make The  
Independent, in a very complete sense,  
a journalistic record and forecast of  
human affairs. Three of these numbers-  
within-numbers, scheduled for early  
publication, are as follows: "Motoriz-  
ing America," March first; "Made in  
U. S. A.," April fifth; "Little Travels,"  
June seventh.

Enclosing a draft for nearly a hun-  
dred dollars to apply on his account  
for copies of The Independent used un-  
der his direction, a Professor in a large  
Western college says: "I have never  
used anything, altho my experience  
runs thru a period of several years,  
that compares with The Independent as  
a guide for the current events reading  
of a college student."

And the Principal of an important  
High School in New York State sends  
this cheering note: "My Modern His-  
tory Class consisting of twenty-four  
members have been using The Inde-

pendent to supplement the text. Twen-  
ty-one out of twenty-four members  
passed the Regent's examination held  
this week. You may be interested in  
learning that the Department of Edu-  
cation at Albany will accept The Inde-  
pendent on its list of Required Read-  
ings."

An advertising agent in Pennsylvania  
writes: "My attention has just recently  
been called to The Independent on ac-  
count of articles by Mr. Purinton, and  
I want to say that I believe them to be  
the most commonsense efficiency articles  
I have ever read."

The newspaper friends of Colonel  
Roosevelt are poking fun at him because  
he lately said that the fact of his having  
been the President of the United States  
prevented him from speaking on a  
great many subjects, and prevents him  
now from so speaking. The New York  
*World* mentions the serum cure for car-  
buncles and the question of lighting the  
subway when the power has been turned  
off, besides dum dum bullets and the  
amount of nutrition in Germany's war-  
bread, as the only topics it can think of  
not yet discussed by the Colonel. But  
the year is still young!

"The War and After" is the title of  
an article which will be published in  
The Independent shortly. Its author,  
Wilhelm Ostwald, feels absolutely cer-  
tain "of the termination of the war by  
the triumph of the German-Austrian  
allies." He prophesies that the change  
in the political significance of the Brit-  
ish Empire will be so vast that the  
present generation of Englishmen will  
be unable to grasp it.

## T H E R E D C R O S S

Each Contribution of Two Dollars or  
more constitutes the giver a Member of  
the American Red Cross for the cur-  
rent year, with a free copy of the Octo-  
ber issue of the *Red Cross Magazine*.  
The Independent will send—by author-  
ity—to each contributor a Certificate of  
Membership and a Red Cross Button.

The total amount contributed to the  
Red Cross Relief Fund thus far thru  
The Independent is \$5,649.87.

The following list covers the con-  
tributions of the past week:

Arthur G. Gehrig, Cristobal, C. Z., \$2;  
Rev. John J. Jefferies, care First Congre-  
gational Church, Bonesteel, S. D., \$22; C.  
A. Keefer, Grafton, W. Va., \$2; F. A.  
Kimball, Hartington, Neb., \$2; Miss Sarah  
E. Lakeman, Ipswich, Mass., \$2; Marion  
Congregational S. S., Marion, Mass., \$2;  
Eleanor and Blanche McIlvaine, Oakmont,  
Pa., \$2; Alfred H. Nash, Abington, Mass.,  
\$2; Geo. Nevins, Virden, Ill., \$2; H. A.  
Richards, Enid, Okla., \$2.50; R. E. Stew-  
art, Lockwood, Mo., \$2; Stoneborough  
Presbyterian Church, Stonboro, Pa., \$8;  
J. H. Stoner, Waynesboro, Pa., \$7; Mrs.  
T. B. Thomas, Pittsburgh, Pa., \$2; Henry  
N. Thomson, Clarkdale, Ariz., \$25; W.

NUMBER 3452

## AN AFFRONT TO HUMANITY

**A**N honest soul can scarcely speak of the bill to exclude worthy illiterates from this country without indignation. We wonder that the President should have thought it necessary to hear words on the subject. His own sense of right spoke before the bill was passed, and it comes to him with all its stain upon it.

The bill is a lie that deceives nobody. It pretends to keep out people as dangerous because ignorant. The danger comes from much better educated people than they. The sponsors for the bill are those who want to reduce immigration, just that and nothing else, and for just one reason, so that there will not be so many who will want laborers' jobs. Have they a whit of pity for the poor people who are suffering starvation and living death in the lands at war? Not a bit; they are too hatefully selfish. They will not even allow an exception for illiterates who are suffering persecution or who, like the Belgians, have been exiled from their own country.

And here we are, in a land that has room in plenty for a hundred million more, where we are all better clothed and fed and housed than in any other country

on this wide globe, coldly, meanly, contriving to shut out the neediest, the most unfortunate, not because they are insane, or have sore eyes or scabby heads, or are anarchists, but simply because they had no chance to learn their letters, tho they are healthy, strong, able and eager to work and pay full toll of labor for the bread they will eat. We are not willing they should bring in their children who may well grow to be congressmen themselves or senators.

And how needless, even from the point of view of these selfish lawmakers, is this pernicious bill! Without their aid immigration is greatly decreased already, and so long as the war continues immigrants cannot come, and after the war ends poverty will keep them at home, to their loss and ours. We can think of the bill only as an insult to humanity, and a blot of disgrace upon a nation—the one on earth that can best afford to give needed hospitality to the neediest.

Is this our open door? Do we give our money, our wheat, our knitted scarfs to feed and warm the unfortunate abroad, and do we shut our gates against Belgians and Hungarians and Russians and Jews, because they cannot read?

## THE CASE OF THE "DACIA"

**C**AN a merchant ship of a belligerent nation be sold after the outbreak of war to citizens of a neutral nation and sail the seas unmolested?

That is the question involved in the case of the "Dacia." The "Dacia" was a German boat. When the war began she was in the harbor at Port Arthur, Texas. She was bought by an American citizen of Michigan. He loaded her with cotton and sent her on a voyage to Germany. A British cruiser will probably capture her on the high seas and take her before a British prize court. What ought to be her fate?

The application of the rules and customs of maritime warfare to the case are not entirely clear. This for two reasons. The Declaration of London, embodying the code of rules for war upon the sea drawn up by the representatives of the nations of the world, has not been ratified and hence has no binding force. Therefore, technically speaking, neither nation can appeal to a provision of the Declaration in support of its contention. In the second place, it is by no means clear just how the fundamental principle should be applied to the facts in the case.

While the Declaration of London has not been ratified, and is therefore not law, it is the best formulated opinion of the world on the subject of maritime warfare. It

cannot be set forward as law in an international court; but it is perfectly legitimate to invoke it before the tribunal of public opinion.

Article 56 of the Declaration of London reads as follows:

The transfer of an enemy vessel to a neutral flag effected after the outbreak of hostilities is void unless it is proved that such transfer was not made in order to evade the consequences to which an enemy vessel, as such, is exposed.

By this article, the presumption is raised against the legality of such a transfer as that of the "Dacia." The burden of proof rests upon the purchaser to show that the transfer was not made for the interdicted ulterior motive. In plain words, the "Dacia" is guilty until she proves herself innocent.

It is clear, then, that Great Britain will be entirely justified in seizing the "Dacia" and taking her before a prize court. What should the court decide? The decision of that question hinges upon the ability of the ship's owner to prove that the transfer of ownership was not made "in order to avoid the consequences to which an enemy vessel, as such, is exposed."

On the face of it, it looks as tho this would be a hard thing to prove. The "Dacia," flying the German flag, would sail the seas exposed to all the consequences of capture and destruction that are the immemorial por-

tion of enemy ships. As a German ship, there were only two places for her—a neutral port and the bottom of the sea.

By becoming an American ship she might avoid these dangers. To hoist the American flag was the only way out.

Now it is conceivable that the new owner of the "Dacia" was actuated by quite other motives. But, under all the circumstances, it does not seem probable. She was a German boat. She has sailed with a cargo of cotton for a German port.

But the question is one for the prize court to decide. There is, however, one thing greatly to be regretted. This case, like every other similar one, will be decided by a partizan body. A British prize court will try the case, and the decision will have all the lack of convincing force that is inevitable when a cause is adjudged by one of the parties in interest.

Questions of naval prizes are international questions. They should be decided by an international tribunal. The Conference of London adopted a plan for an international prize court. But that plan, along with the Declaration, has thus far failed of ratification.

When the "Dacia" is captured, let the United States propose the creation of a temporary international prize court for the consideration of this particular case. If Great Britain would consent, it would be a long step forward.

The fate of the ship herself is not a tremendous matter. But a just and enlightened decision on the underlying principles involved is of the highest importance to all concerned and to the world. A single decision by an international body in a case of this sort would give a strong impulse to the cause of the judicial settlement of international disputes.

The "Dacia" case is minor in itself. But it may have far-reaching effect upon the plan proposed by President Wilson for a government owned merchant marine. If an American citizen cannot buy a German ship without having her sunk offhand by the British navy, could the United States Government expect any different fate for any ships that it might buy from German owners? To be sure, it is not an essential part of the President's plan that German ships should be bought for the proposed merchant marine. But there are many idle German ships in harbors all over the world. What would be more natural than that their owners should seek to sell them to the United States, if the administration's bill became law? Where else could we find promptly the material for our new merchant marine?

It would be well to have the international law of the matter straightened out before the project is entered upon. The case of the "Dacia" offers a splendid opportunity. Why not seek to have it brought before an international prize court, to be created by mutual consent for the purpose?

#### BILLY SUNDAY'S WAY

WE freely admit that we do not like Billy Sunday's way; but any way to start men on the upward road is better than no way at all.

Billy Sunday's way, which is set forth more at length in an article on another page, is coarse, rude, vulgar—but it works. It is on a level with the dancing red devils

of the miracle plays in the churches of five hundred years ago, which came out of lurid pits and frightened ignorant multitudes to the fear of God. So with contortions and gesticulations and vociferations, all directed to the object of persuading the excited hearers to come forward and pledge themselves to be obedient disciples of the great Master, he draws them forward by the hundreds and then the thousands in Pittsburgh and Philadelphia.

The eccentricities are glaring, but to be pardoned, even when he pleases his hearers by some outbreak against the churches, by lampooning the very ministers on the platform who had invited him, and insults reverence and grammar and sense and truth, in a good cause. We do not suppose that all the ten thousand converts who have shaken hands with him at the end of a rousing campaign will hold out a month, but if half or a quarter of them do Philadelphia will be better for his coming to gather in those whom the churches could not stoop low enough to reach.

The Billy Sunday way is good for the Billy Sunday sort who have no care for God or church until they can fall all together like fruit shaken from the tree by a tornado. But how much better, indeed how much more abundant, the handpicked fruit.

These are the valuable permanent converts who have been taught from youth their duty of consecrated love to God and man and have without passion or excitement, but with quiet fixed mind, entered upon the only worthy life, with less, perhaps, to repent of, but with a calm resolution which hardly appreciates its own grandeur. Over such converts the angels rejoice, with little fear that when the sun is up the hasty faith of their thin soil will wither away.

#### FAKED ACTROCITIES

WAR is bad enough and eruptions of savagery common enough without the fabrication of any more instances. But the temptation to exaggerate and to believe in the barbarity of the enemy is so strong that every war produces a plentiful crop of faked cases of atrocity, often narrated with great detail. The most striking case in the present war is the Englishwoman who reported the horrible mutilation by the Germans of her sister, a nurse in Belgium, and produced affidavits of physicians to prove it. It was proved in court that she had made up the whole story and forged the signatures of the physicians. It is highly creditable to British justice that she should have been brought to trial and condemned.

But this may be matched from the other side, for the Germans also are endeavoring to remove the unjust aspersions which have been cast upon their enemies. The allegations that Belgian non-combatants had mutilated the wounded German soldiers in the early days of the war were supported by convincing detail as, for instance, that in the Maastricht hospitals there were six such cases and that a wounded officer had written home that in the Aachen hospital where he was there were forty wounded Germans whose eyes had been punched out by the Belgians. *Das monistische Jahrhundert* has investigated the matter and publishes the statements of physicians in the hospitals of Maastricht

and Aachen in which they say that up to September 24 no instances of any such mutilation had been observed or were known to them.

The Carnegie Commission which investigated the Balkan wars discovered many cases of such spurious atrocities. The Greeks were particularly active and ingenuous in fabricating evidence during the first month of the second Balkan war when Bulgaria was cut off from the world. By exchanging the clothing and cutting up the bodies, photographs of "Bulgarian atrocities" could be produced to order. But the effect of this was somewhat shaken when the Greek priest whose mutilated corpse had figured in the illustrated papers of the world turned up later in Constantinople safe and sound.

During the Boer war false charges of brutality and violation of the rules of civilized warfare were made on both sides. In the *Australian Review of Reviews* Mr. Stead tells of selling a photograph he had received from a friend in Johannesburg showing British wagons crossing a spruit under fire from the Boers. This was reproduced in one of the leading British weeklies with the addition of a red cross painted on each of the wagons and several shells bursting around, while underneath was an inscription stating that this was how the Boers respected the Red Cross!

One of the bad effects of such falsifications is to make the reader skeptical and indifferent toward the real cases of savagery which war always engenders. We must not conclude from the two gross instances of the "frame-up" which we have cited that the Germans may not have been brutal in Belgium or that the Belgians have not maltreated the Germans. The armies of Germany and France, comprizing all able-bodied men, must include the most brutal and depraved to be found outside the insane asylum and the prison, while a professional army in time of peace like the first British troops attracts roving and reckless men and is below the average of the population. The decrease in crime at home since the war began, notwithstanding the distress of the times, indicates that many of the criminal type have gone to the front.

### OUR COMMON

**I**N the days when our common was in the midst of the village we all could keep an eye on it and knew when the grass was getting run out by overfeeding. Even when the community grew bigger and the common had to be moved so far from the courthouse square that it took the boys all the time after school was out to get the cows home we still knew what was going on there, how many cows were pastured, and how they were faring.

But now our common has got so big—over three hundred million acres—and lies so far out that none of us has seen it all or any of the family either. We have to go by what we hear about it from the Keeper of the Common, who lives down in Washington, not far from the White House. His name is Houston, tho whether he pronounces it *ow* as they do in New York, or *oo* as they do in Texas we don't know. But that doesn't matter now; what we were going to say was that we have just heard from him and he tells us that our pasture is getting badly run down and something ought to be done about it right away. He is encouraging

about the crops; says that our wheat crop of 892,000,000 bushels is the largest ever; that our cotton crop of 15,340,000 bales is the second largest; that our apples will fill 259,000,000 bushel baskets, which is more than we ever harvested before; and that taking the six cereals altogether—corn, oats, wheat, barley, rye and rice—we have nearly five billion bushels, which is 428,000,000 bushels more than the crop of 1913. That seems like a lot of foodstuff, doesn't it? But Heaven knows we need it with all those women and children starving over the way because their men folks have stopped work and gone to fighting.

But when Mr. Houston gets to talking about our stock on the range he sings a different tune. We need more meat than ever because the people on the other side of the water are clamoring for it and because we have more mouths to feed at home, about two million a year more. But we have ten million fewer cattle, ten million fewer sheep, and five million fewer hogs than we had in 1899. No wonder our butcher puts up his prices.

Now Mr. Houston, who has charge of our timber lots, too, has been trying some grazing experiments there, and he has found that in 1905 one animal needed 81 acres, but in 1913 it took only 51 acres to feed an animal. And the feeding is better than ever, instead of being spoiled by eating it two months into the ground, as is done on our common, where nobody is around to look after it. He thinks that if he could take care of the open pasture land as he does of the grass patches in the woods, we could keep twice the number of beasts on as well as not. It seems to us that Mr. Houston is talking sense. Let's put him in charge of this big pasture of ours and see what he can make of it.

### TEACHERS FOR BOYS

**T**HE continuing discussion of the question whether it is expedient that boys of ten to sixteen or seventeen years of age should be taught by men, has its ups and downs of earnestness and attention. Of late we have observed a marked increase in both the insistence of the debaters and the space given to it in the local newspapers in various parts of the country. Apparently the advocates of a larger proportion of masculine teachers for adolescent boys are having the best of the argument.

As every one who keeps the run of educational matters knows, women have largely displaced men as teachers, not only in the elementary grades, but also in the high schools. Step by step with the substitution of women for men as teachers, the statistics of school attendance have shown an increasing proportion of girls to boys in all the high school years, and particularly in the years beyond the first.

Interviews with young men in various trades who have been willing to tell why they dropt out of school at the end of the elementary courses, or soon after entering the high school, have produced much testimony that boys over twelve years of age are eager to associate with men, and that they feel more comfortable and more important to be in work under a male "boss" than to be spending their time in school under a woman teacher. There is little room for doubt that this is a stubborn fact of American social psychology, and as such

it must be reckoned with by all students of our educational possibilities.

If there were no other reason for urging the employment of a larger proportion of male teachers, this fact would be reason enough, but other reasons there are. We have been especially impressed by a view of the matter which has been presented in numerous letters to the local press, in both eastern and western states. In brief, it is that far more important than book study is the influence of example upon the lives of boys in their early youth, and that however fine and admirable may be the character of a woman teacher, it cannot make the same impression upon boy nature that is made by the personality of a manly, active, wide-awake man, whose interest in boys as boys, in their sports, their athletics, their plans and ambitions, makes perhaps the strongest appeal for good that can play any part in a boy's life. The writers of these letters say frankly that they send their boys to private schools where the teaching is given by men, or that they would send them to such schools if they were financially able.

These are serious indictments of present policy in public school matters. We have no fear of woman's influence in American life. It is certain to be an increasing influence for good. But it will not do to forget that the influence of man also is a fact which human experience throughout the generations has taught us to take seriously. We cannot afford to drop it out of the reckoning. There should be employed in the upper grades of all coeducational schools at least as many men as women, and probably more.

#### THE LESSER BREEDS TESTED

WHICH are the "lesser breeds" and which is the "superior race"? It is likely to be tried out in Hawaii, where the yellow and white races have a fair chance for competition.

An educational test was made lately there, as we learn from the Honolulu *Friend*. The records were looked up of the graduates for five years of the three largest Honolulu high schools and three grammar schools, 804 in all, of whom 251 were of American or north European parentage, 191 Chinese, 113 Japanese, 112 mixt white and Hawaiians, 77 Portuguese, 28 Hawaiians, 22 Chinese-Hawaiians, and 10 Koreans. Of the Japanese graduates 30.1 per cent obtained the grade of A, or 90 on a scale of 100; of the Koreans 30 per cent.; of the Chinese 26.7; of the Chinese-Hawaiians 18.2; of the white Hawaiians 16; of the American and north European 13.2; of the Portuguese 11.7, and of the pure Hawaiians 10.7 per cent. It will be observed how far the American children fell behind their yellow competitors. Very likely they did not try as hard; but a big part of genius and success depends on the capacity to take pains.

#### THE THINKING HORSES

THE papers publish long lists of artists, authors, scientists, etc., who have fallen in the Great War. But this is not all. The loss of equine genius must also be taken into account. And, come to think of it, horses which can extract the fourth root of 7890481 in ten seconds, as can Muhammed and Zarif, if we may believe Maeterlinck, are more rare in the world than men who

can make a passable picture or poem. The German army conscription exempts none for rank or genius, so the Elberfeld horses had to go to the front just the same as ordinary cab horses who could not spell a word or extract a root, except of the vegetable kind. As Kipling said:

No proposition Euclid wrote,  
No formulæ the text-books know  
Will turn the bullet from your coat,  
Or ward the tulwar's downward blow.  
Strike hard who cares—shoot straight who can—  
The odds are on the cheaper man

and horse as well, so we need feel no surprize to hear that these learned quadrupeds have already fallen victims to the war.

Probably Kluge Hans, the first of these arithmetical prodigies, has escaped the fate of his followers, for he must be now nearly twenty years old and the faculty, whatever it is, seems to disappear with age as it does in the case of Colburn, Inwaudi and other infant prodigies of the human race. Perhaps, too, his spirit was broken by the book of Herr Pfungst which showed to the satisfaction of most scientists that Clever Hans got his clues for pawing the right numbers from the unconscious signals of his master. But this theory, barely acceptable in his case, becomes almost incredible when extended over the more marvelous feats of the horses trained by Herr Krall at Elberfeld. Maeterlinck's theory, that they fish their information up from the illimitable ocean of the subliminal whence he gets his poetry, is still harder to believe. But after the war doubtless the education of animals will be taken up again in the Land of the Thinking Bayonets and there will be a chance to solve the mystery. But let us beware lest we raise up a race of Houyhnhnms which shall conquer the human.

#### A NOTABLE REVIEW

WE have often wondered why it was that we have in America no magazine which in matter and style could compare with the great English quarterlies and monthlies such as the *Edinburgh*, the *Fortnightly* and *Nineteenth Century*. We hoped a few years ago that the *International Quarterly* was going to supply that lack, but, like the other attempts, it failed, owing, they say, to overgenerous payment of its contributors, surely not a common fault with periodicals.

But the *Yale Review* will be at least the equal of the English reviews if it can be kept up to the mark of the last issue. The January number contains a dozen articles; all of them are long enough to say something and all of them do. For instance, President Hadley in his reminiscences of Trietschke clears up the prevalent confusion of his teaching with Nietzsche's when he says:

Nietzsche preached the paramount duty of self-assertion. Trietschke preached the paramount duty of self-sacrifice. Nietzsche held that Christian morality, and in fact all morality, represented outworn superstition. Trietschke held that Christian morality was the most fundamentally necessary thing in life.

Then there is a very valuable exposition of the German theory of neo-mercantilism by Professor Emery, an account of the little known literature of the Belgians by Professor Clarke, a lively chat on "The Worst Edition of Shakespeare," by C. S. Brooks, and a variety of other articles both worth reading and readable, and finally forty pages of real criticism of important books.

# THE STORY OF THE WEEK

## THE GREAT WAR

*January 18*—French capture village of La Boisselle, near Albert, France. Germans take Kielce, Poland.

*January 19*—German airships raid Yarmouth and other Norfolk towns. Turkish troops again routed in Russian Transcaucasia.

*January 20*—French gain trenches near St. Mihiel. Turks driving Russian Jews from Palestine.

*January 21*—Russian army north of Vistula only thirty miles from Thorn. British aeroplanes bombard Zeebrugge, Bruges, Ostend and Essen this week. German aeroplanes bombard Dunkirk.

*January 22*—British occupy La Bassée. Germans regain trenches near St. Mihiel.

*January 23*—Russians fighting to gain passes leading from Bukowina into Transylvania. French struggling to reach Steinbach and Cernay, Alsace.

*January 24*—Five British dreadnoughts attack German squadron in the North Sea and after a running fight of four hours sink the armored cruiser "Blücher." German troops are being sent to Hungary, while Austrian and Hungarian troops take their places in France.

### Four Hundred Miles of Siege

For the last four months the long curved line of the opposing armies, stretching from the North Sea to Switzerland, has scarcely shifted enough to be noticeable upon the scale of a magazine map. Wherever the Allies have gained a little ground they have in most cases lost it shortly after by the Germans concentrating their troops at that point. Only at the extreme ends of this "far-flung battle line" have the Allies made any permanent advances. In Flanders they have gained a strip some three miles wide. In Alsace they have gained a strip about ten miles wide. For the rest of the line between these points honors are about even and neither side can claim any striking success.

As a matter of fact, it is obvious that neither party is anxious to take the offensive and make the sacrifices necessary to break the entrenched lines of the enemy. Both sides are more saving of men and ammunition than at first and count the cost carefully before attempting any adventurous movements.

The only important gain made by the Germans in the last few months was at Soissons, and here they merely recovered ground which they had recently lost thru the gradual encroachments of the French on their positions north of the Aisne. Having driven the French back to the river the Germans contented them-

selves with a bombardment of Soissons from their side without attempting to cross. If they had gained such an advantage in the early weeks of the war we may imagine that they would have found it difficult to resist the temptation to make a dash thru this breach toward Paris, only sixty-five miles away.

The battle of Soissons illustrates the advantage of having the colonial troops to draw upon. It was a Moroccan rifle regiment which served as rear guard and held the Germans

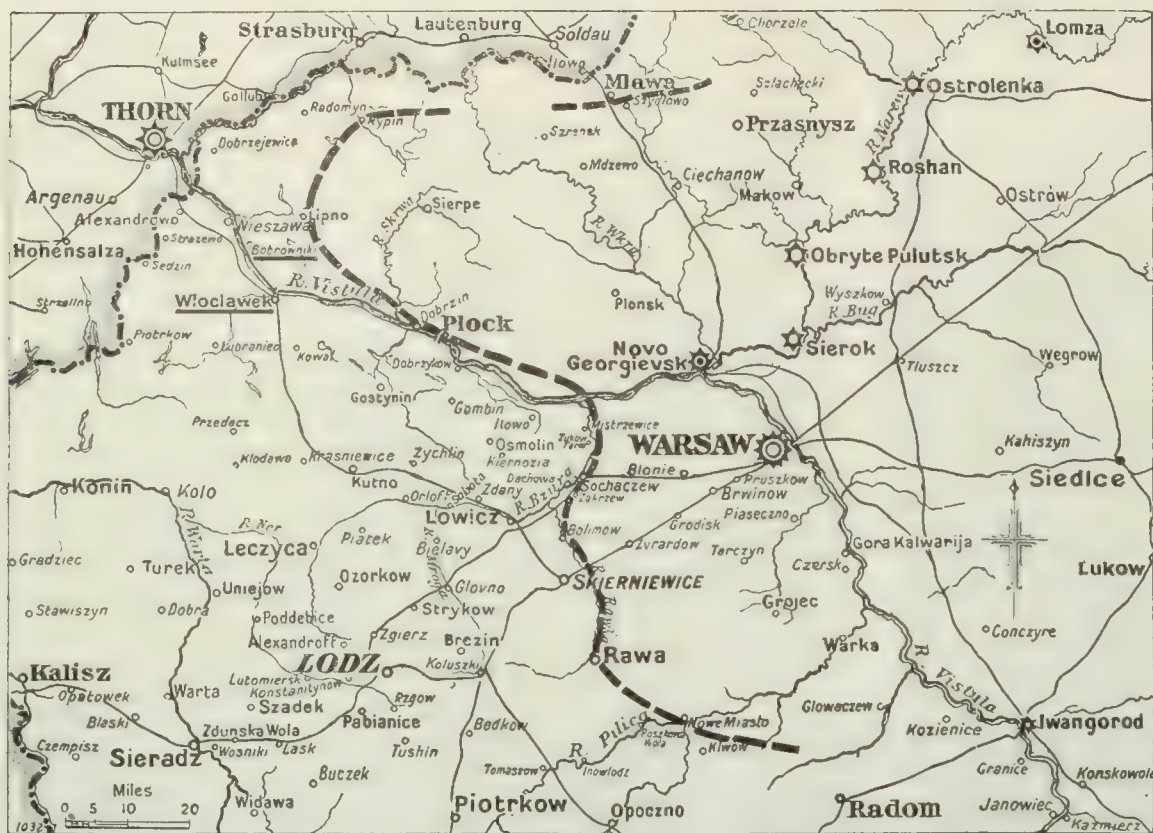

back on January 14 while the French troops retired in the direction of Soissons. At four o'clock in the afternoon Africans were posted on each side of the road, concealed by the ruins of the village of Crouy, and told to hold the ground for one hour. As the Germans approached within 500 yards they were received with a hail of balls from the machine guns which laid them in heaps. Those who escaped were reinforced and returned to the attack with the bayonet, but were again repulsed. It

THE LINE OF THE DEADLOCK

The almost continuous fighting all along the line from Flanders to Alsace makes scarcely a perceptible change on the map. On that part of the line which runs north on the left of the map the Allies have gained a few hundred yards near Dixmude, La Bassée and Peronne. At the angle near Soissons the Germans have regained lost ground. In the Argonne there has been fierce fighting, but without decisive results. The desperate attempts of the French to cut the line connecting the German outpost at St. Mihiel with their base at Metz by attacks from the south have been frustrated. In Alsace the French are making very slow progress toward Colmar, Mulhausen and Altkirch. The shaded area is territory held by the Germans.

THE PUZZLE OF POLAND

This map from the *London Times* presents the curious situation which has developed in Poland. The heavy line representing the Russian front shows that the Grand Duke Nicholas in his drive toward the German fortress of Thorn has forced his new army in between the German forces in East Prussia and the German forces south of the Vistula. It remains to be seen which side will be able to take advantage of this double flanking movement. While the Russians have been gaining possession of the territory north of the Vistula, the Germans have held their entrenched positions before Warsaw and in the south have advanced toward Radom.

was not until six o'clock, after twice being ordered to retreat, that the Moors withdrew. That the French are able to incorporate Moroccan troops in their regular army is remarkable, since it is barely a year since the French effected a conquest of Morocco. The Morocco question was one of the chief causes of the present war, for when Germany found that France and England had made a bargain by which the former was to have Morocco and the latter Egypt, she protested against being shut out of North Africa and demanded compensation. The Entente, however, refused to give way and Germany, finding that her financial condition would not permit her to make war then, postponed hostilities till the present time.

#### German Cruiser Sunk

A squadron of German warships attempting to approach the English coast on the morning of January 24 was sighted by the patrol squadron of battle cruisers under Vice-Admiral Sir David Beatty. The German vessels, finding themselves outnumbered and outclassed, at once made for home at the highest speed. The British pursued and by superior speed kept up with them until the German vessels reached the protection of their mine field seventy miles northwest of Helgoland. The fight lasted over four hours and extended a hundred miles. The chief English vessels engaged were the superdreadnoughts "Lion," "Tiger" and "Princess Roy-

al," the dreadnoughts "Indomitable" and "New Zealand," the last being a gift of New Zealand to the imperial navy. All of these vessels are of recent build and have a speed of twenty-seven knots an hour. The German vessels were dreadnoughts "Moltke," "Seydlitz" and "Derflinger" and the armored cruiser "Blücher." The "Blücher" fell behind and was sunk shortly after one o'clock. Out of her crew of 885 there were rescued 123. This is the first time in history that vessels of such size have been engaged in combat.

#### The Confusion of Poland

In the eastern campaign, as it is recorded from day to day in the newspapers, the reports of decisive movements are separated by long periods of obscurity in which it is impossible to ascertain which side is gaining or what is going on. The last fortnight is such a period. We hear nothing definite from either side, but there are vague rumors of momentous changes in the Polish situation. It is clear, however, that the Russians have made progress in the north and the Germans in the south.

Last week we called attention to the strategic importance of the first of these movements. The new army which the Grand Duke Nicholas has put into the field north of the Vistula is threatening or has already occupied Mlawa with its right wing and Plock with its left, while the center is still advancing westward in the direction of the historic Ger-

man stronghold of Thorn, which commands the Vistula at its exit from Russian Poland. Here the Russians seem to have succeeded in overcoming the German defense of the Skrwa River and in approaching within about twenty-five miles of the frontier of West Prussia. But it is now reported that Marshal von Hindenburg has thrown a force across the Vistula above Plock and so taken the Russian army in the rear. This reproduces on a larger scale the same curious situation as existed at Lodz a few weeks ago, when each army had the other outflanked and partially enveloped. The present entanglement can probably not be cleared up without the same wholesale slaughter, for the Russian and German armies overlap for a distance of more than fifty miles.

In south Poland the German and Austrian forces have advanced and occupied Kielce for the third time. The Russians retired to Radom, about thirty miles to the northeast, where they have massed their troops for the protection of Ivangorod, one of the most important of the Vistula fortresses, which the Germans early in October approached close enough to bombard.

#### The Conquered Territory

Both the Russians and the Germans are extending their administration over the territory they have occupied, with the evident intent to give the population the impression of permanent possession. Lemberg, the capital of Galicia, was, immediately after its capture, renamed Lvov and the Russian language made obligatory in the public service and schools, altho there are few Russians there. The population of Galicia is mostly composed of Poles, Ruthenians and Jews.

The Germans in like manner have changed the name of Lodz to Neu Breslau and have established a civil administration. The German governor is endeavoring to relieve the suffering of the people, who were left without food or fuel in the midst of the winter. A special train of seventy cars of coal was dispatched to Lodz for the electric light plant and the poor and twenty-five carloads of provisions have arrived. The woolen and cotton goods factories, which are the mainstay of the city, will be started up as soon as possible now that the railroad connection with Germany has been restored.

The population of Poland, torn by racial and religious feuds even in time of peace, is now more than ever in internal enmity because as a community passed alternately under German and Russian, first one fac-

tion and then the other would become dominant and take revenge upon its opponents by denouncing them to the authorities. On account of the aid which the German population of Poland has given to the German army, Grand Duke Nicholas ordered all Germans east of Warsaw to dispose of their property within six days in order that they might be removed into the interior of the empire. The same order has been extended to all Germans and Austrians in Finland and the Baltic provinces, who were obliged to leave by January 28 or be liable to penal servitude for life. The Russian Government has presented to the Spanish Ambassador at Petrograd specific charges of atrocities alleged to have been committed by the Germans in Poland, including cases of the shooting of innocent civilians, the use of explosive bullets, the killing and mutilation of wounded, and the rape of women and girls. The Germans have made similar accusations against the Cossacks in East Prussia.

**The War in the Air** The war news of the week reads more than ever like a realization of one of Wells' prophetic romances. Airships on both sides have been more active than before, tho they have caused more commotion than damage. The most sensational was a raid on the English coast of Norfolk on the evening of January 19. It is not yet known exactly what they were or whence they came. The German account alludes to them as "naval airships" and states that they returned to their home port undamaged. This port is possibly Cuxhaven or some other German station

FROZEN AT HIS POST—ONE SERBIAN SENTRY

and not the Belgian coast, for it is said that they passed over Holland on their way. This raises the question, which has been so frequently discussed without settlement in recent years, whether passage thru the air is in violation of the neutrality of a country. The airships are thought not to be Zeppelins, but smaller dirigibles, perhaps of the non-rigid Parseval type.

The night was still and clear, but the airships were not visible except when they used their searchlights, tho the noise of the motors was heard when flying low. The first indication of their presence was the explosion of a bomb in Yarmouth. Eight bombs were dropt here, apparently with the object of destroying the shipping and barracks. Some

of them failed to explode and only one did any serious damage. This struck and completely demolished the house where a cobbler, Samuel Smith, was working at his bench. Part of his head was blown off by a fragment of the shell and Martha Taylor, an unmarried woman, more than seventy years old, who was going by in the street, was shattered and killed. The bomb finally buried itself in a hole six feet deep. One of the unexploded bombs is forty inches around the base, twenty-three inches tall and weighs sixty pounds. Some aerial torpedoes, provided with propellers, were also used.

This airship or another one passed inland to King's Lynn, sixty miles west of Yarmouth. Here also two persons were killed, a boy and a woman, the widow of a soldier who recently fell at the front. Apparently the airships were searching for the King's residence, Sandringham Hall, about ten miles north of King's Lynn, on the supposition, based perhaps on the information of spies, that the royal family was there. But the King and Queen had left twelve hours previously for London, and, owing to the extinction of lights, the Hall was not found. Cromer and Sheringham on the north coast and half a dozen other towns were struck by bombs before the airships departed at midnight, but surprisingly little damage was done. Many windows were smashed, but the total destruction of property due to the raid was not over \$15,000.

The Kaiser sent a message of congratulation to Count Zeppelin, commodore of the German aerial fleet. The German newspapers are jubilant over the demonstration that

## HOLDING THE ROAD AGAINST THE COSSACKS

A forest road near Lodz. German artillery is shelling the advancing enemy and a shell has just burst. The road is partly barricaded

against these new weapons England is no longer protected by her insularity.

The English aviators have recently raided several Belgian and German towns. On January 16, nine English aeroplanes showered bombs on Ostend, doing considerable damage to the barracks and railroad station. The town of Essen, equally famous for its Krupp steel works and model workingmen's homes, was also bombarded from the air. During the Christmas holidays the English aviators were actively engaged in searching for the German field headquarters, and it is said that one of them succeeded in dropping a bomb within 200 yards from the place where the Kaiser was dining. On January 23, bombs were dropt from British aeroplanes on Ghent and Bruges.

The German aeroplanes have attacked Dunkirk many times in the last month, and are said to have inflicted considerable damage upon the town and fortress, altho the loss of life has been small. In the aerial raid of January 21 a dozen bombs were dropt, one of which smashed the windows and furniture of the American consulate at Dunkirk and slightly wounded the American consular agent. One of the German aeroplanes was brought down and the two aviators were killed.

**Turkey in the War** The first move on the part of England in the campaign against Turkey was to secure possession of the head of the Persian Gulf, to which the British have long laid claim. Then they pushed up the Shatt-al-

Arab, the channel thru which the combined Tigris and Euphrates empty into the Gulf, and captured Kurna, which stands at the junction of the two rivers. This put them in control of the outlet of two great rivers of Eastern Turkey, while the Russians are acquiring possession of their headwaters in Armenia. It also gave the British access to the oil fields of Persia near the Shatt-al-Arab, in which the British Government a few months before the war bought a controlling interest in order to get liquid fuel for the navy. The Turks have attacked the British positions and claim some success at Kurna and Basra.

Constantinople also claims successes against the Russians in the Transcaucasus, but, making all possible allowances for the exaggerations of Petrograd, we must believe that the Turks here have suffered a disastrous defeat. According to the Russian account three out of the five army corps which entered Transcaucasia were completely destroyed and the remnants of the other two are retreating toward Erzerum, followed by the Russian troops. The Turkish Redif or reserve troops were without tents or uniforms, and when the Russians surrounded them in the forest they found 900 frozen to death with their rifles in their hands. The defeat of the Turks has greatly discredited General von Sanders, the German officer, in charge of the Ottoman army and Enver Pasha, the Young Turk leader, who is chiefly responsible for the entrance of Turkey into the war on the German side.

The Russian Jews who have been colonized in Palestine by the Zionist

societies are being expelled by the Turks. Their lands are being seized by the Arabs and the wheat collected by the relief committee in Galilee confiscated for the army. The Jews are fleeing to the Syrian ports, hoping to escape to Egypt. The United States cruiser "Tennessee" is aiding in the work of rescue by making regular trips between Jaffa and Alexandria to carry off the fugitives. Over 7000 men, women and children have been taken to Alexandria, most of them entirely destitute.

**The Italian Earthquake** Further reports of the earthquake in central Italy add to the horror of the disaster. In some of the remote mountain towns the fatality was greater than at Avezzano. Out of a population of 3682 at Gioja di Marsi only 700 persons escaped. At Collamele, 1000 out of 1500 were killed. At Ortucchio 400 people or more were attending service when the church collapsed and crushed all but four women. In this town of 2500 less than 400 were left alive. Paterno lost nine-tenths of its population of 2000.

A heavy fall of snow added to the difficulty of rescue, and it was not possible to save all who were imprisoned in the ruins. Many perished from hunger or cold, but in some cases women and children were taken out alive a week after the earthquake. The famished mountain wolves sometimes reached the dead or wounded before the relief parties could get to them. The Italian Government has appropriated \$6,000,000 for the earthquake sufferers. The Pope has received contributions to the amount of \$4,000,000 and the Government about the same. Ten thousand refugees have been received in Rome.

On the night of January 19 there was a second series of earthquake shocks, centering about Calabria in Italy, but felt as far as France, Switzerland and the Ionian Isles.

**The "Dacia"** The case of the steamship "Dacia" has excited much interest in this country and in England. This ship, owned by the Hamburg-American Company, had been interned at Port Arthur, Texas, until recently, when she was bought at a low price by E. N. Breitung, who procured American registry and put on board a cargo of cotton intending to send it to Bremen. It was seen that, if this should be allowed, a precedent would be established for the purchase of other idle ships here. In our ports there are fifty-eight German or Austrian merchant vessels which have

been tied up since the beginning of the war. The North German Lloyd Company owns twelve of these and the Hamburg-American Company twenty-four, one of them being the great "Vaterland."

The case was not wholly unrelated to the Ship Purchase bill pending at Washington, for supporters of that bill at one time considered the possible purchase of the idle German ships by our Government. It was recalled that some time ago the "Alexandria," a Hamburg-American ship, was bought and registered at San Francisco, that she went southward with a cargo, and that this cargo was delivered to Admiral von Spee's German squadron off the coast of Chili. Reference to this was made by persons who express the opinion that this venture with the "Dacia" was designed by friends of Germany to cause friction between Great Britain and the United States.

When it is proposed that the ship should go to Rotterdam instead of Bremen, this did not change the British Government's decision, that it would seize her and make her the subject of inquiry in a prize court. It was held by Great Britain that if she were allowed to go unmolested, this would establish a precedent permitting the sale of all the German ships already mentioned. But England would buy the cargo or forward it on another ship. The owner decided to take his chances in a prize court. The sailing was delayed, however, and at the beginning of the present week the ship had not started to cross the ocean.

**Exports and War Orders** Owing mainly to increased exports of war supplies, our excess of exports over imports was \$131,863,000 in December. To this sum it had risen from \$16,000,000 in September, \$56,000,000 in October, and \$79,000,000 in November. The growing favorable balance of trade has caused dissolution of the gold pool formed some months ago for an adjustment of our debts in Europe. There were great shipments of breadstuffs in December, their value having been \$55,000,000, against \$11,000,000 in December, 1913. The month's export of oats exceeded those of the entire preceding year.

Large new orders from the nations at war have been reported. Henry Ford, the manufacturer of automobiles, said last week that he was considering an offer of an order for 40,000 motor cars, involving the payment of at least \$16,000,000. They are to be delivered at the rate of 2000 per day. The Russian Government has given to a firm in Seat-

tle an order for 15,000 railroad cars. At the DuPont powder mills in New Jersey a large number of men are working night and day. From Boston, last week, 600 horses were shipped on an order for 20,000 to be sent from that port. A steamship carried from New York 250, in part execution of another order for 10,000. In St. Louis it is asserted that \$8,000,000 has already been paid for American horses by the belligerents. Twelve cargoes of horses have been shipped from one dock in New York. Many have been bought by the Italian Government, which recently established in New York a credit of \$4,000,000 for its purchases.

Soldiers of the Allies in the trenches want harmonicas, or mouth organs. Formerly large quantities of these were exported from Germany, but now the orders are sent to this country. A few days ago one of our manufacturers shipped 150,000 harmonicas. Ten sixty-ton locomotives from the Baldwin works are on their way to Vladivostok, and twenty-five more will soon follow them. These, of course, are for Russia, which has established with New York banks a credit for \$25,000,000, to be expended in buying supplies. Factories in Binghamton, New York, are work-

ing on a French order for 500,000 pairs of shoes. English steamships are carrying from New York, on their decks, fourteen-inch guns, fifty-three feet long, made at the Bethlehem Steel Company's works. Four have been shipped. The British Government has expert representatives at the company's mills.

**Deputy Sheriffs Kill Strikers** Deputy sheriffs, sworn in to protect the Liebigs and Williams & Clark fertilizer works at Roosevelt, New Jersey, shot into a crowd of strikers on January 19, killing two and wounding more than twenty. The factories, near Elizabethport, are controlled by the American Agricultural Chemical Company.

Nine hundred men have been on strike since January 4, demanding a return to the wage scale which prevailed until last October. During the four days before the shooting over a hundred deputies, furnished by a Newark detective agency, had been placed in the factories. The strikers believed this the first step toward bringing in strike-breakers and began to search trains arriving at the factory stations. On Tuesday morning, according to the employers'

Paul Thompson

#### ONCE A BAR—NOW A DISPENSARY

The Casino at Le Toquet, France, has become the Duchess of Westminster's war hospital, and now accommodates 250 wounded men per day. This was the American bar before the war

statement, the strikers piled ties on the track, ignored the warning of the deputies, and fired on them when they attempted to remove the obstructions. The policeman on duty at the station made affidavit that no ties were placed on the track, that the strikers were wholly unarmed, and that some twenty deputies made an unprovoked attack on the strikers after pickets had peacefully boarded and left the eight o'clock train. Most of the wounded were shot in the back and legs as they fled before the bullets. The mayor of the borough has issued a statement describing the shooting as "cold-blooded murder," and the sentiment of the local officials and the public is strongly with the strikers.

Twenty-eight deputies, identified by strikers and other witnesses, were arrested and held for the grand jury on a charge of murder in the first degree. The Federal Industrial Relations Commission also sent agents to investigate the shooting.

The funeral of the two strikers who were killed was held on Saturday without disorder. The leaders of the union, which is affiliated with the American Federation of Labor, have urged the men to remain orderly, and the county prosecutor has served notice on the I. W. W. to keep its hands off.

**Hayti's** In Hayti one revolution quickly follows another. **Revolutions** **Davilmar** Theodore recently became President because he had led a successful revolution against President Zamor, who had gained the office by a similar revolt. Now there is an uprising against Theodore. The leader in the field is General Guillaume, who is already President by his own proclamation. On the 16th, the rebels took possession of Cape Haytien, whose garrison surrendered peacefully by agreement. Two or three days later Guillaume's forces there surrendered to the general representing Theodore's Government, also by agreement, and it is said that this general and Guillaume have formed a secret alliance. Guillaume started for the capital, and a decisive battle in the vicinity of Gonaives was expected. There is another revolutionary movement, led by General Laroche, formerly Minister of War.

Our Government has been advising Theodore to accept its offer of a fiscal protectorate, which would involve our use of Mole St. Nicholas as a naval station. It has been estimated that the path of eighty per cent of the Panama Canal traffic lies

near this port. But Haytians bitterly oppose control or administration of their customs service by American officers.

#### The Situation in Mexico

It has been difficult to follow the movements of the militant groups in Mexico, where the situation, as Secretary Bryan says, has become "mixed." After the flight of President Gutierrez from the capital, with 5000 soldiers, he caused to be published a long signed statement in which he accused Villa of being guilty of murders and robbery, saying that he had put to death, in defiance of the President's orders, General Aragon, Prof. David Berlanga and others. Members of the convention, he asserted, had fled for safety to San Luis Potosi. Villa, he continued, had virtually made him a prisoner and had threatened to kill him. He could not submit to a "ferocious military dictatorship." Gutierrez sought an alliance with General Obregon, Carranza's leading military officer, but Obregon could not be induced to turn against Carranza. His written reply to Gutierrez was published.

Villa made a hurried journey from the north with troops and artillery, but he did not enter the capital. For a time he remained at Queretaro, and then went north again. He had the support of Garza, the new President, and of the convention, which confirmed his appointment to the command of all the forces. There were reports that he could not agree with Zapata, who remained at Cuernavaca, but left 10,000 of his men in

the capital. But Zapata signed a statement in support of Villa, and two or three of Zapata's friends, Palafox being one of them, were placed in Garza's new Cabinet. Garza published bright predictions of coming victory, and said the capital was in good condition. Private reports say, however, that there has been a carnival of murder and looting in the city. Villa asserts that Gutierrez stole \$5,000,000 from the treasury and carried it away. The convention has demanded return of the money. The latest available reports show that Gutierrez, deserted by a majority of his 5000 men, has disappeared.

**Villa's Plans** Many have been led to believe that Villa, convinced that he cannot permanently agree with Zapata, and that he cannot retain possession of the capital, intends to make a new republic in the north, including the states of Sonora, Sinaloa, Chihuahua, Durango and Coahuila, with parts of Tamaulipas and Nuevo Leon. This republic would have nearly one-half of Mexico's area, but only one-seventh of the entire population. It would have three Pacific ports, but none on the Atlantic side, if some of the published accounts of his purpose are correct. Villa, however, is now directing a campaign for the capture of the coal fields and the northern oil wells. If he should be successful he would have the eastern port of Tampico.

He has lost General Benavides, one of his best fighters, who took with him a considerable force of troops at San Luis Potosi, and his soldiers have been driven from Guadalajara by the Carranza Governor of the State. There have been vague or conflicting reports about the fighting. Obregon was within fifty-five miles of the capital and his capture of it was predicted. But his advance was checked by Zapata, who, it had been said, desired only to resume his guerrilla warfare in the state of Morelos. The capture of Puebla by Zapata was reported, and then denied. There are three or four governments now, and several independent revolutionary groups. All of these are casually fighting, and all are victorious, if their own reports are accepted. There was a revolt of Carranza troops at the capital of Yucatan, but his army suppress it. Villa may finally establish his power in the north, but he is opposed there by Carranza forces, the Herrera and Salazar independent revolutionists, and such other groups as may enter the field. It is impossible to foresee the results of conflict in any part of Mexico.

#### RE-ENTER THE HORSE

With the London motor busses threading their way from railhead to firing line on French battlefields, their places at home are taken by the old horse-drawn vehicles of the familiar type

# GOLUMPUSSED IN FLANDERS

BY A LIEUTENANT IN THE LONDON SCOTTISH

THE letter I last sent off to you carried us, I think, up to November 13, on which day our rest in billots came to an end. I don't know whether our system of billotting might interest you, but in case it might, here goes.

For such a purpose certain areas are allotted to the various divisions which are, for the moment, resting; these areas are subdivided for the brigades and again for each regiment; then again, regimentally, for each squadron. When possible each squadron sends on in front a billotting party who have to find sheds, etc., for the horses, or, if there are none suitable, fields; then somewhere for watering the horses, and hay; then, if possible, nice hay-loft for the men, and finally some sort of a house for us. *With luck* all these arrangements have been made by the time the regiment arrives so that each squadron can move on at once to its area and each troop to its farm or farms in that area. Bed? Well, if we are lucky we get a bundle of straw; if we are still more lucky we get the straw and, the squadron cart having arrived, our flea-bags (sleeping bags or Wolseley Valises) as well.

Well, talking of Friday, November 13—we were to go into support, so had reveille at four a. m. and moved off at six; soon arrived at our immediate destination, a field. It was a beastly day, with a high wind and rain—plenty of it. At 3:15 p. m. we moved off, on foot, to our old trenches to the west of Mersines—three to four miles away—again cross-country, rotten. Some bad news awaited us; the Germans had the cheek to start shelling our “cooking” farm so that it was no longer safe to light a fire or go there during daylight; this was a great nuisance as it meant that we could get no hot drink during the day—in this weather a very appreciable loss. Late that night it cleared up and got deuced cold. The next day we were favored with heavy showers and it remained very cold; we noticed most in our fet, which were absolutely frozen.

During the afternoon we were severely golumpussed. Same old story, most unpleasant. One man was buried (in nice wet clay). Things were too hot to do more than unbury his head; he asked for a cigaret and one was lit for him and stuck in his face. I believe he was quite comfortable un-

*Here is a real letter from the front—where men toil over frozen roads and know “the misery of the soaking trench” and sleep—now and then—on straw-littered farmhouse floors, and yet are jauntily talking of the enemy as “ger boys” and of the great German shells as “coal-boxes” and “golumpuses,” and where a man buried to the neck in clay, with only a cigaret for solace, was “quite comfortable until he was fully extracted.” The London Scottish are territorials—that is, members of the reserve—but in this war their brilliant fighting has proved even to the officers of the regular army that they are “real soldiers.”—THE EDITOR.*

til he was fully extracted, and no damage was done.

Night came at last and with it peace and quiet except for the snipers. It was fine, but very cold, quite a severe frost. Next morning—the 15th—the enemy first coal-boxed the trenches on our left and I thought it would be a good opportunity to get a photo of a “Little Mary” exploding. Here is a little sketch to show the situation.

A is my trench, having behind it C, a muddy lane, and B, a field which stood four or five feet higher than C and A. DD the main road to Mersines, GGG hedges (shown thus xxxxxxxx). EEE general line where the coal-boxes were exploding. M the spot from which I thought I could get a good photo. K.....N the course I pursued and N, where I stopped. (K to N approximately sixty yards.)

Off I set, climbed into the field behind and gaily promenaded toward the corner of the hedge, got out my camera and was fixing the focus and shutter when another good photo was spoilt: when I arrived at just about the point N some durned fool ger boys evidently thought I was an excellent target and put four bullets round my ears, in rapid succession. Well, I thought I'd let the bally photo

rip. I was rather disgusted tho, when I got back to my trench and one of my men asked me if it was I "drawing the Germans' fire." After this interlude it soon clouded over, a nasty wind got up and then it snowed, then we had sleet and finally it rained; rained solidly all day, and the cold was rotten. I got very peevish as we were sincerely coal-boxed during the morning and our turn for that really came in the afternoon, but eventually it panned out all right, as we were given a peaceful afternoon.

Two of our officers had a providential escape during the morning. It was this wise: It did not take us long to find out that German gunners always shell an area in the same way, i.e., they place their shells from their right to left, each succeeding shell being a bit to the left of the last one until they come to the left flank of the particular area to which they are, at the moment, paying attention, and then they return to the right flank again. Now, one of these officers was watching the placing of some shells and he saw that if the line was continued the next one would be uncomfortably close to himself, so he suggested a strategical movement to a flank. Accordingly he and the other chap crawled away along the trenches. Not thirty seconds after they started their crawl a golumpus landed in their trench, in the exact spot that they had just left. If they hadn't moved—well, I leave it to you. Rather late that night we were relieved; it was impenetrably dark and streaming with rain.

On November 19, we suddenly moved off at 10.30 a. m. Almost at the very moment that we started it commenced to snow, keeping it up all day. We had a miserable march, as it was a nasty raw-cold day with a high wind that blew the snow down one's neck. It was just cold enough for the snow to be where it was not trodden, but the roads were fearfully crowded with miles of artillery on the move, wagons and troops, so that the mud was ghastly; also, the roads being so crowded our march was deadly slow. After passing thru a village called Hooge we dismounted and then, marching a mile or so further, turned off, stumbling and sliding, thru a wood to the trenches we were to occupy, arriving at about 9 p. m. Those trenches were rotten; not a scrap of straw; very narrow, and

THE TRENCH "D" AND THE STABLE "B"

we so crowded that there was scarcely room to sit, much less lie down. Our trench ran along the edge of the wood, the Germans lining another wood about 150 yards in front of us and in one place on our left flank only about twenty yards. Very soon after we arrived it cleared up and got fearfully cold; our clothes were covered with a sheet of ice; no warmth was obtainable by any means, it was almost agony for one's feet; oh, yes, it was quite beastly. We had a little to eat with us; just some bread and sardines and jam; but nothing to drink. (We had not eaten since breakfast.) The Germans kept up a fairly heavy rifle fire all night, occasionally sending their flares across our lines, but they never hit anybody. A miserable long night and one longed for the day to come; one seems never to be content. Very soon after daybreak we looked forward to night.

November 20 was a gorgeous day, the sort that is all that one can desire—if one is in a position to enjoy it—not much wind but it held very cold, freezing hard all day; one could not move at all from the trench, so there was no chance of getting even temporarily warm by taking little excursions. We were heavily coal-boxed all thru the morning and were further honored by an introduction to the "souvenirs" issued by the ger boys' mortars. Nasty spiteful things; some of us thought we were drunk when the first one came our way, and this was odd because intoxicating liquors are, at the best of times, somewhat scarce in the firing line and on this occasion particularly so. But just think of this: we were standing about in the trench, some of us occasionally taking a snap-shot at a ger boy if one had the temerity to show himself; others basking (?)

and then pounce for it. It lay on the ground, an innocent enough looking aerial visitor, for an appreciable time and then—oh Lord—with a deafening and almost stunning crash the thing went off. Earth, stones, bits of steel—everything round about—was blown a tremendous way.

And now I had better make another rough sketch to explain what comes next. The trench G in front of stables B [shown in the photograph above, made by the author] was held by another regiment, the officers using the living portion to sit about in. The buildings A and B were already absolutely shattered by shell fire; however, during the morning the enemy put a lot more shells into these buildings as well as into the trench G and the communicating trench E-E-E; they succeeded in wiping parts of these trenches clear off the face of the earth—killing four men only—the building B was also, of course, quite untenable. Accordingly these po-

sitions were evacuated and then the enemy gave up paying particular attention to these parts and scattered their souvenirs about a bit; we had a very merry time of it.

An extraordinary and appalling sight was presented by the trees in our wood: blasted, cut down, shattered and riven by shell fire; great, big trees, cut clear thru and lying prone across our trench; others half cut thru and now standing bent in all sorts of directions. All cut, scarred and gashed by fragments of shells, in some cases great jagged pieces of steel buried in the thickness of the tree and in one case a whole shell, unexploded and intact, just protruding; a glimpse of ruin and hell, and, during this enemy's shelling, the sound and sensations of the same thing. During the afternoon we were thusly entertained only intermittently; at times we heard voices—of the enemy—in the house B, but we paid no attention to them—for the time being. One of our aeroplanes passed over us and thence over the enemy, high up, but in that clear air very distinct. To amuse ourselves, we started counting the number of shells shot at it by the enemy; we got to eighty-six, on its way out, and then gave it up, bored. Jove, they must be brave chaps, those flying birds. At dusk the men who had been blown out of their trench G came back to retake it.

First they had to re-dig the communicating trench E and then their officer in charge warned me that he was going to reconnoiter the house and asked me to cover him with our fire if necessary. We saw a light in the house and I was wondering whether it was the officer in question when he returned, saying that he could not go into the house as there were lots of ger boys there.

A "GOLUMPUS HOLE"—WHERE A BIG SHELL BURST

A SHELL-SCARRED TREE

What extraordinary people these Germans are, a weird mixture of mad, foolhardy bravery and complete lack of it—they can't face cold steel. Now, as you will see from the sketch, the windows of the house B absolutely enfiladed the main line of our trench D-D, so the position was somewhat uncomfortable.

I immediately turned on as many men as I could cram into the line facing the house to put some rapid fire into the windows, and there was soon a very pretty din. For a time they answered from the house, particularly from the windows of the upper floor, but they shot high *and didn't hit a single one of us*; upon my Sam, I can't imagine how they missed us; the range was not more than twenty yards and they had simply to shoot straight down on top of us and along our line; we must have pretty well "put the wind up them" (term out here to mean "worried," "scared"), and of course our fire *was* pretty hot, nearly thirty men putting in about fifteen aimed rounds per minute each. Soon things quieted down and we resigned ourselves to await our relief, with the best patience that we could muster; the idea, tho, of getting our feet warm did not tend to make us patient, particularly when the hour of our relief—6.30 p. m.—passed. And there we sat. I waited until 10.30 before the French, who were to take over these trenches, turned up. The prospect of a five and a half mile march on my flat feet has never before very much appealed to me, but all of us were, on this occasion, extremely pleased with it. And so, at last, off we set, plodding along the hard, high road; and hard it was—now; no slush or mud, but frozen stiff.

And, oh my Christian aunt, after a mile or so what gyp our feet gave;

tingling and tickling and stinging when the blood at last began to move. We marched thru Ypres; I think that this was the most eerie experience I have ever met; not a lamp lit in streets or houses; the buildings standing stark against the star studded sky. During the last two or three days the Germans had been shelling it heavily with big guns at long range and now, here and there, glimmered a few last flames from burnt out buildings, and one passed thru areas in which mere skeletons remained of what were once human habitations. And over all a deathly silence broken only by the measured plod plod of our boots on the cobbles. Ough! that sort of thing makes war very dismal.

We had some breakfast as soon as we got in and then had two hours' sleep; that evening we heard that we would probably have to go into the trenches again next day, but, thank goodness, that business fell thru.

Since the 21st we have been uninterruptedly resting here, and every officer in the division is being given three days' leave in England; we go in reliefs, of course, and my turn comes in three days from now, so I shall post this letter from town. It is a funny idea, in the middle of the biggest war the world has ever seen, to go home for a three days' brightener—bless my soul, think of hot baths and real, live four-legged beds and things; it is hard to wait, but I suppose it will be ghastly to come back to bully beef, no washes and such-like.

There is one matter in which I do not wish to be misunderstood: two or three times I have mentioned a

scarcity of food, but this has been in no way due to a failure on the part of the supply column. There is only one adjective that I can think of to apply to our supply of food and equipment thruout the whole campaign and that is "Marvelous" with a capital M. 'Tis true, we sometimes get a bit bored with bully beef or other tinned meats, but we get issued with a lot of fresh meat, too, usually when we are in a position to cook it. Tea, sugar, jam (nearly always plum, I am afraid), bully bread, bacon (than which better cannot be bought)—up they come every day, in addition, of course, to oats and, now that the country is eaten clean, hay for the horses. The country is alive with our motors; touring and limousine cars for anyone and everyone who may need them in the execution of their duties; beautiful new—I was almost saying luxurious—ambulance cars gliding rapidly and silently to and fro between the firing line and rail-head; streams of motor busses—now painted battleship gray—conveying infantry from one part of the field to another; steam wagons and motor lorries—gaily decorated with their old advertising signs—bringing up endless supplies for men, horses and guns. It is rather hard on one, tho, when you are trekking along, hungry, thirsty and tired, to be passed by a lorry flaunting in your face such a request as "Drink so and so's stout" or "X Y Z's Scotch whisky is old and matured"—the brutes.

It is very pleasing that these things, and the arrangements for their distribution, should be so good; but how we wish that the crop of plums had been a little less plentiful!

#### BILLY SUNDAY'S WAY

PHILADELPHIA HAS TALKED OF NOTHING ELSE FOR A MONTH.  
HE GOES NEXT TO PATERSON, NEW JERSEY

# BILLY SUNDAY

BY CHARLES E. HESSELGRAVE, PH.D.

IT is evening, and the streets are astir with an unusual number of people making in one general direction. The street cars, bearing special signs, are jammed to the very steps, the sidewalks are overflowing with eager thousands hurrying toward the "tabernacle." In size and aspect it is a real baseball or football crowd, but it is not the season for either game. Not even "the biggest show on earth" could draw such multitudes day after day.

The secret power which draws together this heterogeneous mass lies in religion, religion mediated thru the extraordinary personality of the "baseball evangelist," Billy Sunday, and the organized workers who respond to his leadership. Week after week his tabernacle will be filled to its utmost capacity twice or even thrice daily. When every available seat is taken thousands will struggle for standing room where they may hear the evangelist's voice, and sometimes still other thousands will be turned away. Probably not since the days of Pentecost has a Christian evangelist preached to such throngs.

## DOPING IT OUT FOR THE LORD

It is no wonder that he stirs the religious imagination, evokes harsh criticism, and receives unstinted praise. His methods are spectacular, his theology is raw, and his language more appropriate to the baseball field or the race track than to the pulpit or the prayer-meeting. Sensitive souls shudder when he "dopes it out for the Lord" and "soaks it into Satan," and declares his intention to "stay on his job until hell freezes over." He justifies his manner and method by the fact that he secures results, such as they are. Years ago he tried milder means more in conformity with custom, but found them ineffective. "Then I loaded my old muzzle-loading Gospel gun with ipecac, buttermilk, rough on rats, rock salt, and whatever else came handy, and the gang has been ducking and the feathers flying ever since." By this, or in spite of this, the crowds are won and thousands each year are converted.

For more than ten years Sunday has been going from village to village, from city to city, with his gospel message, not once meeting with rebuff or defeat. Opposition and criticism have not availed to reduce his prestige. His audiences each year have been larger than those of the preceding. The fact is that his astonishing success as a traveling evangelist, culminating in the great

*William Ashley Sunday has been an evangelist since 1896. He claims to have received about 75,000 conversions since then, and in his campaign at Philadelphia last month as many as 697 persons professed conversion at a single service. In New York people are already speculating what will happen when Sunday comes—for he is working eastward and constantly attacking greater cities and sooner or later must come to grips with "God-defying, devil-ridden New York," as he calls it. Dr. Hesselgrave is pastor of the Central Congregational Church of South Manchester, Connecticut.—THE EDITOR.*

meetings at Philadelphia, has made him a national figure and brought into serious consideration his methods and his message.

The most prominent initial impression made by Mr. Sunday is that of a forceful and domineering personality, a master of the situation. His earnestness and sincerity cannot be doubted. His faith in his cause never wavers. His attractive powers are subtle and varied, but three outstanding characteristics are sufficient to give him a firm hold on the attention of a mass meeting held today under any auspices.

## KIN TO THE MAN IN THE STREET

First of all, Mr. Sunday is a man sprung from the common people, and he never allows his hearers to forget this. The fact that several generations ago the name of his forbears in Pennsylvania was written *Sonntag* is significant of his extraction. Thru the death of his father in the Civil War he was early brought face to face with the privations of poverty, while the struggles of youth and the baseball experiences of early manhood have given him a fellow feeling with all sorts of men.

The average man feels that he is in contact with a life strikingly akin to his own in its hardships, temptations, failures, and limitations, and that somehow thru this sympathetic touch he will learn the secret of Billy Sunday's success, achieved without the aid of high birth or special privilege. Mr. Sunday on his part proclaims by every trick of language and turn of thought his alliance with the man in the street who looks askance at "the King's English," revels in the latest slang, and handles all subjects "without gloves."

Again Sunday is an actor of no mean ability. He seizes upon the comic elements of every situation and

exploits them with genuine relish. He dramatizes his stories and turns his platform into a stage on which he presents the various characters with more effectiveness than nicety. Those who visit Sunday's meetings are always sure to witness some spicy presentations of selected scenes from the "passing show" of life.

And thirdly Billy Sunday utilizes, whether he shares them or not, the prejudices and antipathies, the suspicions and social strivings of the masses in America. He well knows that a fling at pride of birth, or accumulated wealth, or college breeding is certain to strike a responsive chord in every large audience. Mr. Sunday plays upon these social moods and half-formulated feelings with masterly success, and turns the tides of aroused passion into religious channels. Without regard to the specific content of Mr. Sunday's message, this combination of qualities is bound to give him a large hearing in any considerable American community.

## A FIGHTING GOSPEL

When one analyzes the Gospel Billy Sunday preaches, he is struck by its simplicity and meagerness. It is essentially the threefold promise of forgiveness for sin, the help of God in true living here, and a heavenly reward hereafter. The motives to which the evangelist appeals, however, are more complex and varied, and do not always correspond to his Gospel. Prominent among these, of course, are the longing for inward peace and harmony with God, and the desire to escape from the consequences of wrong-doing. These motives would be ordinarily weak, but Sunday reinforces them with extraordinary skill by his emphasis upon the reality of God and the imminence of punishment thru the sorrows of this life and the tortures of the next. Even so, these selfish appeals would fail if they were not shot thru and thru with a social dynamic.

All the fears engendered by his confident threats and daring pictures of eternal torment are not to be compared in effectiveness to one of Sunday's stirring calls to fathers and mothers to arouse themselves and save their children from the pitfalls and dangers that everywhere abound in modern society. Pronouncements about the hottest kind of future hell may leave the young man cold and indifferent, but the taunting demand that he be not found a cad or a coward in the struggle of life sets the red blood coursing. Whole regiments troop forward at the trumpet call for

volunteers to fight all forms of hypocrisy and meanness, and drive out society's pirates: the open saloons, bad houses, bad business, and soft-handed thieves. It is these strong social motives that make sturdy men "hit the sawdust trail," and enlist multitudes for the war against sin.

That Mr. Sunday can thus arouse men in large numbers to a regenerate life in spite of his obstructive and often destructive theological teaching is a high tribute to his extraordinary powers and the wonderful organization which works under his direction. For it must be acknowledged that the evangelist's theological background is a confused hodgepodge containing more drawbacks than helps to his real work and tending to destroy his largest usefulness. His premillennialism and his anti-evolution propaganda blind him and his followers to some of the great forces that are working for the Kingdom of God. His vaunted reliance upon the Bible and his provincial interpretation of it as sufficient authority in all things, scientific and historical as well as religious, his crass dualism, and immoral concepts of atonement, not only prejudice men's minds against the truth and tend to connect religion with ignorance and obscurantism, but sow the seeds of reaction and strife, which must in the future weaken the impact of the Church against the forces of evil.

#### A NARROW OUTLOOK

Most of Sunday's doctrinal teaching will have to be ignored or rooted out before his converts can see clearly the true task of the Church in building up the Kingdom of God. Indeed the grave defects in his work arise from this source and not from his use of slang, coarse expressions, and pulpit swearing, repellent as these sometimes are. The fact is that the evangelist has only a part of Jesus' Gospel, and this he holds in terms of Jewish apocalypticism and Greek dualism, and so emphasizes this fragment that the true perspective is lost. What should be—and was with Jesus—the central theme, becomes a subordinate issue. The chief end and aim—a righteous social order—is reduced to the chance by-product of a metaphysical scheme of personal salvation. There is also grave danger that multitudes will be led into the serious error of regarding the Gospel as entirely dependent upon views of the world which cannot possibly be maintained against the leavening power of common school education. What can the Church do with either the converted or unconverted who have their minds

imprest with such a vicious stamp under the pressure of a strong personality and the softening influences of religious emotion?

#### SNUBBING THE CHURCH

This is a question which drives straight into the heart of the future work of the Church and suggests another defect in Sunday's work. His whole type of teaching and influence undermines men's confidence in and respect for the institutional activity of Christianity. Progress without permanent organization is impossible. An impulse toward reform needs no institutional support to make itself felt, but any worthy effects will be preserved, if saved at all, by incorporation into the institutional life of the world. Popular leaders are apt to be blind to this necessity and so frequently weaken the very foundations on which they must place their own structure, if it deserves perpetuation. Mr. Sunday is no exception. One cannot listen to him long without feeling that, despite his assertions to the contrary, the Church as an institution for leavening society with the principles of the Kingdom is worthy of small esteem and often contempt.

A further element of danger in the man's work is evident but difficult to estimate. Whatever social discontent or unrest or spirit of revolt is created by his criticism of present practices and his emphasis upon justice and equality is not directed toward the natural end of social reconstruction. He has a panacea for personal unrest and dissatisfaction, but no program for social alleviation, except the destruction of the saloon. There is no word of reorganization or social reform in Sunday's message. If we add to these grave faults the more noticeable and deeply serious offense that Sunday so frequently commits in violating the holy of holies in religion, the sacred precincts of the human soul in its devotions, we have an array of objections to his work that is hard to meet.

#### HIS GREAT ACHIEVEMENTS

Yet his achievements for good are believed by many to be more than an offset to his defects.

In the first place it is a fact beyond question that everywhere he goes Billy Sunday brings religion to the fore. The churches are deeply stirred. People in the street and shops break the usual reticence about religious matters and talk freely on these subjects. The newspapers put the evangelist's doings on the front page, display his spicy sayings, and for a time at least give more space to moral and religious discussions

than to sports or crime. The attention of multitudes of the indifferent is secured and they are brought within the reach of the Church. The problem as to what the Church can do for them in the condition in which Sunday leaves them is another matter. Religion at any rate is made a thing of first concern in the towns where he works.

Again the evangelist awakens great numbers of people to the prevalence of gross moral evils and incites his adherents to work for their eradication. His crusade against "booze," social vice, and gambling is admirable in its force and effectiveness. His power as a leader in such moral reforms inspires both hatred and fear in those who fatten on the weaknesses and vices of their fellow men. Thousands of those who have lost their grip on spiritual realities and moral principles, those who have turned away from the Church and Christian living, those even who have wallowed in the mire of the underworld, many seemingly past hope of recovery, have been reformed and quickened into new hopefulness and started in a new career of high resolution and worthy service. Such splendid fruits of his labors will be largely augmented, at least in many minds, by the "harvest of souls," which is Mr. Sunday's own immediate aim, and by the constant reinforcement which he gives to the old fashioned virtues of honesty, devotion to pure family life and neighborly helpfulness.

Just because there is such a mixture of good and evil elements in Sunday's work, it is extremely difficult to estimate its total effect. Standards will vary, and the sifting process of decades is necessary to bring forth a final judgment. At present it seems very doubtful whether any permanent addition will be made to the Kingdom of God by his whirlwind efforts, while they carry with them so many seeds of disintegration and decay; and it is certain that so far as his teaching is effective in establishing doctrinal views and creating an attitude of mind, the churches for generations to come will have to reckon with the reactionary forces he is setting in motion. Thoughtful men can only regret that so capable a leader and so striking a personality, inspired by religious zeal and enthusiasm, should not catch the larger vision of the Kingdom for which Jesus stood and to which Christianity is pledged, and use his rare gifts and resources in a well rounded, constructive mission, a work for which the world seems quite ready.

#### JOSEPH EDWARD DAVIES: TRADE COMMISSIONER

FEW POLITICAL CAREERS HAVE BEEN MORE METEOR-LIKE THAN THAT OF JOSEPH EDWARD DAVIES, WHOM PRESIDENT WILSON HAS TAKEN FROM THE BUREAU OF CORPORATIONS AND PLACED ON THE NEW FEDERAL TRADE COMMISSION, PROBABLY TO BE ITS HEAD. IN 1901 HE TOOK HIS LAW DEGREE AT THE UNIVERSITY OF WISCONSIN, AND THE FIRST YEAR AFTER HIS ADMISSION TO THE BAR HE WAS ELECTED PROSECUTING ATTORNEY OF JEFFERSON COUNTY, AND SERVED AS TEMPORARY CHAIRMAN OF THE DEMOCRATIC STATE CONVENTION. IN 1910 HE WAS CHAIRMAN OF THE STATE CENTRAL COMMITTEE, AND THE NEXT YEAR BECAME THE WISCONSIN MEMBER IN THE NATIONAL COUNCILS OF THE PARTY. FOLLOWING HIS MANAGERSHIP OF WESTERN DEMOCRATIC HEADQUARTERS AT CHICAGO IN THE CAMPAIGN OF 1912, PRESIDENT WILSON MADE MR. DAVIES COMMISSIONER OF CORPORATIONS

# THE WATER BRIDGE

PASSING FROM THE

**T**HE upper picture is a panoramic view of the locks at Pedro Miguel. The apparent curvature is an optical delusion due to the range of the camera which includes an arc of nearly 180 degrees. On the left a vessel from Balboa is being raised to the height of over eighty feet above the sea level for passage over the great divide thru the Culebra Cut. As soon as the water which is pouring in thru culverts at the bottom of the chamber has raised the water to the level of the chamber above, then the double miter-gates of the lock will be opened by folding the leaves into the recesses which may be seen in the concrete sides of

the chamber. The leaves of the gate are sixty-five feet wide, eighty feet high and seven feet thick, weighing each 730 tons. They meet at an obtuse angle directed toward the upper end of the locks so as to resist the pressure of water above, on the principle of the arch. It requires only fifteen minutes to empty or fill a lock. It will be seen that the gates are duplicated so vessels may pass up and down at the same time. The lower picture shows the emergency dams, looking like steel bridges which may be used in case of a breakage of the gates. The one on the right has been thrown across the locks and the steel plates are

underneath to shut off the water. The cog rails on the side walls are driven by the electric towing locomotives. The power for this, as well as the lights seen on the rows of concrete lamp-posts on the walls of the locks, is obtained from the water pressure of the dams. We are now beginning to get some returns on the four hundred million dollars we have invested in the Panama Canal. During the first three months of the year, from the first of September to the last of November over one million dollars was taken in tolls. Half of this was from coastwise traffic, which Congress at first proposed to exempt from all dues. The

principal lines now running regularly thru the Canal are the American-Hawaiian, between New York and San Francisco and Honolulu about every three days, and the Luckenbach Steamship Company, between New York and San Francisco every ten days. For the month of December the Canal tolls amounted to \$1,547,100.45, from 356 ships of a total tonnage of 1,743,899, almost equally divided between eastward and westward. The principal cargoes were wheat, coal, nitrates, sugar, oil, cotton, iron ore and lumber.

# THE MOVING WORLD

## A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

### ANIMATED NATURE

Once a Tam O' Shanter dog  
With a plaintive piping frog  
And a cat whose one extravagance was clothes  
Went to see a bounding bug  
Dance a jig upon a rug  
And a beetle balance bottles on his nose.

THIS poem of our childhood was apparently prophetic of the jungle circus which Raymond L. Ditmars has staged for the motion pictures. As Curator of Mammals and Reptiles at the New York Zoölogical Gardens, Dr. Ditmars has acquired an uncanny familiarity with snakes and "such-like varmints," as those who have attended his lectures have seen, and now those who have not had this privilege may thru the movies see some of his pets, such as the nine-foot cobra and Gunda, the man-killing elephant. At the other end of the scale we have athletic exhibitions by insects, such as the housefly which—or who—plays with pithball dumbbells while riding in a chair on the back of an elephant beetle. At his Scarsdale studio Dr. Ditmars has constructed a sort of telephoto-microscope camera by which he can take pictures of the antics of insects and small animals for projection on the screen to a size that brings them within the range of our sympathy and understanding. These films, therefore, offer advantages for the actual study of insect movement and habits superior in some respects to life itself. It is a curious experience to feel a whole audi-

ence watching with muscles tense from sympathy a scarabeus laboring to roll its big ball up a two-inch declivity and then to hear the spontaneous outburst of applause as the coleopteran Sisyphus finally triumphs over the gravitation of the earth.

Dr. Ditmars has put together his latest films in a series called *The Book*

### THE HOME LIFE OF BIRDS

Moving pictures of remarkable interest to ornithologists were shown recently before the National Association of Audubon Societies. They consisted of pictures made by William L. Finley, an expert ornithologist and photographer, on several of the lakes in northern California and southern Oregon, and showed such rare and shy birds as Wilson's snipe, grebs and various terns, in the privacy of their homes, as it were. The cameras had been set by their breeding resorts under a cleverly contrived "blind" made of tule-flags and left there until the birds had entirely recovered from any fright or suspicion that they might have had at first.

More distinctly educational was a series of pictures exhibiting the rearing of a family of bluebirds by the two children of the photographer. These birds were taken into the house from an abandoned nest just after they were hatched and grew up with the utmost tameness and affection for their young benefactors; and all the pretty ways in which they manifested this trust and affection were shown in a long reel of kindly interest. The moral lesson of care was no more

conspicuous than was the zoölogical instruction as to the food and ways of a bluebird family. It is unfortunate, however, that these films are the property of the State of Oregon and are not permitted to be used outside of the state except by Mr. Finley.

GUNDA, THE MAN-KILLER

of *Nature*, of which "the jungle circus" forms the finale. In this the waltzing mice and the walking-leaves do steps surpassing the modern dances, the frog is both clown and high-diver, the jerboas do the jumping act, the monkeys the trapeze performance and the skunk, by

his mere appearance on the scene, adjourns the circus. (George R. Meeker. *New York*.)

Many American universities are using motion pictures in their classroom work, but the State University of Washington is, we believe, the first to introduce a course in the art of writing dramas for the film. Already the department of journalism is able to point with pride to the fact that some of the students taking the course have got real money for their photoplays.

THE DIVING FROG OF THE CIRCUS

NO CIRCUS FOR THE VICTIM

# BATTLE CRY OF THE MOTHERS

BY ANGELA MORGAN

Bone of our bone, flesh of our flesh,  
Fruit of our age-long mother pain,  
They have caught your life in the nations' mesh,  
They have bargained you out for their paltry gain  
And they build their hope on the shattered breast  
Of the child we sang to rest.  
On the shattered breast and the wounded cheek—  
O, God! If the mothers could only speak!—  
Blossom of centuries trampled down  
For the moment's red renown.

Pulse of our pulse, breath of our breath,  
Hope of the pang that brought to birth,  
They have flung you forth to the fiends of death,  
They have cast your flesh to the cruel earth,  
Field upon field, tier upon tier  
Till the darkness writhes in fear.  
And they plan to marshal you more and more—  
Oh, our minds are numb and our hearts are sore!—  
They are killing the thing we cherish most,  
They are driving you forth in a blinding host,  
They are storming the world with your eager  
strength—

But the judgment comes at length.

Emperors! Kings! On your heedless throne,  
Do you hear the cry that the mothers make?  
The blood you shed is our own, our own,  
You shall answer, for our sake.  
When you pierce his side, you have pierced our side—  
O, mothers! The ages we have cried!—  
And the shell that sunders his flesh apart  
Enters our bleeding heart.  
'Tis over our bodies you shout your way,  
Our bodies that nourished him, day by day  
In the long dim hours of our sacred bliss,  
Fated to end in this!

Governors! Ministers! You who prate  
That war and ravage and wreck must be  
To save the nation, avenge the state,  
To right men's wrongs and set them free—  
You who have said  
Blood must be shed  
Nor reckoned the cost of our agony—  
Answer us now! Down the ages long  
*Who has righted the mother's wrong?*  
You have bargained our milk, you have bargained  
our blood,

Nor counted us more than the forest brutes;  
*By the shameful traffic of motherhood*  
*Have you settled the world's disputes.*  
Did you think to barter the perfect bloom,  
Bodies shaped in our patient womb  
And never to face the judgment day  
When you and your kind should pay?

Flesh of our flesh, bone of our bone,  
Hope of the pang we bore alone,  
Sinew and strength of the midnight hour  
When our dream had come to flower.

O, women! You who are spared our wo,  
You who have felt the mother throe  
Yet cannot know the stark despair  
Of coffins you shall never bear—  
Are you asleep that you do not care,  
*Afraid*, that you do not dare?  
Will you dumbly stand  
In your own safe land  
While our sons are slaughtered and torn?  
Bravely thru centuries we have borne  
And suffered and wept in our secret place,  
But now our silence and shame are past,  
The reckoning day has come at last—  
We must rise! We must plead for the race!  
You who behold the mothers' plight,  
Will you join our battle cry with might,  
Will you fight the mothers' fight?  
We who have given the soldiers birth,  
Let us fling our cry to the ends of earth,  
To the ends of Time let our voice be hurled  
Till it waken the sleeping world.  
Flesh of our flesh, bone of our bone,  
Toil of the centuries come to speech,  
As far as the human voice can reach  
We will shout, we will plead for our own!

Warriors! Counsellors! Men at arms!  
You who have gloried in war's alarms,  
When the great rebellion comes  
You shall hear the beat  
Of our marching feet  
And the sound of our million drums.  
You shall know that the world is at last awake—  
You shall hear the cry that the mothers make—  
*You shall yield—for the mothers' sake!*

## THE HEBREW SCRIPTURES

WHAT I BELIEVE AND WHY—NINETEENTH PAPER

BY WILLIAM HAYES WARD

**I** MIGHT, perhaps, after a study of the evidence of Theism, and a statement far too brief of the basis and rule of duty, here end my discussion of belief and the reasons of belief, for all that is absolutely essential in Religion and Morals has now been reached if not covered. For it is incredible that a good God would not look with favor on a good man, who tried to live a life of good will to his fellow men and of honor toward God; for "what doth the Lord thy God require of thee" beyond this? For we may be sure that the abundant good will of God will be toward such a candid soul, even if

he knew no more and believed no more than this. But some further discussion is needed, both because much more is believed and often demanded, and also because further religious faith has been of great service in keeping men in the path of duty.

Passing, then, to the subject of Scripture, I observe that the adherents of a number of religions have books, or a collection of books, which they regard as sacred and authoritative. Chief among these religions are Hinduism, with its Vedas; Buddhism, with its Tripitaka, or Three Fold Path;

Zoroastrianism, with the Avesta; Hebraism, with the Old Testament; Christianity, which adds the New Testament, while retaining the Jewish Scriptures; and Mohammedanism, with the Koran; the old Egyptian Book of the Dead, and a long series of Babylonian hymns, and a multitude of other holy books, that have originated, some of them, as late even as our own day, of which our own country has produced its full share, such as the Scriptures of Mormonism and Christian Science, while Persia has within a century given us the holy books of the Babists. Because the religion in which I have

been educated and to which I have adhered is Christianity, I am obliged with great conciseness to give some reasons why its sacred books are superior to any others, and what is the nature of the authority on which they rest.

I can immediately dismiss the religion of the Vedas, for it is polytheistic. That excludes it from comparison; it is plainly untrue and unworthy.

Buddhism comes next. That also must be dismissed for a different reason. The central aim which it presents to its adherents is that they rid themselves of desire and ambition and feeling and hope, since all existence is bad, and the ultimate goal is absorption of being in the universal infinite; and this is to be achieved by a series of incarnations of successive lives of renunciation of pleasures. It appears to me to be a hopeless and hateful religion which offers no sort of evidence for its incarnations.

#### WHAT ZOROASTER ACCOMPLISHED

Zoroastrianism is a great advance on either of the two religions of India. It is so impressed with the conflict of good and evil in the world that it concludes there must be two mighty spirits, each supreme in his sphere, the utterly good Ahura Mazda, and the utterly bad Ahriman. These two are independent in their being, and so not infinite either in power or wisdom, for neither can destroy the other, at least during the present dispensation. Ahura Mazda created the world and all things in it good; he also created good spirits to rule the universe, what we would call angels and archangels. But whatever he created that was good was offset by corresponding evil creations by Ahriman, evil spirits, storms, diseases, wars, etc. Fire was the emblem of the good god, and sacrifices were offered to him. Much was made of purity of life, but of this, ritual purity was a great part—even the earth must be freed from defilement. There is a judgment after death, and also a final judgment, after which those who have been in Hell will endure a limited further punishment, when all things will be restored by the deliverance of a Savior. Then Ahura Mazda will destroy Ahriman, the good spirits will each destroy his evil counterpart, the icy mountains will be leveled to fertile plains, and a new dispensation of righteousness will reign on the earth. There is much in this like Judaism and Christianity, but the dualistic element in it, altho the power of Ahriman is finally overcome, together with its excessive ritualism, makes it, noble religion tho it is, far inferior to Juda-

ism or Christianity. Unfortunately we do not possess the original Zoroastrian writings, only texts of perhaps eight centuries after Christ, and we do not certainly know whether in the case of elements common to both the Jewish religion borrowed from the Persian or the reverse.

#### JUDAISM TODAY

The Jewish religion knows only one supreme God, creator of all things and of all beings. He is the infinitely wise and good God. This is its great excellence, and it accordingly insists on justice and righteousness. It had in early times a full ritual of sacrifices, but its ritualism mainly ended with the destruction of the Temple. It has in its Scriptures no clear doctrine of a future life of reward or punishment, but there are intimations of it in its later Sacred Books, and its apocryphal books are familiar with Heaven and Hell and with the activities of angels and devils. Present-day Judaism emphasizes the existence of God and the bearings of duty on this world, but pays little attention to the next. It retains the Mosaic legislation, with the observance of the seventh day and the feast days, but omits the sacrifices. While at present circumcision is universally retained as a distinctive rite, the more advanced keep nothing else except it be theism, and their religion is little more than ethical culture added to racial nationalism. In its stricter usage I cannot accept any of its ritualism as belonging to a pure religion, and in its more radical form it is scarcely a religion. Even so it is a racial religion, based on a rite.

#### MOHAMMEDAN MONOTHEISM

Mohammedanism is, like Judaism, purely monotheistic, and is the religion proclaimed by a single teacher, Mohammed, who got his ideas from a very imperfect apprehension of Judaism and Christianity, with influences from the neighboring Paganism. It is a religion of force, conquering by the sword, and it favors polygamy. Its notions of the future life are gross, and have borrowed much from Zoroastrianism as to Heaven and Hell and the judgment of the dead. It can be dismissed as inferior to Christianity, altho relieved of nearly all Hebraic ritualism. Of all the world religions Christianity in its various forms, or at least in its purest forms and in the character of its Sacred Books is easily the best. It holds to the personal and supreme God of Judaism; it requires only the simplest ritual observances; it magnifies justice and holiness, but it magnifies more the love of God as Father of his children

the world over, the supremacy of love over justice; and as Lord and Master it presents Jesus Christ who revealed God to the world; and it promises Heaven to the good and threatens Hell to the wicked. It expects the reign of righteousness on earth and a final judgment. It has its various schools of thought which emphasize or discredit various more or less distinctive doctrines, so that it is not possible to give a common creed; for what some would hold to be absolutely essential, others who equally claim and are allowed the name of Christian would deny.

#### THE VALID SCRIPTURES

Christianity accepts the thirty-nine Sacred Books of Judaism and adds to them the twenty-seven books of the New Testament. As I see no reason to accept the sacred books of other religions as having any binding authority on me, it will be requisite to consider only what I must believe as to the authority of these Jewish and Christian Scriptures.

There has come down to us by tradition and education a general belief in the Scriptures of the Old and New Testaments as having been given to us by revelation from God, or, at least, by writers inspired from God to give us true instruction as to religious history and duty. As to the degree and nature of that inspiration Christians differ. The value of a doctrine of inspiration is to assure to us the truth, and so the authority of the books inspired. The truth is the important thing, and the inspiration is supposed to put the seal upon the truth and forbid doubt. It is the truth in them that is of value.

The question now to be considered is that of the actual inspiration of Scripture, or of its nature and extent. The old view was that these books were so fully inspired by the Holy Ghost that absolutely no error of any sort is to be found in them. Few intelligent people, at least among Protestants, still adhere to this inherited view, while all Catholics are obliged to hold the strict doctrine of the Church on this subject. We have full right to judge of the inspiration of our Scriptures, and no Church has the right to impose its decision upon us. I claim that right to myself. The Church is made up of men, and I am a man with the rest of the members, and with equal right to judge. What I must judge is as to the truth of the statements made in the books, and the moral quality of their contents, whether worthy of God. On both of these points I have the right to judge and cannot help judging as soon as I begin to raise the question of inspiration.

And first, as to the Jewish Scriptures, what do they claim for themselves as to their inspiration? I take the thirty-nine books in order, not the order of the old Greek translation which our English translations follow, and even unfortunately the Revised Version, but that which has come down to us in the Hebrew text. By not following it the English reader misses the fact that the Old Testament is divided into three collections, of which the Law was the first to be received as canonical, followed later by the Prophets, and later still by the Psalms, or Hagiographa.

Of these three the Law includes what are called the Five Books of Moses. The book of Genesis makes no claim to have any authority different from any other book of history, and the same is true of the four succeeding books. We are not told who wrote them, and the anonymous author (or authors) makes no claim to special inspiration requiring belief. We are left to judge from their contents whether they are true, or how far they are true. We are told, to be sure, that a considerable part of the contents of Exodus, Leviticus and Numbers was repeated by God to Moses on Mount Sinai, such as the Ten Commandments; and many a chapter begins with the words, "And the Lord spake unto Moses, saying." For the contents of these chapters the writer claims not mere inspiration but absolute revelation from God who is said to have spoken to Moses face to face. But by whom the writer was told this, or from whom he quoted these many passages, or whether the writer, living then, or some centuries later, himself composed them we are not told. We must judge of them simply from their contents, unless we are willing to rest on the authority of the Church or of tradition; but that would be renouncing reason. We would not do that in the case of any other books.

Included in the collection called "Prophets" are Joshua, Judges, the two Books of Samuel and the two of Kings, followed by Isaiah, Jeremiah, Ezekiel and the twelve Minor Prophets. Of these the purely historical books, Joshua, Judges, Samuel and Kings are not attested as in any way differing from other books of the class, and I can see no reason why they should not be subjected to the usual canons of criticism.

#### THE PROPHETIC BOOKS

Next come the three Major and the twelve Minor Prophets. Of the latter Jonah forms an exception, as it is not properly a prophecy but on the face of it a religious romance, and it bears no attestation, not even the name of

its author. It is perfectly clear that the superscription to Isaiah in the first verse cannot cover the entire book, for the Isaiah there credited with the prophecies lived before the Captivity, while the author of the later chapters lived after the Captivity. A promise of return from the Captivity appears in 43:5-6 and 60:20. A date is set in 44:28 and 45:11, where Cyrus is spoken of as then reigning, and about to permit the rebuilding of Jerusalem. In 48:20-21 the Jews are bidden to escape from Babylon: "Go ye forth from Babylon; flee ye from the Chaldeans." They "were sold for nought," they "shall be redeemed without money." In 64:10 Jerusalem is said to be a desolation and the temple burned with fire. This was not true in the days of Isaiah. The book is thus a compilation, part of it written presumably by Isaiah, and the more valuable portion anonymous. Large portions of the book, whether from Isaiah or the later writer, are put in the mouth of God as his declarations; whether truly and historically his words or so attributed to him dramatically we are to judge. It is evident that here we have come into a new field of literary activity, that of the prophetic function, which needs consideration. Jeremiah is a book of oracles, "The word of the Lord came unto me," or, "The word of the Lord came unto Jeremiah," or "Thus saith the Lord." The conditions are the same in Ezekiel, with a richer development of visions.

When we come to the Minor Prophets, omitting Jonah, the conditions are still much the same. They are all declarations of the divine will, of hope or doom, interspersed with visions. The third chapter of Habakkuk is a late psalm, by way of exception, which has been attached to the oracles.

#### THE HAGIOGRAPHHA

The third division of the Hebrew Scriptures, the last to be incorporated into the Jewish canon, is the Hagiographa, and consists of the Psalms, Proverbs, Job, Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra, Nehemiah and First and Second Chronicles. Of these not one makes any claim for special inspiration except the latter half of Daniel. The first half is a collection of religious stories followed by a dream and visions granted to Daniel, a Jew of whom we have no historical knowledge beyond this book itself. As it is now generally admitted even by conservative scholars that the book of Daniel was not written before the time of Antiochus Epiphanes, that is, three cen-

tures after the times of the Daniel described in this book, and as it was a common convention at this period to put one's teachings into the mouth of some old authority, just as Plato and Cicero did in Greece and Rome, the ascription of the book to Daniel as a prophet falls away; and indeed the authors of the Jewish canon did not count him a prophet nor did they put this book with those of the prophets but into the latest collection. The earlier chapters appear to be, like Ruth and Esther, which also belong to the Hagiographa, edifying patriotic or religious stories rather than to be accepted as histories; while the last chapters of Daniel belong to a large class of eschatological books anticipating the coming reign of righteousness in which the writers of the class delighted, and of which Daniel is the best, and the only one to be received into the final Jewish canon.

Ezra, Nehemiah and Chronicles are purely historical and make no special claim to authority beyond their internal evidence. The Book of Psalms is made up of five separate books, probably of different dates of collection, and were used for worship in the Second Temple. Some are credited to their supposed authors or to collections, and others are anonymous. None of them make any more claim to superior inspiration than do the hymns of the Wesleys. Equally Proverbs is made up of various collections of wise and popular sayings, and, so far as their text goes, are to be judged by their intrinsic value. The next book is Job a drama enclosed in a story. It is anonymous, religious, doubtfully of Hebrew origin, and makes no claim to be treated with any more reverence than its contents require. It is a noble work, the story in prose and the dialog in poetry. The Song of Songs is composed of nuptial songs, is in no sense religious, and can be made religious only by such arbitrary interpretation as is to be seen in the titles of the chapters in King James's Version. Lamentations is a series of acrostic poems bewailing Jerusalem, the verses beginning with the successive letters of the alphabet, and it shows no reason why it should not be judged like other such poetry. Ecclesiastes is a late book the writer of which has put his philosophy into the mouth of Solomon, as the writer of Daniel put his apocalypses into the mouth of Daniel. No inspiration is claimed for it.

#### THE BOOKS THAT CLAIM INSPIRATION

We thus find that the Old Testament, the Bible of the Jews, claims revelation from God for the larger

# New and Forthcoming Macmillan Books

## Fiction, Poetry, Drama

### A Far Country

By WINSTON CHURCHILL. Mr. Churchill's new novel, which will arouse as great interest as its immediate predecessor, "The Inside of the Cup," one of the most successful of modern novels.

Ready in May. \$1.50

### Bealby

By H. G. WELLS. Mr. Wells's new novel, filled with the delightful humor which distinguishes the fiction of the author of "The Wife of Sir Isaac Harman," etc.

Ready in March. \$1.35

### Mrs. Martin's Man

By ST. JOHN G. ERVINE. A new novel of Irish home life and interesting characters written with power, tolerance, love and wisdom.

\$1.35

### The Present Hour

By PERCY MACKAYE. Vital poems dealing with the World War and filled with the expression of America's attitude.

\$1.25

## Government, Politics, Economics, Agriculture, Etc.

### The Life of Benjamin Disraeli

Earl of Beaconsfield

By W. F. MONYPENNY and G. E. BUCKLE. Volume III. Just published. The brilliant biography of the most picturesque and astute statesman that England ever produced. . . . "Volume III continues the stirring story of the career which Disraeli marked out and followed with impregnable patience and dauntless courage."

—New York Tribune.

Three volumes now ready. Each \$3.00

### The Panama Canal and International Trade Competition

By LINCOLN HUTCHINSON. A broad survey of the economic and commercial geography of the two great connected trade areas.

Ready shortly

### Artificial Waterways of the World

By A. BARTON HEPBURN. The best authoritative work on the canalized highways of trade of the world.

Illustrated, \$1.25

### Economics of Efficiency

By NORRIS A. BRISCO. Efficiency essentials analyzed and their application clearly pointed out.

\$1.50

### Principles of Fruit Growing

By L. H. BAILEY. Twentieth Edition. The text of this standard work revised throughout.

Just Published

## Philosophy, Ethics, Religion, Education

### Readings in Political Philosophy

By FRANCIS W. COKER. Presents in handy form important extracts from the great philosophical discussions of political questions from the earliest times.

\$2.25

### Modern Religious Movements in India

By J. N. FARQUHAR. A comprehensive survey of present-day religious tendencies in India.

Illustrated. Ready February 3

parts of Exodus, Leviticus, Numbers, Isaiah, Jeremiah, Ezekiel and eleven Minor Prophets, while no claim is made for the writers of the other books which make up the three Jewish collections of writings selected by the rabbis of two centuries before and nearly a century after the birth of Christ from their general literature to be held as sacred. This requires me briefly to consider the validity of the claims of those writers who speak as the mouthpieces of God.

It is as nearly certain as any fact relating to so ancient a period can be, that the so-called Five Books of Moses were not written by Moses. It is nowhere claimed in these books that he wrote them and they tell us that after him there arose no prophet like him, and the story is told of his death. Of course, writing was well known at the age of Moses, but in the Egyptian or Babylonian, not in the Hebrew letters or language. No such fragment of that age has been found. Of course, we can imagine the books written in Egyptian or Babylonian and translated into Hebrew 500 years later, but that is very improbable. The consensus of scholarship is that they were composed centuries after the death of Moses, and that the author made such use of materials as he could and by a perfectly legitimate literary convention of his day put into the mouth of Moses or of Balaam and into the mouth of the Lord the teachings which he believed to represent the religious history of Israel and the worship of Jehovah. In a way both historical and dramatic he has done what Milton did when in a more venturesome way he enters the council-chamber of Jehovah, and in the third book of *Paradise Lost* reports the long dialog between the Father and the Son. These five Books of Moses are of immense value for history and religion, but I cannot see that they carry evidence of possessing the binding authority of inspiration.

## WERE THE PROPHETS INSPIRED?

The case with the prophetic books is quite different from that with the Pentateuch. Here we have the definite claim of inspiration from the writers themselves. Prophets were numerous in those days, old prophets, young prophets, schools of the prophets in training as under Elisha, wandering dervish prophets, as in the day of Saul; and there were rival prophets who prophesied against each other, each, for aught we can see, impressed with the truth of his message, declaring it had been given him from Jehovah. An instructive story we have in the twenty-seventh and twenty-eighth chapters of Jeremiah.

Jeremiah advocated political submission to Nebuchadnezzar, king of Babylon, who had made a raid on Jerusalem and carried away captives and holy vessels from the temple. His advice was politic, but did not seem patriotic. He claimed an oracle from the Lord, but there were other prophets who also claimed to speak the word of the Lord, and who assured King Zede-

kiah of speedy deliverance and the return of the sacred vessels. To impress his wiser counsel Jeremiah put a wooden yoke about his neck, and went to the king and his princes and told them, from the Lord, that they must submit to the yoke of Nebuchadnezzar if they wished peace. But the prophet Hananiah entered the temple and proclaimed:

Thus said Jehovah of Hosts, the God of Israel, I have broke the yoke of the king of Babylon. Within two years I will restore to this place all the vessels of the house of Jehovah which Nebuchadnezzar, king of Babylon, took from this place and carried to Babylon; and Jechoniah, son of Jehoiakim, king of Judah, and all the captivity of Judah that went to Babylon I will bring back to this place said Jehovah, for I will break the yoke of the king of Babylon.

Jeremiah listened and only said he wished it might be so, but that the event would prove which had spoken truth. Then Hananiah took the yoke off from Jeremiah's neck and said, "Thus saith Jehovah, So will I break the yoke of Nebuchadnezzar off the necks of all these nations within the space of two years." Jeremiah was silent for a day or two, and then returned with a message from Jehovah declaring that instead of a yoke of wood a yoke of iron should be put on the necks of these nations, and that Hananiah should die within a year.

#### A PROFESSIONAL TERM

Apparently *prophet* was a general term, professionally allowed to any one who claimed it, and Jeremiah and Hananiah were equally known as prophets of Jehovah; and it would seem they equally believed they were speaking the will of God. The prophetic function was not peculiar to Palestine, for all the nations around had the same office under different names, given to diviners and interpreters of dreams and ministers of oracles. Even Cicero was an augur.

I cannot doubt that the select line of prophets received into the Jewish canon were the great moral and religious teachers of ancient Israel. They were infused with the sense of right and duty, and with a true patriotism which was held subordinate to their passionate loyalty to Israel's God. Their supreme religious fervor bore them much further than is exprest in the noble lines of John Quincy Adams:

And say not thou, My country right or wrong,  
Nor shed thy blood in an unhallowed cause . . .  
But when thy country tramples on the right  
Furl up her banner and avert thy sight;  
for they never wearied to beseech  
the people to return to their God, and  
they denounced his sure judgments on  
refusal to obey their warnings.

#### WHAT WERE THE PROPHETS?

I take it that a prophet was one who claimed to announce the will of God to the king, the priests, and the people. He was, with scarce an exception, a man of special education, of broad knowledge of affairs, with the attitude of a statesman competent to instruct

### Dinah and Her Jell-O Dessert.

"There's yo' Jell-O and peaches, chile. Yo' goin' to like dat. Jell-O's fine for chil'en 'at likes good things to eat."

Dinah is a cook—a great cook—but even Dinah cannot make other desserts so dainty and delightful as those she makes of

## JELL-O

They are "fine for children" and everybody else.

Any of the seven flavors of Jell-O may be used for these desserts, and for additional variety, peaches, pineapple, oranges, bananas, or other fruit may be added or used to garnish them. The Jell-O flavor is so delicious that it is never *necessary* to add anything to make it better.

A Jell-O dessert can be made in a minute by anybody.

The seven *pure fruit* Jell-O flavors are: Strawberry, Raspberry, Lemon, Orange, Cherry, Peach, Chocolate.

All Grocers sell Jell-O, 10 cents a package.

The new Jell-O book is a real Kewpie book, with pictures of Kewpies by Rose O'Neill herself. If you desire one and will write and ask us for it we will send it to you free.

THE GENESEE PURE FOOD CO., Le Roy, N. Y., and Bridgeburg, Can.

The name JELL-O is on every package in big red letters.

Be sure you get JELL-O and not something else.

## YOU KNOW AT LEAST TEN PEOPLE

who would be very glad to receive a copy of *The Independent* with your compliments. If you will send their names and addresses by an early mail, we will send the copies promptly.

# ATWOOD GRAPEFRUIT

## No Other Grapefruit Equals It In Flavor

THE superiority of Atwood Grapefruit is not an accident. From the first planting the Atwood Grapefruit Co. has sacrificed everything for QUALITY. An initial expense of hundreds of thousands of dollars was incurred, while everything that scientific culture and experience could suggest was done to produce QUALITY. Even then some trees at maturity bore simply *good* grapefruit, but *not good enough for the Atwood Brand*. These trees were cut down and replaced by superior varieties.

So through the various processes of selection, cultivation and elimination has evolved the ATWOOD FLAVOR, as hard to describe as it is difficult to produce.

People who have eaten Atwood Grapefruit say:

"It is absolutely the best grapefruit I ever tasted."  
"Fruit is fine and full flavored, 'The Best Ever'.  
"They are the nicest fruit we have ever tried."  
"The best that we have been able to secure."

"As usual, your grapefruit is 'way ahead."  
"Fully ripe and delicious."  
A well-known physician writes: "I prescribe grapefruit for all my patients, and tell them to be sure and get Atwood Grapefruit."

Atwood Grapefruit is always sold in the trade-mark wrapper of the Atwood Grapefruit Co.

If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave., New York City

# ENGLISH

"We have found your excellent magazine most helpful along two very important lines: discussions on what constitutes vigorous and effective English at the present day and oral practice on topics of greatest current interest. Another year I am sure that I shall make even more use of it for at least a part of the Freshmen. That part will consist of those who are desirous of doing work in Argument and Public Speaking rather than Exposition and Narration during, say, the last two months of the year; but this will be intensive work in elementary Public Speaking. As a preliminary experiment, I have already been running my own section in two parts. Several weeks ago, after each had been given several opportunities in the Oral Work, I offered my section the choice of theme work or Public Speaking work for the remainder of the term. The vote was nearly even--two more, I believe, being for the Oral Work. To satisfy myself of the relative merits of the two plans, I have directed each group along the road of its own choice. My plan for Public Speaking is to combine drillwork in Oral Expression with topics, debates and occasional addresses, and thus to start in the first year the development of student material for the very important function of Public Speaking. While we would not use the magazine every time or every week, I am sure, from this year's experience, that it will furnish a large amount of most helpful material."

Send for Free Pamphlet called

"How to Use The Independent in the Teaching of English," by Dr. Frederic Houk Law, Head of English Department of the Stuyvesant High School, New York.

## THE INDEPENDENT

119 WEST 40th STREET - - - - - NEW YORK

the court. More than this, he was an enthusiast, and he believed that what he said was the will of God. The prophets had the genius of poets, whether they wrote, in prose or verse. It is to be observed that if they delivered their "burdens" and oracles orally, they also wrote them down at their leisure, in such a literary style and with such passion that their writings were copied and preserved. They were prophets not because they foretold things, but because they proclaimed things on the authority of God Almighty; and their prophecies were all of judgments on Israel if she did not repent, and of the visitations of God's wrath on the nations that had oppressed Israel.

I cannot doubt that these prophets believed that they were speaking the will of God; but not that they believed they were repeating God's words dictated to them. Yet they believed it in a higher sense than that in which some earnest and passionate preacher, some Savonarola or Luther, now proclaims and foretells; some Benjamin Franklin, who says, "We must all hang together, or we shall assuredly all hang separately"; or some Lincoln, who trembles when he remembers that God is just. They were enthusiasts. They lived in an age when God seemed very near to man, when many a man saw visions and felt, or thought he felt, the very impulse of God in his soul. To them a strong conviction or a strong passion was the voice of God; and why may it not have been, and why may it not be now His voice when we feel the call of duty? They were human; they could err. They could speak only up to their conviction or their knowledge, some better inspired, some less so:

For every fiery prophet of old times,  
And all the sacred madness of the bard,  
When God made music thru them, could  
but speak  
His music by the framework and the cord;  
and as they felt it they have spoken truth.

### UNINSPIRED PROPHECIES

This does not exclude literary conventions, of the prophets' own composition, given as illustrations, parables, visions, put into the mouth of God. There is a multitude of threats of vengeance on other nations that we cannot approve, altho put into the mouth of Jehovah, as venomous as those in the imprecatory Psalms, of which Isaac Watts says in his notes on his metrical versions, "I have omitted the dreadful imprecations on his enemies" (Ps. 69); and "Rejoicing in the destruction of our personal enemies is not so evangelical a practise; therefore I have given the eleventh verse of this psalm another turn" (Ps. 92); and Psalm 137 he passes by entirely, with other passages, as not "so well suited to the spirit of the Gospel." No one can believe that God inspired the sadly human imprecation, "Happy shall he be that taketh and dasheth thy little ones against the stones"; and there are many whole chapters of such curses in the prophets which cannot be read with edification because they are unchristian, and

which I would never wish to translate for the instruction of Buddhists or Confucianists. I do not find the imprecations on Moab and Ammon in Jeremiah, or those on the surrounding nations in the two first chapters of Amos, helpful to devotion when read in either public or family worship; and I believe these "fiery prophets of old time" made their faulty music by the rude "framework and the cord," and not by the touch of the finger and the loving heart of the All Father. They were inspired in a measure, but I cannot see that it was by any such compelling influence as saved them from error, whether historical, scientific, ethical or religious. Always our best reason and best sense of right, that which we have learned from a higher Teacher since the days of those Hebrew prophets, must judge them, but most reverently, most gratefully, as having been the highest teachers the world had known, thru whom the knowledge of the one true God has come down to us; and yet they, without us, could not be made perfect. Too often they looked on Jehovah as the special Hebrew God, even as Naomi bade her daughters-in-law go back to serve the God of Moab. While a late evangelical prophet could anticipate the time when all the world should worship Israel's God, yet not in the whole Jewish Scriptures is there to be found a single command to seek the conversion of foreign nations.

THE INSPIRATION OF THE OLD TESTAMENT

The present is not a treatise on inspiration. I am merely trying in the most succinct way to tell what I believe and why I believe it. And I do not find in the Old Testament itself any evidence of any such inspiration as forbids us to judge it, and to accept or decline its teachings on any subject. Most of it claims no such inspiration. We would never imagine it authoritatively inspired if we had not inherited the belief, first from the Jews of a century or two before Christ, and then from the writers of the New Testament. The three books of the Pentateuch which tell us what God said to Moses are books of history, and we must judge of them by the same canons as we judge of the speeches given us by Thucydides as spoken by other leaders. For myself, I believe that these books were written long after the times of Moses and that they are not literally historical. The prophetic books are splendid works of inspiration, but not of such inspiration as the previous Christian generations have held them to be. The writers believed themselves to be speaking the will of God, and they wrote and spoke with authority. They promised good for the good and threatened evil for the evil, and also for the enemies of their nation. They spoke the highest utterance of their times, not of all times. Their teachings were not perfect, but they came as near perfection as human faculties and human conscience and faith could then attain. Their writings deserve to have been the Bible of the Hebrew people, but there was something better to follow.

# Imported Novelty Dress Cottons at McCutcheon's

We believe this to be the most exclusive assortment of Imported Novelty Dress Fabrics in this country. It contains many charming designs and attractive weaves which are wholly confined to us.

Our representative was in Paris when war was declared, and remained there for two weeks afterward. He was able, therefore, to secure the very latest productions of the French manufacturers. In many cases only sample pieces of designs and colorings had been manufactured.

The collection is really a notable one. It includes

**Embroidered Voiles, Embroidered Net, Embroidered Crepes, Silk and Cotton Tissues, White Gofine, Plumetis, Embroidered Batiste.**

**Heavy White Fabrics** for separate skirts.

**Ottoman Pique.**

**White Handkerchief Linen** with Self Stripes and Checks.

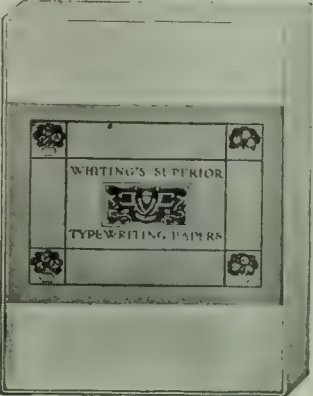

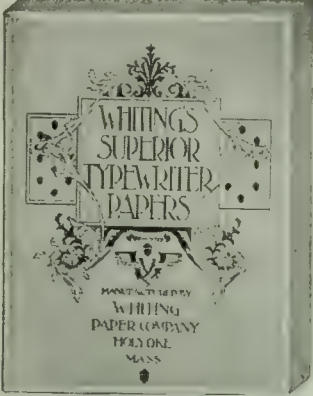

**Printed Handkerchief Linen** in all sorts of smart stripes on white grounds, plain colors to match.

**White and Colored Dress and Suit Linens, Linen Eponge.**

**Japanese Crepes, Shirtings** in upward of one thousand designs and colors, including "**Spun Silk**," a new fabric made in England expressly for James McCutcheon & Company.

*Samples of any of these lines, except bordered materials, mailed upon request.*

**Fifth Ave., 34th and 33d Streets, N. Y.**

## The Truth About Poultry

Get the Facts by Reading **The One-Man Poultry Plant**

Successful Methods of Men on Farms or Small Acreage. Complete in twelve parts; printed in one volume.

By **DR. N. W. SANBORN**

REAL work, with real poultry, on a real New England Farm. This is a simple story of what has been done by a man, at forty-five years of age, town bred and city educated, getting out of practice of medicine, buying a small farm in the hill country, and making a success of the venture. Not only is the rearing of chicks and the management of adult fowl completely covered, but the interesting side issues of fruit growing, grain raising and the production of milk, that cannot be escaped on a real farm. You get rugged facts—rarely found in print. The truth about poultry as found in actual life on a one-man poultry farm.

**You Can Do the Same, Book Tells How**

**OUR SPECIAL OFFER**—The One-Man Poultry Plant, in twelve parts (book form), and the American Poultry Advocate, one year for only 50 cts., book and Advocate, three years, for only \$1.00, if order is sent at once.

Our paper is handsomely illustrated, practical, progressive, and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cts. a year. 3 months' trial 10 cts. Sample copy free. Catalogue of poultry literature free. Address

# The New Books

## TREITSCHKE AGAIN

**S**TUDIES of the famous historian Heinrich von Treitschke continue to appear together with copious extracts from his works. The fullest and most careful survey of his writings and opinions which has yet appeared in English is by H. W. Carless Davis of Oxford University. The merit of the book is that it contains not only, as other recent books have done, a sketch of the man and a translation of his most startling statements, but draws its material from all of Treitschke's chief writings and thus shows his peculiar opinions not as isolated paradoxes but against their historic background of events and as a result of great changes in the man himself. The extracts chosen do not seem to be selected because of their sensational character, with the single exception that references to English history and policy are given at particular length since they would naturally be of greatest interest to British readers.

No one can read this full and fair portrayal of Treitschke's doctrine without being struck time and again by the historian's shrewd insight into many phases of contemporary politics and by the skill of his dialectic. But his great weakness as a historian was that he could not even conceive, much less understand, many aspects of the age in which he lived. Many arguments can be made against democracy, but what is to be thought of the political theorist that could advance against it the following quibble?

The very word "democracy" contains a contradiction in terms. The notion of ruling implies the existence of a class that is ruled; but if all are to rule, where is this class to be found?

Nor can Treitschke be considered more seriously as a philosopher of history. He was so preoccupied with the superior importance of the state to all other human concerns that he pours immeasurable scorn upon Richard Cobden for declaring that Stephenson and Watt were more important in history than Cæsar or Napoleon. What was to him a self-evident absurdity possible only to a narrow-minded cotton merchant of despicable Albion, has been long a commonplace among all historians who have studied the significance of the industrial revolution. Even in details of fact Treitschke is not accurate. When he says of the English House of Commons that until 1832 "not a single member of it owed his seat to the free choice of the people," he makes what every student of English constitutional history knows to be an exaggeration.

Do you realize how much time you lose hunting for your music?

## TINDALE Music Cabinets

Will keep your music in order so that you can find what you want when you want it. A variety of graceful designs, beautifully finished in Mahogany, Oak or Circassian Walnut. Prices moderate—cash or convenient terms. Satisfaction guaranteed or money refunded.

Made for Sheet Music, Albums, Player Rolls and Phonograph Records. Cabinet illustrated is for 600 copies of sheet music. Some designs especially suitable for use in schools—a wonderful time saver.

Cut out this advertisement, write your name and address in the margin and mail it to us for our illustrated catalogue No. 23.

**Tindale Cabinet Company**  
No. 1 West 34th Street, New York

# Constipation

## How to Fight It

Constipation is man's deadliest enemy. It kills more people than war, pestilence and famine combined. It begins subtly and causes Colitis, Appendicitis, Bright's Disease, Cancer and other dread diseases. Yet—Constipation can be remedied by steady attention to daily habits, diet and exercise. This is explained in a book by Dr. John Harvey Kellogg who thus gives you results of his treatment of thousands of cases of Constipation during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium.

Dr. Kellogg is the world leader in "Preventive Medicine." He teaches you how to avoid sickness and stay well continuously. Dr. Kellogg's books are not dry and technical, because—he has the happy faculty of making his writings intensely interesting and so clear and concise they can be understood by anyone. In his book on Constipation, Dr. Kellogg tells you how to rid yourself of this affliction and stay rid of it. The book is not large—only a little over 125 pages—but its contents are worth many times the price. In board covers, the price is \$1.50 but, to give the work widespread distribution, Dr. Kellogg has permitted a limited edition bound in library paper covers and, while these last, we shall sell them for only \$1.00 postage prepaid.

Order at once, if you wish to take advantage of this offer. You take no risk sending money because, if you are not entirely satisfied, you may return the book for prompt refund. Order today and get relief from Constipation. Address—

**GOOD HEALTH PUBLISHING CO.**

# MANUSCRIPT

Suitable for CLOTH BOUND BOOK issue; any field, 25,000 words and upwards, carefully read and considered WITHOUT charge. Published under our imprint and management, A-1 style, if accepted. Copy must be forwarded COMPLETE to warrant examination. Roxburgh Pub. Co., Inc., Boston, Mass.

As a matter of fact a few boroughs, such as Preston, had a wider franchise before the Reform Bill than after it. Treitschke, in a word, is significant among men who have made history, but second-rate among the men who have written it.

*The Political Thought of Heinrich von Treitschke*, by H. W. Carless Davis. New York: Charles Scribner's Sons. \$2.

### AN INCONGRUITY

A moving picture novel by E. V. Lucas. At first one is startled—then disappointed. In its side comments on life, suggestive of his usual whimsical, leisurely philosophy and in an occasional quaint character, *Landmarks* is reminiscent of the author's previous work, but one misses that irrelevancy of fancy wandering at will among books, people and places that gave such charm to *Over Bemertons* and *London Lavender*—for cinematic methods permit of no digression. The significant episodes in a man's life are introduced with moving picture abruptness as detached and isolated scenes from a curious imaginative boyhood merging into rather commonplace manhood—hopeless when judged by the standard of entertainment set by the cinema—delightful only when the author forgets for a moment his resolve to be modern and strays again into those odd, quiet byways of thought and life. The book is so like Mr. Lucas that one cannot but enjoy parts of it, yet so unlike that one protests at this exchange of old ways for new.

*Landmarks*, by E. V. Lucas. New York: The Macmillan Co. \$1.35.

### PROBLEMS BEING SOLVED BY WAR

*Problems of Power*, by W. Morton Fullerton, of which there has been a third printing since 1913, has gained, by the outbreak of war, both interest and timeliness. Its author interprets historical facts from an international perspective showing the dovetailing of events since 1870 into a pattern which joins both to the past of Napoleon and Bismarck and to the future—or rather to the present time of war.

Scribner's. \$1.

### HISTORY SERVED WITH POLITICS

To the second edition of the very valuable survey of *The Philippines, Past and Present*, Dean C. Worcester has added a new chapter, criticizing the present administration's government of the islands. As a former Secretary of the Interior for the Philippines and member of the Philippine Commission, he has an exceptional knowledge of the various races and he ardently defends the policy of the United States toward its Pacific possession.

Macmillan. \$6.

### A WOMAN'S SOCIOLOGY

According to a preface by John Galsworthy, *My Husband Still, a Working Woman's Story*, is a document against English divorce laws. The story, compiled from conversations and a diary by Helen Hamilton, is that of an English working woman unable, despite his unfaithfulness and debauchery, to free herself from her worthless husband. Its chief value is in reflecting the atti-

## STEINWAY

AN increasing popular demand for a piano adapted to the modern home or apartment has led to the manufacture of two new Steinways. These are Style M, the smallest Steinway Grand, and Style V, of the Upright type. They have the incomparable tone and the long life of the most costly Steinway. Yet, as a result of the smaller frame and case, enabling a saving in manufacturing cost, they are offered at prices lower than ever asked for this supreme piano. They make it possible for you to own the ideal piano—a Steinway—at a price you would expect to pay for many so-called "good" instruments.

*We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.*

## Gluten Flour

is prescribed by physicians as a diet for diabetics and cases of Kidney and Liver troubles, Rheumatism, Obesity, etc. The U. S. Pure Food Laws require that Gluten Flour must contain at least 35% of gluten or protein. Our Gluten Flour contains about 40% (a recent analysis showed 42%) and must not be confused with "Standard Gluten Flours" which contain 20% only. To be safe insist on getting Farwell & Rhines cross brand of Gluten Flour and other cereal specialties. For booklet or samples address:

**FARWELL & RHINES, Watertown, N. Y., U. S. A.**

## WHERE'S THE MONEY COMING FROM?

The children,—the house—the butcher and the gas company—all need more, and more and more money. You can't do any more work—and you can't do any different work. What are you going to do? That's your problem.

Your answer is here. You can get more money—for less work. When a corporation wants to make more money without increasing its plant it calls in a great Efficiency Engineer—like Harrington Emerson. Now—you can do the same for yourself—for Harrington Emerson has applied the same principles which he gave to 200 corporations to you, as an individual in the

### Course of Personal Efficiency

24 Lessons—With Charts—Records—Diagrams—Condensed—Clear—

showing you how to get the best results with the least effort. Through this course already 5,000 men are on the way to get what they want in the quickest, shortest, easiest way. The Treasurer of the biggest bond house in the Northwest saves hours every day—an author in New York does twice as much work and has more time to sell that work—a State official saves his State \$3,000 on one job.

The Efficiency Movement has swept the world because it has brought to men who saw no way out a new light to success. Other nations have profited—other nations make the most of their time and their talents—but we in this country—with our abounding wealth, have been prodigal with natural resources, with mental resources, with time. Now we must stop and reorganize.

And above all, it is the individual who must reorganize himself, because it is he who is at the basis of the trouble. Let The Emerson Course teach you to conserve your brains, your time—for these are your capital—just as money and machinery are the capital of a factory. Learn to invest them right. There's more coming to you out of life—Get it. Get

the money and rest and success you ought to have. You won't work longer—you'll work less. You are full of unused energy. Consider country people and city people. The thousand and one things to do—the quick decisions—the rapidity of the city man's life bewilder the country man. A day in New York is a terror. But give him a year in the city and he will keep the pace as well as any one. He will get ten times as much out of himself—and he won't be working any harder. That's what Efficiency will do for you who are already in the city. It will attune you to a new gait—a new zest and snap—and things will leap along where now they crawl.

These principles are not casual ideas of Mr. Emerson's. They are the scientific principles he has developed in forty years of study. He has applied them in over 200 factories, railroads and other organizations. They are studied by other Efficiency Engineers in America, England, France, Germany and other countries who have learned them from Emerson. His big organization in New York—he has 40 assistants) has taught Efficiency to steel mills and railroads, factories and publishers.

It's too big to explain—too new and too vital. Send the coupon for the first lesson free. Follow its instructions. Then if you feel you work easier and get bigger results—you can have the whole course. We have seen the tremendous effects of this one lesson. We have before us the letter of the man who says it "woke him up,"—the letter of the man who says he was on the wrong road and this lesson set him right. We know that's why we're glad to give you this lesson free—so you can be set on the right way without loss of time.

Now—today—send this coupon. You can't have last week's minutes back—but you can still use next week's right. Send this coupon now.

tude of the intelligent, self-respecting poor toward well-meant "meddling."

Bell. \$1.25.

#### BRIEFS FOR DEBATE

A vast and imposing array of arguments and facts Katherine B. Judson has assembled in the latest of the Debaters' Handbook Series, *Government Ownership of Telegraph and Telephone*. Both Postmaster Generals Hitchcock and Burleson have recommended the public acquisition of these communication lines, while each year the further advance of regulation brings the question into increasing imminence.

White Plains, N. Y.: H. W. Wilson Co. \$1.

#### OUR IMPERIAL AMBITIONS

J. M. Kenneday is an English writer of long residence in North and South America, and his *Imperial America* deals with the imperialistic influence of the United States on the politics of the world. His conception of American policies and his attitude toward "peace-mongers" are of the greatest interest at this time.

James Pott. \$3.

#### "DOUBLE TOIL AND TROUBLE"

The recent offsprings of Mary Johnston's brain, tho strong, have been rather too gruesome to be quite healthy, and the same characteristic stamps *The Witch*. The superstition and sorcery of England in the time of James the First lends dramatic and picturesque material a-plenty to the author's fertile if somber imagination, which is handled for the most part depressingly well.

Houghton Mifflin Co. \$1.40.

#### MODERNIZING PAUL'S TEACHINGS

Rev. Dr. J. R. Miller's devotional spirit and easy style give his volume on *Paul's Message for Today* an impression of intimacy and application to every-day experiences not usual in expositions of the life and letters of the great apostle. Each chapter is based on some significant experience or utterance of Paul and is full of wholesome counsel and exhortation.

Doran. \$1.25.

#### WHERE THE HELPING HAND IS NEEDED

Peter Clark MacFarlane has told of *Those Who Have Come Back*, eight true tales of criminals regenerated. Without prejudice or false sentiment, and with little dramatic effect, the author shows a sympathetic understanding of men and habits in the world of lawbreakers that may well serve to others as a guide to these much misunderstood unfortunates.

Little, Brown. \$1.35.

#### KANSAS MEADOW LARKS

*Sunflowers* is a book of Kansas poems collected by Willard Wattles and illustrated with sunflowers and bannered corn by Ivan Schuler. Various poets sing the praises of Kansas in different keys, but they unite in their enthusiasm for the prairie state.

Lawrence, Kansas: Willard Wattles.

#### A FRENCH ANALYST

THE HOME CORRESPONDENCE SCHOOL  
Department 103, Springfield, Mass.

## SHORTHAND IN 30 DAYS

Boyd Syllable System—written with only nine characters. No "positions"—no "ruled lines"—no "shading"—no "word signs"—no "cold notes." Speedy, practical system that can be learned in 30 days of home study, utilizing spare time. For full descriptive matter, free, address CHICAGO CORRESPONDENCE SCHOOLS, 931 Advertising Building, Chicago, Ill.

*The Awakening!* There is, however, a restraint even in the intense introspection which is rather effective in spite of cumbersome translation and the hackneyed theme of marital infelicity.

E. P. Dutton & Co. \$1.35.

## EXPLORING THE MOON

An excellent, simply written popularization of what science knows about the moon is *A Day in the Moon*, by the Abbé Th. Moreux, a French astronomer of some distinction. Without any fanciful absurdities to repel him, the reader really experiences the novelty of a visit to the jovial old man in the sky.

Stokes. \$1.

## FIRST COUSIN TO MRS. WIGGS

That cheery, optimistic philosopher Martha is good for the soul. She is so satisfyingly human, and *Martha and Cupid* is as full of wit and common sense as *Martha-By-the-Day*. Julie M. Lippmann has created a rare character who manages an ordinary world in a most extraordinary way, making and finding a deal of fun in the process.

Henry Holt & Co. \$1.

## RELIGION IN THE OPEN COUNTRY

No other institution presented a better point of approach or formed so favorable a center for the forces of social betterment than *The Rural Church Movement*. Professor Edwin L. Earp, as one of the leaders and earnest students of the movement, writes with authority upon the theme. His volume is excellent in its optimism, suggestiveness and clean-cut presentation of facts. A dash of humor and sturdy common sense attract as well as edify the reader.

Methodist Book Concern. 75 cents.

## A HAWTHORNE BIOGRAPHY

A painstaking, readable biography is *The Life and Genius of Nathaniel Hawthorne*, by Frank Preston Stearns. Some few minor errors of previous works are corrected, but its critical estimate of Hawthorne's work discovers nothing new. Interesting on account of the author's comparison of the New England novelist to the great colorists of painting.

Badger. \$2.

## SERVING HIS FELLOW MEN

The late President of the American Board of Commissioners for Foreign Missions, *Samuel Billings Capen*, was a layman whose distinguished services in missionary organization and administration entitled him to high honor. But in his later years, as his biographer, Rev. Chauncey J. Hawkins, points out, his other interests were entirely submerged in a world call for Christian ministrations and ideals.

Pilgrim Press. \$1.25.

## EXPLAINING THE PARABLES

Rev. R. M. Lithgow has collected into a modest volume on *The Parabolic Gospel* a number of very suggestive essays, setting forth a synthetic scheme of Jesus' Parables, their theology and symbolism as well as the development of Christ's doctrine found in them. The book is judicious, thoughtful and conservative.

Scribners. \$1.25.

Tear it out when attended to

The Robinson Reminder

## Will Tell You Instantly

Don't trust important engagements or valuable ideas to memory or an ordinary note book filled with old notes. Use the Robinson Reminder which preserves only *live* notes.

The Robinson Reminder consists of a perforated pad of couponed sheets, six coupons to a page, enclosed in a handsome Black Leather case (3 1/4 in. wide by 6 3/4 in. long), with a pocket for holding special papers. You make each note on one of these coupons and as soon as it has ceased to be of value, you tear the coupon out and throw it away. No useless matter is kept to hide the other notes.

Reminder complete with extra pad, postpaid for \$1. Individual names in gold, 25c. extra. Send remittance at our risk and we will send Reminder on money back guarantee.

## WHAT 15¢ WILL DO

The little matter of 15c in stamps will bring you the *Pathfinder* for 13 weeks on trial. The *Pathfinder* is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the *Pathfinder* is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the *Pathfinder* on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address The *Pathfinder*, Box M, Washington, D. C.

## THE INDEPENDENT WEEKLY, INCORPORATED.

The annual meeting of the stockholders of The Independent Weekly, Incorporated, will be held at the office of the corporation, 119 West Fortieth street, Borough of Manhattan, City of New York, on Tuesday, February 2, 1915, at eleven o'clock in the forenoon, for the election of directors and for the transaction of such further business as may properly come before the meeting.

FREDERIC E. DICKINSON, Secretary.

Dated, New York, January 20, 1915.

## SUPPLEMENTARY READING

"We have been using The Independent for several years as Supplementary Reading matter for our Freshmen at the opening of the year. It is a good thing for the Freshmen to have something at hand to read which is worth while, when they are away from their homes. Sometimes we use numbers of the periodical for class work in various ways. Perhaps we may use an article as an illustration of some point we are discussing in the composition work. Sometimes we have analyses and summaries written. Generally we use the "Story of the Week" for class discussion with the purpose of giving the men some training in Oral Expression and independent thinking on Current Events of importance."

## EFFICIENCY QUESTION BOX

CONDUCTED BY

**EDWARD EARLE PURINTON**

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

21. Mr. M. F., Long Island. "I am told that my efficiency is greatly impeded by self-consciousness and conceit. Kindly let me know how I can overcome it."

There is a great difference between self-consciousness and conceit. If you were really conceited, you would not ask to be cured of conceit. Your handwriting shows that you are supersensitive; and many a person who feels things more deeply and finely than his neighbors is charged by them with conceit, irritability, pride, or some other manifestation of a high-strung nature. Is your condition a moral failing? Or is it a physical, mental or psychic tendency? Get this matter clear in your own mind.

Among the cures for self-consciousness are these: a habit of vigorous out-door games or exercises, which takes the blood from your brain and puts it in your arms and legs; a scheme of charitable work or social service undertaking, whereby you are made more conscious of the lives of others—the ill and poor and needy, therefore less conscious of your own; a sincere desire to understand and please and cooperate with your associates, in school or home or business; a careful attention to dress and personal appearance in general, that you may wear, do or say nothing peculiar to attract people's notice.

The Kleiser Course in Public Speaking might aid you in correcting the weakness. Write Funk and Wagnalls, 354 Fourth Avenue, New York City, for particulars of this course. Boxing lessons, or generous use of the punching bag, should harden your sensibilities while hardening your muscles.

22. Mr. J. M. B., Iowa. "I am a college student. When I was taking high school work my grades were much better than they are now. I have never used tobacco, or anything of that nature; but have a tendency to be intemperate in eating and am beginning to think therein lies some of my trouble. I am determined if possible to get at the root of this matter during vacation, and am ready to try anything that would help me. What do you advise?"

Your surmise is probably correct. Food lies at the basis of physical, mental and spiritual growth; yet in most colleges the subject is entirely neglected, and the typical "hash-house" providing alleged nutrition for college students would sour the sweet temper and frustrate the inner machinery of an ostrich. How do I know? Because I ate the ungodly stuff served in a college "frat"—and was saved by a miracle, to tell the awful tale. Nibbles and "feeds" and "spreads" and goulashes, and snacks and dinners and banquets galore, this in a college town, where people are supposed to use their brains, tempts one to ask what colleges are for.

Never mind—your task is to straighten out yourself. And when you do it in spite of your surroundings, you will deserve all the more credit.

Why did you not tell us what and when and where and how you eat? Learn to give concrete, material facts, in your letters to the Service. You could not spend your summer vacation more profitably than with a few books on diet, and a large determination to master and apply them. But you should have stated where you will be, and whether you can carry out a new dietetic regime.

You may well study the books of Horace Fletcher on diet and mental attitude; the publisher is Frederick A. Stokes Company, 443 Fourth Avenue, New York City. A book by Bernarr Macfadden, *Fasting Hypodermic and Exercise*, would reveal some new facts for you to ponder. Write Physical Culture Publishing Company, 949 Broadway, New York City, for descriptive leaflet. My book, *The Philosophy of Fasting*, based on a thirty-day fast which I took some years ago for scientific purposes, might give you a new conception of the functions of food. The last edition of this book is now exhausted, but a new one is planned for the near future; if ready before summer, notice will be sent you.

We congratulate you on your wisdom and your power of self-analysis, both of which are unusual in a young man of your age. If we can help you further, let us know.

23. Mr. S. J. H., Washington. "I am a young specialty salesman. How can I cultivate that winning personal style—that breezy atmosphere or friendly address which turns many a trick that nothing else can? How can I develop those magnetic qualities that win men and favors? How can I learn to unfold that magic skill of instantly and favorably adjusting myself to all kinds of people with whom I deal?"

You don't want advice—you want Aladdin's Lamp. Moreover, we are not in the business of "turning tricks." Your letter does not sound to me wholly sincere—pardon me if I misjudge you. Why do you want to win "favors" from anybody? Are you a man—or a beneficiary? The important thing, in salesmanship or any other line of endeavor, is not style but substance. Would you buy a gingham coat, even though in the latest style? No more will your patrons buy a gingham substitute for all-wool salesmanship.

However, the Shelton School, Gunther Building, Chicago, may tell you how to be a better salesman—first by teaching you right principles. And William E. Towne, Holyoke, Massachusetts, could send you a list of modern books on personal magnetism and the psychology of salesmanship.

Among the ingredients of your "magnetic personality" are these: An overflowing supply of health and buoyant animal spirits; a close personal attention to the details of dress, and immaculate care thereof; a choice of the salesproduct that you know to be the best of its kind in the world; a thoro knowledge of the product, and complete faith in the service it will give; a secret, systematic study of your so-called "rivals" in the field—not to imitate or rob them, but to avoid their blunders; a regulation of your meal hours so that when you interview a man your brain will be full and your stomach empty; a habit of unflinching optimism that prompts you to smile gracefully at apparent defeat; and a sincere desire to give a little more than you get, with some real personal service thrown in for good measure.

24. Mr. G. R., Massachusetts. "Would it be out of your line to tell me whether the Dickson Memory Course is all that the founders claim?"

The Service does not pass on the merits or demerits of any aid to Efficiency. Noted thinkers have endorsed and praised the Dickson Course. The fact of its being advertised so extensively, and of having become an established institution, argues on the side of its value to subscribers. We would recommend that you obtain particulars of all books or courses on similar lines, and make a thoro comparison of scope, aim, and probable benefits. Then use your own judgment.

# THE MARKET PLACE

## AN ERROR IN ALLOTMENT

Some errors were made when the Federal Reserve districts were marked out by the organization committee. One of them was the assignment of the banks of northern New Jersey to the Philadelphia district and reserve bank. The northern counties of New Jersey, just across the Hudson River from the great city, have been and are, financially, a suburb of New York. The banks there do business with New York banks. To assign them to the Philadelphia district bank was to cause inconvenience and loss. The Federal Reserve Board has power to correct such errors, and it heard, last week, the arguments of the New Jersey bankers who ask that their institutions shall be assigned to the district bank in New York. State Comptroller Edwards predicted that if the desired change should not be made, in five years there would not be a national bank in the two northern counties, Hudson and Essex.

Many were surprised when the allotment in question was made by a committee, one member of which was Secretary McAdoo, thoroly familiar with banking conditions and practise on both sides of the mouth of the Hudson River. The central board should now attach northern New Jersey to the New York district.

## COST OF THE WAR

Several estimates of the cost of the war, in money, have recently been published in Europe. Addressing a meeting of bankers on the 22d, the editor of the London *Economist* spoke of his original estimate that the cost to the belligerent nations in Europe would be \$50,000,000 a day. As 170 days of the war had passed, this would mean \$8,500,000,000 thus far, a total not including the expenditures of Japan, or Belgium, or the neutral countries. His journal, the *Economist*, makes the cost in Europe for the first six months \$8,575,000,000, and says the cost for Great Britain per day was \$9,850,000 in December. An exhaustive study of costs has been published in Berlin by *Vorwaerts*, the Socialist paper, which finds that the daily expenditure is about \$45,962,000, and that the total, up to January 1, was \$6,894,300,000. At this rate, the cost for a year would be \$16,676,130,000.

Economic losses and those due to the destruction of property are not included in these estimates. The *Economist's* editor says that if 1,000,000 Europeans have been killed or maimed and disabled, this is a loss of \$2,500,000,000. Reports based upon official bulletins at Vienna and Berlin showed last week that the number of Germans and Austrians killed or wounded was 1,149,084, the Austrian losses of the last two months not being included.

## ADVICE ABOUT RAILROADS

At a meeting of the Republican Club in New York last week there was a debate about government ownership of our railroads. The speakers were B. F. Yoakum, recently chairman of the St. Louis & San Francisco Railroad Company's board of directors; Congressman Bryan, of Washington; Thomas F. Woodlock, editor, financier and student of railway conditions; and Professor E. S. Mead, of the University of Pennsylvania. Mr. Bryan was the only advocate of government ownership. We do not propose to summarize here the arguments of the speakers, but only to comment briefly upon Mr. Yoakum and the presentation of his opinions, to which much space has been given by the daily press. He set forth several reasons why, in his judgment, the Government should not and will not buy the railroads.

He also urged that the Government, the bankers and the builders of roads should coöperate in procuring the construction of new lines. The Government should "give material encouragement," he said, because "it is difficult to find investors for new railroad securities under existing conditions." Not long ago he was expressing the opinion in public that the Government should go into partnership with the owners of private capital in both the construction and the management of railroads, exercising supervision and sharing the profits.

We do not understand why any considerable weight should be given to the advice of Mr. Yoakum, who, since the memorable bankruptcy of his railroad company, has sought opportunities to give it in a more or less public way.

The records of the Interstate Commerce Commission's inquiry concerning the St. Louis & San Francisco bankruptcy showed that he, being chairman of the board, entered into syndicate partnership with several other directors and two or three of the company's executive officers with respect to the purchase and sale of railroad property. These syndicate groups bought lines which could be made subsidiaries of the Frisco, and then sold them to the Frisco, their own company, at a comfortable profit.

Mr. Yoakum, in association with eight other directors or officers, for example, acquired by purchase, for \$3,891,000, a piece of railroad property which they promptly sold to their own St. Louis & San Francisco Company for a sum that showed a profit of \$3,000,000. His investment was \$300,000, and his profit \$228,413. There were many ventures of this kind. It was shown by the commission's inquiry, which did not cover all them, that the profits of the members of the syndicate groups had been at least \$7,038,000.

In the great railroad industry of the

United States there have been dark spots. One of them was shown by the Frisco bankruptcy; another by the recent history of the New Haven Company. These two cases have had weight in making investors cautious, in causing that "difficulty," mentioned last week by Mr. Yoakum, encountered in the search for "investors in new railroad securities." They have also been to the disadvantage of the entire railway fabric, exciting popular opposition, promoting severe legislation, and causing restriction in various ways. The American public does not care to be instructed or advised about railroad ownership and management by Mr. Yoakum or Mr. Mellen, and we think the railway industry, as a whole, would prefer that they should be silent.

#### FRAUDULENT PRIVATE BANKS

It is now known that at least twelve persons who were depositors in the so-called private savings banks which were closed last year by the New York Superintendent of Banks, Mr. Richards, have committed suicide because of the loss of their savings, which they had been induced to place in those banks. Probably the number of suicides due to these losses is greater, but twelve cases have been made known to the public.

Mr. Richards became Superintendent a short time after the banking laws of the state were revised, in accordance with the report of a special commission. That part of the revision which related to private banks had been suggested by the commission's inquiry concerning the failure of a private bank conducted by Siegel and Vogel in connection with a large department store. The deposits—placed in the bank by the poor, who were attracted by the rate of interest—exceeded \$2,000,000, and only a small part of this money will be recovered by those to whom it belongs. The revised law gave the Superintendent power which his predecessor had not had. He could employ competent special agents to ascertain the actual condition of the private banks. His annual report, published a few days ago, shows that no less than 338 special investigations have been made under his direction. Many of these related to private banks, nine of which have been closed by his order. Their deposits amounted to \$11,173,000, and at the time when his report was written—it was sent to the Legislature on January 6—only \$710,000 had been returned to the depositors.

Superintendent Richards asks for amendments to the law, and recommends that his power, with respect to private banks, be increased. The law should be so amended that it will prevent the existence of such banks as those which he closed.

## IMPORTANT TO TEACHERS

It is letters like this that show how teachers regard The Independent. We have more than one hundred similar letters in our files, and they show us that The Independent makes good with good teachers.

Altho it is the business of the instructor to keep in touch with a half dozen standard weeklies, the motives which led to a selection of The Independent for our work are these: This magazine presents a positive and sane discussion of vital matters, yet one from which we can occasionally fairly dissent. It presents definite information, and trustworthy, unencumbered by discussion. Its articles are brief enough to fall within the compass of high school pupils. It is devoid of nonsense and casuistry. It contains a great deal of current history in concise form. It is comprehensive and cosmopolitan in its contents. Now this looks very much as if I were writing an advertisement for the magazine, but I mean it simply as a statement of facts which formed our judgment. I esteem certain other magazines very highly, but I regard The Independent as peculiarly adapted to our needs.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

*This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.*

### WANTON WASTE

According to the estimate made by the *Journal of Commerce*, the fire loss of the United States and Canada for the year 1914 aggregated \$235,591,350, an increase over the figures of 1913 of nearly \$11,000,000. This is the heaviest annual loss by fire in the history of the country with three exceptions: 1908, the year of the conflagration at Chelsea, Massachusetts; 1906, when San Francisco burned; and 1904, the year of the big fire in Baltimore. There have been no conflagrations during the past six years (1909-1914), and the total estimated loss for that period is \$1,357,997,700. The annual average is \$226,332,817. Close students of the subject assert that seventy-five per cent of our fires are preventable. According to that formula, the people of the United States and Canada, thru carelessness and negligence, have permitted the destruction, during the past six years, of property valued at \$1,018,498,275.

### GILDER POLICY ASSOCIATION

A life insurance contract to be known as the Gilder Weekly Income Policy has been approved by the New York Insurance Department for use by any of the companies of that state choosing to adopt it. This policy is the product of the Gilder Policy Association, an organization of the friends and admirers of the poet, Richard Watson Gilder, whose death occurred several years ago. The labors undertaken by the members are purely selfish and are dedicated as a memorial to him.

Investigation discloses, says Mr. R. G. Cholmeley-Jones, president of the association, that two-thirds of all those obliged to appeal for assistance, following the death of the bread-winner of a family, are in economic straits only during the first year thereafter, and that the policy which has been devised by the association will cure this deficiency. The arrangement provides for the use of the policy by such life insurance companies as will coöperate in the work, it being understood that they are not to be issued thru agents, the object being to save that expense.

Applicants for them must, on their own initiative, or thru the inducement of employers or friends, take them themselves.

The policies will provide \$75 on the death of the person insured with a weekly income to his or her surviving dependents, during fifty-two weeks, ranging in amounts from \$10 to \$17, the premium cost varying with the amount of the weekly income. It is the belief of the association that there are thousands of people who will avail themselves of the opportunity now afforded by this plan to protect themselves and families against the rigors of poverty consequent upon the death of their supporting members.

Looking for the support of the life insurance companies Mr. Cholmeley-Jones, regarding them as public institutions, established and maintained for the protection of the people, asks if they may not be expected to adopt this contract. "The people surely deserve an opportunity to secure at as low a cost as possible," he asserts, "at least one form of insurance policy, which may be bought directly from the office of the insurance companies—over the counter, so to speak—so that people with small incomes may be given every possible advantage."

The writer regards the efforts here being made by the Gilder Policy Association as worthy of success; it is a piece of beneficence that should find appreciation among the earners of small wages and large families. The authors of the plan, however, doubtless appreciate its main defect, that is, the inertness, the disinclination of the average human being to get himself insured.

In his annual message to the Legislature of Pennsylvania, Governor Tener recommended the adoption of a standard fire insurance policy, a provision licensing fire insurance adjusters and another conferring authority on the Insurance Commissioner to examine and supervise fire insurance rates.

The State Fire Insurance Commission of Texas was established December 10, 1910. It has kept a complete record of all fires and their causes since. Up to January 1, 1915, the total of dwellings, boarding houses, outhouses, etc., destroyed or damaged, was 20,644; of mercantile buildings, special hazards, etc., 24,356. In the class first enumerated 18,355, or eighty-six per cent; and in the other class, 19,592, or seventy-three per cent, were preventable.

As a model of economy in the administration of a receivership may be mentioned the liquidation of the National Slavonian Union of Yonkers, New York, a fraternal life insurance order, by the liquidation bureau of the New York Insurance Department. All death claims, totalling \$4,123.42, were paid in full, leaving a surplus of \$367.94. The liability for general claims was \$454.21, so that the owners of the latter received eighty-one per cent. The cost of liquidation was only \$77.03.

## PEBBLES

"At last I am at the end of my troubles," exclaimed the Optimist.  
 "Which end?" asked the Pessimist, gloomily.—*Life*.

Dennis—Good mornin', Mrs. Murphy, an' is Pat at home, sure?

Mrs. Murphy—Sure, where are your eyes, Dennis Dinny? Isn't that his shirt fornenst ye hangin' on the loine!—*Sydney Bulletin*.

"Do you think only of me?" murmured the bride. "Tell me that you think only of me."

"It's this way," explained the groom, gently. "Now and then I have to think of the furnace, my dear."—*Louisville Courier-Journal*.

The Governor's wife was telling Bridget about her husband.

"My husband, Bridget," she said proudly, "is the head of the state militia."

"Oi t'ought as much, ma'am," said Bridget cheerfully. "Ain't he got the foine malicious look?"—*Southern Woman's Magazine*.

Bobby had been taught to remember all his relatives when he said his prayers. One night, as he knelt at his mother's knee he did not mention the name of a favorite aunt.

"Why, Bobby," said the mother, "you didn't say 'God bless Aunt Beatrice and make her happy.'"

"Well, mother," replied the little boy, "I don't have to say that any more, Aunt Beatrice's engaged."—*Sunshine*.

Two nursemaids were wheeling their infant charges in the park when one asked the other:

"Are you going to the dance tomorrow afternoon?"

"I am afraid not."

"What?" exclaimed the other. "And you so fond of dancing?"

"I'd love to go," explained the conscientious maid, "but to tell you the truth, I am afraid to leave the baby with its mother."—*Harper's Magazine*.

## FROM THE NEUTRAL NATIONS

[The recent boom in the export of copper from America to the neutral nations is very significant. If the enemy's supplies of this article—an essential in the manufacture of cartridges, etc.—were cut off, the war would come to a speedy end. The figures for September and October, 1914, show an increase of nearly 400 per cent over the corresponding figures for 1913.]

O Britain, guardian of the seas,  
 Whose gallant ships (may Heaven speed 'em)

Defend the wide world's liberties  
 Against the common foe of Freedom;  
 Doubt not where our true feelings lie;  
 We would not have you come a cropper,  
 Altho it suits us to supply  
 That common foe with copper.

Dear Land of Hope, in which we trust,  
 Beneath whose ample wings we snuggle,  
 Safe from the Kaiser's culture lust  
 And free to live and smile—and smuggle;  
 Devoted to the peaceful arts,  
 We keep our conduct strictly proper,  
 Yet all the time you have our hearts  
 (And Germany our copper).

Altho the crown is theirs alone  
 Who crush the tyrant's bold ambitions,  
 Peace hath her profits, all her own,  
 Derived from contraband munitions;  
 And you who fight for Freedom's aims  
 Will surely shrink to put a stopper  
 Upon our bagmen's righteous claims  
 And burst the boom in copper.

Once more we swear our hearts are true  
 And, like the tar's connubial token.  
 "It doesn't matter what we do"  
 If we but keep that pledge unbroken;  
 So while we pray for Prussia's fall,  
 And look to your stout arm to whop her,  
 We mean to answer every call  
 She makes on us for copper.

—O. S. in Punch.

## "What You Will!"

### *The New Year Will Be What You Make It*

1915 is at the threshold.

Its hand is on the latch-string. It waits only a beckoning nod to come in. It is here for a twelve months' stay.

It says:

"Do with me what you will. I shall be what you make me. You are the host; I am merely a visitor, passing on my way, which is to be your way, too.

"I can be sunshine or cloud; gay or sad, rich or poor.

"Make much or little of me while I am with you, but remember that I come but once.

"When I pass on, I am gone forever."

What shall we do with this arriving guest, Mr. Business Man, Mr. Financier?

"Do with me what you will," he bids us.

Could we ask more? *What you will!*

There are tremendous possibilities in that line—what you will.

It has no horizon.

It puts a broad foundation under every man's effort, every man's hope.

It is the touchstone of fortune, the driving-wheel of achievement.

It is the spirit that has covered our farms, from ocean to ocean, as with a cloth of gold, and peopled our cities with the world's pick of those who seek the light of better days.

It never dreads failure; it thinks only of success.

We have it in ourselves, then, Big and Little Business Man (especially Big Business Man), to make 1915 our year of opportunity.

Opportunity for each of us. Opportunity for all of us.

We can make it a go-ahead year or a standstill year; a doubting, timid, do-nothing year, or a confident, aggressive, achieving year.

We can deaden it with new fears of *perils that are past*; or vitalize it with confidence in triumphs yet to come.

What are *you* going to make of it, Mr. Business Man, Mr. Financier?

Do you propose to wait doubtingly while others create prosperity?

Are you to keep close to the shore while others are daring? Or are you going to do your part and plan for 1915 in the big, optimistic way the late J. P. Morgan always planned—backing the United States to win its way to prosperity every time?

It is "what you will" that will tell the story of 1915!

*This is the third in the series of forward-looking editorials from the New York "Evening Mail," reprinted thru the courtesy of the editor of the "Mail."*  
THE EDITOR.

## THE CHAUTAUQUA IDEA

BY DR. FRANK CRANE

The intellectual life is for anybody that wants it.

Time was, and to too great an extent now is, when it was supposed to be the privilege of a few.

This perverse humanity loves nothing so much as to separate into exclusive circles; socially it must have its classes, smart sets and clubs; politically it does not seem capable of moving without parties; religiously it can only express itself in sects; and intellectually it runs to esoteric humbug. Humanity clots, like blood.

The average college or university openly boasts of fitting people for a class.

But there is no intellectual class. Anybody that desires can be intellectual. The intellectual life is a great joy. It widens the resources, extends the outlook, prevents boredom, deepens and stabilizes the emotions, and altogether makes life more worth living. Every man and woman should cultivate it, if only to add to the treasures of contentment.

It is open to you. Shop girl, factory worker, stenographer, traveling man, housewife, servant girl, bootblack, messenger boy, dry-goods clerk, letter carrier, chauffeur, stable-boy, railroad man, store-keeper, whoever you are, you may make the pleasures of the intellectual life yours.

All you need to do is to learn the secret of intellectual *recreation*. It is your *play* that forms you, more than your *work*.

"What shall I read? What books shall I get?" This question is asked me again and again. A letter is before me now, from a young girl clerking in a store; she has only a high school education; she wants to do something with her mind.

I feel that this question should be answered definitely, so that the inquirer may know exactly what to do and not be put off with generalities.

Therefore I say, "Take the Chautauqua Course." It is carefully planned for ordinary people, and has less of the affectation of the professors and literary Brahmins about it than anything I know.

It consists of a number of well-selected books and a magazine, with regular studies marked out.

If possible, join a Chautauqua Circle. If not, form one. Get together some congenial spirits and put in your spare time in following the course. If that even cannot be done, go it alone.

I would like to see the public school in every city organize and issue a course of reading, giving evening lectures upon it, and furnish opportunity for everybody to get the benefit of the intellectual life.

But so long as the state has not yet come to this I commend the Chautauqua idea as the best thing in the field for aiding those to whom the intellectual life appeals.

## THE AMBASSADOR

*This is the diplomatic title of an extraordinarily bright and interesting periodical published at Lockport, New York, by the Niagara Paper Mills. Its announced purpose is "to interest all promoters of publicity who add to the value of paper by the judicious application of printer's ink." Many of the more important features bear the suggestive signature "A. Booster," under which there lurks a gentleman of excellent ability and wide acquaintance whose name it would be a pleasure to give our readers if we only had the authority to do so. The special purpose of this note is to introduce an article bearing the signature of "A. Booster" which appears in "The Ambassador" for February, and we are taking all the space at our disposal on this page in order to give the article in as nearly its original typographical form as conditions permit.*

### MORE POWER

THERE is a weekly paper published in New York, called The Independent. It was founded in 1848. I have known of it for a number of years, but have read it rarely. The issue of November 30th was put on my desk by a friend, because he knows that I think the word *efficiency* means more than its definition in Webster's. This issue was the *Efficiency Number*. There were articles on efficiency written by men who have reached a prominent place in their various vocations—men who are "standing in the sun" even when the sky is overcast. The leader, by Edward Earle Purinton, is the best article on efficiency I have ever read. It is my belief that no man, with intelligence, can read it carefully without getting an inspiration to do bigger and better things and, at the same time, get a viewpoint that will help him to grow. If *The Ambassador* were bigger, I would reprint the entire article. As it is, I am merely printing a couple of

paragraphs that should prove of interest.

Mr. Purinton says:

For our ignorance, we pay. It is estimated that seventy-three men out of every hundred are in the wrong job; that most men utilize only about a third of their mental and spiritual forces; that the average American family could live on what they waste; that our business firms lose \$100,000,000 a year thru ineffective advertising; that in the United States there are always 3,000,000 persons on the sick list; that the number of preventable deaths each year is 630,000; that the annual waste from preventable death and disease is \$1,500,000,000; and that somewhere in this country a workman is being killed every four minutes and another being injured every four seconds! Do we not need efficiency?

He also says:

It is safe to conclude that, if you are engaged in a large enterprise and have not applied efficiency methods to yourself and your associates, you are losing from \$1000 to \$100,000 a year. If you are an individual, professional or industrial worker, your loss will, perhaps, run from \$100 to \$5000 a year. Why go on wasting this money?

The difference between a hod-carrier and the head of a million-dollar corporation is that the hod-carrier works his hod instead of his head. For the hod he has trained his muscles, to the hod he is bound. To get ahead—get a head! The leader of men has trained not only his muscles, but as well his nerves, his brain, his lungs and pores and organs of digestion, his thoughts, actions and emotions, his instincts, habits, aims and ambitions, his financial status and his moral sinew.

And this:

*Efficiency is the power of doing one's most and best, in the shortest time and easiest way, to the satisfaction of all concerned.*

The good work The Independent is doing or is willing to do shines forth in this paragraph:

The Editor takes pleasure in extending to the readers of The Independent the services of Mr. Purinton as an efficiency expert. Mr. Purinton will answer, either thru the pages of The Independent—without using the inquirer's name—or by personal letter, any question that may be asked in relation to personal efficiency, health, work and business.

My sole reason for writing this article is that I feel that many readers of *The Ambassador*—whether they be among the struggling or the opulent class—may be led to seek new light from a man who unquestionably knows.

A. BOOSTER.

## THE ITALIAN EARTHQUAKE

We have received the following communication from General George W. Davis, Chairman of the Central Committee of the American Red Cross:

We are officially informed by the Department of State that Italy has definitely declined to receive any contributions in aid of the sufferers from the earthquake, either in a national way or for the Italian Red Cross. It therefore becomes necessary for us to ascertain the wishes of the donors of funds that have been given for this relief, so that we may conform to their desires in respect to disposition of their contributions. It may be that those of our readers who have responded to the appeal for Italian Earthquake Relief will like to have their gifts turned over to the American Red Cross for relief work in the Great War. An inquiry will be sent to them, and the amounts will either be so transferred or returned, as desired.

## THE GREAT FOUNDATIONS

**T**HE danger of assuming that things identical in name are identical in fact is more than academic in the case of the great Foundations, which the Commission on Industrial Relations is now bringing under scrutiny and criticism.

No one who is acquainted with the history of mortmain and with the evolution of the law of charitable uses will deny that the world has been at a good deal of trouble to prevent great benefactions from becoming great nuisances, or even a menace to liberty, or an obstacle to progress. There is a good deal of popular knowledge also on this subject, and it is therefore not difficult to awaken suspicion that a huge charitable trust of any kind is a dangerous factor in a democracy.

This suspicion is by no means warranted. There are trusts and trusts, foundations and other foundations. Discrimination is called for, and at the present time it is important that the true function of such benefactions as are associated with the names of Mr. Carnegie and Mr. Rockefeller should be understood.

**T**HE struggle on the continent of Europe and in England over mortmain, that is, the inalienable holding of property by ecclesiastical, charitable or other philanthropic corporations, was an incident of the rival claims of Church and State to sovereignty and supremacy. Incidentally also, mortmain became a device for evading feudal obligations. The latter fact arrayed many of the more powerful feudal lords against it, thereby strengthening the cause of a relatively liberal central government. Frederick Barbarossa as early as 1156 prohibited conveyances of real property to church corporations. Magna Charta (chapter 43) forbade transfers of land to church corporations by a tenant without the consent of his lord; but the provision was evaded by conveyances to officers of corporations instead of to the corporations as such. To meet the evasion, the act known as *De Religiosis* (7, Edward I, Statute II, ch. 13, in 1279), made all alienations in mortmain unlawful, and the legislation of 51-52 (Victoria, ch. 42) consolidated the English statutes on the subject and made mortmain in general unlawful.

The nearest approach that we in the United States have experienced to the sort of struggle which English legislation records is found in the activity of the Federal Government against the Mormon church. The Edmunds legislation was aimed, as the English mortmain acts were aimed, at an institution which threatened to become *imperium in imperio*.

Plainly, unless there are reasons to expect that the Carnegie Institution, the Rockefeller Foundation, the

General Education Board, the two Carnegie Peace Endowments, the Russell Sage Foundation, or the numerous endowed schools and churches, will some day set up a claim to authority superior to the sovereignty of the American people organized in the Constitution of the United States, there is no sense in haling these institutions to court on a charge that they are present-day embodiments of the menace of mortmain.

To show that they are not perils under the law of charitable uses is not more difficult, altho the subject is more technical. Justice Tucker of Virginia in *Gallego's Executors vs. Attorney-General* (3 Leigh), in 1832, spoke strongly against the "wretched policy of permitting the whole property of society to be swallowed up in the insatiable gulf of public charities"; but the particular danger that he had in mind, and which other judges have dealt with vigorously, was the danger of indefiniteness and irresponsibility, and no sensible person would wish to have a perpetual fund irresponsibly administered, or subject to diversion to uses perilous to liberty or to social order.

The history of the great American benefactions now under investigation has been one of unprecedented care to fix responsibility and to lodge ultimate responsibility as to both purposes and administration in no less an authority than the duly constituted Government of the United States. There is, we suppose, no question whatever in the minds of lawyers that under the terms of these trusts, the people, thru Congress, have absolute power over them. Within and subject to this limitation the trustees are given great power, but the activities which they are charged to further are of such a nature that the light of publicity and the restraining force of public opinion must at all times fall remorselessly upon them.

**T**HESE considerations dispose, as we think, of the more general and superficial objections raised against the great Foundations. There is, however, another and positive side to the whole question, which ought to receive sober consideration.

By far the larger share of expenditure under these trusts has been thus far for the promotion of two objects, namely: One, education thru schools, colleges and universities, brought up to relatively high standards of efficiency at the demand of benefactors; and two, scientific research. Of the latter service it is enough at present to say that in the whole history of scientific discovery since Galileo, no such systematic prosecution of promising inquiries has ever been attempted, as has been made by the Carnegie Institution and the Rocke-

seller Institute. And as for educational progress he is an ignorant man in this field of information who does not know that a new spirit of earnestness, efficiency, business-like attention to finances and responsibility for results has been put into American colleges and universities by the vigorous-minded men who have conducted the activities of the General Education Board.

These two results would be ample justification of these Foundations, but there is more to be said. In this country the higher education and scientific research must be provided for thru endowment or thru state expenditure and administration. Our state universities are in many ways admirable manifestations of American public spirit, and certain special schools are in their practical working most valuable agencies of progress. This is particularly true of the better agricultural colleges, and of some of the schools of forestry; but these lie within the realm of practical affairs, and have to do with things that the average taxpayer cares about and can understand. It is quite certain that the sort of scientific research which will bear fruit in the distant future only, and the studies that do not at once yield practical returns, would get scant consideration in America if there were no other provision for them than that which could be wrung from an American state legislature.

Under these circumstances, the best things in our civilization depend and must depend upon funds wholly distinct in origin and in control from the public revenues. The great Foundations provide such funds on a scale hitherto unknown and unimagined. It will not be the fault of the men who create them, or of the men who are now administering them, if they do not marvelously advance the enlightenment, and the material and moral well-being of the American people. If failure or perverted use is indeed a real danger, which we do not for a moment believe, the origin of that failure and the responsibility for it will be found in the mind and character of the American people itself.

### TRANSCONTINENTAL CONVERSATION

IT was thirty-eight years the ninth of October last since the first "Hello!" was sent over the wires—and then it was not "Hello!" at all but "Ahoy!" which Alexander Graham Bell shouted to Thomas A. Watson over a two-mile wire stretched between Boston and Cambridge. But on January 25, 1915, Mr. Bell in New York City talked with Mr. Watson in San Francisco over 3390 miles of wire. It is rare indeed that an inventor has the gratification of seeing so striking a demonstration of the value of his work to the world. The instantaneous transmission of speech to almost any distance has in a single generation revolutionized modern life in more ways than we yet realize. It has enabled the commander-in-chief to listen to the cannonading at any point along his leagues of trenches and to handle a hundred thousand men as easily as the centurion his century. It has enabled the modern captain of industry to manage his factories and carry on his business without leaving his desk. It has substituted the personality of the human voice for the cold, formal and one-sided message of the pen in social intercourse at a distance. It has relieved the loneliness of farm and ranch and brought to the bedside of the invalid the song and laughter of his

friends. Like the nerves in the human body these copper wires radiate in all directions from the switch-board ganglia of every city and carry the pulsations of speech to the remotest mountain or desert. Thus the country becomes a living thing, permeable to thought, responsive to suggestion and capable of unified action, an organism in truth, since now the Californian may talk to a New Yorker with greater ease than once he could have talked to his neighbor in the next block.

### THE CLOSET DRAMA ON THE STAGE

TEN years ago in reviewing the first volume of Thomas Hardy's *The Dynasts* we recognized its greatness as a poem, but assumed, as did the author himself, that its presentation in the theater was out of the question. What else could have been said of a drama of five hundred pages in three parts, nineteen acts, one hundred and thirty scenes with several hundred thousand characters including angels and spirits and the action set in various parts of the earth as well as ethereal space?

But in characterizing it as purely closet drama we did not allow for the new development of stagecraft in the direction of gigantic spectacle and what is more important the eruption of a war on so stupendous a scale as to raise the sensibilities of men to a height where they could appreciate and indeed demand an epic of such magnitude for the echoing of their emotions. *The Dynasts* has now actually been performed on the London stage, or should we say recited? Both terms are correct, for it was an ingenious combination of reading, spectacle and play arranged by Granville Barker. The descriptive and connecting passages were given by a reader, Henry Ainley, sitting in front, and two ladies, enthroned at the sides of the stage, recited the parts of the "Spirit Sinister," "Spirit Ironical," "Spirit of the Pities," "Spirit of the Years" and other choral comment. Then from time to time the stage between them presented a series of scenes from the drama, either as tableaux, pantomime or act in which the historic characters speak the lines the poet has put into their mouths, such scenes for instance as the battle of Austerlitz with Napoleon triumphant, the battle of Waterloo with Napoleon crushed, Nelson on the deck of the "Victory," Pitt on his deathbed, and the burial of Sir John Moore. This unique combination of acting and recitation is reported to have been quite effective and suggests the possibility that the poetic drama, so often announced and so slow in coming, is to make its advent on the modern stage in some such form as this. Perhaps the motion picture, when it outgrows its childishness and gets over its crudeness, may be used to reinforce and visualize recited verse. It has already been so employed in Germany in presenting the Second Part of *Faust*, which is as written impossible to be staged in the ordinary way.

Of course the object of the production of *The Dynasts* was the stimulation of patriotism, for "The Great Historical Calamity of a Hundred Years Ago" which Mr. Hardy announced as the theme of his drama is now overshadowed by a greater historical calamity in which Kaiser Wilhelm essays to play the leading rôle as a second Napoleon. But Mr. Hardy would hardly be acceptable to the populace as a patriotic poet. He is

pessimistic to the point of cynicism and instead of exaggerating the deeds of historic personages he belittles them by making them the puppets of a blind and impersonal fatality. He views the world from some stellar standpoint and sees the strife of nations as the swarming of ants or bees. His version of Bergson's *élan vital* is "Life's impulsion by Incognizance."

Very curiously this attitude of aloofness and this view of life as a puppet play is the same as that of Gerhardt Hauptmann in his *Festspiel* which created such a scandal a year ago when it was presented at Breslau on the centenary of the gaining of the independence of Germany thru the overthrow of Napoleon. What a change since then! We see Breslau in danger from a Russian invasion. The Crown Prince, who caused the suppression of the play because of its pacificism, has now on his hands the war for which he has longed and is getting more of it than he wants. And Hauptmann the author, condemned then for his lack of patriotism, is defending his country in the fiercest of polemic language in the letters exchanged with Romain Rolland.

One of the reasons why the Festival Play gave such offense to the powers that be was the scene where John Bull is represented as trying to persuade or bribe Germany into joining with him in an alliance against Napoleon, but the Germans respond in chorus "We remain neutral! We remain neutral!" The final scene of the play was the Temple of Love, into which Athena-Germania leads the procession of the Arts and Industries. She proclaims the dawning of the new era of peace and says:

Strange speech does not divide, nor sea nor streams,  
We are not kept apart by jealous gods,  
For in each heart there dwells the Unknown God.  
What sunders us is error, which alone  
Engenders human hate, is ignorance,  
Is hunger's naked need; not the divine  
In mankind, Eros, who renews the world.

But it will be remembered that Hauptmann did not end on this high note, but with a sardonic touch. For as the Director of the show is packing up his puppets, the liveliest of them, Blücher, known as *Marschall Vorwärts*, gets away from him and struts about the stage, a pathetic figure of antiquated militarism. Perhaps it was because the Crown Prince saw in this, as in a concave mirror, a diminuted caricature of himself that he left his seat at the Breslau theater in such high dudgeon. But neither Hauptmann nor Hardy, keen satirists as they are, could equal what the irony of fate is now revealing to the world.

### SOCIALISM FROM ABOVE

WAR has its startling changes, most startling this latest to Germany. When Germany encouraged Austria to invade Serbia she did not anticipate that the hemisphere would be ranged against her, and least did she suspect that in five months she would be forced by threatened starvation to seize the Empire's whole food supply and dole it out to rich and poor till a new harvest is reaped.

The danger must be extreme to require so drastic a resource. There will be enough corn and wheat, says the edict, if carefully husbanded and distributed, so that none may go hungry, but no more must grain be fed to cattle or horses; then there will be enough for

men and women and children. Perhaps so; but the danger of famine must be very great to require such bitter cure.

For observe what it means—Germany is, in its Imperial government, of all nations that which most hates Socialism, and, because it hates and curbs it, Germany is the nation in which Socialism has sturdiest growth. But a military tyranny does by governmental edict just what Socialism would do by the will of the people. It takes control of production, distribution and commerce. It seizes, owns and allots to consumers the great food supplies; it forbids households to have and hold their own supplies, and it takes from merchants their business and livelihood, and gives them in exchange their dole of food. Already the Government tells the people what fields must be sown to grain, for now the forethought of the rulers, as under Socialism, must wisely provide for and direct the industry of all.

This is not yet Socialism, but it is the deeds of Socialism, done by the lords of war instead of by the chosen representatives of the people; and it is most prophetic of the future. The war will end one of these days, possibly a drawn game, perhaps with the utter defeat of Germany, fought out or starved out, as France was beaten in 1870, but in either case disappointed, unsuccessful and discredited. Then, led by the Socialists, the people may rise against the rule that has deceived and robbed them, and shall we have the nation which with firmest hand has ruled its populace, ruled for a while by those who follow the counsels that declare for the ownership by the people, that is, by the state, of the means and ways of production? It may be, but surely no Socialism can take a more radical measure than that which now, by the Chancellor of the Empire, confiscates the total food supply of the nation as a necessity of war.

### THE DIRECT WAY

MR. ROOSEVELT may have the defects of his qualities, but he certainly has the qualities themselves in no negligible degree. One of them is his knack of going straight to the heart of a subject by the shortest road.

New York City has upon its hands this winter a big unemployment problem. It has been the topic of a vast deal of discussion. It has brought forth many plans, proposals and panaceas. From some of them good will doubtless ultimately come.

Meanwhile Mr. Roosevelt delivers before a great audience in the Metropolitan Opera House a lecture upon his exploration of the River of Doubt, now the Rio Teodoro, and the proceeds from the sale of tickets and contributions pledged at the meeting are to go to the work of solving the city's unemployment problem. By this generous act twenty-five thousand dollars are made immediately available for the purposes of the Inter-Church Unemployment Committee.

Mr. Roosevelt has done even more. He announced that he would give to the same cause one-quarter of the Nobel Peace Prize awarded to him when he was President in recognition of his services in bringing the Russo-Japanese war to a close. This means ten thousand dollars more.

When Mr. Roosevelt received the prize in 1906, he immediately turned it over to the United States Govern-

ment to form the nucleus of a foundation for the promotion of industrial peace. The money has remained at the disposition of a board of trustees, but not sufficient interest has been taken in the matter to attract further gifts of money. A bill has now been introduced in Congress to return the money to the giver. It should be promptly passed, in order that, as Mr. Roosevelt aptly phrased it, the talent may be taken out of the napkin and put to use.

Mr. Roosevelt concluded his address with the exhortation, "Be ye doers of the word, and not hearers only." With characteristic directness, he has set a splendid example.

### WITH COURAGE AND WISDOM

**T**HE President has courage. He has vetoed the Immigration Bill passed by Congress. In so doing he was right. But the duty of opposing his single judgment to the desire of his party associates could not have been an easy one to perform.

Mr. Wilson gives two reasons for his veto. They are worth setting down in his own words:

It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men.

It excludes those to whom the opportunities of elementary education have been denied without regard to their character, their purposes or their natural capacity.

These are telling statements of fundamental facts. The United States need not be afraid of fugitives from political oppression in other lands. It need not fear the approach of honest, healthy men and women who cannot read and write.

Political reform and agitation has no terrors for us. To provide opportunities for education to all within our borders is a cardinal principle of our democracy.

### CARDINAL MERCIER'S PASTORAL

**I**T was asserted that Cardinal Mercier, Archbishop of Malines, had been arrested by the German authorities for issuing a patriotic pastoral to his flock; and the arrest was denied by the Germans. But it was true; he had not been carried off to a prison, but he had been kept for a while in his episcopal residence, forbidden to leave it, and 15,000 copies of his pastoral letter were destroyed and the printer fined.

Cardinal Mercier is one of the ablest and most influential of the Catholic ecclesiastics. He was president of the great University of Louvain until he was made cardinal, and is a scholar of high distinction. Such a churchman is not to be lightly touched. And yet why should the German soldiers hold a cardinal more sacred than the city and University of Louvain or than Notre Dame of Malines? And what could the Germans do? They had invaded Belgium, had fought the Belgian army and occupied the country, claiming to annex it, and that violence involved any other violence that might follow. Cardinal Mercier's pastoral letter was a defiance of Germany. It told the citizens that they were under no obligation to recognize German authority, that they were to trust in their fighting army and in their brave French and English allies. It praised the valor of the Belgian soldiers, many of whom had died almost as martyrs, assured of eternal salvation, for they had given

up their lives for their country. It accused the Germans of faithlessness to solemn treaties, and declared that it would have been poltroonery if Belgium had not resisted invasion; and it stirred up the citizens to patriotism to death. Of course the German rulers, having assumed the rule, having essayed to annex Belgium, could not allow such a public, such an official assault upon their authority. They have treated the cardinal as gently as they could; they could do no less. They did not think it prudent to do more. Austria is a Catholic country, and they must be tender to Austrian sensibilities, just as they are courtiers to the Moslem feelings of their Turkish allies.

Greatly to be admired is the courageous patriotism of the Belgian cardinal. Tho in the power of German militarism he minced no words; with fulness and at great length he expressed himself as to the crime of Germany in breaking her treaty oath, in invading a peaceful country, in destroying cities and towns, in slaughtering helpless and unresisting priests, men, women and children; and this arraignment of the invaders he bade read in every church. For far less offense citizens lost their lives. When Belgium is herself again the memory of her brave archbishop will stand with that of her heroic King and that of her stout army, enrolled forever in historic fame.

As Senator Williams figures it the speeches made by the Republican senators in their filibustering fight against the shipping bill have cost the Government over \$500,000 in printing bills and stenographers' fees. Senator Burton's speech of thirteen hours is reckoned at \$250,000. Would it not be well to give each member of Congress a speech allowance of, say, \$100,000? Then if he overran the limit it would be at his own expense, to be charged at cost, and if he did not use up the allowance he could put the balance in his own pocket as he does his excess mileage? Such a rule would have a good effect in reducing surplus verbiage and saving session time. Speech is silver and we have always opposed its free and unlimited coinage.

The "Chant of Hate Against England" by Ernst Lisauer, which we published November 2 in the admirable translation of Mrs. Henderson, has brought to its author the decoration of the Order of the Red Eagle, fourth class. We are sorry to see the Kaiser thus publicly approve of such vindictiveness, but we must admit that considered purely as poetry it would be hard to find its equal anywhere in the literature of the war.

The formal opening of the Canal is postponed till July. Well, it matters little just when the brave procession of warships and excursion boats makes its spectacular progress. The Canal has been open enough for business quite a while already.

It was a British bishop, real or mythical, who met the query, "Who will win the war?" with the pregnant counter query, "Who won the San Francisco earthquake?" It is good enough to have been said by an archbishop.

Why not put Mexico under the commission form of government with all of the presidents on the board?

# THE STORY OF THE WEEK

## THE GREAT WAR

**January 25**—Germans attempting to recapture Thann, Alsace. Austrians pushing attack on Russians south of Tarnow, Galicia.

**January 26**—German attack on British trenches near La Bassée repulsed with great slaughter. Turkish outposts reach Suez Canal and fight at El Kantara.

**January 27**—Heavy fighting near Craonne, Ypres and St. Hubert. Turks again defeated by Russians at Sari Kamish, Transcaucasia.

**January 28**—Turks and Kurds attack Russians north of Tabriz, Persia. Russian torpedo boats sink many Turkish vessels in Black Sea and bombard Trebizond.

**January 29**—Germans destroy French regiment in Argonne Forest. Russians invading northeastern corner of Prussia near Tilsit.

**January 30**—German submarine sinks the British steamships, "Ben Cruachan," "Linda Blanche" and "Kilcoan," in Irish Sea. Artillery duels and occasional charges on Bzura River front near Warsaw.

**January 31**—German submarine torpedoes the British steamships "Tokomaru" and "Ikaria" off Havre. Austrians and Russians fighting for possession of Dukla Pass in Carpathians.

### Submarine Raid in the Irish Sea

The policy recently announced by Admiral von Tirpitz, the German Minister of the Navy, of starving out England by preying upon her commerce, has now been actively begun. On January 22 the German submarine "U-21" overtook the British steamer "Durward" on her way from Leith to Rotterdam and sunk her. The submarine towed the boats containing the crew to within 500 yards of Maas lightship and then vanished.

On January 30, the "U-21" attacked four vessels in broad daylight less than forty miles from Liverpool and sank three of them. The freighter "Ben Cruachan," loaded with coal for the fleet, was overhauled off Fleetwood when the submarine appeared and the German captain, in excellent English, told the crew of twenty-three to take to their boats within ten minutes. As soon as the boats had pulled away a torpedo from the submarine sunk the collier. The coaster "Linda Blanche" was overhauled eighteen miles northwest of Liverpool Bar lightship. In this case the crew of eleven men were allowed to take all their belonging with them, and, since the boats were not supplied with food, the Germans gave them chocolate as well as cigarettes and told them in which direction to row to find a trawler to take

them ashore. Then the vessel was blown up by mines placed in the fore-castle. The "Kilcoan" was intercepted eighteen miles off Liverpool bar and blown up. The Germans commandeered a British collier to take the crew to the Isle of Man. The "Graphic," a passenger steamship plying between Belfast and Liverpool, was chased by the submarine, but escaped by entering the mouth of the Mersey River.

The sinking of these vessels in the track of the oceanic liners and just outside the principal British port has caused much excitement. If the submarine came from the Elbe and around the north of Scotland she must have traveled at least 1200 miles. If she came from the new German base at Zeebrugge the distance would be less, but she must then have made her way thru the British mine field in the channel as well as dodged the patrols. The submarines "U-21" to "U-26" were built in 1912-1913 and have a displacement on the surface of 840 tons. Their speed is

eighteen knots on the surface and twelve knots submerged.

On the following day two more British steamships were torpedoed off Cape d'Antifer, near Havre; the "Tokomaru" from New Zealand, carrying 97,000 carcasses of mutton as well as some clothing and toys for Belgian refugees, and the "Ikaria," which was injured but not sunk.

### The Kaiser's Birthday

The outburst of activity manifested by the Germans during the first three days of the week is attributed by their enemies to the desire of the Germans to celebrate by some striking success the birthday of the Kaiser on January 27. We are even told that he appeared in person at the front to watch the attack upon Arras and announced to the soldiers that he had some Iron Crosses to pin on their breasts in the public square of the city. Then he remained waiting in vain on a white horse caparisoned with purple while the troops marched as tho on parade, four

THE NORTH SEA FIGHT

In the neighborhood of "1" the English squadron met the German and began the chase. Near "2" the British turned back and gave up the pursuit of the three German ships still in line. See the article by Park Benjamin on another page

#### THE WILDERNESS OF SINAI

The Turkish army of 120,000 men has invaded Egypt in three sections. One followed the caravan route near the coast from Rafa thru El Arish and has attacked the Suez Canal at El Kantara. On account of the shallow water and sand bars, the British warships could not make a flank attack. Another Turkish force has taken the southern road from the head of the Gulf of Akaba to the head of the Gulf of Suez. A third force, perhaps a division of one of these two, has reached the Canal at its middle point, Ismailia.

abreast and singing, toward the town, only to be mowed down by the British guns pointed thru the loopholes in the factory walls. It is estimated, also by their enemies, that the Germans lost 5000 men in this vicinity and 20,000 altogether during the week without making any gains of importance.

On the other hand, the Germans deny heavy losses and claim successes in the vicinity of La Bassée, Nieuport, Craonne, Perthes, St. Mihiel and especially in the Argonne forest. In the fighting in Flanders north of Nieu-

port more than 300 hundred Moors and Algerians were found dead among the sand dunes. In the western part of the Argonne, on January 29, the 155th French Infantry regiment is reported to have been annihilated by the loss of 400 or 500 killed and 745 taken prisoners. Twelve machine guns and ten smaller guns were taken here by the Germans. The French admit being forced to withdraw some 300 yards at this point, but claim that the Germans lost more heavily than they. The German report states that dur-

ing the three days' fight at Craonne 1500 French dead were found on the battlefield and 1100 prisoners were taken. In the forests of the Vosges Mountains the fighting went on in spite of a heavy snowstorm, in which some detachments were lost. In Alsace the Germans are making energetic efforts to regain the ground they have lost in the last few weeks. But the French still hold Thann, altho the German guns at Cernay throw as many as 5000 shells a day into the town.

#### WHERE DEATH TAKES SHAPE

War to-day is fought with weapons the scientists devise. Here in the laboratory of M. Turpin, Turpinite, a new and horrible explosive, is being tested for the Allies' use.

In the Wilderness of Sinai It took Moses forty years to cross the Sinai peninsula; it took Napoleon a week. Whether Djemal Pasha has beaten this record or not we do not yet know, because we do not know when the Turks started from the Syrian border or how many of them have reached Suez. But at three points along the Canal skirmishes are reported, so it is evident that the advance guard of the Turkish army has already reached its goal. The distance from Syria to Suez is about 150 miles and the chief problem is the water supply. The British authorities have evidently decided that the desert is the best protection of Egypt, so they have not attempted to prevent the bands of Turks and Arabs from ranging over the peninsula as far as the Gulf and Canal, but they have filled in all the wells of the oases, so the invading army will have to carry its water with it until it gets near to the Suez, where shallow wells may be dug in the sand. To overcome this difficulty Misner Pasha, the German officer in

charge of the engineering corps, has followed the example of Kitchener when he invaded the Sudan and is constructing a light railroad as the troops advance. Early in December it was reported that Dr. Baurat Shumacher was constructing a railroad to connect the Jaffa-Jerusalem line with El Arish and that Herr Frank had constructed a large portable iron bridge for crossing the Canal and was testing it on Lake Tiberius. Every household in Palestine has been forced to furnish an empty oil can and a sack to be used for transport *en route* and perhaps later for floating the pontoons and filling in the Canal. The first shipment of German guns and ammunition for the expedition was seized by the Rumanian Government while crossing that country.

The Turkish forces collected for the invasion of Egypt are said to comprize three army corps, or about 120,000 men. The right wing advancing from Rafa and El Arish by the coast route arrived at El Kantara on January 26, and the first engagement was fought five miles east of the Canal. The Turks opened fire at long range with mountain guns and the British replied with rifles and machine guns. The defense of the Canal is entrusted to the Indian troops raised by the native princes. There are also said to be some 400 Lancashire territorials on the eastern side, and in reserve the Australian and New Zealand contingents, who are encamped by the great pyramids.

Another division of the Turkish army has followed the southern caravan route used by the pilgrims to

#### REAL FIGHTING

A remarkable photograph of a German charge, made at some risk to the life of the photographer

Mecca. This road leads from Akaba across the Tih plateau at an elevation of 2000 feet. The outposts of this force have appeared near the city of Suez and on the Gulf to the south of it.

Apparently another force has come between these, for an attack on the Canal near Ismailia is also reported. So far the traffic on the Canal has not been stopped, altho it is restricted to certain days, when gunboats convoy a number of ships at one time thru the Canal. Obviously, however,

the Germans and Turks will make every effort to cut this channel of communication between England and her dominions in India and Australasia.

The Campaign in Austria-Hungary Little news comes from Poland except a rumor that the Russians have recaptured Kielce, but in the Carpathians important movements are developing, altho their purport is still dark. It is reported that the proposed inva-

#### WHY VON HINDENBURG FIGHTS IN THE EAST—THE DESCENT OF THE RUSSIANS

The huge masses that Russia can throw against Prussia—800,000 youths reach the age of active service in a single year—force Germany to the utmost to defend herself, and her best general is in charge

Underwood &amp; Underwood

"IT'S A LONG WAY TO TIPPERARY"—THIS IS TIPPERARY

sion of Serbia by a joint Austrian and German army has been abandoned and the troops collected for that purpose have been sent into Hungary to meet an attack from the Russians and perhaps Rumanians on the other side of the Carpathians or perhaps to take the offensive and cross the range into Bukowina or Galicia.

It is said that the Austro-German troops now massed for the protection of Hungary number 800,000 or more. Instead of attempting to drive the Russians in Galicia back from Cracow as they have twice before, they are preparing to attack them from the south thru the passes in the Carpathians, and they express confidence in their ability to relieve the siege of Przemyśl and to recapture Lemberg. The official report from Vienna states that 10,000 Russian prisoners were taken in the passes the last week of the year. On the other hand, the Russians claim to have held all the passes in spite of the efforts to dislodge them.

Thru Geneva and Rome transpire reports of anti-war riots among the Slavonians and Czechs. At Agram, the capital of Croatia, and at Trieste the mobilization notices were torn down, and in conflicts with the authorities several rioters were killed. The Austrians, however, deny that any rioting has occurred and assert on the contrary that the war has unified all races in the Dual Monarchy.

Russians Our point of attention  
Attack Tilsit is suddenly shifted  
from Warsaw to the  
northern extremity of the frontier,  
to Tilsit, where once the fate of

Warsaw was decided. On a raft in the middle of the Niemen River, between Prussia and Russia, on June 25, 1807, Napoleon, Emperor of the French, and Alexander I, Emperor of All the Russias, met and divided up Europe between them. By this arrangement Prussia was, much against her will, forced to become the ally of France and Russia and the enemy of England.

Tilsit was occupied by the Russians under Rennenkampf without serious opposition early in August, but since they were expelled from East Prussia by Hindenburg they have not made any energetic attempt to regain it until now, when the Tenth Russian army of the Grand Duke Nicholas is advancing toward Königsberg from the north and east. The town of Pilkallen, north of Gumbinnen and ten miles inside the Prussian border, was taken on January 24, after a bombardment lasting all day. All but 300 out of a population had fled from the town at the advance of the Russians. Pögegen on the northern side of the Niemen, opposite Tilsit, has also been occupied, and, since the river is now frozen over, that city can be attacked from the north as well as from the east.

If Tilsit is taken or invested the Russians can attack Insterburg, a railroad junction thirty miles south of Tilsit and forty miles east of Königsberg. This will bring them behind the Germans, who are strongly entrenched among the Mazurian lakes and bogs, which, now they are frozen, do not afford such fine protection as they did in the summer and fall.

#### Canal Opening Postponed

Colonel Goethals, builder of the Panama Canal, told President Wilson a few days ago that, in all probability, it would not be possible for the Atlantic fleet to pass thru the Canal in March, on the date chosen for the opening ceremonies. The channel will not be deep enough. More work than was expected has been required on account of the slide at Gold Hill, in Culebra Cut. The bottom of the Canal has been forced upward there by pressure near one side of the waterway. It had been planned that the President should arrive at Colon on March 10, and that after going thru the Canal he should be carried on a battleship to California, to attend the expositions at San Diego and San Francisco.

Announcement was made on the 29th by Secretary Daniels that the opening ceremonies had been postponed until some time in July, because of the conditions reported by Colonel Goethals. The secretary said it was not true that any naval or other officer of the Government had urged that the fleet should not be transferred to the Pacific during the Great War. It is understood that the President will go to California by rail in March, and will make speeches in several places along his route. Some had thought it would be unwise for him to make the journey by way of the Canal during the war, because for a considerable time it would be difficult for him to communicate with Washington. And it may be necessary to have an extra session of Congress in March and April.

The Canal is not closed. Five ships passed thru on the 30th, and the passage of two whose draft is thirty-one feet was awaited. Prediction was made that the channel would be deep enough for them.

#### Case of the "Dacia"

The "Dacia" started from Galveston for Rotterdam on the 31st, after delay which was not clearly explained. This is the Hamburg-American Company's ship that was bought by E. N. Breitung for \$165,000, placed under the American flag, and loaded with \$800,000 worth of cotton, which was to be carried to a German port for \$190,000. As was said in these pages last week, the British Government objected (even after Rotterdam had been substituted for Bremen), mainly on the ground that if it should allow her to go without interference, a precedent would be established permitting the sale of more than fifty German or Austrian ships interned at our ports.

Two or three days before she sailed it was alleged that she had been insured at Hamburg, and that she had been sold upon the condition that she should not be used in trade with British or French ports. This, if true, would confirm the British Government in its determination to seize her and subject her to the inquiry of a prize court. It was reported that Mr. Beitung had bought five other German ships which have been tied up here since the beginning of the war. The assertion was made by some that he, being a German by descent, was not unwilling that this venture should excite a controversy between the United States and the Allies.

Another case is that of the American steamship "Wilhelmina," which sailed for Hamburg on the 22d with a cargo of wheat, corn and meat. The British Government held that it would be difficult to prevent this food from going to the German army. This opinion was confirmed when the German Government, on the 26th, seized all the grain and flour in Germany.

The German Ambassador at Washington told President Wilson that he had his Government's promise that this cargo would not be taken for military use. In London, however, this case was regarded as not less important than that of the "Dacia," and there was a general expectation that the ship and cargo would be seized.

**Immigration Bill Vetoed** It had been expected that the President would veto the Immigration bill. His veto message was sent to Congress on the 28th. At the beginning he expressed regret that he could not sign a bill that was in many important respects admirable and well conceived. But in two particulars it embodied a radical departure from the traditional policy of our country. It sought "to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation of what they conceived to be the natural and inalienable rights of men," and it excluded "those to whom the opportunities of elementary education have been denied, without regard to their character, their purposes, or their natural capacity."

The right of political asylum, he continued, had brought to us many a man of noble character and elevated purpose who was marked as an outlaw in his own less fortunate land, and who had yet become an ornament to our citizenship and to our

WITH AN EYE TO THE ZEPPELINS

The Southgate Council has found it good to specify bomb-proof cellars in its advertisement of building land

public councils. The literacy test and the restrictions accompanying it were not tests of character or personal fitness, but tests of opportunity. "Those who come seeking opportunity are not to be admitted unless they have already had one of the chief of the opportunities they seek—the opportunity of education." He did not believe that our people desired to reverse the policy of past generations. He asked whether this policy of restriction had been approved at the polls. It should be submitted to the people in party platforms in order that their wishes might be expressed. Opinions differ at Washington as to the action which Congress will take. Many think that the vote in the House for passage over the veto will be a little less than the necessary two-thirds.

#### The Ship Purchase Bill

Questions concerning the interned German ships are to some extent involved in the pending Ship Purchase bill. At a conference, the Democrats of the Senate decided to press this bill for passage at the present session. It has the earnest support of the President. The Republican senators set out to prevent action by debate. Night sessions were ordered, and then a continuous session. Beginning at 11 a. m. on the 29th, there was debate for thirty-seven hours without a recess. Mr. Gallinger, seventy-eight years old, had spoken for seven hours at a previous night session. Mr. Smoot's speech consumed nearly the entire night of the 29th. At the end

of thirty-seven hours a recess over Sunday was taken.

In the course of the debate Mr. Walsh argued that our Government had a right to buy and use the German ships. Mr. Root asserted that a quarrel would be purchased with every ship so bought and that grave complications would ensue. After a time it was said by Democratic senators that if the bill should become a law, our Government would not buy an interned German ship without first obtaining the consent of Great Britain or the Allies by diplomatic negotiations.

It is understood that our Government has been informed by Great Britain that the purchase and use of the German ships would be regarded as unneutral acts, and that the ships would be treated as those of an enemy. Except the interned German and Austrian ships, there are very few for sale. It is admitted that the bill will be passed if it can be brought to a vote.

#### Carranza has left the Mexican Capital

President Garza left the Mexican capital on the 27th and went with Zapata to Cuernavaca, sixty miles south, which has been the bandit general's headquarters for some time past. Two days later, Obregon, Carranza's commanding general, who had been fighting his way up from Vera Cruz, entered the capital with 20,000 soldiers. Carranza had been driven from it by Villa in November. It is said that Garza was kidnapped by Zapata and taken to Cuernavaca by force. Addressing the convention the night be-

fore his departure, he said Zapata's army was incompetent and that Zapata did not know how to fight in the open. He urged the convention to depose Zapata and to place the forces under his (Garza's) command. In no other way could the capture of the city by Obregon be prevented. It is reported that he then attempted to go north and join Villa, but was carried away by Zapata.

When Obregon came in the factories and shops of the city were closed, and bars were up at the doors of private residences. The capital was in great need of food and fuel. Relief was given by the opening of the railway line to Vera Cruz. Garza had sent a telegram to General Ornales in Juarez, saying he would not leave the capital, "as did my disloyal predecessors," but would stay there, even at the cost of his life. Sniping riflemen on the roof of the cathedral attempted to kill Obregon, and did kill three soldiers who were marching near him.

Carranza remained at Vera Cruz, writing and issuing long decrees. One of them, containing 2500 words, has drawn a protest from our Government. It cancels sales and concessions of land made by local or national authorities, without due regard for certain laws enacted in 1856 and 1876, and virtually authorizes

confiscation of much property held by Americans or Englishmen. Thus, he says, he seeks to restore to the people the lands of which they have been despoiled. Another decree gives the owners of oil wells three months in which to prove their titles. There are many indications that Villa left the capital because he could not associate harmoniously with Zapata, whom he appears to have regarded as an incurable bandit.

**Villa's Inactivity** In the north, Villa was still preparing to move against Tampico. Gutierrez, the fugitive predecessor of President Garza, was said to be wandering about, awaiting a favorable response to offers of support sent by him repeatedly to Carranza.

Salazar (representative of Felix Diaz), recently said to have been killed, captured Casas Grandes, a railway point of some importance. At San Diego were 8500 rifles and 4,000,000 rounds of ammunition, received from New York and reported to be intended for his use. Some explained Villa's inactivity by saying that but little ammunition was left in Mexico and that, while carefully husbanding his own, he was waiting for Carranza's supply to be exhausted. Owing to the demand from the

belligerent nations in Europe, it has been very difficult recently for the Mexican warriors to replenish their stores of ammunition in the United States.

Villa claims to have control of the coal fields of Coahuila, altho Carranza's forces in the north have been increased by desertions from Villa's standard. If he should take Tampico he would have all that would be required, in the way of ports and natural resources, for that northern republic which he is said to have in mind. The next important battle will probably take place in the vicinity of Tampico, where earlier events of some interest occurred.

There were persistent rumors that Villa had been shot by Fierro, his bodyguard, the man who killed Benton, the British subject. It was said that he had quarreled with Fierro at Aguascalientes. So far as can be learned, he was slightly wounded, but not by Fierro. The latest story is that certain persons at the capital plotted his assassination and hired one of his officers, formerly in the Federal army, to do the work. He failed. His fate has not been reported. A private in our army, W. C. Warrick, was killed while in his tent near El Paso, last week, by a bullet that came from the Mexican side of the river.

JOHN D. ROCKEFELLER, JR.

They have met, and they have talked about the Colorado mining situation. Furthermore, Mr. Rockefeller has conferred with three labor officials—all active in the Colorado strike. These face-to-face meetings are the most interesting and perhaps the most significant incidents of the hearings of the Federal Industrial Relations Commission in New York, at which Mr. Rockefeller made very plain his policy of non-interference with the management of the mines.

# THE NORTH SEA FIGHT

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

ON Sunday morning, January 24, a German squadron of four battle-cruisers, the "Derfflinger," "Seydlitz," "Moltke" and "Blücher," left its base in the vicinity of Heligoland and started west in the North Sea—object unknown. Somewhere near the coast of England it encountered a British squadron of five battle-cruisers, the "Tiger," "Lion," "Princess Royal," "New Zealand" and "Indomitable," distant fourteen miles. It thereupon turned back and was chased by the British vessels for between three and four hours. Upon reaching a point some seventy miles from Heligoland, the British ships relinquished pursuit because of "the presence of submarines," having in the meantime sunk the "Blücher" with over 700 of her crew. The German Admiralty reports the return of the remaining ships, but states nothing as to their condition. The British squadron has come back to Leith without irreparable injury to any of its ships and with comparatively few casualties. The chief interest centers in the conflict between the battle-cruisers, which is the first in which ships of that type have been opposed to one another.

The British squadron intercepted the four German vessels, the departure of which had been discovered by the destroyer flotilla on watch. It thus observed the cardinal principle of naval strategy by "getting there first with the largest force." It took the offensive, which comports with the power having command of the sea. It followed the retreating foe, thus gaining the advantage which usually falls to the pursuer. It defeated the plan of the German admiral, whatever his objective may have been, and it inflicted a serious loss.

It must be assumed that Admiral Hibber expected to elude the more powerful but slower British battle-ships. His chief danger lay in meeting just such a superior force of battle-cruisers as he in fact encountered. Distance of the meeting point from a protected base thus became an important, if not a controlling factor in the German strategy. While the known speed of the British ships was greater than that of the German vessels, the difference was not so great as to make a stern chase other than the proverbially long one, and hence Admiral Hibber might well have decided that if he turned back immediately upon sighting a su-

perior British force he would have ample time to cover the distance to the mine-protected area around Heligoland before he could be overtaken, and even before the pursuers could get within effective range.

The British gun fire was effective at the exceptionally long range of 17,000 yards or about 9.6 miles upon a target presenting minimum area, for the "Blücher" was running away and therefore exposing her stern and not her broadside, and the pursuers were racing at a speed greater than that of the fast ocean liners. The German ships brought their stern guns to bear on the nearer British ships, and chiefly upon Admiral Beatty's flagship, the "Lion," which led the line until a shell pierced one of her oil tanks, which cut off part of the fuel supply to her engines.

The hurt and staggering "Blücher" is said to have been overwhelmed by salvos from the battle-cruisers. What a salvo means from the "Lion," for example, is the combined blow of eight 13½-inch guns, the 1250-pound projectile of each of which on leaving the gun is capable of penetrating fifty-one inches of wrought iron, with a striking energy of 63,187 tons, moving at the rate of one foot per second. Each gun, therefore has a striking power nearly five times greater than that of the whole broadside of one of the largest line-of-battle ships of a century ago, thru whose lofty wooden walls there grinned tier upon tier of smooth-bore cannon.

It is hardly necessary to point out that if submarines can turn back squadrons of the most formidable capital ships, their importance in naval warfare is tremendously enhanced. If, as may well have been the fact, Admiral Hibber's retreat was covered by a screen of submarines, whether provided for by him in advance or called by him from a nearby German base after the chase began, this is new strategy—and marks a novel departure in the battle co-action of surface and underwater vessels. It also seems to follow that if the submarines had preceded the advance of the German ships, the British squadron would have turned back at the outset, and left Admiral Hibber to do as he liked.

And this brings us to what is beyond all else the most astonishing feature of the fight, namely, the deliberate abandonment of the pursuit

by the British admiral. In his telegraphic report he says that at about 11 a. m. "enemy submarines were observed on the starboard bow and a course was steered to avoid them." Some time after this he stopped the chase. His words are:

"The presence of the enemy's submarines *subsequently necessitated* the action being broken off."

And this altho he says "the 'Blücher' was sunk and two other battle-cruisers were heavily on fire and seriously damaged." To complete the picture there need be added only the German official admission that "the high speed of the British vessels would have enabled them to catch up with and destroy the German cruisers."

Allowing for the "Lion" being out of the line because of injury received, here were four of the most powerful battle-cruisers in the world unhurt and at the very crisis of a furious chase on the high sea and at the greatest speed ever known, with their enemy's flying ships not only inferior in force but "on fire and seriously damaged" and absolutely within his grasp, yet this British admiral turned back and let the enemy escape—because of "the presence of submarines." It is well to be plain about it. Matters were not at all minced here when we talked about the battle of Santiago. This man ran back with 29-knot battle-cruisers in the face of submarines of not half that speed! What risks would he take?

Was he in any less danger from the submarines while going in one direction than in the other? Could they overtake him going forward but not going back? Is not speed under conditions of ample sea room the chief safeguard against submarines, and is there any case where a torpedo has been successfully aimed from a submarine against a vessel going twenty-eight or twenty-nine knots an hour?

War cannot be waged without taking great chances—often desperate ones—and since navies have existed the commander who fails to do "his utmost to capture and destroy" takes his life in his hands. Admiral Beatty's report is given out officially by the British Admiralty. It proves on his own showing that he deserves not glory, but a court martial—once more "*pour encourager les autres*" and the ghost of Admiral Byng present as an interested spectator.

To Admiral Hibber is due the

credit of extricating his three ships from a bad predicament and his feat is all the greater if he had to conduct them thru mine fields with their steering gear impaired.

It is difficult to account for the presence of the "Blücher" in the German squadron. It was well known that her speed was inferior to that of the other vessels, and that she was, therefore, subject to the hard—and from a sentimental viewpoint—heartless vicissitude of war, which compels the abandonment of the slower ship by her swifter consorts when they cannot stop to help her without inviting their own destruction. A vessel torpedoed by a submarine must in like manner be left to her fate, lest, as in the case of the "Cressy," "Aboukir" and "La Hogue," the others be also sacrificed.

It is especially important to note that this action was fought not between battle-ships—of which we have, built and building, forty-two—but between battle-cruisers, of which we have none at all. A battle cruiser differs from a battleship in that, while she may be of greater tonnage and have heavier guns, she has lighter armor, the saving in weight being utilized in motive power, so that her speed is considerably greater. To illustrate: The "Queen Elizabeth," one of the newest and most powerful of British battleships, has belt armor 13½ inches thick, tapering at the ends to four inches; lower deck side armor, ten inches; similarly tapering to four inches; main deck armor, 8 inches, while her turrets, barbets and conning tower are of the maximum thickness above noted. She carries eight fifteen-inch guns, has a displacement of 27,500 tons, and is credited with twenty-five knots speed. The British battle cruiser "Tiger," on the other hand, which took part in the recent action and which is the newest and most powerful of her type, has side armor but nine inches in thickness, tapering to four inches and extending from seven feet below her water line to her upper deck, and the same on her turrets and barbets. Her displacement is about 30,000 tons, and it is reported that her speed has attained the extreme figure of thirty-three knots. She carries eight 13½-inch guns. The "Tiger" could easily run away from the "Queen Elizabeth," but if caught where escape was impossible, she could be destroyed by the battleship. Battle cruisers may form homogeneous squadrons—as in the recent fight—or they may act in concert with battleships or even smaller cruisers. In the former case, their principal func-

tion is to engage like ships of the enemy, or in chasing a battleship fleet to harass and delay the rear ships of the column until the pursuing battleships can come up, or to accumulate power quickly against the enemy's weak spots, or cut off or repel the enemy's small cruisers and scouts, or to veil the movements of the battle fleet on the high seas, or to rush to widely separated points on a long coast such as our own when menaced by raiders. When joined with light cruisers they greatly strengthen the array, as the "Lion" helped the weaker ships in Admiral Beatty's raid last August.

The "Lion" and "Princess Royal" have the same armament and about the same speed as the "Tiger," but are of somewhat less tonnage. The "New Zealand"—a gift from the colony—has a tonnage of 18,750 tons, the "Indomitable" about 1000 tons less. Both have eight twelve-inch guns. The speed of the "Indomitable" is about twenty-eight knots—one knot less than that of the "New Zealand."

The "Derfflinger," "Seydlitz" and "Moltke" are the best of the German battle cruisers, and are of 28,000, 25,000 and 23,000 tons respectively. The "Derfflinger" is stated to have a speed of thirty knots, the other two twenty-nine and twenty-eight. The "Derfflinger's" armament includes eight twelve-inch guns—the others are alike in having ten eleven-inch guns each. The "Blücher" tonnage was 15,500 tons and her maximum speed about twenty-five knots. Her armament was far inferior to that of the other German vessels, as the twelve guns of her main battery were but 8.2 inches in caliber.

The speed of the slowest British ship was in excess of that of the "Blücher." There was sufficient margin of superiority in the other vessels to make their overtaking of the remaining German ships practically certain, if the chase lasted long enough. The great disparity lay in gun-fire, in the ratio roughly of about 23 to 13.

As has been stated, we have no battle-cruisers. We have preferred to build the largest possible battleships, in which high speed is not the chief object. Witness the "Pennsylvania," 21 knots; "Oklahoma," 20.5 knots; "New York" and "Texas," 21 knots; "Wyoming" and "Arkansas," 20.5 knots; "Florida" and "Utah," 20.7 knots. Compare this with the British "Queen Elizabeth" class (five ships), 25 knots, and "Iron Duke" class (four ships), 22 knots; or with the German "Kronprinz" class (four ships), 23 knots;

or the Japanese "Fuso" class (four ships), 22 knots. Our neglect of other and necessary types of vessels has been simply scandalous. We have practically no scouts or fast light cruisers capable of doing such work as the "Emden" did, and our deficiencies in destroyers, submarines, supply vessels and other auxiliaries—as well as in the absolutely necessary men to operate them—have lately been filling the newspapers and are under congressional investigation.

Possibly the naval committees may find the absence of battle-cruisers not wholly unconnected with the supply of "armor-plate." From the figures already given relating to the British battleship "Queen Elizabeth" and the British battle-cruiser "Tiger," it will be easy to see that a battleship takes a great deal more armor plate than a battle-cruiser. Armor plate in this country is so expensive a luxury that a Government plant for its manufacture has been twice authorized by Congress: but as the Secretary of the Navy somewhat ruefully says in his 1914 report, recently issued, "Twice were the armor-plate factories saved a monopoly of this business thru a 'mysterious providence.' There are only three concerns in the country which make armor plate, and last year when bids were invited, all three made identically the same bids to a cent. They justified this sham of bidding by saying that the department had fixed the price and divided the business between the three concerns regardless of the bidding, making the award of one-third the quantity desired to each firm at the lowest figures quoted, which was always, as may be supposed, a figure which gave inordinate profits." The moral of all of which—as the immortal Bunsby observes—"lies in the application of it." Whether the "mysterious providence" has anything to do with the non-prevalence of battle-cruisers in our navy the intelligent reader may judge for himself.

The naval fights of the present war all tell one and the same story: the command of the sea, general or local, goes to the contending power which has the heaviest guns in the fastest ships.

The lessons of the fight are:

1. Battle cruisers as well as battleships should form a part of the United States navy.

2. Submarines may be used to cover an enemy's retreat—and in such event are a risk to be met subject to the penalties and provisions of the Articles of War.

AFTER HALF A YEAR OF WAR

## I N T H E O F F I C E

BY SIMON BARR

Hour after hour, she rattles at the keys,  
With head bent low and furtive smiling lips,—  
Blind to the world that thru her ribbon slips,  
Dreaming girl-dreams, re-living memories.  
Hour after hour, the hands of little ease  
Know not their soul,—flash from their finger-tips  
Strong words that rear a tower or launch great ships

Voyaging for miracles upon strange seas;  
Strong worlds that crash in steel and blaze in fire;  
Startle a myriad arms; give life to wheels;  
Fashion men's destinies and wing desire;  
Levy earth's tribute; guide the golden stream;—  
She weaves the magic age . . . yet weary feels . . .  
Dead monodies . . . and dreams her greater dream.

## A W I N T E R ' S D A Y I N F L O R I D A

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "HOW TO LIVE IN THE COUNTRY"

THE northern birds—blue-birds and robins, phoebes, flickers and goldfinches—came dropping in all thru October and November, and those that located here for the winter—especially robins and bluebirds—we shall find in what we call bayheads, eating their berry lunches and whistling to keep up courage. They are lonesome fellows, never quite calling it home here, and never building houses. Take the boat with us this morning, across Lake Lucy, and we will find one of these retreats, just back of the Wright Grove. The banks of the lake are very sloping and are covered with huckleberry bushes. But there are level places, especially where the bayhead opens into the lake, and these, often spreading out into flat muck lands, make the richest of gardens. A good climb from the landing place, and then a quarter of a mile trekking it thru the pine woods, brings us to an orange grove, neglected since the winter of 1895 and the great freeze. It is now an orchard of sour oranges, not so bad for lemonade, but unfit for market or eating.

This is a good spot to sit down on a pine log and eat your morning lunch of oranges, grape fruit and loquats, these three making a capital balanced ration for a man of eighty or a boy of twenty. This preliminary breakfast is a part of the dietary creed of every genuine Floridian. Out of the swale that is not far ahead the wind is bringing to us a very curious medley; not a song, nor a chorus, but a roar; and at first you

will not believe it possible that robins can engage in such a furious riot of music. It is really conversation, and as you get nearer to them you can almost distinguish words. They are discussing community affairs with such vim as no robins in the North ever display. Bluebirds begin to come out of the bayheads in inquisitive clouds, while robins dot the bushes and fill the air. But this is only a preliminary. When they begin to gather for the North in March you would hardly care to walk thru the heedless clouds of wings. You must not imagine that your singers who migrate spend their winters as they do their summers. Here they are only picking up food and escaping the zero weather. There is no home about it.

While we have been over the lake Hal has been mowing Natal grass in the orchard and on the lake front. You can hear his whistle clear across the lake, and you can see that he notes our return, swinging a cheerful hand. This is the fifth crop of hay that we have cut in a single year. This Natal grass came to us from South Africa, and we welcome it because we cannot grow either timothy or bluegrass. It is more wonderful than either and more beautiful. It is going to fight its way with our wild grasses, and give us one of the sweetest and most abundant hay crops the world ever saw. Only recently we were importing timothy at thirty dollars a ton.

Still by the lake, and where there is plenty of water and rich feed, our Guernsey looks up to us from the

cow pea garden, where she is feasting. She comes to the fence and speaks to us, wanting her poll scratched. It is a pretty sight, this winter pasture, and we vow we do not care to be where the ground is two feet under snow, and solid frozen underneath. Jenny has already been milked, and a generous pailful has been carried to the house. She is what they call down here a four-gallon cow; and when her cow peas are somewhat the worse for treading, she has a velvet bean garden over back of the barn; in fact, two of them, and they will serve for all winter pasturing. Only in her barn there is a rich storage for wet days and cold nights. What could Nature have done better for the would-be farmer than to furnish him legumes that grow thirty or forty feet in a season, and keep him busy all summer cutting them lest they run away from him? This velvet bean has gone half way up these eighty foot pines, wherever it could get a chance, and the great clusters of pods hang as thick as hops. Yet there are those who cannot make a living in Florida.

It is eight o'clock, and late for breakfast. As we go thru the orange orchard, we may as well make sure of one more large grapefruit, one Pineapple orange, and a bunch of loquats. These last are like a combination of the best pears and cherries in one. Our tramp has, however, made it quite possible for us to enjoy all these fruits, and still take a bowl of milk, full of bran bread, and more loquats. The forenoon's work, as we find it in our memoranda, is

making soil. We are going to plow under the cow peas where bossy has finished with them, and while the vines will give immense quantities of humus, the nodules on the roots will fill the soil with nitrogen. Florida is a land of legumes; they are everywhere, from little plants three inches

high to these velvet beans that grow almost out of sight. By and by we will plow under the velvet bean waste. Sandy soil needs only this sort of manuring, and a generous addition of lime.

The before-noon has brought us, as it always does, a great deal of

novelty and taught us lessons that we cannot talk about here. Even in January and February we have warm days, and it is quite in order to gather on the veranda, look down at the lake, and hear the ducks gabble, while we ourselves hold converse.

*Sorrento, Florida*

## THE TONIC OF THE WINTER WOODS

BY MELVIL DEWEY

**T**HERE has never been a time or country where so many of the best men and women were crippled or wholly out of service from overstrain, as now and here. Most modern high-pressure men have to choose between vacations, death or insanity. Men whose predecessors would spend months in a visit to Chicago for an important business conference, now nerve themselves intensely and, with the power of a toggle-joint, concentrate every energy of their being at the telephone, where they transact a larger business in five minutes than did their grandfathers in five weeks' visit.

We learned long ago that every one must have a vacation every summer, but thousands have now found that two or three times a year, others that every month, and some even that every week-end, must bring rest and change or the tense bowstring that keeps life strained to the limit will snap. Vacation used to have August for its month; now like death it hath all seasons for its own. Part of the world's best workers are sure to be off duty even in the busiest season. They go stale like the racing crew in training. They are below par physically. To maintain efficiency they must make the break.

More and more find that they need rest in winter even more than in summer. When doors and windows are open night and day and all the world is taking it a little easy, the strain is vastly less than in winter when we are shut up in our overheated houses and offices at the instant call of the insistent and relentless telephone for twenty-four hours a day. So for many the great problem is "What can I do in winter that will bring most health and strength in a brief time?" The writer became keenly interested in this problem while sharing in the strain of Manhattan thirty years ago. The result of his study and experience may be useful to many who are facing the old problem.

Most people who resolve to take a rest, perhaps at large sacrifice, come

*Melvil Dewey, former Librarian of New York State, is a man of a thousand interests, which he pursues with the fervor most men reserve for their special hobby. Not the least of them is the Lake Placid Club, a unique institution, part club, part hotel, part recreation park, part educational center, part mountain and lake playground. It is unique because its founder's conception was unique and because it has been realized in unusual degree. The spirit in which he conceived the plan and has developed it in the past twenty years is well set forth in this article.—THE EDITOR.*

home feeling that what they did ought to have been something different. Perhaps a list of "Don'ts" will most compactly give the warnings against mistakes on which experts largely agree.

Don't try to stay at home and let the doctor give you something. Take medicine for acute diseases, but when simply overworked and tired, shun drugs like the plague. Get change of food, scene, altitude, climate, occupation, amusements and all environment.

Don't accept vastly inferior advantages simply to save a few hours' ride; but even worse, don't waste strength and thus neutralize part of the benefit by traveling thousands of miles to find what perhaps can be had better in one-tenth of the distance. If you live inland, go to either coast or mountains. If you live in the mountains don't go to other mountains but to the sea, if its damp salt air agrees with you; if not, go to the plains and escape the humidity so trying to many when physically below par. If you live within two hundred miles of the sea, go straight to the inland mountains. The commonest mistake is to go from a seaboard city to a resort also near the coast simply because it is quicker. Air is vastly more important than food and water, for we eat only three times a day, but fill our lungs fifteen to twenty times a minute. So a complete

change of air is the first essential for a wise vacation.

Don't choose the wrong altitude. Experts here and in Europe, after long study, agree that for the average man the most perfect elevation is about 1800 feet; lower than that one loses the wonderful tonic effect and higher many hearts are overstrained. Now and then one (perhaps one to one thousand) finds even 1800 feet too high. If after a week there is any discomfort he might better sacrifice other advantages and drop to a lower level.

Don't go to an enervating climate. Nine-tenths of those who seek the tropics would gain twice as much by getting into the dry cold of the north. It is the difference between hot and cold baths. Heat feels much better to the invalid, but all the world knows that the cold dash tones up while the hot bath weakens.

Don't fear cold where the air is dry and home comforts are available. Hundreds each year who have thought the Adirondack forest a kind of Greenland that only Arctic explorers should visit in winter are astonished to find that they are much more comfortable than in seaboard cities where the thermometer runs twenty to forty degrees higher. They are learning that dry cold does not bite. Constantly our Adirondack Club members who enjoy weather from zero to thirty degrees below outdoors all day long, find on going back to the coast that its humidity cuts like a knife and they really suffer.

Don't forget Whittier's

There's iron in our northern winds,  
Our pines are trees of healing.

The Adirondacks are world-famed for toning up rapidly those overworked and generally run down. There are many other places of equal altitude that have no such reputation. The explanation is clear. The New York Constitution protects one of the world's greatest parks of 4,000,000 acres. In it there are neither factories nor cities nor towns, and but few and small villages. It is nearly

WHERE THE DRY COLD WINDS SW

all a great forest of balsam and pines thru which the winds blow almost always from the southwest.

The fame of the Adirondacks centers in the northeast corner, where Lake Placid, Keene Valley, Loon Lake, Saranac Lake and Paul Smith's are all within twenty miles. Here one's lungs are filled fifteen to twenty times a minute by air that has filtered thru the 4,000,000 acres of balsam and pine. It combines as nowhere else the tonic of the mountains with the softness and health-giving and healing qualities of the southern pines. As might be predicted, the effect is felt in the first hours; it is like wine in its stimulus and yet usually the softness makes one sleep hours longer than at home, so that a nickname for our club is "Sleepy Hollow." People feel so well and full of life that they walk five or ten times as far as at home and often have to be warned not to overdo.

Don't buy costly furs and elaborate equipment. If you choose the right climate, the dry cold often demands no thicker clothes. If you are outdoors without exercising much you can buy or rent the cheap but comfortable local furs; a \$30 long coat is as warm as rare skins that cost \$200 or more. An all-wool 3-in-1 cap, at trifling cost, protects ears, neck and face, one or all as wished.

Don't risk comfort and health and perhaps life in the cold north winter by living in houses equipped for mid-summer only. Convinced of the superlative value of cold

and winter sports, one unwisely ventures to use the makeshift house and tries by extra clothing and ho to get thru somehow. This is a grave danger. Sometimes it will be eighty degrees or more near register or and below fifty degrees nearer doors and windows. exercising till tired, it is a serious risk to sit in a full of drafts that wander about in search of a vic

Don't go where snow and ice come and go, but they stay put. Shun that bane of a winter outing, the midity of melting snow. It is as bad for health as temper. Dry air and dry snow are essential to best r

Don't go where you cannot get the fascinating health-giving winter sports. If you find a steady snow can sleigh anywhere, but this is least important group. In many places there is skating. Curiously, 2000 lakes in our 4,000,000 acre Adirondack park, but much ice but little skating. Our club worked ten years before it solved this important problem. Now we spend tennis court rinks in November and build up snow twelve inches thick without a drop of water under it. dents or even wet feet are impossible and it lasts till

Football, basketball and baseball (using a large ball) are fine winter games. We played ball on snow to the great amusement of the gallery, but of late play almost entirely on ice, where the game is far less humorous. THE MORE FAMILIAR SUMMER VIEW

R MILLION ACRES OF BALSAM AND PINE

msy sport, may be had wherever there is good snow, e pleasure is doubled if there are plenty of hills, for en the novice vastly prefers to coast down hills rather an propel himself like a snowshoer.

We are coming to the Scotchman's view that the "roar- g game" is in winter what golf is in summer: the equaled sport for young and old of both sexes. One rns to curl enough to enjoy it mightily the first day, ile there is no limit to the skill that may be developed study and practise. It attracts many who wisely avoid e dash and exertion of hockey and other winter sports some little danger.

Skijoring is practicable wherever there are skis, snow d trained horses. Long traces are hitched to a pole, ch is caught over the arms of the driver, who in case accident cannot be dragged. It is sleighing with the aceful, slender skis, four inches or five inches wide, stead of a big sleigh. With the right horse there are sorts of possibilities. We find it rare sport, growing favor here as it has abroad.

There is no thrill or inspiration, except to babies, in opping a few feet down on the slopes usually available r a toboggan or sled. But on a real run or coast, the nsation is far keener than in the fastest motor car. ter failing in our efforts for fifteen years, we built a oggan tower forty-two feet above the summit of our st hill, five minutes south of the rinks. There are dif-

ferent landings so the timid may start as low as they wish; but the dash from the top on torch nights, when one hundred flaming torches mark the course for over a mile, is something to be remembered.

After some years of trial, we limited our first so-called "all-the-year houses" to summer use and built for winter as no native ever dreamed of building, with heavy walls and large cellars, having double power heating and ventilating apparatus. All the walls were double papered, double boarded and backplastered. A double roof prevents the heat of the house from melting the snow and making ice dams sure to force the water thru. Most windows are double with hinges for ventilation where needed. Often the outside window itself has two sheets of glass so there are two clear dead air spaces and three sheets of glass between the cold and the room, which is insulated something like a thermos bottle, for dead air keeps out cold better than anything except a vacuum. Frost never shows on these windows and one may sit by them safely tho northern blasts roar. Our normal winter weather is about zero, but now and then it drops with a rush. Our lowest record is fifty-two degrees below—eighty-four degrees below freezing. Obviously none but the most robust can safely risk being caught by such a drop, except in houses specially built and heated.

Most people find the dry cold so exhilarating that they spend much time outdoors, but in blizzards, or extreme

CID CLUB'S GREAT WOODLAND PLAYGROUND

cold, or when "not quite up to the mark," all must fall back on the house, which should have more than mere parlor, dining room and sleeping rooms. Our first years in the Adirondack winters taught us to add music, library, writing, game and other public rooms. We started with one stone fireplace as the best center for indoor life. There were steady calls for more till we now have 207 open fires and are yearly adding more; for one who lives in the real north soon comes to be a fire worshipper.

Besides these indoor fires we have a score of Adirondack camps with one side entirely open toward a fire of huge logs. These are built for summer, but their winter use grows yearly.

In twenty years we have developed a long list of club customs into which newcomers readily fall. Young and old especially like our revivals of ancient customs. We started with the traditions, centuries old, of our own Iroquois Indians, then added English, German and others handed down from the long ago. After Hallowe'en and Thanksgiving are duly observed, on St. Andrew's night, November 30, we have the skirling of the pipes by Highlanders in full costume as a prelude to a Scotch evening. On December 24, the great annual holiday season is ushered in at four p. m. by Christmas chimes, bringing the Yule logs, and in the evening, from eight to ten, by wassail ceremonies and carols. On Christmas Day comes the play of

the "First Christmas Tree." Of course all this costs thousands of dollars each year for upkeep, but divided among our thousand members the burden on each is but a few dollars and he knows that the best the country affords in winter sports is available to him and any friends he may introduce, for a season two or three times as long as winter sports are really available in most places. It is probably impracticable to maintain such facilities commercially, for the season is too short and the income too small to justify the investment. But wherever a large club of congenial friends can be organized with no one looking for profit, great winter facilities can be provided without an undue burden on any one.

*Lake Placid, New York*

## PERUGIA

BY THEODORE MARBURG

FORMER MINISTER TO BELGIUM

**O**N thy hilltop, bold Perugia, with the shadows flying  
o'er

All the tangled vine and olive lying round thy ancient door,

Circled by thy ring of mountains capped with cloud or winter snow,

Thou dost gaze in contemplation on the happy fields below.

From the uplands frank and fearless, free their secrets to disclose,

From the uplands thy soul borrows constancy and deep repose.

Far beneath thee flows the Tiber singing of the ancient deed,  
How it washed the Pagan temple ere the birth of Christian creed.

What the hawk sees and the eagle thou dost see on soaring wing

Drinking deep the glow of Autumn or the freshness of the Spring.

Waked by the first beam of morning, cooled by grateful breeze of noon,

To thy glowing cheek and forehead evening comes but all too soon;

Evening that doth bring thee memories, mirrored in thy softened eye

Half unmindful of the glories fading from the western sky:

Memories of thy rude beginnings, older than the Roman sway,

When thy bold chiefs swept the valley, red and ruthless birds of prey;

Memories of the Middle Ages—when again rough might made right—

Of thy freedom stoutly guarded on the castellated high;

How, when gentler manners triumphed, thou didst turn thy thoughts to art,

Playing in that great awakening not a mean nor trivial part;

For thy Perugino labored in a deep religious mood,  
Passing on the spark of purpose to his youthful painter brood.

And among them stood the Raphael, caught the master's fire and skill,

Saw the visions that were destined all the after years to fill,

In the Raphael all the master had imparted—truth and worth,

Tenderness, religious motive—blazed in hightened beauty forth.

Men still study him and love him in all lands where art hath place.

So dost thou, his teacher, linger in the memory of the race.

Yonder gleaming on the hillside, sits Assisi old and grey,  
Still the shadow and the sunshine on its lofty spire at play,  
Seems the order Francis founded seven centuries ago  
Stable as the rock he sleeps on in the mystic crypt below.

Stripped of miracle and legend, type he rests so clean and brave,

Little fearful of the present, nothing fearing of the grave.

Yes, ascetic, e'en fanatic term him if you will today,  
Yet how splendid is the figure who could lead the life and say:

Without money and be poor, without pleasures and be chaste,  
Under orders and obedient man must work and if he waste  
His poor body in the effort, even so, why, let it be  
Since man's character is building for a vast eternity.

Each new generation knows him, knows his war on greed and pelf,

Knows the positive upbuilding and the mastery of self,  
How he put aside his fortune, hand in hand walked with the poor

Ministering to mind and body, bringing hope to every door.

In the spacious church above him, on the arches broad and fair,

Angels wrought by young Giotto wing their way thru ambient air.

Love of God and love of beauty, beauty of the mind and soul,  
Of the world of great performance, of the ever distant goal—  
This the love that guided painter, this the love Assisi knew,  
When they wrought with such devotion and their splendid labors grew.

Painter, poet, priest or statesman, social worker, humblest hind,

PERUGINO'S "JESUS IN THE GARDEN"  
 "Thy Perugino labored in a deep religious mood"

All who bring unto their labors conscience and the constant  
 mind,

Swell a life-bestowing current ever broadening its span,  
 Pointing the transcendent glory of the spiritual life of man.  
 As the butterfly that sunders shell of chrysalis apart  
 So do we stand forth transfigured by philosophy and art.

From the time that human motive first began its upward  
 flight

When the mind of man still slumbered darker than the  
 starless night

Dreams have come of life hereafter, nay, conviction that  
 the pain

Of the earthly dust and travail surely have not been in vain,

Lending richness to the present, stealing, from the unknown,  
 fear,

Making labor of the spirit, growth and culture all more dear,  
 Ever offering consolation in the bare and sterile ways

Where uninteresting labor brings no hope of better days.  
 In the far-off, lonely cabin and among the city's throng

Lulled to sleep is human sorrow by this olden cradle song.

Yet we know not, yet we know not if the cherished hope be  
 true,

All pervading and enduring tho its iridescent hue.

This we know: that man has purpose, God-inspired but still  
 his own,

Will to climb, to plan, to venture, will to conquer the un-  
 known;

Know the iron in his spirit holding him with steady zeal  
 Faithful to the seen and unseen tho they break him on the  
 wheel.

Human will made history. Let man take the praise and  
 blame,

—So will failure of his duty mantle still his cheek with  
 shame—

In the clash of human interests offer but one prayer at  
 night:

For the strength to do His bidding which is strength to do  
 the right;

One fear only in his bosom: wholesome fear of doing  
 wrong—

'Tis the fear of God in substance making men and nations  
 strong,—

Cheerful courage ever marking all the progress of the day,  
 That which helps to send our neighbor singing on his upward  
 way.

If His purpose be in all things, progress of the race we hail  
 Thru an ever higher conscience to a will that shall prevail.

## BIRDS OF NEW YORK

## AN EDUCATIONAL ACHIEVEMENT

LITTLE BLUE HERON

**O**RNITHOLOGY has had a remarkable development in the last half century. With its advance has come a complete revolution in the science as the result of persistent work in the field and close study of structure, classification, migration and distribution. This is

due directly to the patient work of professional ornithologists; indirectly to the popular awakening of fuller appreciation of the out-of-doors among all classes of society.

So, with the Audubon societies making their heroic defense of our songbirds and sea fowl, the sportsmen aroused to the necessity of protecting our game and wild fowl, the governments recognizing the inestimable value of birds to agriculture, and special commissions for educating the people in economic ornithology, we have now in the United States not only a quickened interest in bird life, but a vigorous public sentiment working for the remnant of the country's heritage of game birds, song birds and sea fowl.

Such is the time at which appears, from the New York State Museum, the monumental work which is here considered. The people of the Empire State are indebted for this beautiful and comprehensive work first of all to Dr. John M. Clarke, director of the State Museum, who inspired the idea and has been working for the accomplishment of this publication for many years; second to the author, Mr. Elon Howard Eton, whose wide experience and thoro knowledge of his subject are evident to the most critical student; finally, to Mr. Louis Agassiz Fuertes, the accomplished bird artist, who in more than a hundred large plates in full color has contributed a gallery of American birds worthy to stand beside the immortal bird drawings of Audubon himself.

Any detailed description, in this

limited space, of these two massive volumes would fail to do justice to the work.

In broad terms it may be said that not often has a publication appeared of greater practical, economic and cultural value in the field of its subject.

In accepting the work for the state, Mr. Andrew S. Draper, Commissioner of Education, says in part: "The economic value of birds, the aid which they bring to common culture, and the stimulus which they give to moral sense, constitute ample warrant for supplying accurate

and scientific information about birds and bird life at the expense

LAPWING

of the state." If there were no other reason for commending public service of this nature,

the Commissioner's statement would serve as full justification for the large expenditure.

Certain it is that the creators of "Birds of New York" have set a shining mark for other states.

ELON HOWARD ETON, AUTHOR

JOHN M. CLARKE, DIRECTOR

# THE CHRISTIAN SCRIPTURES

WHAT I BELIEVE AND WHY—TWENTIETH PAPER

BY WILLIAM HAYES WARD

**W**HEN the twenty-seven books of the Christian Scriptures were written there was no question among the Jews that the thirty-nine books of the Jewish Scriptures were fully, and, we may say, verbally, inspired. The writers of the Christian Scriptures were all Jews, and they accepted unquestioningly this belief. In Gal. 3:16 Paul bases an argument on the use of the singular, "seed," instead of the plural, "seeds," depending with rabbinic nicety on the verbal exactness of the text, which gives the promise to Abraham. The writers of the New Testament based their claims for the new faith on their exegesis of the commonly accepted Hebrew Scriptures which bore full divine authority, and they tried thus to show that Jesus was the promised Messiah. But no such inspiration do they claim for their own writings, simply the authority of truth. That satisfied the Apostolic Church.

The three Synoptic Gospels, Matthew, Mark and Luke, are books of biography. They are the remains of a number of such books recording the sayings and works of Jesus, and they were preserved no doubt because they were the most complete and valuable of all that were current. Luke tells us in the first verse of his Gospel that many such booklets were current in the churches, but all of them have perished except these three Gospels. One of them, indeed more than one, Luke certainly used, for much of his material is common to Matthew and Mark. Matthew's Gospel is also composite, and Mark's seems to be the most nearly original of the three. The writers make no claims to have possessed in the writing of them anything more than human wisdom. For all they have to say we have the right to use our judgment in accepting their statements as true. But that their object is to give substantially a true story of the life and teachings and death of Jesus is plainly evident.

## THE DRAMATIC FOURTH GOSPEL

This is not so clear as to the Gospel given to us under the name of John. No author's name is assigned to the Fourth Gospel, any more than to those of Matthew and Mark, but an old tradition assigns it to the Apostle John; and the last chapter, which is an appendix apparently by another writer, assigns it to him. It may be that John wrote it in his old age, or, quite as likely, one of John's

younger disciples composed it, incorporating facts and reminiscences which he had received from his master.

The latter conjecture seems more probable to me, for it seems evident that it was the intention of the writer to give, as in the words of Jesus, the substance of the Christian teaching, and not to gather up from tradition or memory our Lord's actual and exact addresses and prayers. The book is dramatic rather than biographic. Thus in John 7:4-26 is given the prolonged conversation of Jesus with the woman of Samaria, when no one of the disciples was present. Similarly we have in the third chapter the conversation of Jesus with Nicodemus at a secret meeting, the writer's purpose being in both cases to present Jesus as the Christ. It was his plan to put in an historical setting the author's idea of the essential principles of the Christian faith as they had been developed in the Church at the time of his writing. Whether John wrote it in his old age, or John the Presbyter, as some have thought, or some other writer, is to me of no importance, not worth discussing here, and may be left to the schools for study or conjecture. It is enough to say that the Fourth Gospel bears to the Synoptic Gospels very much the same relation as do the Dialogs of Plato, in which the teaching is put into the mouth of Socrates, to the actual sayings of Socrates as recorded by Xenophon in his *Memorabilia*.

## IT DOES NOT CLAIM LITERAL ACCURACY

It must not be thought that such a composition with language put into the mouth of an honored leader would be regarded in those days as ethically wrong or was meant to deceive. We know that sixty books were written by the disciples of Pythagoras and ascribed to him with the thought of honoring him; and a multitude of Jewish books, like the Book of Daniel and the Book of Enoch, and a larger number of Christian Gospels and other writings ascribed to the Apostles have come down to us, and the Christian Fathers were honored in the same way. When a Greek or Latin historian puts into the mouth of a general a rousing address to his soldiers before going into battle, it must not be supposed that the historian had before him a parchment copy of the speech, or, indeed, that any speech was made. It is simply the historian's way of indicating what he be-

lieved to be the purpose of the general in joining battle. Yet a subsequent writer, or an uncritical reader, may make the mistake of supposing that the author's literary device really represented the genuine words of the hero of the history. Such has been the case with the Fourth Gospel. After its great value made it read in the churches and received into the canon, it came to be believed—and the tradition has come down to us—that the very words of Jesus in his discourses and their historical setting were truly and miraculously reported and have been preserved to us. For any such conclusion there is no evidence and no claim in the Gospel itself.

## IT IS UNIQUE IN METHOD

It is incredible to me that these discourses attributed to Jesus were really uttered by him. They are quite unlike the simple, concrete sayings of Jesus given in the three other Gospels, and which were written down long before the composition of the Fourth Gospel. It is not simply the historical discrepancies which affect my conclusion, but the substance of the discourses, which represent a later stage in the development of Christianity. The tone is utterly different. The three Gospels tell a plain story. Jesus does miracles of healing, and gives religious teaching about the Father, and righteousness and mercy, but publicly makes no claims to be the Messiah. That comes but seldom, and then privately with his disciples, and He bids them tell no man. Even the marvelous judgment scene of the last day when he shall sit on the throne of his glory, and that other assurance that his disciples shall sit on twelve thrones, are in private. But it is different in John's Gospel. The writer says in his conclusion, before the Appendix, that he wrote it "that ye may believe that Jesus is the Christ, the Son of God, and that believing ye may have life in his name." Accordingly every incident and address is chosen and told so as to emphasize publicly as well as privately his claim to the Messiahship. He tells Nicodemus that he is "the only begotten Son of God." He tells the woman of Samaria that he is the Christ, and she tells the Samaritans, many of whom believe, after he had been with them two days, that he was "indeed the Savior of the world." After the cure on the Sabbath at the Pool of Bethesda he tells the Jews that he is "the Son of God"

and that the dead shall hear his voice and come out of the tombs unto the resurrection of judgment. Again in the synagog at Capernaum he told the people that his flesh was for the life of the world, and that he would at the last day raise up those that believed in him. And so it goes thru the whole Gospel: Jesus is all the time talking about himself and emphasizing his claims, except in the unauthentic account of the woman taken in adultery, which sounds like one of the gracious stories lost out of the Gospel of Luke. There are no characteristic parables, only long addresses.

#### PAUL'S THESIS

The explanation of the difference in the description of Jesus given in the Synoptic Gospels and that of John is to be found in the fact that it represents a later stage in the development of the Church, and that it was written to emphasize that faith in Jesus as Christ and Savior which he taught privately in the chamber and not on the housetop. When it was written the Church had felt the transforming influence of Paul, of which we find no trace in the three Gospels, but of which the Fourth Gospel is full. I think of Paul as brought, as suddenly as by a miracle, to the conviction that Jesus was the promised Messiah. But that contradicted all the biblical teaching he had received, and the permanent authority, he saw, tho the other apostles did not immediately see it, of the Mosaic Law. So he searched the Scriptures to learn where his error had lain. He clearly saw that the acceptance of Jesus as Messiah and King involved a purely spiritual religion, with the passing away of the Mosaic ritual and ordinances, and the victory of Jesus over Moses. How could this be? He found the key to the problem in two passages, one in Genesis, that "Abraham *believed* God and it was counted to him for *righteousness*," that is, for *justification*; the other in Habakkuk, where he found the same two words, that "the *just* shall live by his *faith*," that is, *belief*. The two passages agree, as two witnesses, that one is *justified* by his *belief* in God, and if so not by any formal rites. The first passage shows that a good man, yet uncircumcised, living centuries before the Mosaic law, could be saved by his faith in God; and the second showed that faith was equally efficacious after the promulgation of that law. So he found Bible authority for discarding the saving value of the law of ritual service. Thus faith was to him the condition of salvation; and by faith he meant not intellectual

belief in a system of doctrine, but the opposite of what he called the works of the law, of sacrifices, fastings, circumcision and other "bodily exercises" which "profit nothing." That is, faith was heart religion, was the acceptance of God as the loving father, obedience to him and fellowship with Jesus Christ who had died and risen again as the Messiah.

#### IT IS REFLECTED IN JOHN'S GOSPEL

Thus faith, with Paul, meant faith in Jesus as the Christ. But this is what we do not find in the Synoptic Gospels as the meaning of *faith* and *believe* (the same words in Greek). In these Gospels those who would be healed must "believe" that he can cure them; if the disciples "believe" they can remove mountains they can do it; and Jesus bids the multitude "believe" in his good news. But in John's Gospel the word *believe* appears more than twice as many times as in the three other Gospels together; and now it is to believe on Jesus, an expression belonging to Paul and not found in the Synoptics.

Thus the purpose given for writing the Fourth Gospel, that its readers might believe that Jesus is the Christ, is borne out in its composition. It is the latest of the Gospels to be received into the canon, while a number of others were written, had some currency, but were finally rejected. It is rich in spiritual inspiration, a precious treasure, but it makes no claims for itself to be received as a book inspired in any peculiar way. The speeches put into the mouth of our Lord give the spirit of his gospel, but cannot be real reports.

The Book of Acts is a book of Church history, but it makes no claim to be judged in any way differently from any other book of history; and, on the face of it, it is to be valued by what it is found to be worth, and that value is immense.

#### PAUL'S APOSTLESHIP AND SERVICE

Paul in his Epistles speaks with a real authority, but it is the authority of an Apostle rather than of one guided in all he may write by the Holy Spirit of God. In most of his Epistles he describes himself as an Apostle, yet not commissioned like the other Apostles who had been disciples of the Lord, for he had never seen Jesus in the flesh, but only in a vision; yet his apostleship, he claimed, was as direct as theirs and had been more fruitful. So far as we can see, the very permanence of the Christian Church, as well as the definition of its faith, depended on Paul. But for his clear exposition of its meaning and its universality it

might have perished as a mere Jewish sect, like that of the Ebionites. Paul had the clear vision to see what was involved in the spirituality of Christ's teachings, that in Christ the Gentile is as good as the Jew, and that not one ritual observance, not even the Sabbath, was retained as of obligation. Jesus, as his teachings appear in the Synoptic Gospels, never broke the Mosaic Law. He observed its commands. He said that he who should break one of them would be least in the kingdom of heaven; that tithes of mint, anise and cummin should be paid. He kept the Sabbath, but he condemned, out of the Law, the stringency which forbade to do good on the Sabbath, and the hypocrisy which kept the letter but not the spirit, and added burdensome traditions and interpretations; and he strengthened the Law, not by adding to its letter but by emphasizing its spirit. He preached only to his own people, the lost sheep of Israel; but it is the Gospel of John which, following Paul, tells us that neither in the Samaritan mountain nor in Jerusalem does God choose to be worshiped any more than in any humble heart.

#### THE AUTHORITY OF PAUL

Paul was the chief of Apostles, and yet he did not claim to speak with any such authority as he allowed to the Old Testament. In writing to the Romans he recognizes that they are "filled with all knowledge," and yet he ventures to admonish them, not to command them, simply because of the grace given unto him "to be a minister of Christ Jesus unto the Gentiles." He "beseeches," not commands, the quarrelsome Corinthians to put aside their contentions; and again, "not that we have lordship over your faith." He gives his rebukes positively yet courteously, and on some questions on marriage he gives his opinions with reserve, or thinks he has the Spirit of God, while on other matters he speaks positively, as their teacher and Apostle. He rebukes the Galatians sharply for their Judaizing, but the most he says of his own authority is that he received his gospel from God. More positive "command" does Paul give to the Thessalonians that they withdraw from any that walk disorderly. He tells Timothy that the sacred writings which he had learned from his infancy, meaning the Jewish Scriptures, are "inspired of God," but has nothing to say of any Christian writings, his own or any other. Indeed, nowhere does he claim the same authority which he allows to the Old Testament.

The Epistle to the Hebrews is from an unknown author, not from Paul. It is most clear in its accepted doctrine of the inspiration of the Old Testament, saying in the first verse that God had "spoken unto the fathers in the prophets in divers portions and in divers manners"; and the whole argument of the superiority of the Christian dispensation to the Jewish people is based on the authority of the Old Testament, which it quotes in the words, "The Holy Ghost also beareth witness to us"; but the writer depends on such authority and not on personal inspiration for his own claim to acceptance.

#### THE CLAIM FOR REVELATION

No more do the shorter epistles of James, Peter, John and Jude make any claim to divine inspiration. They simply exhort as any teacher might. But the case is somewhat different with the Revelation, which is assigned to John, apparently the Apostle. It is in the form of visions; and the writer puts the most of it into the mouth of Jesus Christ or of angels; and by way of exception to all the other books of the Bible the writer, at the end of the book, puts into the mouth of the Lord Jesus a curse upon any one who should add to or take from its contents. This must be understood as a most positive claim for the fullest inspiration and sanctity.

And yet, the Revelation, as it comes last in the New Testament, so was the last to be accepted as canonical. It was recognized in the second century by Papias and Justin Martyr, but was rejected in the same century by Marcian, and later was not included in the old Syriac Version and was generally rejected in the Eastern Church, and by Dionysius of Alexander, Eusebius and Chrysostom. But the Western Church held to it, and opposition to it gradually died out, altho Luther put it, with Hebrews and James, among books of doubtful canonicity. It is hardly probable that it was written by the Apostle John, quite as likely by John the Presbyter, and it belongs to the list of a number of books on the last things, a subject which much fascinated imaginative spirits. This is far the best of the whole class, but I can see no internal or external reason for believing that it bears divine authority.

#### THE GROWTH OF THE DOCTRINE OF INSPIRATION

If then, not one of the writers of the New Testament, except the writer of the Revelation, the most doubtful of all, claims for his work any

such inspired authority as he allowed to the whole Old Testament; and if the same is true for the writers of the Old Testament, except as three books of the Pentateuch and the prophetic works claim to include certain revelations from God, how does it happen that the doctrine of inspiration for each of the two Testaments as a whole has grown up? It is clear that no special act of inspiration first gave its accrediting to either Testament as a whole, but that the separate books, one after another, came to be held as sacred and one was added to another until the time came when the collections were held to be complete.

#### HOW THE TESTAMENTS GREW

I take it that, for the Hebrew Scriptures, as the literary period advanced after the Captivity and the return, and as the development of the synagog advanced in its provision of local worship, rolls were gathered, first of the Pentateuch, and later of the prophetic books, and finally of the Psalms and kindred collections, to be read at sabbath services. The synagog would provide for the community its library and school; and other books of value beside those purely religious might be read, such as were historical, or romances like Esther, Ruth and Daniel, which were among the latest to be accepted.

Some, like Ecclesiasticus and Judith, might have some currency, but not to be thought quite as valuable perhaps if not written in Hebrew or if of later composition. When read in worship and depended upon for religious and patriotic history they would gradually acquire sanctity and even the original romance or the old love-songs would be accepted as history or figure. In our own day, we have seen the Book of Mormon and Mrs. Eddy's teachings on Christian Science read with the Bible in worship and added by some to the canon. The process was gradual but sure; and while the three divisions of the Hebrew Scriptures were not held to be of equal sanctity, yet all were allowed divine inspiration, and this result had been reached, as the New Testament books prove, before the time of Christ. Jesus and his Disciples as well as the Jews inherited and accepted the doctrine without question.

The process by which so many of the early Christian Gospels, Epistles and other writings were chosen to form a sacred canon was much the same. The Christian synagog became the church, and like the synagog the church had its chest of

valued books. There the children were taught and all the people worshiped and listened to the written words of the Apostles and other distinguished teachers. Thus Polycarp made a collection of the letters of Ignatius for the church at Philippi. Each church would make as good a collection as it could to be added to the Old Testament Scriptures. These would be read on the Lord's Day, and by the time a generation or two had elapsed the new Christian books of the Apostles and others near them would come to be regarded as quite as sacred as the Jewish Scriptures. It would come gradually, and different churches would have varying collections. Thus the West accepted the Revelation while the East rejected it, and in old manuscripts of the New Testament are included the Epistles of Clement, the Epistle of Barnabas, and the Shepherd of Hermas, while to these may be added the Gospel According to the Hebrews and that According to Peter, and the two Apocalypses of Peter and Paul. Many such books dropt out, leaving by general consent those now printed in our Bibles.

#### TIME-HONORED SANCTITY

The result was that the best survived, and some perished. What was at first accepted as good and precious grew into sanctity and to it was ascribed the same divine inspiration as to the Old Testament. Time ripens distinction. The church in Corinth quarreled as to the preference to be given Paul or Peter or Apollos. Washington and Lincoln were not canonized in their own day. There was no cult of Shakespeare and Milton while they lived. A generation or two had to pass before Milton could pen the epitaph on Shakespeare's "honored bones," and a similar period had to elapse before Dryden's famous quatrain could rank Milton as the fourth and greatest of the world's epic poets.

So it was with the New Testament books. Clement, about 90 A. D., quotes the Old Testament abundantly, and with such formulas as "The Scriptures bear witness," "Thus saith the Holy Word"; but the New Testament books are never quoted by him with any such reverence, altho he does speak of one of Paul's rebukes to the Corinthians as guided by the Holy Spirit. In the second century the condition has changed. Polycarp quotes the New Testament as authority more than the Old, and a little later Justin Martyr has given it full inspiration. In our day the New is properly accepted as superior to any part of the Old.

# BOTH SIDES

SHALL WE HAVE A  
GOVERNMENT-OWNED  
MERCHANT MARINE?

# A DEBATE

RESOLVED, That the United  
States should have a government-  
owned merchant marine.

THE decline of the United States merchant marine since the war of 1812 has been due to treaties giving ships of other nations equal privileges with American ships, to the introduction of iron ships which could be built more cheaply abroad, to the growth of large shipping corporations, and to the fact that our navigation laws admitted only American-built and American-manned ships, under specially restricted conditions of employment, to American registry. The provision of the Panama Canal act, admitting American-owned, foreign-built ships less than five years old to American registry, did not materially alter the situation. During the present war, many ships have taken advantage of the act of August 18, 1914, admitting any foreign-built ships, owned by Americans, to American registry and empowering the President to suspend certain provisions of the navigation laws relating to manning and inspection of vessels. The ship purchase bill, now before Congress, provides for the formation of a corporation, fifty-one per cent of the stock to be owned by the Government, to purchase or build ships. This debate was prepared by Mary Prescott Parsons.

## ARGUMENT FOR THE AFFIRMATIVE

- I. The United States has long needed a merchant marine for foreign trade.
  - A. To improve the foreign mail service.
  - B. As an auxiliary to the navy.
  - C. To develop commerce.
  - D. To protect the financial interests of the United States.
    1. To give the advantage of freight rates to American shippers.
    2. To prevent the "tight money" situation which follows shipment of gold abroad to pay freight rates.
- II. The present emergency necessitates a prompt solution of the shipping problem.
  - A. The situation is serious.
    1. Freight rates have become excessive.
    2. The United States cannot secure enough foreign ships to move crops.
      - a. Most ships of belligerent nations have been commandeered or interned.
      - b. Ships of neutral nations are busy carrying the freight of their own countries.
    3. Failure to move crops is causing financial and industrial depression.
  - B. The United States should take advantage of this unusual opportunity to restore her merchant marine and extend her commerce.
- III. A government owned merchant marine is the best solution of the problem.
  - A. No other solution is possible at present.
    1. Private capital will not invest in shipping.
      - a. It is cheaper to operate ships under foreign flags because our navigation laws require higher standards of living and wages for sailors.
      - b. Congress will not lower these standards.
      - c. Private capital cannot compete with the large shipping corporations.
    2. Government guarantee of the bonds

of private shipping companies would result in political favoritism.

3. The free ship policy has not proved adequate.

4. Discriminatory duties and tonnage taxes are contrary to existing treaties and would lead to retaliation by other governments.

5. Subsidies are open to grave objections.

a. They have failed in this country in the past to build up a merchant marine.

b. They are a source of extravagance and corruption.

c. They discriminate in favor of large companies.

B. Government ownership of a merchant marine is practical and wise.

1. It is a legitimate function of the government.

a. Government ownership of the Panama Railroad Steamship Company line is a precedent.

b. It will benefit the entire country.

2. It will not create a government monopoly.

a. The government will own only part of the American shipping.

b. The government proposes to sell its ships to individuals as soon as possible.

3. It will not endanger our neutrality. Great Britain and the United States have long upheld the right of a neutral nation to purchase the merchant ships of a belligerent.

4. It is wise economically.

a. Experience with the Panama Railroad Steamship line shows that a reasonable profit could be made.

b. It will insure moderate freight rates.

## ARGUMENT FOR THE NEGATIVE

- I. Altho the United States needs a merchant marine, the immediate need has been overestimated.
  - A. Our foreign mail service is satisfactory.
  - B. Our coastwise ships could be used as an auxiliary to the navy.
  - C. High freight rates are more than offset by higher prices received.
  - D. Additional ships are not needed to move crops and extend trade.
    1. The present emergency is caused rather by lack of port and terminal facilities and of marine insurance than by lack of ships.
    2. The government can meet the emergency better in other ways.
      - a. By a better system of foreign credits.
      - b. By loans at reasonable rates.
      - c. By adequate war risk insurance.
- II. Government ownership of a merchant marine should not be attempted.
  - A. It is wrong in principle. It is class legislation, paternalistic, and contrary to American ideals.
  - B. Government ownership of a merchant marine would defeat its own purpose.
    1. Private capital would be kept from investing by government competition.
    2. Reduction of rates would drive the present American ships from the sea.
    - C. Even if the principle be conceded, the plan is open to insurmountable difficulties.
      1. Our neutrality would be endangered by purchase of ships from belligerents or by any slight hostile act committed against a government ship.
      2. The bill would have no immediate value.
        - a. Mere transfer of ships to the government would be of no use.
        - b. Enough additional ships to alter the

present situation cannot be secured, for 1. Only the ships of belligerents are for sale. 2. It takes from seven to twelve months to build ships. 3. The bill does not provide funds for acquiring many ships.

3. It would be a waste of money.

a. Shipbuilding is unusually expensive at this time.

b. Government management is sure to prove more expensive than private management.

c. Foreign ships will compete again as soon as the war ends.

4. The bill would endanger our coastwise shipping.

5. It would necessitate government trading to secure return cargoes.

6. It would invest the shipping board with too much power.

7. There would be danger of political favoritism.

D. Government ownership of ships is unnecessary.

1. It will not relieve the present trade situation. Other measures will meet the emergency. It is not advantageous as a permanent policy.

4. A revival of privately owned American shipping is likely to follow the close of the war.

a. Ships can now be operated under the American flag at a moderate profit; greater efficiency of American seamen makes up for their higher cost.

b. War debts will increase the cost of operating under foreign flags.

c. The war has opened new markets to American shippers.

E. Other policies such as discriminatory duties or subsidies would be preferable to government ownership of ships.

F. A new policy should not be inaugurated hastily under unusual conditions.

## The New Books

### WAR SPECIALS AT THE FRONT

**T**HE present trials and hardships of the press correspondents in their hard-fought campaigns to beat the news censors and break down the resistance of the field army regulations are served up to us every morning as a substitute for the accurate information we crave about suspected defeats and victories, the movements of armies, and the plans of the general staff. In our complaints over the failure of the news gatherer to furnish all we ask, we quite forget that the experiences of the war correspondent himself are as well worth relating as the manner in which a picked regiment assaulted an impregnable position.

No tales could be more romantic or thrilling than some of those which depict the adventures of *Famous War Correspondents* in their efforts to follow the battle lines and overcome official interdicts in search of news for their journals. Mr. Bullard tells, with keen relish for the daring and picturesque, the stories of such extraordinary careers as those of Sir William Howard Russell, who as representative of the *London Times* during the Crimean War opened a new chapter in journalism; Archibald Forbes, who made fame for himself and the *Daily News* at the time of the Franco-Prussian War, and J. A. MacGahan, the Ohio boy, who followed the Russian expedition across the desert to Khiva and stirred all Europe with his letters on the atrocities of the Bashi-Bazouks.

There are some names also which are now appearing in almost every day's news: Sir Frederic Villiers, the noted artist of the *London Illustrated News*; Richard Harding Davis, and especially Winston Spencer Churchill of the English Cabinet, who won his spurs, so to speak, in his reckless work as a reporter during the Boer War. Every chapter of the book gives new evidence of the trouble, expense and risks that must be incurred to furnish the public with facts on which to form judgments of approval or condemnation on the course of the Great War.

*Famous War Correspondents*, by F. Lauriston Bullard. Boston: Little, Brown & Co. \$2.

### OTHER AMERICAS

Of all the books appearing upon South and Central America not one contains so much real meat as *Latin America*, a group of twenty-nine lectures delivered at Clark University by men who speak with authority upon Latin America and our relation to it. The range of subjects includes the Mon-

## The Telephone Unites the Nation

**A**T this time, our country looms large on the world horizon as an example of the popular faith in the underlying principles of the republic.

We are truly one people in all that the forefathers, in their most exalted moments, meant by that phrase.

In making us a homogeneous people, the railroad, the telegraph and the telephone have been important factors. They have facilitated communication and intervisiting, bringing us closer together, giving us a better understanding and promoting more intimate relations.

The telephone has played its part as the situation has required. That it should have been planned for its present usefulness is as wonderful as that the vision of the forefathers should

have beheld the nation as it is today.

At first, the telephone was the voice of the community. As the population increased and its interests grew more varied, the larger task of the telephone was to connect the communities and keep all the people in touch, regardless of local conditions or distance.

The need that the service should be universal was just as great as that there should be a common language. This need defined the duty of the Bell System.

Inspired by this need and repeatedly aided by new inventions and improvements, the Bell System has become the welder of the nation.

It has made the continent a community.

MARQUIS DE LA FAYETTE  
MAJOR GENERAL U.S.A. 1776-1778

"Peace Founded on the Sanctity of Contracts between Nations"

## THE LA FAYETTE FUND

This winter on the Aisne, along a battle line extending a hundred miles, in trenches of frozen earth, the men of France and her Allies, covered with ice and driven by hail and sleet, are fighting for the ideals of Democracy. It is not only shells that kill, but there is the suffering from cold and exposure. Will you help to relieve that suffering? When in the snows of Valley Forge your ancestors struggled to create this Republic, the strangers who came to their aid were La Fayette and the people of France. Let us now manifest our sympathy by efforts to relieve the suffering of her Soldiers.

## THE LA FAYETTE KIT

to be devoted to the immediate relief of the unavoidable suffering of the men in the trenches

Two Dollars provides, and by arrangement with the French authorities dispatches to the trenches, a kit of AMERICAN MADE GOODS. The whole of each contribution goes to the soldiers in the field.

### EACH KIT CONTAINS THE FOLLOWING ARTICLES:

Fleece Lined Shirt	Fleece Lined Drawers	2 Pair Woolen Socks	1 Pair Woolen Gloves
Abdominal Belt with Six Safety Pins	Colored Handkerchief	Dark Heavy Muffler	Small Cake Soap

THE NAME OF THE CONTRIBUTOR WILL BE ENCLOSED IN EACH KIT

roe Doctrine from *their* point of view as well as our own, the history and expressions of democracy, Latin as well as Anglo-Saxon, the present political and educational systems and ideals of our neighbors, their economic situation, their commerce, and the obstacles to an increasing trade with the United States. The writers, including diplomats, editors, public officials, commercial experts, scientists, and students of history and government, are all qualified to speak by reason of detailed study and experience. No other one volume offers so wide a view, so authoritative a treatment, or more accurate and valuable information than this timely publication.

Brazil's loss of her rubber market lends a present interest to Mr. Algot Lange's detailed account of journeys into the jungle of *The Lower Amazon* and his graphic representation of the difficulties of the rubber industry, accompanied by some account of indigenous Indian tribes and their language, as well as a by no means hopeful estimate of Brazilian civilization as it is under the equator. Much wider in scope and of much more permanent interest is the reprinting, in a revised form, of Mr. Bancroft's *History of Mexico*. This history is now one of the fullest and best available, and with its final chapters bringing the book up to date, it should commend itself to all.

Disastrous as some of Mexico's revolutions have been, and bloody, perhaps no political occurrence in the Western Hemisphere was so terrible, spectacular, and at the same time so racially interesting as *The French Revolution in San Domingo*. The doctrine of equality set the whole island aflame. On the French side the mulattoes rose against the whites, later the blacks against the mulattoes; the Europeans were exterminated; and Haiti set out upon her course of political turmoil and commercial misfortune. This particular chapter, with the remarkable careers of Toussaint Louverture and his lieutenant, Dessalines, has never been fully written before, and Mr. Stoddard is to be congratulated upon the thoroughness with which he has gathered his material and the clearness with which he has reconstructed his picture.

*The Lower Amazon*, by Algot Lange. New York: G. P. Putnam's Sons. \$2.50.

*History of Mexico*, by Hubert Howe Bancroft. New York: The Bancroft Company. \$2.

*The French Revolution in San Domingo*, by T. Lothrop Stoddard. New York: Houghton, Mifflin Co. \$2.

## ENGLAND'S ECONOMIC DEVELOPMENT

Professor William J. Ashley has put into a compact volume his lectures, delivered two years ago at the Colonial Institute of Hamburg, on *The Economic Organization of England*. It comprises a brief but most valuable study of the historical development of the English agricultural and industrial organizations from the manorial and gild systems of the thirteenth and fourteenth centuries down to present-day land-

Austin's Shops, 103 Court St., Binghamton, N.Y.

lordism and capitalistic production. Many illuminating comparisons are made with continental conditions, and the peculiarities of English developments are accounted for. The influence of commerce, the Reformation movements, and the course of parliamentary government on large land-holdings is clearly traced. The so-called "industrial revolution," resulting in freedom of contract and the evolution of capital along lines of concentration and collective action, is viewed merely as part of a long process of economic development. In the light of Professor Ashley's historical sketch and analysis of present conditions it is easy to see why England has a determined and growing party bent on land reform and greater governmental control in industry.

*The Economic Organization of England*, by Prof. Wm. J. Ashley. New York: Longmans, Green & Co. 90 cents.

#### THE ART OF THE SHORT STORY

Many manuals have been written to explain to ambitious authors the mysteries of short story technic. The same task has been undertaken for the general reader by Professor E. A. Cross in *The Short Story*. During the past fifty years this form of fiction has been very highly developed, and it is Professor Cross's contention that to enjoy the modern product fully the reader must appreciate its artistic form as well as its content. Altho story-telling is one of the oldest of the arts, it was Poe and Hawthorne who first began the shaping of a definite technic. Among its modern masters, some of whose stories Professor Cross reprints are James B. Connolly, Joseph Conrad, A. Conan Doyle, Hamlin Garland and Jack London. One conspicuous omission is the name of O. Henry. As a bibliography an excellent list of magazine stories and articles has been appended.

A. C. McClurg. \$1.50.

#### A HANDY DICTIONARY

The serious defect we have found in our constant use of the *New Standard Dictionary* is what we must recognize is its greatest merit, that is, its comprehensiveness and consequent size. But often our desire to look up a word is not strong enough to lead us to lift such a heavy volume. Therefore we are delighted to receive from the publishers a compendium of their larger work in a single volume of convenient size, the *Funk and Wagnall's Desk Standard Dictionary*. It contains some 80,000 terms, which is as many as anybody ought to use, and they are mostly of the language, for obsolete words have been cut down to give room for modern ones. Biographical, historical and geographical names are included in the same alphabet with common nouns. Synonyms receive special attention.

Funk & Wagnalls. \$1.50.

#### CLOISTER AND COURT

If history be a bitter pill, the sugar-coating of romance is sometimes a great palliative. So Robert Hugh Benson, under cover of the adventures of a young novice in the service of the Holy Church at the Court of Charles II, packs a deal of information about the struggle of Papist and Protestant into his new novel *Oddsfish*. The painstaking chronicle, tho reflecting the somber days of the seventeenth century, possesses nevertheless a certain quaint humor that serves to relieve the tension.

Dodd, Mead & Co. \$1.35.

#### BATTLE-SWEPT BELFRIES

William Gorham Rice says that when he learned that even the custodians of the British Museum knew of no work on carillons, he was convinced there was need of another book in the world. That he was right he proves by supplying the need with a very interesting book indeed on *Carillons*

## You Never Know

when you are going to need an axe, but when you do, you need it badly. Then you want a HANDIAX and when you go to buy don't say just "an axe." Say a Romer Axe, and thus make sure of getting high axe quality, durability and cutting efficiency. The best hardware and sporting goods dealers carry the Handiax.

of Belgium and Holland: Tower Music in the Low Countries. Mr. Rice's descriptions show that the best carillons have from forty to fifty bells and that an accomplished bell-master plays thereon such difficult music as sonatas by Bach and Schubert. It is a melancholy thought that probably half of the carillons of Belgium described in this book have now been destroyed by the German invaders.

John Lane Company. \$1.50.

## POVERTY SUPERFLUOUS

That modern methods of production make poverty a problem of distribution rather than one of sufficiency, is generally recognized by all informed people. Professor Hollander in the little book, *The Abolition of Poverty*, analyzes the causes of poverty into underpayment, unemployment and unemployableness. For each group of causes he recommends a specific remedy—or rather preventive—such as social insurance, collective bargaining, minimum wage regulations, labor exchanges, decentralization of populations, etc. He repudiates both the *laissez-faire* and the Socialist viewpoints and pins his faith to social regulation on the assumption that it is the misdirection and not the normal workings of competitive industry that brings about poverty.

Houghton Mifflin. 75 cents.

## WHAT CHILDREN LOVE

A useful thing to have around the house that is inhabited by animals other than (and in addition to) children and their parents and attendants, is *The Pet Book*. In this Mrs. Anna Botsford Comstock of Cornell University gives interesting descriptions of the habits of, and simple direction for the care of some seventy animals that are more or less commonly kept as pets. The book is beautifully illustrated with over 120 half-tones, mostly full page, and a number of cuts. There are also numerous appropriate poetical selections and references to further readings on the animals discussed. This is not only a very attractive book to look at and to look over, but it will be of great help in schools that attempt to keep living animals on hand for use in connection with nature study or biological instruction.

Ithaca: Comstock Pub. Co. \$2.50.

## EFFICIENCY IN BUSINESS

Without attempting to make the reader an efficiency expert in every department of industry or commerce, Professor Norris A. Brisco of the College of the City of New York brings together a large amount of instructive material about the history of and the reasons for the various phases of the "efficiency" movement. *Economics of Efficiency* is a very readable text-book that discusses the relation of management, methods, training and hiring of labor, working conditions, wages and payment systems, etc., to productivity. Where he tries to philosophize, as in the chapter on organized labor, we get nothing but pious platitudes. Otherwise the book ought to be helpful to students and business men generally.

Macmillan Co. \$1.50.

## PAGEANTS IN AMERICA

How popular and how varied in subject matter has been the outdoor pageant movement since its importation into this country from England a few years ago is strikingly demonstrated in the volume, *American Pageantry*, by Ralph Davol. Besides pictures from more than eighty cities, which tell graphically of the growth of this great new outdoor art, there are chapters that deal with the subject of presentation, how to construct the dialog and the most effective setting in scenery and costumes for the successful open air spectacle.

## Efficiency Question Box

in which Mr. Purinton answers questions of health, work, business, and everyday life?

their builders, from the Emperor Diocletian to the simple monks of the cloistered convent of Ragusa and the present-day inhabitants. These are introduced in such a way as to be made to live for us, whether they are passengers on the steamer, cabin or steerage, Italian townfolk, Dalmatian peasants or Montenegrin bravos. The personal side of the authoress' adventures is perhaps a little overdone. Extracts from her diary run a thread of romance thru the book in which figure a gallant Austrian officer and a flippant Fräulein, a thread that smacks of fiction.

Funk & Wagnalls. \$2.

#### EDUCATION AS IT WAS

Not history, but the materials from which history is made are to be had in W. H. Smalls' book, which is a relief from the frequently superficial compilations on life in the colonies. In ancient town and colonial records he has gleaned the plans and regulations of *The Early New England Schools*. There is comment enough to bind them together, but the extracts are in themselves sufficiently vivid and leave the reader marveling that any people could have developed under such meager and often stupid and cruel training.

Ginn. \$2.

#### MORE OF FATHER BROWN'S WISE INNOCENCE

Gilbert K. Chesterton builds up his intricacies of mystery like a house of cards—just for the pure delight of knocking it down with *The Wisdom of Father Brown*. The elaboration of evidence and the simplicity of that odd little priest-detective's solution make a most clever and amusing contrast, and one is quite willing to puzzle over the involved schemes—even to strain the credulity a bit for the privilege of following Father Brown as he trots peacefully thru a world of complications.

John Lane Co. \$1.30.

#### THE PSYCHOLOGY OF WAR AND PEACE

*An Open Letter to the Nation, with regard to a Peace Plan*, by James Howard Koehler, suggests that hereafter the War Department of the Government be called the Peace Department, the Secretary of War be known as the Secretary of Peace and what are understood as War Policies shall hereafter be known as Peace Policies. The author thinks that by taking advantage of the "suggestibility of the human mind" the people will change their minds and subsequently their conduct peaceward.

Kennerley. 75 cents.

#### CHECKING UP JOSEPHUS

Mr. Norman Bentwick has published a readable sketch of the life of *Josephus* and a careful survey of his work as a Jewish apologist and historian. The volume is written from the Jewish standpoint with no attempt to extenuate the moral or literary faults of the ancient writer. The relation of Josephus to earlier writers is emphasized, and the value of his historical books critically examined with the result that all his statements need to be corroborated before accepted as trustworthy.

Phila.: Jewish Pub. Society.

#### AUTHORS AS RECRUITING AGENTS

Already the flood of patriotically inspired war fiction is rising. Like Barrie's *Der Tag*, Florence Barclay's *My Heart's Right* There ought to be a first rate recruiting agent for the British War Office. Mrs. Barclay is a most accomplished artist in moving the popular heartstrings, as *The Rosary* and *The Wall of Partition* well testify, and even such slight stories as this, without a semblance of plot or incident, afford striking evidence of her power.

Putnam. 75 cents.

#### WIVES, IDLE WIVES!

A few railings against discontented women masquerade under the disguise of stilted conversation and moody reflection in *The Pillar of Salt*. Tho petty in viewpoint and expression, Horace W. C. Newte "means well feebly" in his palpably moral tale, but both moral and story would have profited by a little thought.

John Lane Co. \$1.35.

## BOOTH TARKINGTON'S *Big New Novel* THE TURMOIL

Try to remember the tenderest story of love you have ever heard or read—

Try to recall the never to be forgotten sensation of your own first all-enfolding rapture—

And then you may form some faint picture of the beautiful story Booth Tarkington has written in his great new novel "The Turmoil." "It is beyond question the novel of the year."

# THE MARKET PLACE

## STEEL DIVIDEND PASSED

The market for securities was affected last week by the passing of the Steel Corporation's common stock dividend. It was shown by the official report that net earnings in the last quarter of 1914 had fallen to \$10,933,170, the lowest total in the company's history. There was nothing for the common stock, and nearly the entire amount required for the preferred (or \$5,606,000) was taken from the accumulated surplus. On the Stock Exchange the price fell from 51 1/2 to 40. The minimum fixed by the Exchange was reduced from 48 to 43, then to 40, and finally to 38.

But the Corporation decided that it would not reduce wages, and since the end of the year there has been some improvement at its mills. This is due mainly to orders from railroad companies, the steel industry's best customers. And the chief cause of depression in the latter part of last year was the restraint imposed upon the railroads by their failure to obtain permission to increase rates. The orders recently given have followed, with some delay, the Interstate Commerce Commission's favorable action.

The decision about wages was reached after reductions had been made by independent competing companies. There is evidence that a much better report will be shown at the end of the present quarter, altho the payment of dividends on the common stock may not then be resumed. In the year 1914 the Corporation's pension expenditures were \$511,917, or \$90,000 more than those of the preceding year.

## THE MORRIS BANKS

There has been in operation since December 31 in New York one of the Morris Plan banks, and applications for loans have been made by more than 3000 persons. In the United States there are now sixteen of these banks. The first was established fourteen years ago in Norfolk, Virginia, by Arthur J. Morris, who sought to provide banking facilities on a small scale for men of moderate means. Having made a study of industrial and coöperative banking in several European countries, he adapted certain features of the foreign systems to conditions in this country.

The success of the original Morris Bank in Norfolk caused the establishment of similar banks in Atlanta, Baltimore, Washington, Philadelphia, St. Louis, Denver and other cities. Growth of the system required a central company. This, the Fidelity Corporation, was organized two years and a half ago. Under its direction several additional local banks were established. Then a stronger national company was needed, and in June last the Industrial Finance

Corporation, with an authorized capital of \$7,000,000, and a subscribed capital of \$1,500,000, came into existence. It acquired the assets of the Fidelity Corporation, its proprietary rights to the Morris plan, its contracts, etc. This company has a minority interest, averaging about twenty per cent, in the capital stock of the local banks.

These banks are designed to serve the wage-earner and the salaried man who has no relations with other banks, and to aid such men by small loans in emergencies. The applicant, if a man of good character who is earning a living, may borrow \$100 upon his note, endorsed by two men of good character and of his own station in life. He pays interest at the legal rate, and is required to make a weekly payment of \$2 for fifty weeks. His debt having been discharged, he may continue his weekly payments and thus acquire interest-bearing certificates upon which he can borrow without endorsers. Up to October 31, 1914, the fifteen banks in this country had loaned \$6,100,000 to 49,500 borrowers, an average of about \$123. Losses due to bad credits had been very small. The eight companies whose reports are available show a loss (on loans of \$3,200,000) of less than one-tenth of one per cent. The net profits of the banks last year were 7.8 per cent upon their capital.

The public is accustomed to measure the soundness and sincerity of such projects by the character and records of the officers, directors and chief owners of stock. The president of the Industrial Finance Corporation is Clark Williams, formerly Superintendent of Banks and Comptroller of the State of New York. He is also a director of the bank in New York. Among those associated with him in the central company are Charles H. Sabin (treasurer and chairman of the executive committee), president of the Guaranty Trust Company, one of the greatest institutions of its kind; Arthur J. Morris; Joseph B. Gilder, secretary, and Herbert L. Satterlee. The directors of the local New York bank include Mr. Sabin, Henry R. Towne, formerly president of the Merchants' Association and now a director of the Federal Reserve Bank; President Shonts, of the Interborough Rapid Transit Company; President Cochran, of the Liberty National Bank; James E. Russell, dean of Teachers' College; President Baldwin, of the Otis Elevator Company; Vice-President Allen, of the Mechanics and Metals National Bank; Willard Straight, president of the Asiatic Corporation; Vice-President Canfield, of the State Charities Aid Association; R. T. H. Halsey, chairman of the Finance Committee of the Stock Exchange, and Vice-President Du Puy, of the Virginian Railway Com-

pany. These names are a guarantee of safety and good management.

Under the new central company there should be an extension of the system and a wise development of its work. Probably the number of local banks will speedily increase. Every city needs an institution of this kind. It should be noted that the loans are not secured by mortgage but by character and earning power, and that the borrower has an opportunity to make safe investments yielding more than the savings bank rate of interest. With the growth of the system new features will be suggested. Expansion may be expected. But the additions, like the loan plan, will be made in the interest of men like the 49,500 borrowers whose names are on the Morris books.

REVENUES AND SUGAR

In Washington they are talking about the Treasury deficit, which grows from day to day. For the first seven months of the current fiscal year it is \$70,000,000. Returns from the new war revenue taxes have not met expectations. Income taxes will be available in June, but there are indications that they will be disappointing, on account of the war. There has been a loss of \$57,000,000 in customs revenue, or about thirty-two per cent. In Congress, the estimates made by the executive departments have been exceeded in legislation. There has been a large reduction of postal receipts, and postmasters have been directed to cut down expenses. It is expected that in large cities the number of clerks on the daily pay roll will be decreased. There have been conferences at the White House, and it has been decided that there shall be no addition to taxes by legislation before the end of the fiscal year.

The growing deficiency has caused discussion of the provisions of the new tariff law concerning sugar. One-quarter of the duty was removed, and the law says that the remaining three-quarters shall be taken away on May 1, 1916. The revenue loss thus far has been about \$15,000,000. Customs receipts from sugar under the old law exceeded \$50,000,000 a year. Representative Broussard, of Louisiana, has introduced a resolution providing for an indefinite suspension of the removal ordered for May 1, 1916.

The adoption of this resolution would not perceptibly affect this year's revenue, but the proposition deserves careful consideration. The reduction of one-quarter has not aided consumers. Removal of the entire duty could reduce the price very little, and might cause no reduction whatever. On the other hand, it would probably ruin the cane sugar industry of the South and the beet sugar industry of the West. At the same time, the sugar planters of Porto Rico and Hawaii would suffer by reason of the discontinuance of the present discrimination in their favor. The duty should be retained.

The following dividend is announced:  
The J. G. White Management Corporation, preferred, quarterly, 1 3/4 per cent, payable March 1.

## Are You Going Deaf?

Deaf people hear clearly. Write at once for particulars of the latest wonder of science, the improved

### NEW 1915 Thin Receiver Model Mears Ear Phone

Thousands of sufferers from deafness have recovered their hearing with this perfected instrument. It has 96 sounds covering 8 entire octaves of 12 tones each. In this instrument you get, at last, the perfection of the hearing device. All changes in sound adjustment instantly made by a touch of the finger to suit any condition of the hearing organs or to register either loud or ordinary sounds.

**Free Trial** Prove its powers at our expense. Will you try a Mears Ear Phone for 15 days in your own home, absolutely free? Will you believe the evidence of your own ears? That is all we ask. Send for free trial offer.

### 96 Degrees of Sound

Positively the very newest, latest invention for the deaf. You get the real tones of the natural voice—the finest qualities in music. In this latest perfected ear phone we have striven to give to all deaf persons sound responses as nearly like those of the normal ear as possible. You will be truly amazed when you put this thin receiver phone to your ear for the first time. Write for the free book on deafness. Get our direct-to-you-from-our-laboratory offer.

### Valuable Book FREE

The Mears Ear Phone book — mailed free — explains all the causes of deafness; tells how to stop the progress of the malady and how to treat it. Write at once — now — for this Free Book and our Special Introductory Offer. Send a postal today.

**Mears Ear Phone Co.**

45 West 34th St. Dept. 2482 New York

**\$4 a Month FREE Trial**

Genuine Oliver Visible Typewriter. We sell direct; save you agents' commissions and expenses. Ship on approval, \$4 per month if you keep it. Send for free booklet. See how you can save \$48.00 on high grade machine. Write today.

**TYPEWRITERS DISTRIBUTING SYNDICATE**  
166-18A N. Michigan Blvd., Chicago (274)

### GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

**HOME LIFE INSURANCE COMPANY**

Geo. E. Ide, President.  
256 BROADWAY NEW YORK

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

### FOR AND AGAINST

The Insurance Superintendent of Illinois, Hon. Rufus M. Potts, in a recent lengthy communication—some ninety-three pages octavo—to the Governor of that state, after severely criticizing the methods and practices of the fire insurance companies, comes squarely out in favor of the transaction of fire insurance by the state. All his statements are of an uncompromising character and, as he avers, are based on facts adduced after months of investigation. He generally concludes that the interests of the people demand the replacement of the system by another under the auspices of the state. In this he seems to be at utter variance with views he expressed in an address delivered at Urbana, Ill., last April, in which, after a full discussion of the subject, he held that there was "no justification for a state becoming an insurance experimental station." The fire underwriters are quoting Mr. Potts in April against Mr. Potts in December.

### A FINE ILLUSTRATION

Of course, it doesn't often happen that a life insurance company pays the face proceeds of what is called an "Ordinary Life" policy into the living hands of the man who carried it, because the arrangement provides that a policy of that sort matures by death only. It is a "straight life," a "whole life," or, as the scorners of old were wont to cry, "a die-to-win proposition." But once in a while some strong, sturdy son of man, in his own proper person, does outdistance the Mortality Table. His life exceeds its uttermost limits. Actuarially, he is dead.

There comes to me from Mr. W. A. Courtwright, general agent of the Penn Mutual Life Insurance Company at Indianapolis, a card briefly recording such a case. It is interesting to me, and perhaps it will be to our readers. On December 26, 1849, Mr. Albert W. Smith of Wilmington, Delaware, he being then thirty-two years old, secured a Whole Life policy for \$1000 from the company mentioned. The premium was \$25 a year. He stood by the contract faithfully, paying sixty-four premiums, the end of the last policy year finding him beyond the age of ninety-six, the reserve on it amounting to exactly its face, \$1000. Here we have demonstrated for us the function which, in old line insurance, the reserve performs.

Let us see how this contract between Mr. Smith and the company worked out as a business transaction. He paid sixty-four premiums of \$25 each. That comes to \$1600. That looks like a pretty big price for a \$1000 policy, but it isn't net; he received from the company in divi-

dends an aggregate of \$906.30, leaving the cost at \$693.70 for the sixty-four years' \$1000 insurance. But he lived. He passed in life beyond all the mathematical provisions underlying the contract; the company had to his account reserve amounting to the face of the policy; and it paid it over to him.

The description of Mr. Smith at the time this settlement was made states that, while it may not be said he was vigorous and healthy, "he was certainly not decrepit; his step was elastic, eyes bright, intellect clear, speech fluent and his handwriting firm and round." He lived and won.

### A CORRECTION

Last week, describing the admirable work undertaken by the Gilder Policy Association of New York City, we say in the last sentence of the first paragraph: "The labors undertaken by the members are purely selfish and are dedicated as a memorial to him." The context clearly indicates the blunder. Instead of "selfish," the word should be "unselfish." It is a bad piece of proof-reading, for which an apology is tendered. We heartily commend the work the Gilder Policy Association is doing, and we know it is *given* to humanity.

Insurance Commissioner Epstein of Colorado has resigned that office as of January 16 and the duties of supervision devolve on Mrs. Dorothy M. Ralph, Deputy Commissioner, the first woman to head an insurance department.

A. E. C., Grafton, N. D.—The company mentioned is a good one, sound financially and aggressively as well as capably managed. Unless values go all to pieces as the result of a long war, future dividends will not be appreciably affected.

State Comptroller Travis of New York has commenced an investigation into the management and affairs of the Workmen's Compensation Commission, the administrators of the State Fund, for the purpose of ascertaining if any economies can be instituted.

Both branches of the New Hampshire Legislature have by formal vote requested Governor Spaulding to remove Insurance Commissioner Joseph Warren, appointed in the last days of Governor Felker's term, alleging that Mr. Warren is not qualified for the position.

Alleging that the insurance laws are inadequate and the authority of the superintendent of insurance limited, a citizens' association of Washington, D. C., has petitioned the Commissioners of the District of Columbia "to correct the glaring evils of the present situation."

J. H. R., Montreal, Que.—The company began business in 1878 on the assessment plan, continuing to 1911, when it qualified as an old line reserve institution. Rates were raised, which caused a heavy decline in membership and in surplus funds. The actuarial methods are sound and funds are properly invested. Assets January 1, 1914, \$81,249; policy reserve, \$66,221; net surplus, \$10,605; total insurance in force, \$1,674,234. The company is under the supervision of a good insurance department and I believe a policy in it would be safe.

ABOUT CHAUTAUQUA

New Chautauqua Reading Circles are reported from Riverton, Wyoming; Tulare, California; David City, Nebraska; Wichita, Kansas; Akron, Ohio; Parker's Landing, Pennsylvania; Spencerport and Williamson, New York.

One hundred and seventy graduates of the Chautauqua Course in Southern California have organized an alumni association called "The Society of the Hall in the Grove," named after the famous Hall of Philosophy at Chautauqua, New York.

There is a very substantial gain in the membership of the Chautauqua Reading Course as compared with a year ago. The radical change which substituted The Independent for the Chautauquan as the periodical element of the course is thus pronounced a success by those who are primarily interested.

Topics for "special weeks" of program events at Chautauqua, New York, in 1915 include: Community Service, The Liquor Traffic, Music Festival, Remaking of Contemporary Europe, Administration of Justice, International Relations. Engagements for single addresses have been made with Dr. John Finley, New York State Commissioner of Education; Dr. Mitchell Carroll of George Washington University, St. Louis; Hon. John Lind, President Wilson's representative in Mexico.

Preachers already engaged for the season of 1915 at Chautauqua, New York, are: Dr. Samuel B. McCormick (Presbyterian), Chancellor of the University of Pittsburgh; Bishop Francis J. McConnell (Methodist), Denver, Colorado; Dr. Charles W. Gilkey (Baptist), pastor of the Hyde Park Baptist Church, Chicago; Bishop Charles D. Williams (Protestant Episcopal), Detroit, Michigan; Dr. Shailer Mathews (Baptist), Dean of Divinity School, University of Chicago; Bishop John H. Vincent (Methodist), Chancellor of Chautauqua Institution; Dr. Frank W. Gunsaulus (Congregational), Pastor Central Church, Chicago.

A Winter Chautauqua and Carnival Week was held at Chautauqua, New York, January 30 to February 6. The winter community of this summer city, comprizing some 600 people, succeeded so well in their first attempt last year that repetition this year was assured. The daily indoor program scheduled a morning, afternoon and evening feature with moving picture prelude. Among the speakers were President George E. Vincent; Frank Stephens of Arden, Delaware; Director Arthur E. Bestor; Mr. and Mrs. Owen W. Wiard of Chicago; Miss Meddie O. Hamilton and Mrs. Ida B. Cole, Chautauqua Field Secretaries; Rev. S. M. Gordon and Mr. W. M. Gibbs. Miss Alice H. Spalding of Allegheny College, reader; Madame Grace Hall Riheldaffer, soprano, and Joseph Rosani, novelty entertainer, were also on the program. The outdoor carnival of winter sports provided for coasting, skiing, skating and ice boating on Lake Chautauqua.

## Scanty Sowing, Scanty Harvest; Plentiful Sowing, Plentiful Harvest

**T**HIS sound doctrine comes from the Good Book. You will find it in Corinthians.

It seems as tho it were written for today, and for us—for those among us who now hesitate to sow, to work, to dig, lest there may be no harvest.

Mr. Big Business Man, Mr. Financier, must every prospect be rain-bowed with sunshine, and every promise backed up by certain results, before you undertake your share in restoring prosperity?

Suppose, Mr. Big Business Man, you had been as wise and confident as was the farmer a year ago. Suppose that instead of cutting down your help, going on half time, and refusing to make goods for fear you could not sell them, you had followed the farmer's example, and had planned for greater production than ever—had done your part toward maintaining good times?

Do you know how many millions in wages would have been paid out that were not paid out, how many new homes would have been built, how many dollars would have gone from American workingmen into purchases of comforts as well as of necessities?

While you were talking business down, the farmers of the country were not discouraged. They did not shirk, or fall back. They had faith.

They stuck to their work. They plowed more ground than ever before; they harrowed it; they seeded it—did so with song on their lips and confidence in their hearts. They did not let croakers make them lose faith in the richness of the earth or the richness of the market in which they would sell.

Result: Ten billions of new wealth out of the farm lands of the United States—ten billions that represented the value of all farm crops and farm animals for the year 1914! That sum represents \$100 for every inhabitant of the United States.

Suppose, Mr. Business Man of little faith, the farmer had seeded fewer acres rather than more; suppose he had drawn in, as you drew in, what a different story there would be from our farm lands the past year! Today the farmer is again an optimist. His winter wheat acreage, already sown for 1915 crop, is 11 per cent greater than ever before! He isn't worrying about the future; he is making certain to do his part in the present.

He knows what will surely come in this 100,000,000 country of ours if every one puts his hand to the plow.

The farmers teach us all a lesson of industry and confidence. Would that every industry followed their example! They are patient, serene, optimistic. They work, work, work.

They know that persistent, thoro work brings its reward. They sometimes meet with disappointments, but they never sit down and fold their hands. They are always up and doing.

If all of the rest of us did the same thing, would there be any occasion for anybody to feel blue? Would the wheels of business ever stop turning?

"SCANTY SOWING, SCANTY HARVEST; PLENTIFUL SOWING, PLENTIFUL HARVEST."

*This is the fourth and last of the series of forward-looking editorials reprinted from the New York "Evening Mail" by courtesy of the editor, Mr. Henry L. Stoddard.—THE EDITOR.*

### PEBBLES

Jones—What's the Oh Joy silver mine stock selling for now?

Broker—We just sold the last ten rolls of it for wall paper.—*Philadelphia Bulletin.*

Lady (purchasing alarm-clock)—Never mind, thank you, I won't take one if they've been made in Germany. It would be sure to play some dirty trick. Go off in the middle of the night, or something of that sort!—*London Opinion.*

"Why are you moping there, Dick?"

"I've no one to play with."

"Well, go and fetch Freddie next door."

"Oh, I played with him yesterday, and I don't suppose he's well enough to come out yet."—*London Opinion.*

André Fretin, a lively Gaul, has contributed to a London paper the following translation of a well-known song:

Longue est la route de Tipperary,

Longue pour y aller;

Longue est la route de Tipperary,

Ou demeura ma bien-aimée.

Au r'voir, Piccadilly,

Adieu, Leicester-square,

Longue, longue est la route de Tipperary,

Mais la-bas est mon cœur. —*Et.*

THE PRIZE CONTEST

We are publishing in this issue the first of eight articles on the Hundred Years of Peace between Great Britain and the United States. The Independent offers a Peace Centenary Medal for the best essay from any school in the United States covering this period. The eight articles, which begin this week and will be concluded in the issue of April 5, have been prepared by Preston William Slosson, of Columbia University. They tell the story in simple and direct language, showing how great were the issues at stake in the serious difficulties between the two nations, how high was the tension of popular feeling in both countries, and how, nevertheless, patriotic and honest statesmanship did not fail to find a satisfactory solution without recourse to war. The titles of the articles are as follows:

THE GREAT TREATY  
Telling the story of the Treaty concluded at Ghent, 1814, published this week.

THE BOUNDARY OF PEACE  
The story of the boundary from the Atlantic to the Rocky Mountains, a boundary unfortified by nature or man, and yet in bitter dispute for many years.

"FIFTY-FOUR-FORTY OR FIGHT"  
The story of the greatest of all our territorial disputes with Great Britain over the question of the ownership of the Oregon country.

THE ALABAMA CLAIMS  
A sketch of our difficulties with Great Britain during the War between the States, also describing the peaceful solution of the Alabama Claims.

PRESIDENT CLEVELAND AND THE VENEZUELA DISPUTE  
The story of the eventful incidents that brought the United States and Great Britain to the verge of war.

THE ALASKA BOUNDARY QUESTION

A history of the negotiations surrounding the solution of the disputes concerning the Alaskan boundary.

FISHERMEN AND STATESMEN  
The seventh article treats of the many questions which have arisen as to American fishing and sealing rights along North American coasts.

THE CLAYTON-BULWER TREATY AND THE PANAMA CANAL

Dealing with the disputes which have arisen at one time or another in regard to the project of the inter-oceanic canal.

Any American school, private or public, elementary or secondary, may take part in the contest, but a medal cannot be awarded unless ten pupils at least compete from that school. Each competitor must complete an original essay of from 500 to 2500 words and hand it into the judges by May 5.

The judges should award the prize to that essay which shows that the competitor has not only a thoro acquaintance with the events of the One Hundred Years of Peace, but has most thoroly studied their significance and learned how to express it. School authorities may, at their pleasure, exact further qualifications from contestants, such as a certain amount of outside reading. The name of the successful contestant should be sent by the judges to The Independent by June 5, as no medals will be awarded after June 15. In the case of elementary schools the school authorities shall select three judges from among the faculty, pupils or outsiders (but including no contestant). In the case of secondary schools the contestants themselves may get together and select any three judges they may choose, except a contestant.

This contest is open freely to all schools and a subscription to The Independent is not obligatory.

This Prize Contest has the hearty approval of many eminent educators, including Mason S. Stone, Superintendent of Education, State of Vermont; R. H. Wilson, Superintendent of Education, State of Oklahoma; Nathan C. Schaeffer, Superintendent of Public Instruction, Commonwealth of Pennsylvania; A. M. Devoe, Superintendent of Public Instruction, State of Iowa; H. A. Davee, Superintendent of Public Instruction, State of Montana; C. G. Lawrence, Superintendent of Public Instruction, State of South Dakota.

Dr. Nicholas Murray Butler, President of Columbia University, who is the Chairman of the Committee on Historical Review of the American Peace Centenary Committee, writes:

As Chairman of the Committee on Historical Review of the Peace Centenary Committee, I am glad to say that the Prize Contest of The Independent meets my cordial approval—both as a means of informing the boys and girls of the country as to the history of the past hundred years, and of showing them how conference and common sense have been more effective than war.

Schools in twenty different states have already sent notice of their participation in the Contest, and the number of contestants is growing every day.

# First aid to the Injured

After the skilled surgeon has repaired the broken body it remains for the trained nurse to assist Nature in restoring wasted tissue and building up the body into new life and strength by giving a food that contains the necessary body-building material in digestible form. As a builder of healthy tissue nothing equals

## Shredded Wheat

a natural, elemental food made of the whole wheat steam-cooked, shredded and baked in the cleanest, finest, most hygienic food factory in the world. Shredded Wheat is always the same quality, always the same price.

For breakfast heat the Biscuit in the oven to restore crispness; then pour hot milk over it, adding a little cream. Salt or sweeten to suit the taste. Better than mushy porridges for the chilly days. Deliciously nourishing for any meal with stewed prunes, sliced bananas, baked apples or fruits of any kind.

Made only by

## A CHALLENGE TO THE WORLD

**G**ERMANY'S declaration making all the waters about the British Isles into an "area of war" contains two unexpected statements.

The first is the assertion that the German navy will endeavor to destroy every enemy merchant ship that is found within this area of war, "without its always being possible to avert the peril that thus threatens persons and cargoes."

The second is the warning to neutral nations to keep their merchant ships out of this area, for the reason that "their becoming victims of torpedoes directed against enemy ships cannot always be averted."

Apparently, Germany is prepared to sink enemy merchant vessels without regard to the lives of crew or passengers, and in so doing to face the possibility of occasionally sinking a neutral vessel with all on board.

Germany has a perfect right to seize any merchantman anywhere flying the British flag. She has a right to seize a neutral merchantman carrying contraband to England, provided the contraband forms half of her cargo. If Germany could declare and maintain an effective blockade of British ports, she would have a right to capture any neutral ship attempting to run the blockade. Germany has a right to sink such merchant ship, British or neutral, provided the taking of it into port would endanger the success of the operations in which the capturing vessel is engaged.

But Germany has no more right to send the crew of a merchant ship, enemy or neutral, to death with its ship, than she would have to hang them at the yard-arm. It is the recognized practise of nations: first, that the

nationality and character of any merchant ship must be definitely determined before it can be made to suffer the accepted penalties of trading in contraband or in prohibited waters, and, second, that the crews of merchant vessels may not be killed unless they invite such a fate by offering armed resistance.

The German declaration is one more illustration of the changed conditions which the world is facing in this war. It is the coming of the submarine into being that has made possible and, from the German point of view, desirable, such a declaration as this. The British navy, with its allies, rules the seas. It has isolated Germany from the world. The German navy is immured in harbor. Only its wonderful submarines are able to operate in open waters. Germany wants to attack the shipping that is bringing to England supplies from the rest of the world. Her submarines may be able to do it. But the submarine cannot take a prize into port. It cannot spare a prize crew for the navigation of the captured vessel. It cannot take the vessel's crew into its own cramped quarters.

The German submarine has shown that it can safely and effectively operate in British waters and interfere with British shipping. But it suffers an insurmountable handicap if it must live up to the accepted rules of the game.

So Germany proposes to change the rules.

In so doing she is making a grievous mistake. When the new rules wantonly threaten the lives of the crews of neutral ships, every neutral nation should rise in protest.

## SIX MONTHS OF THE GREAT WAR

**A**T the outbreak of the war there were many people who said that it would be over in six months. At the present time there are probably more who believe that it will last six months longer. But all such prophecies are unreliable, for the introduction of scientific warfare has not eliminated the chances of war. If the Austrian emperor should die, if the German emperor should change his mind, if Great Britain should lose command of the sea, if a revolution should arise, if—a dozen other things imaginable, the war might come to an end any time. All that we can say is that after half a year of fighting in which twelve nations and five continents are involved and in which men and ammunition have been expended more lavishly than ever before in the history of the world, the war has come to a deadlock and it is hard to tell on which side the advantage lies.

The situation is this: The Germans in France stand

about where they did September 11. The Russians in East Prussia stand about where they did August 19. The Germans in Poland stand about where they did October 15. The Russians in Galicia stand about where they did September 20. The Austrians in regard to Serbia stand about where they did July 30. The navies of Great Britain and Germany stand in about the same ratio of strength as on August 4, that is, about two to one in favor of the former.

We cannot of course make any accurate estimate of the extent of enemy territory occupied, especially in the eastern theater, where whole provinces have been lost and gained in a week, but it is safe to say that if peace were made today on the same principle as the treaty of Portsmouth, when the boundary line in Manchuria was drawn right where the armies stood, the net gain for the German side would be some ten thousand square

miles of land in Europe, a territory about the size of Maryland. But if we consider the colonies, which constitute the real prize in the contest, the situation is reversed, for Germany has virtually lost a million square miles of non-contiguous territory, mostly taken by England, tho some by France and Japan. The ultimate ownership of this booty depends, however, upon the outcome of the war in Europe and the terms of peace.

If we count continental gains and losses, the semi-annual trial balance will stand something like this:

German gains in Belgium.....	11,000	square miles
“ “ “ Luxemburg .....	1,000	“ “
“ “ “ France .....	8,500	“ “
“ “ “ Poland .....	18,000	“ “
	38,500	square miles
French gains in Alsace.....	300	square miles
Russian gains in East Prussia.....	1,200	square miles
“ “ “ Galicia .....	22,500	“ “
“ “ “ Bukowina .....	4,000	“ “
	28,000	square miles

But the war will not be decided by comparing temporary territorial gains. All attempts by either side to circumvent or to break thru the enemy's line by concentrating troops at a particular point have so far failed and do not seem likely to succeed so long as the eagle-eyed aeroplanes keep watch and so long as men and courage and ammunition hold out. The struggle has settled down to a contest of endurance, to the question of which can stand punishment longest. If it comes to matching man for man and coin for coin, of course the odds are overwhelmingly in favor of the Allies. The vast potential resources of Russia are virtually unimpaired, altho it is doubtful whether she could bring into the field within a reasonable time as many more troops as she has sacrificed. Lord Kitchener is reported to have said that he did not know when the war would end, but did know that it was going to begin in May. This paraphrase of John Paul Jones' famous retort does not sound like Kitchener of Khartum, but it correctly represents what is or might be the attitude of England, for without resorting to conscription she has raised and equipped a new army of a million or more. France and Belgium, we must assume, have practically all the men they can raise in the field. Germany has still some reserves to draw upon, for in recent years she has been giving army training to only a little more than half as large a proportion of her male population as France has had in her standing army.

When we come to talk of the termination of the war thru exhaustion we must remember that there is no such limitation even within sight. The Great War, terrible as it is, cannot yet be compared in relative destructiveness to many smaller wars of the past. The Thirty Years' War reduced the population of Germany by one-half and in some parts by two-thirds, and it took Germany a hundred and fifty years to recover from it. But even the most belligerent English journalist in calling for the "annihilation" of Germany does not propose anything so drastic as that. In our Civil War the total killed on both sides amounted to about half a million. Our population in 1860 was 31,400,000. If then Germany has had as many fatalities as that, which is doubtful, she has suffered only half as much in the six months as did the United States in her four years' war. Those of us who are old enough know very well what the condi-

tions are now in France and Germany, for in many towns of the North and more in the South practically every able-bodied man went to the war. Still our country survived.

Or, to look at it in another way, during the nineteenth century Germany lost thru emigration over six million, but in spite of this constant drain the country grew and prospered. In 1881, 221,000 emigrants, largely young men, left Germany mostly for America. This was nearly five per thousand of her population and probably half her losses in the present war. The United Kingdom has been for years losing by emigration over three hundred thousand a year, which must be much greater than her war loss thru fatalities, altho we do not know exactly what these are. The total German losses for the six months including killed, wounded and missing, are estimated by the French *Bulletin des Armées* at 1,800,000. The number of dead is presumably less than a quarter of this and we should probably be safe in assuming that it is under half a million. If so Germany has not lost population since the war began, for her natural increase is nearly a million a year. That is to say, the number of babies born or the number of young men and women coming of age since August 4 may be assumed to balance the fatalities of the war as well as the natural deaths.

France has, of course, lost population since in that country the birth rate is but little over and sometimes under the death rate. But certainly the population of Europe as a whole is considerably greater than it was last summer in spite of the war. The real reason why Europe can waste men and money in this horrible fashion is simply because she has more of both than ever before. In the time of Napoleon the combined population of France, Germany and the United Kingdom was 67,000,000; now it is 154,000,000. So a loss of half the population would not reduce Europe to the position she occupied a hundred years ago. The wealth of these countries has increased much faster than the population. England has been getting richer at the rate of nearly two and a half billion dollars a year. That is, the profits of her commerce and income of her investments have added annually that amount to her surplus wealth. Germany has been catching up of late and has probably passed the two billion dollar mark in her annual savings. France is *per capita* as rich as England. The losses due to the curtailment of manufacturing and commerce are in part compensated by greater industry of many comparatively idle people and by the cutting down of luxuries. The Russian Government has lost half a billion dollars revenue by stopping its sale of alcoholic liquor, but the country has, directly and indirectly, saved many times that amount as the rise in its receipts from other taxes already shows. Deposits in German savings banks are a quarter of a billion dollars more than last year.

It is therefore absurd as well as wicked to talk about the war being carried on to the "complete exhaustion" of one side or the other. The only sensible thing for those in authority to do is to stop and coolly consider what possible advantage they can gain by going on with it. All parties have sufficiently demonstrated their courage. We are willing to concede that they can fight for another half year or three years or thirty if they like, but what is the use? The Kilkeny cats are no fit examples for human beings.

## TRADE-MARKED PHILANTHROPY

UNEMPLOYMENT will never be remedied by "Bundle Day." Its effects are too broad, its causes too deep, for any such relief to be effective. But among the palliative measures adopted by a community partly aroused to its responsibility this is a picturesque and encouraging project.

There was in the aggregate on "Bundle Day" a good deal of giving. It comes, moreover, after a season in which the plight of Europe has caused a large overflow of charity. Evidently the more spectacular need of the war-ridden nations has not obscured the familiar obligations to the men and women at home who are economically adrift. Once we begin to give we give more and more generously, and without partizanship.

Trade-marked philanthropy was never more brilliantly vindicated. As one disgruntled worker said, thousands of folks who would turn away a man who asked for a pair of shoes at the back door were glad to send the shoes out of the front door as a contribution to "Bundle Day." The individual appeal gains tremendously when it is socialized and the means of granting it is made easy and a little piquant. Human nature being granted, that is no discredit to the giver, and it affords a sound basis for optimism. Nothing in our present civilization is developing so rapidly as the science of advertising; and if we can keep the publicity expert a few steps in advance of the public conscience we shall surprize ourselves by the quantity of good works we are lured into doing.

## THE EXPANSION OF AUSTRALIA

THOSE who have deplored the waste of human effort and life in the attempts to reach the geographical pole will be glad to read in this issue of an expedition which had a more sensible aim than to be the first to attain the mathematical point which marks the confluence of imaginary lines, and, what's more, a point that does not stay still but wobbles around in a sixty-five foot ring. The Australasians are a practical and far-sighted people and it was not for nothing that the Governments of Australia and New Zealand appropriated over \$100,000 for the exploration of the coast of the Antarctic continent lying nearest them. Adelie Land is but little farther from Australia and New Zealand than these are from each other, and they certainly have the best right to it. Any claims that we might have had by right of discovery have long been forfeited by our failure to follow up Admiral Wilkes, who first saw this coast seventy-five years ago.

Judging by the pictures we present on other pages, this newly acquired territory is not suited to colonization. Where the wind blows on the average fifty miles an hour and the summer temperature is 32° Fahr., immigration is not likely to be excessive. Nevertheless the Mawson expedition proved that men can live there the year round if it is worth while and also that it would be worth while. Nothing very definite has been given out to the public about the mineral wealth of the Antarctic continent, but from what Professor David of Sydney University said in his England address, it must be considerable. Germany is finding out that copper is very valuable when you do not have it, and coal is something that is bound to rise in price in future years, like the Sibyl-

line leaves. The furs and fisheries alone are likely to pay the costs of acquisition and exploitation, as they have in Alaska, and there is here also the hint of gold behind. At any rate the expedition has extended the domain of Australasia by more than a third.

Toward the north as well these enterprising countries are now rapidly expanding. In the last six months they have taken possession of all of the German islands of the Pacific, except such as have fallen to the lot of Japan. This amounts to 96,000 square miles, an area larger than New York and Pennsylvania put together. New Zealand and not Germany now shares with us Samoa; Japan and not Germany now shares with us the Ladrões; Australia and not Germany now shares New Guinea with the Dutch. The ultimate ownership of these islands depends upon the outcome of the war and the bargaining of the peace conference, but for the present at least Australasia may rejoice in the gain of large territories in the tropics whose luxuriant vegetation and high temperature form a natural complement to her cold and barren Antarctic acquisitions.

## ON BEING SNOWED ON

IT is a poor-spirited wayfarer who attempts to shield himself from the snow with an umbrella. Not that he deserves to share the scornful apostrophe which Meredith addresses to the man who shrinks from the rain:

Thou, trim Cockney, that jeerest, consider thyself, to whom it may occur to be out in such a scene, and with what steps of a nervous dancing master it would be thine to play the hunted rat of the elements, for the preservation of the one imagined dry spot about thee, somewhere on thy luckless person!

For being rained on is quite another story. The rain is uncompromising; it lacks the urbane adaptability of the snow, which is content to settle where it falls and make the best of it, which flutters into your face with the most determined insistence, yet without brusquerie—diplomatic to the last flake. There is a bit of caress and just a touch of chill in it, like the lightly flung sarcasm of a sister or a sweetheart.

Then it does such quaint things to passersby. This year's absurd balmacaan and the rusty coat of a decade's service, dusted with its clinging white, are hardly to be distinguished; even the fantastic complexities of your debutante's tailor-tortured costume are reduced to democratic simplicity. And when here and there a wisp of brown hair is powdered more daintily than was ever my lady's coiffure, who would regret the umbrella?

## THE LIBERTY TO MAKE OPPRESSIVE CONTRACTS

IN the name of equality of right, the decision of the United States Supreme Court in the Kansas coercion law case fastens upon the man who works with his hands a crippling burden of inequality. The Kansas law, like similar statutes in thirteen other states, forbade an employer to require a workingman, on being hired, to sign an agreement not to join a labor union. This law, sustained by the state courts of Kansas, the Supreme Court has now overthrown.

The majority opinion of the court declares that the

restriction imposed by the statute upon the employer disturbs the equality of right enjoyed by employer and employee, impairs the liberty of contract guaranteed by the Constitution, and effects no purpose necessary or beneficial to the general welfare.

On all these points the court has taken a view which is reactionary and regardless of the actual facts of modern industrial life.

On the first point, the Supreme Court had a clearer view in a previous case, involving a legislative limitation of hours of labor, when it said: "The legislature has also recognized the fact, which the experience of legislators in many states has corroborated, that the proprietors . . . and their operatives do not stand upon an equality. . . . The proprietors lay down the rules and the laborers are practically constrained to obey them."

On the second point, it has long been established by legislative action and judicial pronouncement that liberty of contract is not absolute but relative—a right of the individual which, while it may not be taken away, may be modified on behalf of the general welfare. Indeed it is not even absolute in regard to the individual himself, as was recognized by the Supreme Court in another case, when it said: "A man may not barter away his life or his freedom, or his substantial rights."

On the third point, the dissenting opinion of Mr. Justice Day, concurred in by Mr. Justice Hughes, speaks with force and reason:

This statute reaches not only the employed but as well one seeking employment. The latter may never wish to join a labor union. By signing such agreements as are here involved he is deprived of the right of free choice as to his future conduct, and must choose between employment and the right to act in the future as the exigencies of his situation may demand. . . . We cannot understand upon what ground it can be said that a subject so ultimately related to the welfare of society is removed from the legislative power. . . . It would be difficult to select any subject more intimately related to good order and the security of the community than that under consideration—whether one takes the view that labor organizations are advantageous or the reverse.

The contention of the majority of the court is that the prohibition of such action by employers as will render it impossible for the workers to unite in organizations for the collective preservation of their rights has no relation to the general welfare.

It must be a matter of deep regret to every lover of human rights and believer in social and industrial progress to have the highest court in the land take such a stand. It is gratifying that three of the keenest and most progressive minds on the Supreme bench, Mr. Justice Holmes, Mr. Justice Day, and Mr. Justice Hughes, take the contrary view.

But even that fact does not help at the present juncture. We have taken a backward step.

### THE TYRANNY OF A MINORITY

**O**NCE more a filibuster has been used by the minority in the Senate to impede and postpone action by the majority.

The rules of the Senate, unlike those of practically every other legislative body in the world, permit unlimited debate. The majority cannot bring a measure to a vote so long as a single member is willing to stand in his place and talk, no matter how little he may have to say, or how irrelevantly he may say it.

In the present case we are inclined to approve the result. But that does not alter the fact that the method by which it is arrived at is wrong.

In any body where decisions are made by the counting of noses, there is bound to be from time to time arbitrary and autocratic action by a group to the detriment of the interests of the rest of the body.

Generally it is the action of the majority. Whereupon the minority complains bitterly of tyranny. In the United States Senate it is often the action of a minority. Then the majority inveighs loudly against tyranny.

Both are right. But if tyranny there must sometimes be, the tyranny of the majority is better than the tyranny of the minority. For the majority presumably represents the opinion of the majority of the electorate.

The world has yet to find a better method of legislation than that of majority voting in representative assemblies. Until such a method is found, a minority has no right to obstruct the course of legislation by sheer physical inertia.

The rules of the Senate on debate are a denial of fundamental facts of representative government.

The best of material for the future historian is the ephemeral literature of the war, such as magazines, newspapers, pamphlets, press bulletins, postcards, letters and the like which reflect contemporary opinion. But such things vanish very quickly after the occasion that has called them forth, so we are glad to learn that Yale University has begun the collection of material of this sort as well as all books and official documents bearing on the Great War with the object of building up a special library on the subject.

The Great War named itself. So we said in early August, and the spread of this designation shows that the fitness of the designation is generally recognized. Now it receives official sanction thru the publication of a volume of Italian documents under the title of *I documenti della Grande Guerra*. The "European War" is obviously too narrow. The "World War," tho it has the advantage of alliteration, is too broad, for one continent is happily saved from it by being under theegis of the Monroe doctrine.

Harry Thaw, the insane murderer of Stanford White, is back in New York State after many months of fugitive exile. Now begins a new legal battle over his continuance in confinement. There should be no question about it. Until a board of competent experts declares that he has regained his sanity to the point where he is no longer a danger to the community, he should not be released from the asylum. And no mawkish sentimentality should influence the decision.

After the Buy-a-Bale movement, why not try a Buy-a-Day-of-Work campaign? A day's work would cost you little and might help one of the unemployed much.

Congress has twelve big appropriation bills to pass—and less than twice as many days to pass them in. It is time to stop talking and get to work.

# THE STORY OF THE WEEK

## Germany Declares a War Zone

The German Government has announced that beginning February 18 every enemy merchant ship entering the waters surrounding the United Kingdom will if possible be destroyed, and that even neutral vessels will be in danger owing to the misuse of neutral flags.

As this measure brings up a question of neutral rights that touches American interests very nearly and may necessitate action on the part of our Government, we quote several paragraphs from the announcement, using the official version coming direct by wireless from Berlin to Sayville, since this differs considerably from the version which came first to this country thru London:

Since the beginning of the present war Great Britain has carried on a mercantile warfare against Germany in a way that defies all principles of international law. It is true the British Government has announced in a number of decrees that the Declaration of London concerning naval warfare is binding on her naval forces, but in reality she has renounced the declaration in its most important particulars. . . .

Inasmuch as she has declared subject to capture all articles of conditional contraband intended for Germany, without reference to the harbor in which they are to be unloaded or to the hostile or peaceful use to which they are to be put, she does not hesitate to violate the London Declaration, as her naval forces have seized on neutral ships German

## THE GREAT WAR

*February 1*—Germans repulsed on the Bzura before Warsaw after a week of desperate attack. British regain ground lost at La Bassée.

*February 2*—Heavy Austro-German attacks force back Russians in Carpathians and Bukowina. Four Dardanelles forts shelled by Anglo-French fleet.

*February 3*—French repulse German attacks in Champagne. British foil attempt of Turks to cross Suez Canal.

*February 4*—Battle of the Bzura continues indecisive but with losses estimated at 25,000 on each side. Russians invade Hungary thru Carpathian passes.

*February 5*—Germany warns all vessels away from the United Kingdom after February 18. Cunard "Lusitania" hoists American flag to escape capture in Irish Sea.

*February 6*—Russians cross Bzura and attack German positions near the Vistula. Turkey salutes Italian flag, so closing the Hodeida incident.

*February 7*—Russians advancing in East Prussia toward Insterburg. Austrians report advance in southern Galicia and capture of 1200 Russian prisoners.

British Government and the contingencies of naval warfare, their becoming victims of torpedoes directed against the enemy's ships cannot always be averted.

At the same time it is specifically noted that shipping north of the Shetland Islands, in the eastern area of the North Sea, and in a strip at least thirty sea miles in width along the Netherlands coast is not imperiled. . . .

A case of what the German proclamation refers to as "the misuse of neutral flags" occurred on February 6, when the Cunard liner "Lusitania" arrived at Liverpool flying the American flag. She had hauled down the Union Jack and put up the Stars and Stripes the night before in the Irish Sea after receiving by wireless a warning of danger from German submarines. The British Merchant Shipping act of 1894 prohibits the assumption of the British flag by a foreign vessel "unless the assumption has been made for the purpose of escaping capture by the enemy or by a foreign ship-of-war in the exercise of belligerent right."

property that was not contraband, in violation of her own decrees.

She has further, thru her naval forces, taken from neutral ships numerous Germans liable to military service, and has made of them prisoners of war. Finally she has declared the entire North Sea to be an area of war and, if she has not made impossible the passage of neutral shipping thru the sea between Scotland and Norway, she has made it so difficult and so dangerous that she has to a certain extent effected a blockade of neutral coasts and neutral ports. This is in violation of international law. These measures have the obvious purpose, thru the illegal paralyzation of neutral commerce, not only to strike at Germany's military strength, but also at the economic life of Germany and, finally, thru starvation, doom the entire population of Germany to destruction. . . .

Just as England has designated the area between Scotland and Norway as an area of war, so Germany now declares all the waters surrounding Great Britain and Ireland, including the entire English Channel, as an area of war. It will thus proceed against the shipping of the enemy for this purpose beginning February 18, 1915.

Germany will endeavor to destroy every enemy's merchant ship that is found in this area of war without its always being possible to avert the peril that thus threatens persons and cargoes. Neutrals are therefore warned against further entrusting crews, passengers and wares to such ships. Their attention is called to the fact that it is advisable for their ships to avoid entering this area, for, even tho the German naval forces have instructions to avoid violence to neutral shipping in so far as they are recognizable, in view of the misuse of neutral flags ordered by the

Probably the bloodiest battle of the war is that which has been fought in the angle between the Bzura and Rawka rivers. Here a force of 80,000 or 100,000 men had been concentrated under General von Mackensen, who was determined at

This Polish girl, Stanislaw Ordinska, fought so bravely in several battles as a member of the Polish volunteer legion of the Austrian Army that she was brevetted sergeant

any sacrifice to break thru the Russian lines defending Warsaw, thirty miles east. It is an open and level battlefield and the frozen ground made it difficult for the attacking party to get protection by digging or to gain ground by sapping. As the Russians have had months in which to prepare their defenses, they had entrenched themselves as strongly as possible and had marked the ranges for their artillery.

Against these fortified positions the Germans launched their attack, endeavoring by sheer mass momentum to overpower the enemy. After a week of alternate artillery fire and charges they succeeded on Sunday, the last day in January, in capturing two miles of trenches. The Russians then retired to their second line, and against this the German waves broke in vain. The buildings of the village of Goumine and the country estate of Borjimow formed the center of action. The battle front was nearly seven miles long. Six hundred guns were used by the Germans to support their infantry charges. In order to prevent the depletion of their numbers thru the terrific fire of the Russian machine guns the German soldiers advanced in close formation, shoulder to shoulder and nine ranks deep. The regiments in front, who were expected to be sacrificed to make way for the rest, were called the "Death Divisions." Reserves were brought up from Lowicz to take the places of those who fell.

Three days of such tactics made no impression upon the Russian defenses, and as soon as the force of the onslaught was exhausted the Russians charged with the bayonet and regained their lost positions. According to Russian estimates the Germans lost at least 25,000 in killed and wounded between February 1 and 4, and the Russian casualties were not much less. The German official report is reticent, but claims

From the London Times

#### THE BATTLE OF THE BZURA

From January 22 to February 4 the Germans, under General von Mackenson, made mass attacks on the Russian lines between Sochaczew and Bolimow, west of Warsaw. According to Petrograd reports the Germans sacrificed 25,000 men and made no permanent gains. North of the Vistula the Germans have attacked the Russians near Lipno

the capture of 6000 Russian prisoners in the three days' fight.

Following up their success a force of Russians crossed the Bzura River at its junction with the Vistula and so attacked the German position from the left flank.

North of the Vistula the Germans have met the Russian army which was making its way toward Thorn. Their attack was delivered between Lipno and Dobrzyn, and, according to the Russian account, was repulsed with heavy loss.

In western Europe the fighting has been fiercest where the weather is the worst, that is in the Vosges Mountains of Alsace. Here the snow is deep and hard packed, so both armies have taken to skis. In some cases the French Alpine troops have

carried German positions by skating down the mountainside with such momentum that the charge could not be checked on the way either by the enemy or by themselves. Concealment by digging, which has become the established method of warfare in the present conflict, is easier in snow than in earth. Both the Germans and the French have hidden their batteries in the snow banks so they are invisible even to the aeroplanes flying over.

The fighting here devolves mostly upon the artillery, and the towns fought for are shelled first by one side and then by the other until little is left of them. Thann, Steinbach and Cernay have so suffered as the Germans have successively retired from them and fallen back toward Mülhausen. An aerial bombardment of the headquar-

ters of General von Bordungen near Altkirch forced him to remove the staff to Mülhausen. The French have now possession of a strip of the Alsatian border from Switzerland as far north as St. Dié, about ten miles wide and fifty miles long.

About the rest of the French-Flemish line there is little to say, altho there has been hard fighting in the Champagne district, where trenches have been lost and won at several points. The French have made strong efforts to push back the German line between Rheims and Argonne in order to cut the railroad, which parallels the entrenchments a few miles to the north, but they have not been able to hold the little ground they have gained.

#### Turks Attack Suez

Last week we described the march of the Ottoman armies across the wilderness of Sinai and gave a map illustrating the lines of advance. Of the three divisions the middle one seems to have been the most important; it is said to have consisted of 12,000 men. On the night of February 2 these troops attempted to bridge the Canal by means of rafts and pontoons a few miles south of Ismailia. While engaged in this work they were attacked by the British Territorial, Indian and Australasian troops, and in an all-day battle suffered a terrible defeat. It is reported that 400 of the Turks were killed, many more than that wounded, and 600 taken prisoners. The British lost fifteen killed and fifty-three wounded.

Two days later the Turks renewed their efforts to cross the Canal and were again repulsed, with the loss of 300 prisoners and many killed and wounded. The British captured three machine guns and ninety camels loaded with supplies. The prisoners could be more properly designated deserters, for they had suffered so

much from lack of food on their recent march and from the harsh treatment of the German officers as to be quite willing to surrender. Most of them are imprest Bedouin or Palestine peasants without uniforms or training.

In this war of ditch-digging and machine maneuvers the only chance for the display of individual daring is in the air. The aviators alone remind us of the ancient days when the champions encountered one another in front of the armies and the knight errant wandered at will thru the enemy's country. Most of the bomb-dropping exploits, however, do little damage; at least according to the account of the party attacked, usually the only side heard from.

The Germans continue their air raids on the channel port of Dunkirk. On the night of January 28 six German aeroplanes passed over the place and fifty bombs were dropped, both explosive and incendiary, for the purpose of destroying the provision depots, but the only buildings injured were private houses.

English aeroplanes visiting Dortmund damaged twenty-one public buildings and the Germania monument at Hohenburg. Seven English aeroplanes which were bombarding Ostend and Zeebrugge were attacked by a flock of Taubes and driven out to sea, where three of them are reported lost.

A German dirigible of the Parseval type, which attacked the Russian port of Libau, was brought down by gun fire and fell into the sea. The crew was captured.

The first really effective use of the aerial arm in battle is reported from Craonne, where the French airmen rained bombs upon the German troops massed in the trenches until they were so demoralized that when the French infantry charged with

fixed bayonets they fled in a disorderly rout.

Percival Gibbon, the Russian correspondent of the *London Chronicle* and the *New York Times*, who is almost the only eye witness to send news of the eastern campaign, thus describes a duel between a German Taube which was dropping bombs on Warsaw and a Russian biplane which attacked it over the city:

It was a glorious piece of sheer daring, for a seventy-horsepower biplane, while admirable for reconnoissance and observing gunfire, is overmatched in such a competition as this by a twelve-horsepower Taube monoplane. The Taube quickly straightened up and then swooped, like a sparrow hawk shooting down the air in a plunge so swift and steep that from the street corner groups the cry went up that it was falling. The two machines passed abreast of one another at a distance that appeared to be small, and as they came abeam I could see the twinkle of the pale fire as the gun of the monoplane spat at her opponent. Then they were apart again and the monoplane was climbing swiftly to repeat the maneuver.

Some minutes elapsed before the strategy of the overmatched biplane was apparent. The fight flickered away in dives and circles across roofs and threatened to pass out of sight when suddenly the colorless sky showed a rag of smoke drifting across. Three more biplanes had driven the Taube clear of the streets to where the guns from the batteries could bear on her.

Instantly the Taube was circling and climbing in a panic to get out of range of the shrapnel which burst around her. The last seen of her was her beeline retreat due west.

To the same papers we are indebted for the following vivid description of an exploit by Pegoud, the French aviator. One day in trying out a new machine he took along a dozen bombs to drop upon a German magazine.

When he was near his goal he hovered above the place, and, descending lower, dropt nine of the bombs. The effect was prodigious. Explosion after explosion rent the air so that his machine was shaken by the vibrations.

Pegoud flew away elated at his success. Still he had three bombs left, and

swooping like a bird of prey flung them over the heads of a company of German soldiers. They scattered in all directions and Pegoud flew thru the darkened sky like a winged death.

His latest achievement was directed a few days ago against a captive airship, from which the fire of German batteries was directed. Flying at a great height and making a wide detour behind a veil of clouds, Pegoud then flew straight at the sausage-shaped balloon. He was seen at once, and shots were fired at him wildly. He heard the shouts of the soldiers and hoarse commands. Little figures were running about like ants down there, and the balloon was hastily drawn earthward, but it was too late.

Pegoud swooped in magnificent volplanes which used to thrill me when I saw them over English soil. When he was less than fifty yards above the airship he flung his bomb. A dull explosion followed, making a gale of air currents in which the French aeroplane rocked with quivering planes. The ball of gas was rent and the German airship collapsed to earth.

**The Japanese Demands** It was commonly believed in the United States that Japan, in undertaking the capture of the German territory of Kiao-Chau, had pledged herself to return it to China. This, it now appears, was not the case, for the Japanese Government has stated that Japan is under no obligations whatever as to the disposal of Kiao-Chau. Judging by appearances, it is the intention of Japan to retain both the continental and the insular territory taken from the Germans. Plans are being made for the colonization and agricultural development of the archipelagoes by Japanese, and they have taken over the German railroads of the Shan-

tung peninsula leading from Kiao-Chau into the interior.

The Japanese Government has recently presented to China a list of her demands, and President Yuan Shih-kai has called a conference for their consideration. No authorized statement of the contents of the note has transpired, but it is rumored that Japan asks for the extension to ninety-nine years of her lease of the Manchurian railroad, the privilege of residing and owning land in Mongolia as well as Manchuria, and the transference to Japan of all the German mining, railroad and agricultural concessions in China. It will be remembered that a few years ago, when Russia brought Outer Mongolia under her control, Japan took measures to extend her sphere of influence in Inner Mongolia. In southern China also the Japanese have been investing extensively in mining and other concessions, and they fared and supported with men and money the ill-fated rebellion of Dr. Sun Yat-sen against the government of Yuan Shih-kai at Peking.

The Japanese are reported to have sold over \$40,000,000 worth of arms and ammunition to the Allies, mostly to Russia.

#### Mr. Wilson's Veto Upheld

In the House, on the 4th, there was an attempt to pass the Immigration bill over President Wilson's veto. Exactly one year had elapsed since the original passage of the bill in this branch of Congress. After a day of debate the roll was called and Mr. Wilson's veto was sustained. But the margin was a nar-

row one. To pass the bill 261 voted, and 136 were counted in the negative. There were 399 members present (two not voting), and 266 affirmative votes were needed for the two-thirds which passage over a veto requires. Party lines were broken. There were 166 Democrats against the veto, and 102 for it. On the Republican side, 78 opposed the veto and 32 voted to sustain it. Nearly all of the Progressives were against the veto.

This was the third failure to pass such a bill over a President's veto. Two years ago Mr. Taft's disapproval was effective. Mr. Cleveland's veto of a similar measure was upheld. The chief ground of objection has been a literacy test. If the House had shown a two-thirds majority this time, the bill would have become a law, for there were only a few votes against it in the Senate. The supporters of it will try again in the next Congress. In the debate the veto was opposed by Mr. Underwood, the Democratic floor leader. Mr. Burnett, chairman of the Immigration Committee, said the President had erred in asserting that the proposed restriction had never been advocated in national platforms. He asserted that support of it had been given in the Democratic platform of 1896.

#### The Ship Purchase Bill

A Democratic revolt may have prevented the passage of the Ship Purchase bill in the Senate. On the 1st, Mr. Clarke, of Arkansas, moved to send the bill back to the Committee on Commerce. A point of

order against this motion having been raised and sustained by the Vice-President, his decision was overruled by a vote of 46 to 37, nine Democrats voting against him. Then there was a motion to lay Mr. Clarke's motion on the table. This was defeated by a vote of 44 to 42, the following seven Democrats standing for Mr. Clarke's original proposition: Messrs. Clarke, of Arkansas; Camden, of Kentucky; O'Gorman, of New York; Bankhead, of Alabama; Hitchcock, of Nebraska; Hardwick, of Georgia, and Vardaman, of Mississippi.

At a Democratic conference efforts were made to gain the support of the seven Senators by concessions. One would prevent the purchase of interned ships; another would end Government ownership at the close of the war. The overtures were rejected. On Friday, adjournment until Monday was ordered, and the efforts were renewed. At the end of the week it was shown that the President and the Senators supporting the bill lacked one vote. Passage of the bill was not expected.

#### Cotton and Food Ships

The steamship "Dacia," which was bought from the Hamburg-American Company by E. N. Breitung, and which started from Galveston on January 31 for Rotterdam with a cargo of cotton, arrived at Norfolk on the 7th and stopped there to take on coal, intending to resume the voyage without delay. It is expected that the ship will be seized and subjected to the action of a British prize court. Mr. Breitung has bought the "Segurança," an American ship, and is converting her into a cotton carrier. According to decisions recently announced, a cargo of cotton on this ship, consigned to Germany, would not be disturbed.

It is understood that the "Wilhelmina's" cargo of foodstuffs will be seized. This ship, under the American flag, sailed for Hamburg on January 22, a few days before the German Government took over all the grain and flour of the country. The British Government has decided to take the "Wilhelmina," holding that, despite the guarantee given by the German Ambassador at Washington, the cargo may come into the possession of the German Government and be used for the army. Because the ship sailed before the German Government's food decree was published, Great Britain will pay for the cargo and release the vessel. Notice has recently been given that all foodstuffs shipped to Germany, Austria or Turkey will be regarded as contraband.

#### The Case of Werner Horn

Werner Horn, a German man who had been in this country for several years, attempted, on the 2d, to destroy the Canadian Pacific Railway bridge over the St. Croix River (the international boundary) at Vanceboro, Maine, by an explosion of dynamite. The bridge was but slightly injured. He was arrested in Vanceboro on a warrant procured by the railroad company. Admitting that he had sought to wreck the bridge, he claimed that what he had done was an act of war, or a political act, saying that he was a German reservist with the rank of captain. When Canada asked for his extradition, he asserted that the offense had been committed in Maine and that he had not set foot on Canadian soil. He also appealed to the German Ambassador at Washington.

He was arrested again upon the charge that he had injured buildings in Vanceboro. Having been found guilty, he was sent to jail for thirty days. It is expected, however, that he will soon be surrendered to the Federal authorities for a hearing before a commissioner concerning extradition. The legal question is a complicated one, and the case presents novel features. It is suspected that

Horn started the fire that destroyed the Roebling works in Trenton, New Jersey. War material was being produced there. He was in Trenton at the time.

#### At the Mexican Capital

General Obregon, representing Carranza, has retained control of the Mexican capital. Zapata, with headquarters at Cuernavaca, sixty miles from the city, has been carrying on guerrilla warfare. His forces have been whipped twice by Obregon, but he has cut the capital's water mains. When Zapata retreated from the city, he took with him Garza, the latest of the provisional presidents. It was said that Garza had been kidnapped and borne away by force because, in an address to the convention, he had denounced Zapata and called his army an incompetent one. Since Garza's departure nothing has been heard of him, and at the end of last week many believed that Zapata had put him to death.

The diplomatic representatives of foreign powers are in a quandary. Carranza, saying that Vera Cruz was the new capital, invited them to that city. They declined to go, holding that acceptance of his invitation would be equivalent to recognition of

#### TRIFLING DAMAGE THAT MAY CAUSE COMPLICATIONS

This is all that Werner Horn's bomb accomplished when he tried to wreck the international bridge over the St. Croix River, between Maine and New Brunswick, over which foodstuffs for England are shipped. But he has appealed to Ambassador Von Bernstorff to secure freedom from extradition from this country on the ground that his offense was an act of war.

his Government. Whereupon their relations with the First Chief and General Obregon became strained. Carranza ordered the Spanish Minister, if he desired to avoid deportation, to surrender within twenty-four hours a Spaniard named Delcaso, a confidential agent of the Spanish Government, who has accompanied Villa. It was alleged that Delcaso had assisted Villa in many ways. The man had sought refuge in the Spanish legation, and the Minister declined to surrender him. This incident offended the diplomatic corps, and at the end of the week it was

son were held, their release being conditional upon the First Chief's pardon of Santibanez, who asked for his old place in the Constitutionalist army. The First Chief would not yield. Last week he reported the death of his brother.

#### Villa and His Foes

In the north, Villa has continued his preparations for a movement against Tampico. He has promised to capture the port, to drive all his enemies out of northeastern Mexico, and to defeat Carranza's army within six weeks. General Angeles has been

and will retire after the restoration of peace. He has appointed three Cabinet ministers—Diaz Lombardo, formerly Minister to France; Francisco Escudero, formerly speaker of the Chamber of Deputies, and professor of political economy in the University of Guadalajara, and General Garza Cardenas. Probably Angeles will be his Minister of War.

Reports about military movements in the northwest are conflicting. The Yaqui Indian troops have mutinied and are terrifying the people of Sonora. Mines are closed in that state and agriculture is neglected.

#### THE EXPOSITION FROM AN AEROPLANE

The main group of buildings as they looked in December. The big fair opens at the end of this week and will run to the end of the year

said that all of the diplomats might leave Mexico. They were unable to use the telegraph wires, there was no Government for them to deal with, and the city was suffering for lack of food. Obregon closed all the newspaper offices, but afterward permitted the publication of two dailies, under a rigid censorship. Thousands of Government employees were out of work, and the Villa currency, in general circulation, had been made worthless by Obregon decree.

Gen. Jesus Carranza, the First Chief's brother, and his son Abelardo, who were captured in the first week of January on the Tehauntepec Isthmus by General Santibanez, who had turned from Carranza to Zapata, have been put to death by Santibanez. Members of General Carranza's staff were executed immediately after their capture, but he and his

successful in and about Monterey, and another subordinate of Villa has captured San Luis Potosi, driving out General Benavides, who was formerly loyal to Villa. He will have 25,000 men in three columns attacking Tampico, and General Caballero, defending Tampico, has only 10,000. General Gonzales, also at Tampico, has issued a notice that all foreigners there who aid Carranza's enemies or interfere with the political affairs of Mexico will be put to death.

Villa has assumed the Presidency, or has made himself a kind of dictator. In a published statement he says he reluctantly took this course for the preservation of order, because he and his forces had been separated from the convention, the capital and the President (Garza), who cannot be reached. He does not seek the Provisional Presidency, he adds,

It is reported that \$7,000,000 has been raised by wealthy Mexicans in exile for a new revolutionary movement, hostile to both Carranza and Villa, and designed to establish a republic composed of Sonora, Sinaloa and Lower California. Another report speaks of a movement of the same kind in support of Gen. Eduardo Iturbide, as a candidate for Provisional President. He is now in Texas. A peace conference, attended by more than 200 former governors, general or cabinet ministers, was held last week in San Antonio. It adopted a resolution urging all the militant factions to submit to arbitration, and appointed a committee, the leading members of which are Francisco Carbajal, who was President for a time after the fall of Huerta, and Federico Gamboa, Foreign Minister in Huerta's Cabinet.

## THE MEN IN THE BLUE SUITS

BY ALFRED STEAD

*This is the third of Mr. Stead's articles from Belgium and France especially for The Independent. He has been at the front as the special correspondent of the London "Daily Express."*—THE EDITOR.

"VICTORY belongs to those who know how to suffer a quarter of an hour more." This phrase of the famous Japanese General Nogi sums up modern war. And what of those who suffer, the wounded by shot and shell, the grim incomplete harvest of war?

Modern war is very cruel to the wounded, just as modern surgery and modern science are kind and save many lives which would have been lost formerly. There is none of the awful squalor and dirt of the Crimean hospitals—there is preparation here and plenty of it. The railway network of France makes it far more easy to convey wounded to adequate hospitals far from the battle line once they can be collected. But there is the rub. Shell fire makes ambulance work very perilous indeed—since the enemy's artillerymen fire on anything moving, at distances which make it difficult to distinguish those carrying out an errand of mercy from the

attacking troops. But the wounded are picked up under the heaviest fire. There are plenty of brave ambulance men and stretcher bearers.

As one of these latter said to me: "It is not the shells that bother us so much, but it is very hard to carry a heavily loaded stretcher when all the time one is falling over dead bodies and horses."

But often the wounded have to lie out for hours, in a zone of retreat and attack, where no help can come to them. During the night help may come, but if the ground be still contested nobody can go there at all. And from the darkness go up cries of "water, water, help," gradually weakening as the strength of the sufferer ebbs away.

The use of the emergency first aid, applied by fellow wounded on the field of battle, has saved many lives. For sometimes it is quite impossible for a doctor to reach the wounded; but a less severely injured comrade,

rolling over and over, may be able to arrest a hemorrhage and save a life.

How wounded suffer and endure is well illustrated by the case of some regiments which had taken up a position across a river: they were cut to ribbons but could not be collected. Finally the wounded were ferried across on rafts during the night three at a time, under shell fire—this after twenty hours' exposure in wet trenches.

Then they were taken to the hospital in a church. No sooner there than the roof was taken off by shells and a move into the cellar was advisable. At nightfall this forlorn band, wounded by bullets, but more by splinters of shell and shrapnel, staggered forth to seek safety. There were only a few stretchers, and men who were sure they could not walk, walked all the same, clinging to their comrades. Thus thru the night for two miles to where the motor ambulances were waiting. Then forty miles

© American Press

A HOSPITAL AUDIENCE AT BOULOGNE—BRITISH SOLDIERS LISTENING TO A SINGER FROM HOME

to railhead—jolting and suffering as the fractured bones rasp and grate together. Comfortable trains for two days, with every rail giving a throb, to hospital. But thanks to the efficiency of the field hospitals there is little gangrene—little, that is, compared with what might be.

Those hospital trains—what an experience it is to travel in them! The smells, the indescribable horrors, the pitiful sufferings of men from the trenches, with blood-soddened bandages, jolted for hours between country stations, without a cup of hot coffee or a change of rags. And yet all that can be done is done. In this frightful hurly-burly of war, when a few hundred yards backwards or forwards may mean thousands more wounded to be dealt with, it is impossible that there should not be great suffering. Motor vehicles have done much to reduce the time of suffering, but there is still much.

But they are wonderfully brave, these sufferers. I saw a Highlander whose arm had been cut off by one of his own officers in a trench—it had been terribly shattered by a shell—cheerfully smoking on his stretcher, dissatisfied with his French cigarettes but cheerful, very cheerful.

"I will be first-rate for opening taxi doors in the Strand; lucky it was my left arm," was his comment.

Another Tommy was drinking tea, that beverage beloved of the army, when a bullet took him in his right arm. He carefully trans-

ferred the pannikin to the left hand and finished his tea.

Men have been known to ask to be shaved on arriving in Paris to go to hospital so as to appear clean to the nurses.

"Can't shock them with a beard like that," said a burly sergeant with four bullets in him. And yet at the hospitals it takes something to shock them now.

I saw the arrival at the Ritz Hotel, now partly a hospital, of a French private who had come from the eastern frontier. He had had forty days' continuous work in the trenches, without taking his clothes off, without shaving, without washing. He was a regular wild man of the woods. His clothes had to be cut off him. And he was having a fine time with all the comfort of fine linen and accommodation of a first-class hotel.

That is one thing—modern hotels make fine hospitals. The supply of hot and cold water is especially useful. But the men's troubles are over when they arrive at a real hospital. It is the transit from the firing line to the hospital which is terrible for them.

Cleanliness is the keynote of the hospital endeavor. At the front this is difficult, but often the apparent uncleanness which one sees is only superficial; the wound surfaces are clean and safe.

The stretchers with their pockets for dressings are wonderfully efficient. In each ambulance are

little dispensaries and everything antiseptic to make of these vehicles perfect little movable hospitals.

From battlefield to motor ambulance, from motor ambulance to train, from train to hospital—all these stages in the way of the cross of the wounded are now well defined and working well. Steps have been taken to prevent the well-run organization of efficient doctors and nurses from being upset by the well-meaning but dangerous efforts of the amateur nurse. These have been politely but firmly removed from the possibility of danger—and their services will be utilized as and when they can.

At the beginning of the war the Red Cross badge was rather abused by curiosity seekers. Some such arrived near a battle in progress, some way back from the firing line, and announced that they were come to help.

"Go and help them burying these bodies over there," said the medical officer. And they did, these society amateurs, because they had to. But they never went out with Red Cross badges again.

The whole of France is full of wounded; there are no towns without them. Before the end of the war all the countries concerned will be—must be—vast hospitals, with thousands or hundreds of thousands of men in all stages of convalescence.

From a military point of view the thing to be done is to get the wounded back to the firing line as soon as possible. Nor are the wounded averse to this; in fact they are all keen upon getting out of the hospital as soon as possible.

And so they sit there in the sunshine, joking among themselves, grumbling about having no letters, "grousing" about little

Paul Thompson

TOMMY ATKINS TURNS LINGUIST—TAKING A LESSON IN FRENCH PRONUNCIATION FROM A BELGIAN CONVALESCENT

details as is their traditional right. but none of them despondent, none of them not a better soldier than before as to morale.

"That is what is so fine about the British army," said a French officer, "the more you pound them, the more they suffer, the better they get, and the more determined to win." Those blue-clad lines of cripples prove

more the strength of the British army than a thousand military pageants and parades.

The very courage and cheerfulness of these men make visitors rather ashamed of themselves. One of the hospital orderlies had been complaining that the blue clothes of the wounded secured for them an undue share in the good things showered on

the hospital by the warm-hearted French people. To his grumble, "You get all the things given you, you in the blue suits," came the quick retort from one of the wounded men: "It's easy enough to get a blue suit; all you've got to do is to go in the firing line." And those who earn a blue suit may be cheerful, but they certainly do earn it!

Underwood & Underwood

SORTING THE BUNDLES—A FEW OF MANY THOUSAND ARE STACKED AT THE RIGHT

## BUNDLE DAY IN NEW YORK

TRANSFERRING SURPLUS CLOTHING FROM THE EMPLOYED TO THE UNEMPLOYED

**B**UNDLE, *n.* A number of things or a quantity of anything bound up together; a single thing folded or doubled and tied up; a package."

The lexicographer who devised that definition probably thought himself rather conclusive. But he ought to have seen Bundle Day Headquarters in New York. When five floors of a Fifth Avenue loft building are filled with overcoats, derbies, silk hats, women's hats, dresses, socks, bathrobes, collars, ties, waists, toys, white silk vests and knitting needles, in paper boxes, wooden boxes, hat-boxes, bags, suitcases, newspapers, brown paper, and nothing at all, the most elastic definition of *bundle* stretches until it snaps.

For Bundle Day is nothing less than a sociological phenomenon. It is one phase of New York's effort to adjust itself to a winter in which something like half a million men and women are out of work.

February 1 was "Wardrobe Day." February 2 was "Attic Day." February 3 was to be the climax, "Bundle Day." But all thru the day the bundles kept pouring in in such quantities that the "day," like the defini-

tion, was expanded indefinitely, and plans were laid, under Mrs. James Speyer's direction, to make the work permanent.

Everybody helped. The first problem was to get people to ransack wardrobes and attics for the clothing they could spare. Advertising placards and newspapers and hundreds of thousands of seductive tags accomplished that. Then it was necessary to collect all the bundles; the hotels arranged to collect from their patrons, the commuters' railroads provided storage room in the stations, the city threw open the school houses and the police stations, the department stores and the express companies and the city provided wagons and trucks. Next the huge piles of clothing had to be sorted, cleaned, prest, repaired, and put in wearable condition. In this task volunteers from churches and social service organizations all over the city worked with men and women secured thru the Municipal Employment Agency. And when the garments were finally ready for shivering backs practically all the relief agencies in the city co-operated in distributing them.

An empty building near Madison

Square was secured to serve as the clearing house. The Lackawanna Railroad gave enough coal to keep it warm, and the committee took possession. Then the magnet began to work. Huge "quantities of anything bound up together" were piled into elevators jammed to cubic capacity, unloaded and stacked, sorted by hurrying hands and passed on to the repair staff.

Not that the clothes arrived in rummage-sale tatters. To be sure, there was one pair of trousers which, the resourceful worker remarked, would do nicely for a one-legged man. But there were thousands of warm overcoats and suits—decently arranged on clothes-hangers provided by a great department store. "From good makers, too," sagely remarked the little tailor who was visibly relishing the opportunity to bring his professional judgment into play after long idleness. There was one gift of 500 pairs of brand-new socks; another of 200 pairs of shoes fresh from the factory. There seemed to be tons of warm underwear. In one room a group of seamstresses, under the guidance of two teachers loaned by the Board of Education, were busy

putting quantities of women's clothing in good shape.

One of the lately unemployed remarked facetiously to the lean-faced Yankee who, with a rakish gray hat and collarless shirt, was sporting a nobby livery of blue with huge brass buttons, "Jimes, go 'round the corner and get me a glass of 'ahf-an'-'ahf.'" "Aye, aye, sir," replied James, with

a last flourish and a jovial pun on the "tale of a waiter's coat" before he whipped it off and passed it on. And if he did miss his cue a little the donor of the coat did no better. But that sort of gift was rare. Most of the things would do just what they were meant to do—relieve hardship.

If you ask Miss Frances Kellor (whose work for immigrants Inde-

pendent readers know well), who was responsible for launching Bundle Day in New York, she flashes back "I don't know." But nobody quite believes her. At any rate, New York liked the idea. Half of those who observed it liked the passing sensation of being generous; the other half liked the lasting sensation of being clothed.

## THE INSPIRATION OF THE SCRIPTURES

WHAT I BELIEVE AND WHY—TWENTY-FIRST PAPER

BY WILLIAM HAYES WARD

**I**N two previous papers I have spoken of the Hebrew and the Christian Scriptures, and have tried to show what testimony they give as to the claim that the writers had special inspiration from God.

Believing, as I find evidence to believe, that God's hand can be seen in the creation and evolution of nature, I have no difficulty in believing that God can act and has acted, under his own laws, in the course of human history. I can see no reason why he should not guide good men, of whatever nation, as teachers along the ways of goodness; but, as in his guidance of the course of nature, I would expect his action to follow a course of evolution, along which men should gradually learn more of him and more of goodness and wisdom. I see no reason why an Elijah or Isaiah or John or Paul should not have had much of such guidance and inspiration, or why great and good men in later or earlier days might not have been thus favored, whether Zoroaster or Socrates.

But I should not expect this light from heaven to be blinding. It would not give more than could be received. The earliest history of mankind makes them ignorant savages, and by a course of evolution they had to come from a condition somewhat higher than the beasts to one of civilization and intelligence. God might lead them up gently, patiently, by many hands which his had grasped. God's prophets would be imperfect men, and much imperfection and much error would be mixt with some new truth discovered and taught.

### A MIRACLE OF INSIGHT

I can see in the Hebrew and Christian Scriptures no evidence of what is usually meant by inspiration; in much of them no evidence of more than any historian or other writer might attain. It is not in the history or the science of the Bible, any more than in its rhetoric, that we are to look for anything unusual; they are

no better than what we find the literature of other ancient peoples to be; it is in the amazing appearance of the teaching of one supreme God of absolute Justice and holiness. At first, as under a process of evolution was to be expected, he was the one God of the Jews, while other nations had other gods, but later in the time of the Captivity the Hebrew prophets rose to the conception that Jehovah was the only God, and the gods of the nations were but silver or gold or wood. No other nation reached this height of inspiration. Greece invented civilization, and from Greece alone has it spread to all the world since; but it was only the Hebrew people that discovered, taught by their prophets, the worship of one only true God, Maker of heaven and earth, and beside him there is no God. By what miracle of insight or of divine revelation did they learn to worship this sole God, that insignificant little tribe of Egyptian slaves, fated to hold the highway of two hostile nations, the mightiest on earth, both vulgarly polytheistic, one worshipping "Isis and Orus and the dog Annubis," and the other, on the Euphrates, annexing gods from every conquered nation, and in terror of heavenly and earthly monsters and dragons innumerable; and right about them the many-named Baalim and Ashtarothe of the lesser Amorites and Syrians and Phenicians. Why did this insignificant football of the nations, tributary or captive, find the one God whom the learned priests of Thebes and Memphis and Babylon and Ninevah, searching for a *Deus Exsuperantissimus* in their genealogies and hierarchies of deities could not find—no, not even when the Heretic King of Egypt chiseled out the names of Egypt's gods that he might replace them for a decade or two with the mighty, many-handed god of the solar disk? Here is history's great riddle, unsolved unless it be by special divine Providence which made little Pales-

tine the world's teacher in religion, as little Greece is its one master in culture and civilization. Was there not here revelation to the soul rather than inspiration to the pen?

### JESUS' ATTITUDE TOWARD SCRIPTURE

It is impossible to prove this or any higher degree of special inspiration, for it would transgress no natural law of the mind, and it would be a matter of faith resting not so much on reason as on its reasonableness. It is reasonable that God may have guided, as a part of his providence, certain men anywhere and at any time to be teachers of their people. Miracles may be supposed to support inspiration, but the miracles are a part of the books for which inspiration is sought, and their genuineness is a part of the question, and is more in doubt than the inspiration itself. Really, the one main argument for the inspiration of the Hebrew Scriptures is that Our Lord is, I doubt not, truthfully, reported to have treated them as such, referring to them as prophetic evidence of his Messiahship. To be sure, we may reply that the Evangelists wrote a decade or more after his death and gathered their reports of his words from memory and from stories current in the Church and hardly verbally accurate, and very likely incorporated their own ideas of the fulfilment of prophecy; but, as the record stands, Jesus himself accepted the current Jewish notion of the inspired infallibility of the Old Testament, and it is almost certain that he was taught in the synagog school to believe as every one believed. Whatever view is taken of the divinity in Jesus this is admitted by all, that he grew in knowledge from his childhood, that he did not know when he should return to earth, and that, if correctly reported, he was mistaken when he said that his second coming would take place during the life of that generation. Jesus was not alone in his acceptance of the prevalent doc-

trine of Scripture. But that doctrine had grown up gradually, and had no definite basis. Because the Jews of two or three hundred years before Christ had developed this doctrine, the Christian Church in the course of a hundred years or more added their own Scriptures to the inspired canon.

#### ERRORS OF FACT IN THE BIBLE

What is valuable in the Bible, Old Testament and New, is its truth rather than its inspiration, its religious truth and its historical truth. Christianity depends on the truth in the Scriptures, not on their inerrancy; otherwise if error were proved that would overthrow Christianity.

We do not need to search with a microscope to find errors of fact in the Bible. They are patent. The world of earth and stars was not made in six days. The meaning of the story in the very first chapter is not to be twisted and wrenched by hunting in the dictionary for a definition of "day" that will stretch it to millions of years, for the question of meaning is purely literary, not arbitrarily lexicographical, as if "The evening and the morning were the first day" could cover a whole geologic period. The truth of the chapter is not in the details of the panorama, but in the grandeur and sublimity of the detailed conception that God was the author of the firmament above and the earth and the waters beneath. That truth we can believe and accept, and disbelieve all the rest.

Nor do we have to believe that all men and beasts perished from the earth except those in Noah's Ark. With our knowledge the story is absurd; and we know that it is an older Babylonian legend cleansed of its polytheism to fit it to the acceptance of those who worshiped one only God. Just as absurd is the myth of the Confusion of Tongues at the Tower of Babel. We can smile at the credulity which lengthened out the lives of the Patriarchs, Terah 205 years, his son Abraham 175 years, Isaac 180 years, Jacob 147 years, Joseph 110 years, and Moses 120 years, at a time when we know from contemporary Egyptian and Babylonian inscriptions that the ordinary period of life was not exceeded.

It is a comparatively simple thing to separate the legendary from the historical period in the annals of Israel, and to see in both the development of the pure faith of monotheism. History depends upon writing; and it is not likely that the Hebrews had any writing in their own language before the time of David. Of course the Egyptians and Babylonians had their complicated picto-

graphic or syllabic systems of writing long before, and the Babylonian system and language were used in Palestine we know till near the time of Moses for international correspondence, but it is exceedingly improbable that the books of the Pentateuch were written first in Babylonian or Egyptian and translated centuries after into Hebrew. It is much more likely that the so-called Five Books of Moses were composed some considerable time after the civilization that grew up with David and Solomon; and this accounts for not a little of legend and miracle in them. The freedom of composition is illustrated by the fact that in so solemn a document as the Ten Commandments the reason given for keeping the Sabbath in Deuteronomy is entirely different from that given in Exodus.

#### MORAL ERRORS

But misapprehensions as to the distinction between history and legend are far less serious than moral or religious imperfections, and such there certainly are, and not a few of them, in the Old Testament, and perhaps in the New. We must expect them if the understanding of duty and the knowledge of God come by slow development of ages; the new seed will not at once crowd out the old weeds. Indeed the whole sacrificial system common to the nations about them, at first polytheistic and later purified by monotheism, was based on a false conception of God as a being who has to be placated and bought off by the most precious gifts, even to the first-born, and the prophets had to protest against dependence upon it; and Christianity had to reject it all and save it only as a type of Christ.

But why should we be surprised to find that writers of the Jewish Scriptures fell behind our ethical standards, when we have not ourselves ceased from going to war, and honor soldiers as a superior caste? I cannot read portions of the Old Testament without wishing that their translation into new missionary languages might be long delayed, and that children might learn the New Testament before the Old. We should not make too much of the Old Testament; it is far from perfect. It is not to edification to read of the seventy men of Bethshemesh whom God slew for looking into the Ark when it was sent back by the Philistines; or of Uzzah who died later because God was angry with him when he tried to steady the Ark when it shook as David was bringing it to Jerusalem; or of Elijah the prophet slaying the four hundred and fifty priests of

Baal; or of Elisha cursing in the name of the Lord forty-two little children who had rudely called him a baldhead, and were killed by bears. Among the Prophets there are not a few whole chapters, as in Ezekiel and Amos, not fit to be read in public worship because of the vengeance which they demand against the enemies of Israel. There is in them none of the spirit of Jesus. And even in the New Testament we are sometimes disturbed because what Jesus said or did seems wrong, and we cannot help asking if the tale be true: as when our Lord is said to have cursed the barren fig-tree, which belonged to somebody, and it withered away; or when he was asked to leave a city because he had destroyed a herd of swine; or when he forbade his disciples to teach, as they went two and two, outside of Jewry, because he was sent only to the lost sheep of Israel. Or how can we at this late day be expected to approve, even if we can credit, the sudden execution, by the malediction of Peter, of Ananias and Sapphira for "lying to the Holy Ghost"?

#### THE MISUSE OF PROPHECY

If a stringent theory of inspiration, whether we call it inerrant or plenary, fails when judged by either history or morals, it equally fails when we test the New Testament by its interpretation of the Old. No scholar would now dare to use the Old Testament in argument as the writers of the New Testament use it, getting in a rabbinic way meanings out of it that were not in the mind of the old prophet. The first chapter of Matthew quotes a prophecy, "A virgin shall conceive," etc., as fulfilled in the birth of Christ; but it has no plausible relation to Jesus; for Isaiah goes on to tell Ahaz that before her child is old enough to know good from evil his two enemies, the kings of Syria and Samaria, would die. In the next chapter Matthew quotes the words of Hosea, "Out of Egypt have I called my son," as fulfilled in the return of the infant Jesus from Egypt, when it is perfectly evident that the quoted passage is not prophetic but looks backward: "When Israel was a child then I loved him, and I called my son out of Egypt," and Hosea goes on to say that after coming out of Egypt Israel turned back to idols. The book of Hebrews offers what we should call illegitimate expositions of Old Testament passages which suffer a verbal dislocation, as when in the first chapter the passage "I will be unto him a Father and he shall be unto me a Son," which was addressed definitely to David, is made pro-

phetic of Christ. So thru two chapters the author proves that Jesus is greater than Abraham on the basis of a verse which says, "Thou art a priest forever after the order of Melchizedek," which has no bearing on his argument.

#### THE EVOLUTION OF TRUTH

But, as I have said already, the value of the Bible, as of any other book, depends on the truth, especially the new truth that it brings us. It is to be expected that it will retain errors belonging to its times, for without error it would not be comprehended or received by the people to whom it was address. And this is true even tho it contain ethical errors and imperfect views of God. Every failure to see moral obligation clearly involves a relatively false view of God; for God is our highest conception of what is right. Even yet are we gaining truer views of right and wrong. We understand duty better than it was understood in Paul's day. Paul knew that in Christ there was neither bond nor free, but he gives no sign of knowing that slavery was wrong. For aught he could see woman was a subject sex; we free both women and slaves. Jesus had taught that God was a loving and forgiving Father; Paul could not get beyond the idea of expiation and appeasement of God by sacrifices, and from him and the author of Hebrews the doctrine came which Milton puts into the mouth of God speaking to his Son in the heavenly conclave, that Adam, because of his sin,

To expiate his treason hath naught left,  
But, to destruction sacred and devote,  
He with his whole posterity must die:—  
Die he or Justice must; unless for him  
Some other, able, and as willing, pay  
The rigid satisfaction, death for death.  
That is Old Testament teaching, the teaching of justice, righteousness, not the full Christian doctrine of the parable of the Prodigal Son, of full, free, fatherly love. And so it is that too many of us have regarded the Second Person of the Trinity as the expression of the infinite love of God, and the First Person of the Trinity as the expression of God's stern punitive justice.

#### WHAT IS LEFT?

But I will be asked, "If you deny an infallible Bible, what have you left? You are—are you not?—an infidel, an unbeliever, left like other pagans to the bare light of nature?" We are used to hearing that reproach from Uzzahs who rush to steady the ark. It is better—it is safer—to seek after the cold truth than it is to try to bolster up faith. But Christianity

surely does not depend on the possession of an infallible Scripture. It depends on the spiritual truth in the New Testament, on the true conception of God as Father, on love for others as the regnant principle of life as against self-culture or any other coarser form of selfishness; on the kingdom of God to be created on earth by that love expanding over all humanity; and, historically, it depends on the person of Jesus, the Christ, whose teachings, life and death initiated the highest of all religions. But it is his teachings which we must accept, and not any matters of history about him, from his birth to his resurrection and ascension. These only are of cardinal and essential importance; for love affects character, while history, correct or incorrect, bears only on intelligence.

#### THE DISCOVERY OF GOD

What, then, is left when I venture to question and doubt, or even to deny, on the basis of my own reason, statements which I find in the Bible, and to disapprove matters of morals, theology or religion recognized not unfavorably in the two Testaments? This is left, the search for and discovery of God in the myths of the childhood of the race, the grandest discovery to which the mind of man, wandering among portents and omens and dreams, has ever been guided, the story of the marvelous discovery, scarce credible where made, that God is one and that he created and rules the world. The great fact was learned by the teachers of an insignificant tribe, but its implications had to be slowly found; and I see in the successive books of the Old Testament a clearer and ever clearer sense of God's holiness, and of the obligations of justice and right as resting on men. It is worth while, greatly worth while, to possess this unique collection of writings of prophets and psalmists and historians, utterly unique in the history of ancient literature, with whom God and righteousness were supreme, and from whose Hebrew faith alone we have inherited our knowledge of God. When I try to conjecture how this sublime vision and this wonderful succession of seers and sages was able to conceive and teach what was hidden from more gifted and cultured nations, I do not find it easy to believe that it all came thru some mysterious special genius for religion, and I find it easier to see the proof of the guidance of that indwelling Spirit of God which we call inspiration, not knowing how or where it may work.

And much more is left. I see in the

New Testament the Mosaic religion suddenly rejuvenating itself and developing into Christianity. I see Jesus an utterly new sort of prophet, announcing and promising the kingdom of heaven to spread over the earth. That was new; it is not in the Old Testament. I find a new doctrine of God and a new doctrine of man—of God as Father, which is, being interpreted, God is love; of all men as brethren, and the duty to treat them with love, all of them, Jew and Gentile, and to sacrifice for them, to die for them if needful, to teach them the good news of the love of God and of the kingdom of heaven which is the kingdom of love. I find God brought very near to us in this world, and the promise of the world to come.

#### A RELIGION OF LOVE AND SERVICE

All this constitutes a new religion, a religion the world had never known, a religion of loving worship toward God, and a religion of all possible social service toward men. The first Christians were noted because they loved one another, and buried the unburied bodies of the pagan poor about them. I may not be sure that the very fullness of God dwelt in the man Jesus; but God's wisdom, which was with God from the beginning, his Logos, dwelt mightily in Jesus, and allowed him to give to man a better knowledge of God by far than the world had ever learned, even from the best of Hebrew prophets. And I and any one can see that Paul and the other Apostles caught much of his spirit, and spread it abroad after his death; and if I fail to see that they were wholly right when with one hand they discarded the Jewish ordinances ready to perish, and with the other made them the authority for a new sacrificial system of pardon for which love was enough, may I not see that the spell of Mosaism could not at once be fully thrown off, and that there was inspiration enough left, so that the cleansing fire of its love might purge the remaining dross of the law of justice appeased by sacrifice; and we can approach directly to God, with the God in Jesus Christ as our Mediator, or even with no mediator at all, saint, or Virgin Mother, or Jesus Messiah.

So I do not look on any doctrine of inspiration as essential or even important; but the truth which came so suddenly to the world in Jesus Christ, that is, the Christian religion, is of infinite value, and is such, apart from any theology about any way, additional to its evident truth, by which men have believed it to be accredited.

# SIR DOUGLAS MAWSON ON THE SEVENTH CONTINENT

AN EXPEDITION WHICH CAMPED IN THE NURSERY OF THE SOUTHERN BLIZZARDS

SIR DOUGLAS MAWSON, the distinguished Antarctic explorer, who is lecturing in the eastern states and who took the wonderful pictures shown on the foregoing pages, led the Australasian Exploration Expedition of 1911-1914, with the object of mapping out the Antarctic Continent south of Australia, if such a continent existed. The matter had been in doubt since 1840, when Admiral Wilkes of the United States Navy reported sighting land there. Sir Douglas found this land and as far as he was able to ascertain he and his party were the first human beings ever to set foot on it. It is known as Adelie Land.

In an inlet which Sir Douglas named Commonwealth Bay a landing was effected and a hut erected near the shore as a main base of operations. Then a new discovery was made—Adelie Land is the birthplace of the Antarctic blizzards. Hurricanes rage here continuously, and during the entire time he remained there the average wind velocity was fifty miles per hour; at times it reached 220 miles per hour and weights of 300 pounds were tossed about like cardboard boxes.

The hut was soon snowed under; a winding tunnel had to be made by way of entrance. It was extremely fortunate that the hut was buried before the first of the extremely high winds were felt on it or it surely would have been blown out to sea and the entire party lost.

In the summer season—a summer with an average temperature of thirty-two degrees Fahrenheit—penguins came to Adelie Land by the million. Where they come from and where they go to in the winter no one has yet discovered. When the severe weather settles over the Antarctic shores these queer birds go straight out into the open sea and apparently remain there until the milder temperature of summer brings them back to their nesting places.

Motion pictures were secured of all the animal life, showing the remarkable tameness of the birds and animals. Sir Douglas accounts for this lack of fear by the fact that man was an unknown species and not recognized as an enemy.

The expedition found a vast area, of over a mil-

lion square miles, rich in coal with copper deposits, and traces of gold as well. New land was discovered, and while the party was still on the ground they secured by wireless the sanction of the English King to the naming of the territories King George Land and Queen Mary Land.

The wireless equipment was one of the novel features of the Mawson expedition. On the way south a station had been set up on Macquarie Island, 900 miles south of Australia, and another was established at the main base in Adelie Land. Thru them the expedition was able to keep in constant touch with civilization. These stations were also of material benefit to Australian shipping, as from Adelie Land, where the storms originate, Sir Douglas was able to flash warnings of their approach that reached Australia from twenty-four to forty-eight hours before the storms.

The expedition, while successful beyond all expectations, even in the face of most trying conditions, was not without its tragic side. Sir Douglas, accompanied by Lieutenant Ninnis and Dr. Mertz, left the main base for a sledging journey inland, and after traveling 311 miles Lieutenant Ninnis, with his dog team, broke thru the snow roof of a crevasse and fell to an unfathomable depth below. Mawson and Dr. Mertz went back and peered down into the black hole, but all that could be seen was part of the wrecked sledge and a dying dog on an ice sledge 150 feet below. They called down into that awful depth for

hours, but the only sounds that came back were the moans of the dog. These finally ceased, and Sir Douglas and Dr. Mertz faced the problem of racing back to camp, sixty days' journey, with only enough provisions for ten days' normal rations. Most of the food had been on Ninnis' sledge, and with this and half the dogs gone, the chances of their safe return were very small.

As dog after dog gave out it was used as food, partly for themselves and partly for the surviving dogs. The physical strain soon began to tell on Dr. Mertz and when it was seen he could not go on without a greater allowance of food the balance of the regular store was given to him. A few days later, however, he gave in and quietly passed away.

Left alone in that vast wilderness of sharp ice and dangerous snow-covered crevasses, Mawson read the burial service over his friend and once more started on hopeless but with the determination to get as near camp as possible in the hope that his records would be found and science receive some benefit thru his efforts. Three times, in that terrible struggle homeward, he found himself dangling at the end of his sledge rope in the yawning mouth of a crevasse, but after the first fall he had made a crude ladder of rope and when the sledge itself caught in the heavy snow at the top he was able to climb back to the surface.

When the last morsel of food was gone and the end seemed only a matter of a few hours, he stumbled into a supply of food cached by a relief party from the main base. A rest of a few days with proper food restored his strength so that he reached the main base alive but in horrible physical condition, sixty days after the loss of Ninnis and thirty-one days after the death of Mertz.

The "Aurora," after waiting until the last moment for his return, had finally put out to sea. She was wirelessed and turned back to get him, but the pack ice had gathered and the terrific winds did not permit of a safe landing, so, without proper medical attention, Sir Douglas was forced to spend another year in the Antarctic before returning to Australia.

## THE GREAT TREATY

THE FIRST OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH SPEAKING PEOPLES

THE ARMS OF  
GHENT

THE War of 1812 enriched our history with the memory of many famous battles on land and sea, the triumphs of which raised our infant navy to a position among the mightiest fleets of Europe. But its greatest gift to our country was the treaty which ended our last armed conflict with Great Britain. It showed that peace with honor can be won by statesmen determined to win it, even tho the nation which fought to settle great issues be forced to leave them undetermined until long after peace is made. The War of 1812 is the great historic exception to the rule that an inconclusive war breeds further war. The Treaty of Ghent was written while England burned with eagerness to avenge the defeats inflicted upon her navy, while Americans demanded vengeance for the destruction of the national capital and for many defeats on land. It omitted practically every point that either nation thought it vital to decide when negotiations began. And yet it was no peace of exhaustion, no mere armistice, for from it has grown not a renewal of war, but a final, conclusive and lasting peace.

If ever it seemed necessary to assert the rights of American citizens it seemed so in 1812. Our European trade had been practically ruined by Napoleon's "continental policy," which declared British ports shut to neutral trade, and the British "Orders in Council," which declared a blockade of the European coast line controlled by Napoleon. These injuries were felt the more severely since in those days a large part of the carrying trade of the world was in the hands of American shipowners. For a while it was doubtful whether the United States could stand neutral in the great contest between Napoleon's empire and Great Britain, and if not, which side we should attack. The reason why the War of 1812 was fought with the British

rather than with the French was because of another grievance we had against the British Government. The British claim was that any man who had once been a subject of the King remained such thruout his lifetime. So their warships searched our merchant ships and arrested and carried off to join their navy any one who had ever been a British subject, even tho he might now be an American citizen. This insult was felt even more deeply than the practical injuries which had been inflicted upon our trade, and at length the United States declared war, resolving never to make peace until the sea had been made safe for American sailors as well as American ships.

It proved much easier to begin the war than to end it. The first hope of peace came thru the Russian Government, which at that time was very friendly with Great Britain and the United States. The United States accepted mediation and appointed a commission to treat for peace. But the British Government objected to Russian intervention and instead offered to negotiate directly. A second American commission was appointed, consisting of five of the ablest men in the country: John Quincy Adams, Henry Clay, Jonathan Russell, J. A. Bayard and Albert Gallatin. They were instructed to insist upon Great Britain aban-

doning the right to search American ships and impress their sailors into British service. They were also instructed to get what they could besides, such as control of the Great Lakes and a renewal of the old fishing rights off British-American coasts. The British commission consisted of Lord Gambier, a naval officer; Henry Goulburn, an under secretary of state, and William Adams, a doctor of civil law. They demanded a new Canadian boundary, peace with the Indian allies of Great Britain, the creation of a "buffer state" for the Indians out of our northwest territory, free navigation of the Mississippi and the prohibition of American warships or fortifications on the Great Lakes. They refused even to consider the questions of the right of search and of impressment, which the Americans were anxious to have settled before any other matter. Had either party insisted upon its full wishes or even its "minimum demands," peace could never have been made. The story of the conference can be quickly told, for it was simply a moderation by each side of its demands until little was left except the greatest wish of both—peace.

The American Commissioners refused to consider the creation of an Indian state between the United States and Canada, but offered full

THE CARTHUSIAN CONVENT IN GHENT  
Here the British delegates were entertained and the treaty was signed

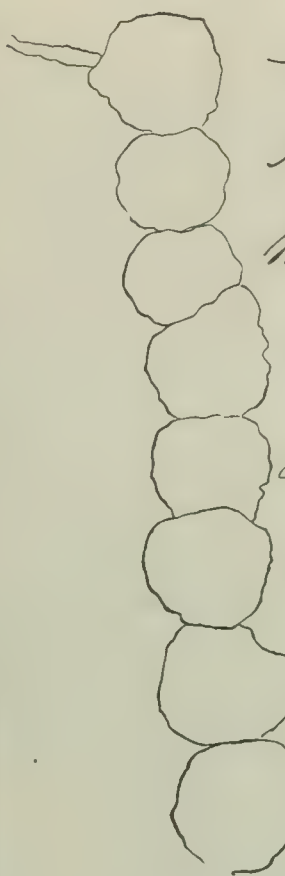

amnesty to the tribes which had been allied with Great Britain in the war. This was accepted so that discussion might begin upon questions which were of greater moment to the two nations and consequently more difficult to settle. The Americans proposed that the territories of the United States and of Canada remain as they were before the war, while the British suggestion was that each party keep what it had occupied during the war and still held at the time of the conference. This would have meant the loss to us of the northern parts of Maine, Vermont, New Hampshire and New York and perhaps the towns of New Orleans and Mobile. When the Americans refused this offer it was generally believed that negotiations were at an end. They communicated with the President and prepared to leave the conference. But the British minister Castlereagh informed the Commissioners that he would not insist absolutely upon his earlier instructions and that he desired the conference to

continue. The American Government, altho only with the greatest reluctance, allowed the conference to drop altogether the question of the right of impressment and of declaring French possessions blockaded to neutral ships. The British moderated their demand of all the southern shore of the St. Lawrence River and a large part of Maine, reducing it to Fort Niagara and a few small islands off the New England coast. The questions of British use of the Mississippi and American access to the fisheries were left as they had been before the war under the agreement of 1783. When the Treaty of Ghent was finally drafted it provided for an end to the war, release of prisoners on both sides, peace with the Indian tribes, the restoration of all territory conquered by either nation, the appointment of a boundary commission to determine the correct division line between American and Canadian territory and a pledge of common effort to abolish the slave trade.

Two men among others deserve special credit for the conclusion of peace. One was the illustrious English general, Wellington, who was invited by the Government to put himself at the head of an expedition against the United States. But, altho he expressed his willingness to

serve in America if called upon to do so, he strongly advised the Government not to insist upon a war for gaining territory in America while the European situation was still so critical. The advice of their greatest general was not a little influential in moderating the demands of the British Government. The other man was an American, Albert Gallatin, who had been an able Secretary of the Treasury and was the most tenacious supporter of peace at the conference. Many times it seemed that the negotiations had reached an end either thru the obstinacy of the British representatives or the incessant quarrels among the Americans as to what points should be insisted upon

*References.*—These references do not aim to be complete, but simply indicate to the student a few of the more easily accessible works which cover the topic treated. If a general reference for the whole series of articles is desired, *One Hundred Years of Peace*, by Henry Cabot Lodge, may serve the purpose, but a fuller and more impartial history of Anglo-American relations is Professor W. A. Dunning's *The British Empire and the United States*. *The Rise of American Nationality*, by Dr. K. C. Babcock (in Prof. A. B. Hart's *American Nation* series), contains a good general account of the Treaty of Ghent, on pages 168-201. Volume IX of Henry Adams' *History of the United States* (pages 1-53) covers the same period excellently. A briefer account may be found in J. W. Foster's *A Century of American Diplomacy* (pages 243-9). Captain Mahan's *The War of 1812*, and, for the student who likes to get at the sources, the *Memoirs of John Quincy Adams* may also be mentioned.

and which conceded. The American Commissioners had been purposely selected to represent as wide a range of party sentiment and sectional interest as possible, and but for the tact and diplomacy of Gallatin no agreement might have been reached even among themselves. As it was, the Treaty of Ghent, concluded December 24, 1814, not only commanded the consent of all the Commissioners, but received the unanimous ratification of the Senate when submitted the following February.

In celebration of the Treaty agreement the authorities of the City of Ghent gave a formal banquet to the British and American Commissioners on January 5, 1815. On the evening of the 5th of January this coming year the City of Ghent was to have repeated its courtesy and celebrate the centenary of the Treaty by a commemoration banquet in the same room of the *Hotel de Ville* where the Commissioners were entertained one hundred years before.

What the war did not settle the peace did. Great Britain did not formally relinquish the right to impress sailors who had been British subjects, but the right was not exercised and the British nation in the end adopted the American view of the question. Some years later the Chief Justice of England admitted that "the Orders in Council were grievously unjust to neutrals, and it is now generally allowed that they were contrary to the law of nations and our own municipal law." It is true that the present great war has revived some of the old disputes about the right of British warships to search American merchant ships, but today both nations are willing to settle their differences before matters can go as far as war. Great credit is due to the wisdom of the British Government in working for a peace without insisting upon any material gain from the war, and to the American Government for trusting to the future to effect what could not then be established by force of arms. In the words of the historian Henry Adams: "Perhaps at the moment the Americans were the chief losers, but they gained their greatest triumphs in referring all their disputes to be settled by time, the final negotiator, whose decision they could safely trust."

# WHAT WILL THE CANAL ACCOMPLISH?

AN ESTIMATE OF ITS EFFECT ON WORLD TRADE AND SOUTH AMERICA

BY THEODORE E. BURTON

UNITED STATES SENATOR FROM OHIO

**T**HE construction of the Panama Canal is the greatest engineering achievement of all the ages. The Isthmus of Panama connecting two continents was valueless for transportation or any movement of human activity between them, but now an artificial strait pierces the isthmus and brings two great oceans together. Nevertheless no trade millenium can be expected from the opening of this Canal. This colossal work, important as it is, must be considered as a part of the great series of developments which characterizes the beginning of the twentieth century. It shortens distances between numerous ports of the world; it gives to the United States an advantage not possessed before in access to numerous foreign countries; it gives ready water communication between the east and west coast of North America, but as a commercial factor it cannot be compared with the Suez, opened in 1869. The shortening of distances accomplished by the opening of the Suez gives it a monopoly of advantage in routes between many great commercial centers. The Panama route may be said to enter a competitive field in which the gain derived from the shortening of distances will inevitably be contrasted with the rates of toll established.

The opening of the Panama Canal will no doubt be a factor in the world's trade of prime importance. One of the most conspicuous features will be an increase in trade between the west coast of South America and the east coast of the United States. For the same reason trade between those countries and Europe will increase, tho not in the same proportion. The most important use of the Canal, however, for many years will no doubt be in the transportation by water between the Pacific coast of the United States and the Atlantic and Gulf ports. As already stated, however, the fact which is most significant is that the construction and opening of the Canal are contemporaneous with great developments in trade. We often mistake the importance of a single great event. The discovery of America, tho of surpassing significance in the world's history, was but one of a number of events, less spectacular, which distinguish the great awakening of the fifteenth century. The opening of the Suez Canal also followed or accompanied a marked ad-

© Harris & Ewing

SENATOR BURTON

vance in movements which made for the increase of the world's commerce, tho it stands by itself as the one great commercial event of the last half of the nineteenth century.

## ANTICIPATING THE CANAL

It is a surprising feature in regard to the Panama Canal that, in the years preceding its opening, partly no doubt in anticipation of that event, the trade on the west coast of South America and in countries now more readily accessible by this route had been increasing beyond the average in other portions of the world, and movements were also under way for a better understanding between the countries mutually benefited by its opening. The preceding thirty years, it must be admitted, surpassed any similar preceding period of equal length in industrial and commercial activities. As a result trade has enormously expanded.

Another feature which has been characteristic of periods of notable progress has been the migration of population. There is always a tendency for people to move along the route of greatest opportunity, to

escape from areas of economic distress and high pressure upon the means of subsistence. Such a movement is likely to accompany the opening of the Canal, resulting in an increase of migration from Europe to the west coast of both North and South America. The undeveloped resources of the west coast countries of Central and South America as well as Mexico, and the relative sparsity of population, afford the ideal conditions for such a movement. Mexico has a population of only twenty to the square mile, Central America and Colombia fifteen, while the west coast countries of South America have only six. The opening of the Canal will remove the barrier which has hitherto prevented migration to these localities.

It must be conceded that the final or compelling motive for the construction of the Panama Canal was a desire to strengthen our national defense. The enforced voyage of the "Oregon" around Cape Horn in 1898 was a most impressive object lesson. In addition to this the desire for its construction was in a measure sentimental. The vastness of the enterprise and the failure of a private company stimulated the imagination of the people. The American mind has a fondness for attacking apparently impossible problems. All these gave to the enterprise an unprecedented degree of what may be called moral support.

It was not anticipated at the time Congress was providing for this great work that it would prove to be a profitable undertaking. So far as the Canal itself is concerned, it is altogether improbable that the income from tolls will, after meeting the cost of operation and maintenance, ever pay any considerable income upon the original cost. It will be readily recognized that the United States entered upon this great enterprise with a motive altogether different from that which has actuated other governments or private organizations in the construction of public works, and having incurred an expense so vast, reaching nearly \$400,000,000, the argument is sure to arise that, as no commensurate return can be obtained, it is better to make it free to all the ships of the world.

No doubt the question of most immediate interest to many in connection with the opening of the Canal is that of its practical effects upon our foreign and domestic trade. In that

connection I now wish to discuss a few of the more important factors which determine our trade relations and the routes of transportation. The factor which will first occur to all, I have no doubt, is that of the saving in distance and the consequent readjustment of ocean routes resulting from the opening of the Canal. The greatest proportionate saving in distance from New York is to the city of Panama itself, at the south end of the Canal. Here is accomplished a saving of 8478 miles, and corresponding distances are saved on all the routes from New York to the west coast of North America.

#### CHANGING TRADE ROUTES

So far as the practical advantages of shortest distances are concerned the following facts may be regarded as most essential: All routes between the eastern coast of the United States and the western coast of South America down as far as Valparaiso, Chile, will be greatly benefited. In relation to this route the shortened distance will probably be a decisive factor in the course of trade.

In relation to Australia and the Far East, the case is not so advantageous to American shipping from the Atlantic seaboard as might be imagined. Most of the Asiatic ports will continue to be nearer to London than to New York, while the ports of Australasia will in part be brought nearer to New York and a part will still be nearer to London and Liverpool, the dividing line being a meridian passing nearly north and south approximately thru the center of Australia. All ports west of Shanghai will continue to be nearer to London by way of the Suez. Altho the distance to Shanghai from New York is shortened somewhat more than 1000 miles by taking the Panama route, still the distance to this port from London by way of the Suez is 799 miles less than the shortened distance to New York. Manila, as another important example, will be about 2000 miles nearer to London by way of Suez than to New York by way of Panama. In fact, the Panama Canal will not provide a shorter route from New York which will still be about 200 miles nearer to Manila by way of Suez.

The greatest benefit to the ports of the United States located on the Atlantic and Gulf, so far as the eastern trade is concerned, as already indicated, will be with the eastern ports of Australia, Melbourne being brought 831 miles nearer to New York than to London, Sidney 1612 miles, and Brisbane 2933 miles. The situation in New Zealand is still more

favorable, Auckland being 3660 miles nearer to New York, Wellington 3717 and Dunedin 3137. In the case of Japan, Yokohama will be brought 892 miles nearer to New York by way of Panama than to London via Suez.

#### THE SUEZ MONOPOLY

Great as these savings in distances are they are not to be compared with the advantages gained by the opening of the Suez. When that channel was opened the reduction in sailing distances was so great between European and Oriental ports that shipping was bound to take that route almost regardless of the tolls imposed. The detour around the Cape of Good Hope was a total loss, as on this route, at least at that time, there existed almost no ports of call. The case with the Panama route is quite different. The east and west coast of South America both furnish a measurable amount of traffic, and it would be easy to lift tolls to a point where the route via Cape Horn will be competitive. It is also true perhaps in a larger measure that high tolls would divert ships trading in the Far East to the Suez route. Thus, as already stated, the Suez Canal was opened under conditions that give it a monopoly, while the Panama will be opened under conditions which will be highly competitive.

There is another marked contrast. The Suez Canal supplies the most economical trade route between ports representing three-fifths of the world's population with corresponding possibilities of traffic, while the opening of the Panama Canal provides shorter routes for a comparatively small portion of the world's trade.

#### THE NATURE OF OUR TRADE

Predominately our trade has been—indeed is now—with the most advanced nations of the earth. For this there are obvious reasons. We have been able to extract from the earth stores of food and raw material which for a long time seemed inexhaustible. The nations of western Europe have needed our wheat and our cotton, our oils and our minerals, their own supply having been heretofore diminishing and their demands very rapidly increasing. Again, our supplies of iron and steel, primary necessities of modern life, are more readily supplied here than elsewhere because of the abundance of our iron ores, the greater percentage of iron contained in them and the abundance of fuel for their reduction. The development of our export trade in iron and steel is essentially due to our more abundant supplies of raw material; still further, Amer-

ican ingenuity in divers classes of manufactures, as in agricultural implements, boots and shoes and many forms of machinery, is affording us increased outlets in the world's markets.

It was not until 1898 that our exports of manufactured articles exceeded imports, yet the exports which we are now supplying and will in the future supply to foreign markets will consist in increasing measure of manufactured articles. A further feature of the situation is our home market, which is far and away the best in the world and which includes not only the demands arising from highest average consumption of any people, but larger requirements for further development. As a natural result only a limited effort has been made thus far to establish trade with the less advanced nations of the earth.

#### IT CENTERS IN EUROPE

As illustration of the disparity between our trade with the countries of Europe and Canada (our neighbor which in proportion to population is altogether our best customer) on the one hand, and the rest of the world on the other, it may be said that in the year 1913 our exports to Holland, with only 6,000,000 of people, were more than to the whole continent of Asia, with its 600,000,000. Holland is largely a trading country—shipping our commodities to other nations—but nevertheless it is an astonishing fact that our exports there of \$125,000,000 were more than to Japan, China, India, Siberia and all of the Asiatic continents. Our exports to Canada were half as great as the total imports of South America. In 1908 we exported to Denmark more than to all of Africa; still further, in 1906 a larger value of our exports went to the United Kingdom than all the nations of the earth sent to South America, so that if every product, except those produced in the United States, had been shut out of South America, and we had possessed a monopoly of all their trade, nevertheless in 1906 we would have sent less to all of South America than to Great Britain and Ireland. Happily that is not the case now. Our South American trade has very largely increased and I trust will continue to show the same rapid gain in the future. The exportation of raw materials, food and certain forms of manufactures does not require that minute study of foreign markets, of the tastes and preferences of a people, which is required for obtaining a large share of the trade of South America.

I must express a certain degree of

enthusiasm for the future of South America. This great continent, unlike North America, possesses that variety of resources which is afforded by a combination of the tropical and temperate regions. It is easy enough to forecast a phenomenal growth in the regions which belong to the Temperate Zone, as in Argentina and Uruguay and parts of Brazil and Chile. The future of this portion of the southland is sure to be similar to the unparalleled growth of the United States and Canada. Political disorders or any spirit of inertia are sure to be superseded in this era of progress by enterprise and the best utilization of all the resources of this continent.

#### THE FUTURE OF SOUTH AMERICA

The present population of the South American continent is approximately 49,000,000, as against the figures of 100,000,000, which it is said will be reached in the United States alone on the 2d of April next. There was not always this disparity. Three hundred and forty years ago the estimated population of Peru was double that of the United States, so late as the year 1810. The population of Mexico in the same year 1810 was greater than that of the United States. These comparisons show the possibility of developing an enormous population to the south of us with a correspondingly increased productive power. A question of momentous importance is the future of the tropical regions of South America. We may not agree with Dr. Gorgas that the tropical regions, with improved sanitation, will become the seat of the very highest civilization, but these portions of the earth are assuming an altogether different position from that which they held formerly. Such obstacles as climate, which tend to repress human energy, were at one time regarded as an insuperable barrier to their development.

One of the principal features in the industrial development of the whole world in the last score or more of years has been the increased consumption of tropical products, as rubber for industrial purposes and bananas for food. This has been caused by the increased demands of our modern life, and has been stimulated by improved methods of transportation, by sanitation and by the migration from the Temperate Zone, and lastly by a marked increase in industrial ambitions on the part of the inhabitants themselves.

#### ITS POTENTIAL PRODUCTIVITY

Notwithstanding its extensive area of desert and of mountains, South America possesses lands

which, if reclaimed and brought under a high state of cultivation, would in the aggregate be as productive as those of North America. This is especially true when, in comparing the two, we take into account the large portion of this continent which is included in the regions of the frozen north. We must not forget that the whole world is feeling the pressure of increased demands for food and the necessities of life. Not only is population rapidly increasing but the average consumption of each individual is also increasing. The subjugation of areas inhabited by barbarians has found a partial excuse even with men of the most humanitarian views because of this pressure.

How much more certain is it that the great areas to the south of us, where popular government, notwithstanding frequent revolutions in the past and the troublous times of the present in some countries, shall have its full share in supplying the demands of modern life and shall enjoy a growth and prosperity beyond the most sanguine expectations.

#### THE CANAL A PEACEMAKER

One immediate effect of the opening of the Panama Canal and of the universal movement now in progress will be a change in the tendencies and aims of the people of Central and South America. Industrial and commercial activities will be stimulated. Even tho the Canal may exert a disappointing influence, this colossal achievement will call attention to the possibilities of production and trade. With increased interest in commerce and industry will come a disposition to promote peace. On this subject the Nicaraguan Minister, Señor Salvador Castrillo, in an address delivered in June, 1912, very well said:

A fact not to be overlooked is that the opening of the Canal will promote peace in these South and Central American countries. Being brought into closer touch with the other parts of the world by commerce, shipping and travel, these countries will want to preserve a peaceful attitude, to show off their best side. It will incite the people to greater work and activity. The life of the South and Central American republics is now essentially political; all the struggles are for political supremacy. The Canal will be the beginning of the opening of a business life for these countries and one of progress and industry.

Progress has already been made by the Treaty of Arbitration between Chile and Argentina for a settlement of all difficulties of whatever nature by peaceful methods. This has been commemorated by a statue of the Prince of Peace upon the Andes, also by the treaty entered into by the Central American States, which has

on several occasions resulted in the settlement of serious difficulties between them.

No survey of the situation in South America in either its commercial or political advancement can be complete without an understanding of the influence of scientific progress upon economic and political improvement. Not only does progress in trade and industry depend upon the application of science to the needs of the human race, but so also does the most wholesome political life. Popular government in the more perfect form is impossible without the railroad and telegraph, which provide for bringing peoples of countries nearer together and for the dissemination of a common intelligence among them. The countries to the south of us have already felt the quickening touch of railroad building and the stimulus which comes from the construction of public and private works on a large scale. All these must have a constantly increasing effect, not merely on the increase of wealth but for more orderly and perfect administration.

#### OUR ATTITUDE TOWARD SOUTH AMERICA

With the opening of the Canal it is especially appropriate that we should give earnest heed to our relations with the so-called Latin-Americans, not merely those of trade but of the higher relations of comity and good will. The first consideration is the relation of a stronger, more populous country like our own with countries of less population and inferior military and naval strength. On this subject there can be no better policy adopted than that laid down by the senior Senator of this great state, in his address delivered at Rio. Mr. Root said:

We wish for no victories but those of peace; for no territory except our own; for no sovereignty except the sovereignty over ourselves. We deem the independence and equal rights of the smallest and weakest member of the family of nations entitled to as much respect as those of the greatest empire, and we deem the observance of that respect the chief guaranty of the weak against the oppression of the strong. We neither claim nor desire any rights, or privileges, or powers that we do not freely concede to every American republic.

It must be realized that these Latin-American states are of a different racial stock and are also very much affected by the intermingling of races and by different ideals and traditions. It will be conceded by our neighbors that not all of them have made the same progress in popular government which we have made. The one great test of orderly and successful popular government is the readiness with which the minority

submits to the rule of the majority. Unfortunately this has not always been the case in the South American republics. It affords ground for rejoicing that decade after decade this disposition which makes for turbulence and disorder is diminishing, and the advantages of comity and united action of the body politic are more and more recognized.

It is not for us to look with disparagement upon these conditions which have prevailed. Our whole policy should be one of friendship and aid, and every endeavor should be exerted to understand the different conditions and ideals which have prevailed in South America. There should be an absolute absence of that pride of opinion which leads to the belief that no other people is so capable of self-government as we. In our attitude to smaller nations there should be an entire absence of all superciliousness. Any nation which assumes proper relations or friendliness with others must first of all realize that, while there may be uniform standards of honor and of fair dealing to be observed by every country, there is no uniform standard for forms or methods of government or for personal qualities.

#### THE MORAL EFFECT OF THE CANAL

One result of the opening of the Panama Canal must necessarily be a stimulus to the cause of popular government and of peace. These beneficent results have always been promoted by discoveries and achievements in science and the more general diffusion of knowledge. It was not by a mere coincidence that the reign of Queen Elizabeth could boast of a Shakespeare, a Sidney, a Spenser and a Marlowe, that the next witnessed the discoveries of Lord Bacon giving scientific knowledge practical application, and the third chronicles the fact that the King lost his head because of his arbitrary and tyrannical course.

It is again not a coincidence that after the development of the steamboat and the great progress made in transportation by the construction of canals and railways following the downfall of Napoleon in 1815, the nations of Europe sought to maintain an era of peace in which there was the most rapid progress in all that ministers to the material benefit of man and to a broader outlook.

Similar results must follow the opening of the Panama Canal. Closer communication with the outside world stimulates commerce and portrays in clearer light the greater benefits of an era of commerce and industrialism as compared with war. Altho as an agency of transportation the Panama Canal may prove disappointing, it will nevertheless awaken the imagination. A great event which appeals to the whole world arouses a spirit of enterprise which is always effective in bringing beneficent results. Thus the effect of the Canal will be largely a mental or a moral one. The diminished distances may be less advantageous than was supposed, the direct benefit to commerce may be less than was anticipated, but so magnifi-

It tells you how to select the home refrigerator—how to keep food longer without spoiling—how to cut down ice bills—how to guard against sickness—doctor's bills.

## Neurasthenia Or Nervous Exhaustion

What is Neurasthenia? One of the greatest living physicians—Dr. John Harvey Kellogg—says "Neurasthenia is a symptom—not a disease" and that it is due largely to habits which may be corrected by giving attention to causes of the ailment.

In his new book—"Neurasthenia"—Dr. Kellogg gives results of his experience with thousands of cases treated during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg's book is not dry and technical. On the contrary, it is intensely interesting and easily understood. If you suffer from nervousness—exhaustion—sleeplessness—or any other form of Neurasthenia, get this book and study it. It shows you the way out—teaches you how to obtain relief from the dread fangs of nervousness.

250 pages, printed with plain type on fine book paper. Several full page illustrations, diet tables and valuable instructions as to exercise, relaxation, rest and sleep. The regular price is \$2.00 but, to give the work widespread distribution, Dr. Kellogg has permitted an edition in library paper covers to sell at **only \$1**. Send your order and remittance today. You take no risk sending money because, if you are not satisfied with the book, it may be returned for prompt refund. Order at once and get relief from nerve suffering. Address—

**GOOD HEALTH PUBLISHING CO.**

cent a triumph of modern enterprise will give, especially to the countries immediately affected and in a less degree to the whole world, a new conception of man's control over nature and of the promise afforded by the progressive era.

In every country of considerable extent differences of temperament and of interest have tended to create factional differences between the northland and the southland. This is inevitable, because physical causes must have their influence. It may be confidently anticipated that in the larger scale of relations between North America and South America, the opening of the Panama Canal will not only afford closer communication, increase commerce, a stimulus to the industrial life of all the countries affected, but also the removal of asperities and misunderstandings and a better day of good will and more perfect harmony.

## The New Books

### BILLY SUNDAY'S SECRET

The story of the early life of Billy Sunday furnishes some explanation of the course of his recent career and of his unusual power and success as a traveling evangelist. Born in the Civil War period after his father had gone to the front never to return, Sunday inherited the traditions and experienced the limitations imposed by war's vicissitudes and the struggles of the reconstruction period. His fine physical and mental endowments, subjected to the peculiar and abnormal molding forces of his environment have produced a startling compound of untiring energy, determination to succeed, versatility, resourcefulness, and a passion for domination, all limited by a narrow vision of truth, blighting prejudices, and narrow sympathies, and all made doubly effective, or dangerous, by an enthusiastic devotion to whatever he has undertaken. Like other men of his time Sunday has made quick and visible success the touchstone of truth and eternal value, and has little or no patience with methods and theories outside his own limited range of comprehension and experience.

Dr. William T. Ellis, his latest biographer, is disposed to agree with this standard of worth in estimating *Billy Sunday, the Man and His Message*. He seeks to excuse the evangelist's use of violent, slangy and coarse language on the ground that this "popular way" of putting things makes a new and strong impression upon ears "dulled by the 'shop talk' of the pulpit." He even asserts that today "nobody cares for the language of Canaan, in which many ministers, with reverence for the dead past, have tried to enswathe the living truths of the Gospel, as if they were mummies." It is impossible to believe for a moment that the author does not know such a statement to be absurd, misleading and somewhat irreverent. If the Biblical language with all its purity and perfection of style and substance is no longer fit for the expression of vital, religious truths, it is certain that the sober intelligence of this age will reject the attempts of Dr. Ellis or "Billy" Sunday, or any one else, to revitalize outworn dogmas, especially such as that of verbal inspiration, by clothing them in the terms of vulgarity, and denouncing those who are unable to accept them in their new dress. Fortunately for religion, there are not a few who still believe the noble language and spiritual messages of Isaiah, Paul and Jesus have sufficient vitality to meet the religious needs of the world. Dr. Ellis' book is made up largely of Billy's sermons

## CHARLES SCRIBNER'S SONS

and sayings, illustrated by sketches and photographs fully in keeping with the spirit of the text.

Sunday's purpose is no doubt high and his sincerity is unimpeachable. Much of his work has value for the individual and society. But judged from this volume, his methods are offensive to many Christian ideals, and the results must be in multitudes of cases degrading to religion and destructive of keen ethical discrimination.

*Billy Sunday, the Man and His Message*, by William T. Ellis, LL.D. Philadelphia: The John C. Winston Co. Illustrated. \$1.50.

YALE, MOTHER OF MEN

A monument to Yale's service to America and the world is Anson Phelps Stokes' *Memorials of Eminent Yale Men*, a biographical study of student life and university influences during the eighteenth and nineteenth centuries. In two large noble volumes, these memorials embrace sketches of seventy-nine alumni of large eminence and many of lesser distinction. No living graduate is considered. Mr. Stokes is not only biographer, but commentator and philosopher. He precedes his biographies by a leisurely and illuminating introduction and follows it with three chapters in which he declares that study, religion, inspiring teachers and the association with classmates are the "historical factors of influence at Yale," that democracy, faith, conservatism and constructive ability are the "common characteristics of most eminent Yale men" and that the historic universities have a special privilege of serving as "channels of transmission for what is noblest in the life of the nation." One might easily question whether these include the chief essentials of an academic ideal. But one cannot doubt that the Yale spirit has had a fine influence on the country and has been excelled by that of no other American institution of higher learning. Mr. Stokes has made a distinct contribution to American biography and has set an example that should be followed by some devoted alumnus in every historic university of America.

*Memories of Eminent Yale Men*, by Anson Phelps Stokes. New Haven: Yale University Press.

THE VIKING ISLAND

Four horseback journeys have given W. S. C. Russell knowledge and love for *Iceland*, the tiny country whose sulfur beds, volcanoes and steaming springs make it seem a land still in the making. Its people, too, are living examples of the Norsemen of song and legend. On their distant acres they have kept their ancient tongue unaltered and with it the virtues of their ancestral Saga folk.

Badger. \$2.

FROM CHARITY TO SOCIAL SERVICE

In this story of the forty-three years of the Charity Organization Society, Helen Bozanquet finds need to touch on almost every form of *Social Service in London* and almost all the plans and experiments for the betterment of conditions that have been considered in the last half century. During that period the aim of philanthropic work has become more definite while its scope has broadened, and this society has had a great share in the change that looks to permanent betterment of conditions rather

**AUTHORS RESEARCH BUREAU**  
500 Fifth Avenue New York

We assist in preparing lectures, orations, essays, debates, club papers, special arti-

er than to temporary relief. The book has especial value for the American worker since the problems are much the same on both sides the water, while methods are suggestively different.

**E. P. Dutton. \$3.**

### THE SECRET OF THE CITY

Kitty Craven and Ned Penfield saw the glow in the sky which rises from the metropolis. Both went to the city; both found their way to the office of the *Daily Megaphone* and to the restless work of the reporter. What they—or rather Kitty Craven—discovered beyond and beneath the life pictured in the Sunday supplements is what sympathetic people find everywhere, in village and city alike. For life elsewhere—even in the way two persons love—is the same as the life of the true city as that is described in *The Great Mirage*, by James L. Ford.

**Harpers. \$1.35.**

### ROLLAND'S MUSICAL ESSAYS

Essays and criticism by Romain Rolland, who was a musical critic of renown before he won international fame as the author of that greatest of musical novels, *Jean Christophe*, are now made accessible to English readers by Mary Blaiklock's translation of a group of them under the title of *Musicians of Today*. The original version of the book was published in Paris in 1898, but the author has made some revisions and additions for this English edition, bringing it down to date, so that it now covers with some degree of completeness the modern development of music in France.

**Henry Holt. \$1.25.**

### HIGH-LIGHTS OF LITERARY GENIUS

Not every one will agree with the choice of the twenty greatest English writers which Professor Edwin Watts Chubb of Ohio University has made in his *Masters of English Literature*. Of these twenty, from Chaucer to Browning, he gives a pleasant, brief biography, and a literary estimate of value more for its succinct paraphrasing of all that is generally accepted than for any originality or research. The volume serves excellently to give student or general reader a glimpse of the "highlights" of literary history, and contains a valuable selected bibliography of periodical literature.

**McClurg. \$1.50.**

### EUGENISTIC SENTIMENTALISM

Following upon the *New Tracts for the Times* issued by the same publishers (see *The Independent*, August 8, 1912, p. 326), *Principles of Eugenics*, by Blanche Eames, is decidedly disappointing. It deals very largely with exalted sentiments in regard to the responsibilities of parenthood, and so far the work is well done. But when it comes to speak of principles of heredity the author shows that she has read authoritative books on the subject—for she refers to them—but has selected the medieval superstitions on prenatal influence and maternal impressions as the better part of wisdom.

**Moffat, Yard. 75 cents.**

### WANTED—EYES TO SEE

Another suggestive and practical essay comes from J. C. Dana. In *American Art, How It Can Be Made to Flourish*, he uses art in the broad sense of the creation of beauty under any form. "Art has always flourished where it has been asked to flourish," he says, and for the training of the needful beauty-loving public he gives the wise advice, "Study your teacups."

**Elm Tree Press. \$1.**

### WHEN PLANTS HAVE SEX

The first volume in the University of Chicago Science Series is Professor John Merle Coulter's *The Evolution of Sex in Plants*. The matter is highly concentrated and can therefore not be recommended to those seeking an elementary introduction to the subject. Professor Coulter maintains the most advanced position on the subject of the significance of sex in evolution, at least to the extent of rejecting the idea that

sex is advantageous to species in reproduction. The lucid style characteristic of the author's earlier writings sets a high standard for the series.

The University of Chicago Press. \$1.

## MODERN MUSIC APPRECIATIONS

Exceptional among music critics is he whose ears are open to welcome new beauties in contemporary music. Such a one is Lawrence Gilman. His *Nature in Music and Other Studies in the Tone-Poetry of Today* treats in the first paper "Tonal Landscapes" and "Music and the Sea," in both of which directions he finds that the finest achievements are those of the moderns, Debussy, Vincent d'Indy, MacDowell and Loeffler. Other papers deal with Strauss, Grieg, Montemezzi, with "Death and the Musicians," and with "The Question of Opera in English." The whole group forms a valuable and stimulating little book for music lovers.

John Lane. \$1.25.

## THE JOY OF EXPLORATION

The lure of Mt. Sir Sandford, more than eleven thousand feet above the sea, led Howard Palmer, F. R. G. S., to organize several expeditions between 1908 and 1912 for the exploration of the Canadian Selkirks. In *Mountaineering and Exploration in the Selkirks* he tells the experiences which led to the conquest of Mt. Sir Sandford and many lesser peaks. The zest and joy of the mountain climber rather than the more methodical spirit of the topographer, pervade the account of the first charting of a wide region, the wildness and grandeur of which is conveyed by the many illustrations from photographs taken by the author.

Putnam. \$5.

## THE POET OF THE ITALIAN REVOLUTION

Books like this by Orlo Williams in the Modern Biography Series right for the pocket or to be read thru at a sitting, find their welcome ready. The life of *Giosue Carducci*, fiery poet of the Garibaldian era tho he was, is of the quietest. Literature lecturer at the University of Bologna, the events of those forty-four years were his books and his always crowded lectures. One wishes that the prose volume arranged by the poet himself might be translated.

Houghton Mifflin. 75 cents.

## THE DUMMY'S DERIVATION

Nick Carter and cigarets forsworn, *The Adventures of Detective Barney* begin. A more refreshing upstart from the East Side than this lad of Harvey J. O'Higgins' new book, which is a novelization of the play "The Dummy," never satisfied his longing for thrills and proved his capacity. Barney's rigorous initiation into the ranks of detectives thru a series of mysteries that lead to that final test of Sherlockian genius—a "hunch" of his own—fairly cries aloud for a sequel.

Century. \$1.30.

## THOUGHTS FOR EVERYDAY SINGING

Some *Staccato Notes for Singers* cleverly entitles Marie Withrow's suggestions for vocal aspirants. Her central idea, which is divided into three parts, physical fitness, mental fitness, and vocal fitness, might in turn be subdivided into good, bad and indifferent—however the little book is well worth perusing for those fragmentary admonitions that are born of good sense and experience and exprest in terse, able form.

Oliver Ditson Co. \$1.

## HOW TO MAKE GARDENS

There are books galore on the laying out of grounds, but most deal with the delights of the occupation rather than with its science. These enthusiastic specialists, Messrs. R. R. Root and C. F. Kelley, however, while awaking in their readers as keen a desire to plant and prune as do the wholly popular writers, yet state fully the principles that underlie all beautiful *Design in Landscape Gardening*, and are insistent on the necessity for their thorough understanding and practise.

Century. \$2.

## NO TIME LIKE THE PRESENT

**T**O make permanent provision for dependents, securing to them a monthly income for life.

In order to acquire the protection which life insurance affords, it must be taken when you can secure it. When you become uninsurable you will feel the need of it—but it will be too late.

**Berkshire Life Insurance Co.**  
Pittsfield, Mass.

## What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Editions artistically printed and bound—almost every book was bought from me. WHY? Because, I have no agents and sell you just the books you want—all new—many at a saving of from 50 to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return them at my expense—and owe me nothing.

## Sample Prices:

The Eyes of the World, 90c	Messages and Papers of the Southern Confederacy, 3-4
Their Yesterdays, 35c	Morocco, publisher's price \$15—my price, 98c
Winning of Barbara Worth, 35c	Home Library, 8 vols. cloth, publisher's price \$4—my price 85c
Calling of Dan Matthews, 35c	Wild Animals of North America, publisher's price \$3—my price 45c
Library of Oratory, 15 vols., publisher's price \$15—my price \$4.75	Orations, Addresses and Club Essays, publisher's price \$1.50—my price 42c
Shakespeare, 40 vol. full flexible Morocco, largest type and best notes of any Shakespeare published, publisher's price \$96—my price \$24.	

Here are De Luxe Editions, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Scott and scores of others.

## Get My Big, New Catalog

My new catalog, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

**David B. Clarkson, The Book Broker**  
229 Clarkson Building Chicago, Illinois

## "CAN'T KEEP HOUSE WITHOUT IT"

"Send me another for my daughter"—"What I needed for years"—these are some of the testimonials from delighted housewives who have our WHEEL TRAY. Saves steps—great convenience. Two oval trays. Rubber tired wheels. \$10 in black enamel; \$12 white. Booklet free. Dish cart for hotels, too.

WHEEL TRAY CO., 432 W. 61st Place, Chicago

## WHAT 15¢ WILL DO

The little matter of 15¢ in stamps will bring you the *Pathfinder* for 13 weeks on trial. The *Pathfinder* is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the *Pathfinder* is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15¢ to show that you might like such a paper, and we will send the *Pathfinder* on probation 13 weeks. The 15¢ does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

## North Dakota Farm Mortgages

Are relieved from the constant fluctuation of general class securities.

Farm Mortgages secured upon land, the prime factor of the country's prosperity, made in an old settled country, and by Bankers of established reputation and character are the Ideal Investment.

My 33 years residence, and 30 years making Farm Mortgages without the loss of a dollar in interest or principal, gives the careful investor every warrant and guarantee of absolute security.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

1048 Calvert Bldg. Baltimore, Md.

## THE MARKET PLACE

### END OF THE COTTON POOL

The cotton pool, or cotton loan fund of \$100,000,000, has ceased to exist, because, like the gold pool of \$107,000,000, it has not been needed. It will be recalled that the gold fund, made by contributions from the national banks, was designed to assist in the liquidation of our country's foreign obligations. It has not been required, because a growing balance of trade in our favor has been making a natural settlement of the differences. The excess of exports over imports has grown from \$57,000,000 in October and \$79,000,000 in November, to nearly \$132,000,000 in December, the increase having been due largely to shipments of supplies to the belligerents.

When the cotton fund was formed by the banks, there was great anxiety in the South. The crop was the greatest ever harvested, but a large part of the market had been cut away. Our normal exports of cotton are nearly two-thirds of the crop. It was almost impossible to send cotton across the Atlantic, and demand for it in Europe had temporarily fallen to almost nothing. Cotton Exchanges were closed. Prices were very low, and planters were embarrassed. In Congress there were wild propositions for relief legislation. Some asked for an issue of \$300,000,000 in currency upon the security of cotton. It was urged that the Government should make loans to planters. In the South there was a movement for a compulsory reduction of cotton acreage.

But there have been only seven applications for loans from the fund. These came from Georgia, and called for \$28,000 in all. With the opening of the exchanges, the establishment of the Government's War Risk Bureau (for insurance of cargoes) and the declaration of England and France that cotton should be regarded as non-contraband, the condition of our cotton-growing industry rapidly improved. Prices—now a little more than 8½ cents a pound at New York—have shown an advance of about one-third from the lowest figures. Recent exports have been large, altho the total for the present cotton season is less than two-thirds of the shipments made in the corresponding part of the preceding season. Two banks in New York will assume the \$28,000 of loans. There have been expenses, which the subscribing banks must pay, but the attorneys employed will not ask for fees. If cotton should be declared to be contraband, or if shipments should be prevented by Germany's attacks upon the ships in the vicinity of the coasts of Great Britain and France, the situation may change, but at present no loan fund is needed. Altho there has been no demand for loans

(the \$28,000 excepted) the effect of the creation of the fund has been beneficial. It gave courage to the planter and tended to ward off legislation of an objectionable character.

### SECURITIES AND THE INDUSTRIES

On the New York Stock Exchange, last week, where 1,258,715 shares were sold, the market was in a favorable condition until Friday, when a decline was caused by Germany's war-zone declaration, relating to the coast waters of Great Britain and France. There was some fear of international complications, with expectation that our export trade would be checked. Rumors of impending reductions of railroad dividends affected two or three stocks. At the close on Saturday, however, the net losses of the week were small, as a rule. For Steel common there was a slight gain, owing to a recovery of 2½ points from the lowest figures. An Exchange seat was sold for \$42,000, a price showing an advance of \$2000 since a sale made a few weeks ago. Nearly forty per cent of the week's business was in Steel, Reading, Southern Pacific and Union Pacific shares.

During the week there were signs of improvement in industrial and financial conditions. The Pennsylvania Railroad Company sold \$49,000,000 of 4½ per cent bonds. For these there was a notable demand. Subscriptions were for more than five times the amount, and after the allotment the bonds were quoted at 1.04%. For some time past there has been a good demand in the Stock Exchange market for first-class bonds.

Reports from the shipyards showed that the leading plants had work enough to keep their men busy for the remainder of the year. One building company has orders for two years. In the last two months contracts for sixteen large ships have been placed. A majority of these vessels are to be used in the South American and West Indian trade.

The pig-iron output for January exceeded the total for December by 85,669 tons, and on February 1 the daily capacity of furnaces in blast was 56,270 tons, against 48,850 on January 1. At the Homestead plant of the Steel Corporation work on full time, for 8000 men, was resumed. Full time was ordered at one of the large tin-plate factories, which has been used at only eighty per cent of its capacity for some time past. Full time was resumed in seven cotton mills at Fall River, which for three months had been in operation only four days in the week.

Railroad buying aided the steel industry. It is estimated that 200,000

tons of rails have been ordered in the last two weeks. This total includes 30,000 for the Erie, 27,000 for the Northwestern, and 28,000 for the Baltimore & Ohio. Cars also were bought. The Illinois Central ordered 1000 refrigerator cars and twenty-five locomotives. The Burlington Company was ready to spend \$1,000,000 for new equipment.

Exports have been increasing. Returns from the leading ports show that all previous records of excess of exports over imports were surpassed in January. The largest excess for a full year has been \$666,000,000, in 1908. Treasury officers say that if the rate shown in January is maintained throughout the year, the excess for 1915 will be \$1,500,000,000. For the transportation of cotton goods from Southern mills to the seaports extra trains were needed on the railroads. The outward movement of war supplies continued, and new orders for such supplies were reported.

FRAUDULENT BANKING

As a result of investigations made by authority of a new law in New York concerning what are called private savings banks, the state's Superintendent of Banks, Mr. Richards, closed nine of these banks a few months ago. The courts are now beginning to punish the men who, by means of these institutions, robbed the poor of their savings. The first to be prosecuted was Ladislaus W. Schwenk. He had a bank in the great city, with branches in towns on Long Island. The poor were induced to place \$700,000 in his hands. He lost nearly all of it in speculation. Knowing that he was insolvent, he continued to seek and to receive deposits until the end of July last, when the state authorities interfered.

He has been convicted and sent to the penitentiary for a term which must be two years and may be four years and a half. Four more "bankers" of the same kind await trial. Their deposits were nearly \$5,000,000. In all the nine banks closed by Superintendent Richards the deposits amounted to \$11,173,000, and nearly all of this sum has been lost by men and women who could not afford to lose anything. There should be severe punishment for those who are guilty of this stealing and responsible for at least a dozen suicides. Schwenk's sentence shows what others soon to be tried may reasonably expect.

Eleven employees of the National City Bank, of New York, sailed last week for Rio de Janeiro, where they are to open the National City's second South American branch. The first is in Buenos Ayres.

Professor Irving Fisher of Yale recently testified at an arbitration hearing that the average increase of prices since 1896 has been fourteen per cent more than the average increase of wages.

The following dividends are announced: Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable March 1. Niles-Bement-Pond Company, preferred, quarterly, 1½ per cent, payable February 15. Pratt & Whitney Company, preferred, quarterly, 1½ per cent, payable February 15.

## AN APPEAL TO AMERICANS

BY

## The Commission for Relief in Belgium

## Sole Clearing House for All Belgium Relief

We, as Americans, are enlisted for the war to save seven million men, women and children. It is the greatest commissary undertaking in the history of the world, and in the lexicon of America there is no such word as fail.

## We Need Food Supplies as Well as Cash

Every penny donated to this Commission goes, without reserve, for the purchase of food. Money donated will be credited to your state, and, whenever it can be done advantageously, spent within the borders of your state. We pay the freight from a special fund donated to organization and transportation.

Railroads, express companies, post-offices, governors and state committees are aiding. Our Flotilla of Mercy, comprising thirty-five chartered ships, is constantly carrying food. But—Our Supplies Are Far Too Short.

Has Your State Sent a Ship to Belgium?

Is It Planning to Send One?

Is there a committee for Belgian relief in your community?

If there is none, start one under our official sanction.

Are You Helping?

If Not, Send in Your Name Now?

Make out your check or money order, or send cash either to your state committee co-operating with this Commission or to the New York Headquarters:

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

*This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.*

## CHOOSE WISELY

Among the many letters which come to this desk from readers of The Independent asking for information, advice and guidance in connection with their investments in insurance of various forms, is a constantly large proportion relating to the financial condition, policy contracts and managerial capacity of what for lack of a more expressive general term, I will designate as the minor life companies. I use the phrase merely to differentiate them from the thirty or thirty-five older companies which, during a period of a half century and more, have made their names familiar to insurants thruout the country.

Without taking the time to go over the list, I should say that there are at present about 150 life insurance companies, located principally in the West and South, which in point of age and accumulated funds must necessarily rank second to their older competitors. This is said without prejudice to them, for among them are a number which will eventually take rank in the first class. But it is impossible for one who has studied the growth of all the companies, and has taken note of the elements constituting their progress, to evade the conclusion that some of them, perhaps a majority, are destined to elimination. To fulfil this destiny, it is not necessary that they become financial failures and involve their policyholders in losses, altho a few of them may and perhaps will. But the laws of all the states are now so wisely drawn, especially as regards the maintenance of proper policy reserves, as to afford reasonable protection. Reinsurance of their risks in stronger and more capable companies is, in my opinion, the course which a great number of them will eventually adopt. As a matter of fact, some of them have retired in that way during the past five or six years.

As I view the matter, there are too many new and small companies. Competition is keen thruout the entire field, and the advantage, both as to economy of administration and as security, is with the old and thoroly established companies. To secure the proper agency service, the newer companies are com-

pelled to offer larger commissions, while their essential administration expenses are heavier per \$1000 of insurance placed than those of the old companies. This statement may be challenged by some of the smaller individual companies; but without compiling the figures of all, I feel safe in venturing the conclusion generally.

There is another feature of the matter which, to a careful student, indicates many future changes among the companies comprizing the minor class: Nearly all of them are stock companies—some of them transacting a mutual business, some a non-participating business and others a mixture of both. But the main point is that they are controlled by the proprietors and that the policyholders are powerless in the matter of directing them. The weight of opinion in this country is on the side of mutual life insurance. The recent changes in the Metropolitan and the Prudential are but the natural responses to a popular demand, hearkened to by men of rare business acumen and discrimination. While it seems impossible in the nature of things to reduce fire and other forms of insurance protection to a mutual basis and render them secure, the certainty of death makes it fully practicable in life insurance; and as the latter is a beneficence—the mitigation of a serious human misfortune—there is a constantly growing objection to its employment as a medium of profit on capital. The number of mutual life companies will steadily increase, the continuance of some of the stock kind eventually depending on the change.

In conclusion it is desirable that I should say that many of the younger and smaller companies are worthy of confidence and support; that their policies (barring those of the deferred dividend class) are of good average quality as to results; and that their managers are capable, conscientious men. But in this, as in all other business matters, the buyers must discriminate; they must choose wisely and intelligently. They need the services of companies that will last.

D. H. M., Sioux Center, Ia.—The company you inquire about is a good one in every respect and while you have failed to state age at which your policy was issued the fact that it is of the endowment class induces me to conclude that the premiums are properly reasonable. I believe you will find the results satisfactory.

Last year the Mutual Life paid its policyholders \$10,612,873 more than it received directly from them. The company closed the year 1914 with assets of \$611,033,801 and it issued new paid-for insurance aggregating \$147,720,038. In its seventy-two years of existence the Mutual has paid policyholders (plus its present assets) \$1,808,357,370. It received from them \$1,588,366,174. The excess of benefits over premiums received amounts to \$219,991,196.

**ABOUT CHAUTAUQUA**

All the guarantors, eighteen in number, of the fall Chautauqua at Hatboro, Pennsylvania, were women.

The Kentucky Federation of Women's Clubs and the State Library Commission are using the Chautauqua course of home reading.

A Mothers' Club has been organized at Chautauqua, New York, for the study of "Your Child Today and Tomorrow," one of the Chautauqua course books for this year.

Mrs. Sarah Stout, the oldest Chautauqua graduate among Southern California Chautauquans, has passed her ninetieth birthday. She is still active, not only in Chautauqua Circle work, but during the recent "dry" campaign was the leader of the Long Beach daily prayer circle.

Sedalia, Missouri, has had a Chautauqua Circle since 1883. There are fifty members this year. The Circle at Winston-Salem, North Carolina, meets in the Carnegie Library. The Progressive Circle at Brockton, Massachusetts, at a special meeting, packed toys and clothing for the Christmas Relief Ship to European war sufferers.

Des Moines, Iowa, is one of the banner Chautauqua towns. Nearly 800 members are enrolled in the various Chautauqua Circles. One of the circles is giving four Economy Luncheons during this year. The plan is to popularize simple standards of social entertainment by giving, not the cheapest possible luncheon, but the best luncheon for the lowest price. Fifteen cents was the price charged for the first one. These luncheons follow the afternoon's program of Chautauqua reading.

This story is going the rounds of a Chautauqua Circuit: On "suffrage day" the anti-suffrage speaker, a woman, said she knew a suffragist who, when she wanted to go to meetings, set the supper table for her husband, put his tea in a thermos bottle, went off and left him to eat alone. At the close of the lecture Professor Scott Nearing mildly questioned the speaker: "Madam, may I ask if your husband is taking his tea from a thermos bottle tonight?" It is reported that the lady grew red in the face and hotly answered: "My sister is taking care of my husband and children."

Chautauqua Institution has just announced two new special reading courses, one on American Literature and the other a Bible Study course. The Literature course is based on the textbooks *American Literature*, by Katherine Lee Bates, and *Provincial Types in American Fiction*, by Horace Spencer Fiske. This gives a comprehensive survey of our national literature and an acquaintance with some of the best works of American fiction. The new course in Bible Study is based on *The Message of Jesus to Our Modern Life*, by Dean Shailer Mathews of the Divinity School of the University of Chicago and Director of Religious Work at Chautauqua.

"The Leading Fire Insurance Company of America."

The transfer books will close at 12 o'clock Noon on February 6, 1915, and will reopen at 10 o'clock in the forenoon of February 16, 1915.

CHARLES L. CORNELL, Treasurer.

# EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON, DIRECTOR OF  
THE INDEPENDENT EFFICIENCY SERVICE

*Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.*

25. Mr. J. S., New York. "I beg to lay before you a thought that has some bearing on man's possibilities. A youth, having spent some months in the pursuit of your directions, is prepared to fill the place higher up. When the vacancy opens for which he would naturally be chosen, Mr. Brown, president of the company, tells the head of this department that an outsider picked by Mr. Brown must have the position. The outsider happens to be a relative or a political friend of Mr. Brown. What becomes of the years of sacrifice and devotion to the interests of such an employer? How would you make the employer efficient in justice, conscience and fair play? This sort of thing is happening in New York every day in the year."

We are not concerned with the injustice of the other man. He is responsible for that, and he will pay. We are concerned only with conditions that we ourselves can improve. To worry over the case you mention is but to squander energy and delay progress.

Be calm in disappointment—you will grow moral muscle. And stick, brother, stick. A deed of injustice resembles a house made of straw—at the first hard gale, it crumbles. The man who has the place that belongs to you won't keep it. And if you will only study the situation, you will find some way to make capital out of your apparent loss.

26. Mr. J. S., Maryland. "I would like to ask a few questions about health. Am sixteen years old, and take an interest in physical culture. (a) Is seven hours of sleep enough for a youth who attends a school where there is much mental but little physical activity? (b) Are two weekly baths enough for a person, if cold baths are taken daily? (c) What is the cause and prevention of headache during physical recreation?"

(a) No. Eight hours should be the minimum. And don't study late at night, if you can help it. Should you have to perform brain work in the evening, take a fifteen-minute walk slowly, and breathing deeply, just before going to bed.

(b) Yes. But the hot cleansing bath should close with a spray or plunge or ablution of cold water, to prevent the chill or reaction often accompanying a very hot bath. And a hearty friction rub of the surface of the body with a crash towel should follow the bath. Morning is the best time of the day for the cool, tonic bath; and for most people night is the best time for the hot, cleansing bath.

(c) The cause of the headache may be one of a score of things. A personal diagnosis by your private physician or a skilled oculist should be able to locate the trouble. It may be malnutrition, or over-exertion, or catarrhal tendency, or adenoids, or sluggish liver, or defective teeth, or prolonged eye-strain.

27. F. T. T., New York City. (a) "Are women to be excluded from your series of lectures, and why? (b) "Do you approve the course in Efficiency advertised in The Independent?"

(a) No. The first lecture of this year, "How to Study Efficiency," held at the West Side Y. M. C. A. of New York, was attended by 500 to 600 people. Of that number, only about forty were women. This percentage holds generally. The average woman is not interested in personal efficiency—the average man is. When the wives and mothers of this country are as eager to learn household management as

the men are to learn business management, we shall prepare courses of lectures particularly for women.

This day seems approaching. One mail recently brought requests for lectures from two women readers of The Independent—the Welfare Superintendent of a leading New York hotel, and an upstate leader in musical and social circles who wishes to organize an efficiency lecture feature in Buffalo. To meet such demands, a lecture on "Woman's Work, Its Meaning and Method" is now in preparation.

(b) We cannot officially recommend one course of study as better than another, or as the course for you to take. But I would suggest that you write Mr. George F. Barber, Efficiency Director of the West Side Y. M. C. A., 318 West Fifty-seventh Street, New York City, and ask him what results he has had in the various classes he has organized and conducted, using the Emerson Lessons as the principal text. I understand that the Emerson Course is now being given by Y. M. C. A. classes in Baltimore, Chicago, Milwaukee, Los Angeles, and other leading cities. Such endorsement may interest you.

28. A California Housewife. "I have heard that coffee and tea are injurious, especially to children and to nervous people. If this is true, what should be served instead, at meals or between meals?"

You have heard correctly. Caffeine and tannin are elements in coffee and tea and in most cases they have deleterious effects. A small cup of black coffee, without cream or sugar, sipped after the heavy meal of the day, perhaps will not seriously harm a person of robust constitution. However, we do not believe in taking even this.

For a hot drink at meals, try Postum from Postum Cereal Company, Battle Creek, Michigan; or Kaffee Hag from Kaffee Hag Corporation, 225 Fifth avenue, New York City; or Old Gristmill Wheat Coffee from Potter and Wrightington, Boston; or Kneipp Malt Coffee from Kneipp Health Store, 112 East Forty-first street, New York City. Hot malted milk is a good meal-time drink; your druggist can get the powder for you. Many physicians advise the use of a pure cocoa or chocolate, in moderate amounts.

Between meals, grape-juice, half water, is an ideal beverage for most people. Orangeade, that you can make yourself, is beneficial where there is no hyperacidity or other derangement of the stomach. Pure, soft water is of course the best drink under all circumstances, if health conditions are normal.

29. Mr. G. L. B., Pennsylvania. "My question is concerning your statement that no worker is efficient until he would rather work than eat. I find myself so interested in some form of mental work that I do not quit at meal time—often I pass the meal hour altogether. Is not this more often injurious than beneficial? Is it not fagging? How can I control myself, for better service to humanity?"

You are of the stuff that geniuses and martyrs are made of. Be glad of that. You are likely to achieve great things, but only by learning to handle your body and brain with utmost care and wisdom.

Suggestions: Arrange your work so that the kind which is most absorbing comes on a certain day each week. Plan to have this day absolutely clear of all details and responsibilities, and start your all-engrossing work or study early in the morning. If you haven't finished by lunch time, forget the clock and work on. When you are thru the task or problem you have set yourself, take a nap, or a good rest of an hour or so, before eating. Then eat lightly—about half what you could, and very slowly, and with great satisfaction over conquering habit and getting command of yourself.

Or, when lunch time approaches, sip

while at work a glass of Zoolak or Kumyss, or other form of cultured milk. A raw egg, whipped and beaten in a glass of plain milk or malted milk or cereal coffee, will serve the same purpose—that of "staying the stomach" without robbing your brain of energy.

To miss a meal occasionally is fine for the brain and soul; but to do it often is perilous for the body—until you have learned the science of fasting.

30. The Independent Efficiency Service is pleased to offer extracts from a recent letter written to the Editor by Mr. C. Seymour Thompson, Assistant Librarian of the Public Library of the District of Columbia, Washington, D. C.

Mr. Thompson says: "I have read with much interest Mr. Purinton's article on Work and Efficiency. I have been surprised at the failure to make any mention of the public libraries of the country in connection with the advice counseling readers to get literature for increased Efficiency in their work. Numerous free public libraries have made special efforts to get and distribute the best books on all vital themes including business methods and Efficiency.

"I note also Mr. Purinton's advice 'go to your local newspaper office and ask to consult a copy of an American newspaper annual and directory.' In any of the larger libraries and in a great many of the smaller, the inquirer would find a copy of the American newspaper annual. Furthermore, in the larger libraries at least, would be found files of the most important trade journals and the inquirer could consult these files without going to the trouble and expense of writing at random to get sample copies.

"I should therefore be very glad if occasion could be found in your columns to make some reference to the fact that in practically every town in the country of any considerable size there is a free public library, which is the natural place for any one to consult when in search of such information as Mr. Purinton is counseling his readers to obtain."

This letter is so frank, friendly and valuable that we beg to answer it here. Reference was not made to the free public libraries because (a) many readers of The Independent live in small towns or country places, outside the public library zone—and we endeavor to make suggestions that are universally practical; (b) many libraries are themselves lacking in books and magazines on Personal Efficiency—and we prefer not to disappoint our readers by sending them on a futile quest.

We hasten, however, to endorse the advice of Mr. Thompson, and to say "Consult your library first." And we would thank him for taking so much interest in our plans.

31. Mr. J. M. M., Pittsburgh. "Business magazines that talk Efficiency usually illustrate the executive force with cigars in their hands and mouths. Does the tobacco habit in any of its forms make for Efficiency in the executive or any other department of business? Would you advocate it?"

My personal dislike of tobacco is so strong that my opinion would hardly be reliable. Yet there are "extenuating circumstances" in its use. Most men cannot think in the abstract—they have to be doing something with their hands. Hence they feel lost without a cigar to play with, during their "business conferences." Moreover, the light and the smoke may assist concentration—as the crystal ball or the point of flame serves to focus the mind of the East Indian. Further, an offer of a portly cigar seems to quiet surly gentlemen and to animate indifferent ones, therefore, it seems a part of "good business" in entertaining prospective customers. The performance is childish; but as we call nothing wholly bad, we no more condemn it unqualifiedly than we advocate it.

## J U S T A W O R D

A letter from one of the editors of The Independent appears in the New York Sun of February 10, and contains so excellent and common-sense a suggestion that we are moved to re-print and emphatically endorse it in this the (more-or-less) business end of The Independent:

"AMERICAN MADE"  
TO THE EDITOR OF THE SUN—*Sir:* The phrases "Made in America" and "Made in U. S. A." are flat and clumsy imitations of the original, which was "Made in Germany." Why not use "American Made" instead? It is more compact and its internal alliteration gives it a proper swing. Since our Government has authorized the term "American Consulate" our right to the use of the adjective must be regarded as established.  
EDWIN E. SLOSSON.

## A CALL FROM PALESTINE

The Holy Land has not escaped the misery of the Great War. Christians, Jews and Mohammedans in Palestine and Syria are in dire need. Those families whose men have been taken for the Turkish army are destitute. Women and children who are at all times dependent on wage-earners abroad are in want now that communications are cut. The war has ended the tourist traffic upon which many were dependent for livelihood, and, to crown all, military necessity has borne heavily upon the always meager food supplies of the country.

Starvation is threatened over an area larger than Belgium and among as many people as are suffering there. Christian missionary organizations and Jewish societies in this country have joined to carry relief, and from all the people of America help is needed for all the peoples of the Bible lands.

A shipload of food is to be sent as soon as possible. It is urgently needed now. Nathan Straus has given \$50,000 the American Jewish Relief Committee, the Provisional Executive Committee for General Zionist Affairs, and Jacob H. Schiff have given \$25,000 each, and \$150,000 is still to be raised. The Palestine-Syria Relief Committee is re-

ceiving contributions thru Brown Brothers, 59 Wall street, New York. At its head is Dr. Talcott Williams of the Columbia School of Journalism; the Rev. Stanley White, D. D., of the Presbyterian Board of Foreign Missions, is secretary-treasurer, and the committee includes, among others, Oscar S. Straus, Rabbi Wise and Dr. John R. Mott.

## AMERICAN WAGE-EARNERS

According to the latest census there were 38,167,336 gainful workers in the United States in 1910. They comprized 41.5 per cent of the total population and 53.3 per cent of the population ten years of age and over. Of all males 63.6 per cent, and of females 18.1 per cent were gainfully employed. The per cent of males ten years of age and over gainfully employed has increased from 78.7 per cent in 1880 to 81.3 per cent in 1910, while the proportion of gainful workers in the female population ten years of age and over increased from 14.7 to 23.4 per cent.

The distribution of the workers by sex and occupation was as follows in 1910:

	Males	Females
Agriculture .....	10,851,702	1,807,501
Mining .....	963,730	1,094
Manufacture .....	8,837,901	1,820,980
Transportation ....	2,531,075	106,596
Trade .....	3,146,582	468,088
Public Service.....	445,733	13,558
Professional Service	929,634	733,885
Domestic and Pers- sonal .....	1,241,328	2,530,846
Clerical .....	1,143,829	593,224

Domestic and personal service was the only occupation in which the females outnumbered the males in 1910. In professional service the sexes were quite evenly distributed. This was due to the large number of women teachers.

Among the male workers 49.4 per cent were native whites of native parentage, 17.6 per cent were native whites of foreign or mixt parentage, 21.9 per cent were foreign born and 10.6 per cent were negroes. Thus less than half of the male workers in this country are of native stock.

Among the women at work this distribution according to color and nativity is quite different. Here we find that only 38.4 per cent were native whites of native parentage, 21.3 were native whites of foreign or mixt parentage, 15.1 per cent were foreign born whites and 24.9 per cent were negroes. Only one-tenth of the females in this country ten years of age and over are negroes, and yet they furnished a fourth of the workers.

There were 1,990,225 children ten to fifteen years of age engaged in gainful occupations in 1910. Of these 1,353,139 were boys and 637,086 were girls. The proportion of boys at work in 1910 was slightly smaller than in 1900, while the proportion of girls at work had increased somewhat since 1900. It is gratifying to learn that the increase in the number of children at work was confined entirely to agriculture, while the number engaged in manufacture had decreased by over 125,000 since 1900.  
WILLIAM B. BAILEY.

# THE EQUITABLE

LIFE ASSURANCE SOCIETY OF THE U. S.

165 BROADWAY, NEW YORK

The Fifty-fifth Annual Report of the Society, embodying its Financial Statement, Schedules of Investments, and full details regarding its progress during the year 1914, will be sent to any address on application.

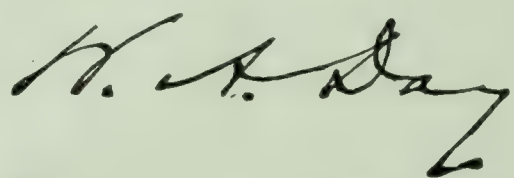

Increases are shown in Outstanding Insurance, Assets, Surplus, Income on Investments, and Payments to Policyholders, accompanied by a decrease in Expenses.

OUTSTANDING INSURANCE, DEC. 31, 1914.....	\$1,494,234,342
NEW INSURANCE PAID FOR IN 1914.....	136,867,367
ADMITTED ASSETS, DEC. 31, 1914.....	\$ 536,524,680
GENERAL INSURANCE RESERVE.....	\$441,198,837
OTHER LIABILITIES.....	9,866,637 \$ 451,065,474
SURPLUS RESERVES:	
For Distribution to Policyholders in 1915.....	\$12,287,757
Held awaiting apportionment upon deferred dividend policies.....	62,148,865
For Contingencies.....	11,022,584 \$ 85,459,206
GROSS INCOME ON INVESTMENTS.....	\$ 23,734,855
PREMIUM INCOME.....	\$ 54,579,766
PAYMENTS TO POLICYHOLDERS IN 1914.....	\$ 56,700,461
DEATH CLAIMS PAID IN 1914.....	\$ 19,919,461

98½% of the Death Claims in the United States and Canada were paid within twenty-four hours after receipt of due proof of death.

The Mortality rate was the lowest in 15 years.

The service which the Equitable offers is comprehensive and efficient. Its Policies are simple, direct and liberal, and are issued on all standard forms, for the protection of individuals, firms, and corporations.

NUMBER 3455

## THE WOMEN WHO SAVE THE RACE

**T**HE worst of the war is yet to come. Not next month, nor next year, but twenty years from now and after will its most serious effects become apparent. Then for the first time will we know which country has really been defeated. It matters comparatively little where the boundary lines are drawn or how much the indemnity is or who pays it. The deciding factor will be that which ultimately determines the fate of every nation in peace or war, that is, what will be the numbers of the next generation and who will be their parents?

Why is it that fair Champagne and the rich north-land of France are now crushed beneath the iron heel of the invader? Not because of French misfortune in 1870-71; not because of German prowess in 1914-15; but because in the years of peace and prosperity in between France took no thought for the morrow. Year by year the French have been growing richer, year by year the birth-rate has fallen until it came to pass that the coffins outnumbered the cradles. Thru love of ease and fear of suffering, thru avarice and vice, French men and French women have sacrificed posterity to selfishness. They paid no heed to the warnings of their statesmen and statisticians or the counsels of pastor and priest, altho the necessary consequences of such a course were patent to all.

The decline of France dates not from 1871, but from 1881. Since that time it is as if she had lost a battle a month. The invasion of France did not begin in August last, but long before, and it was not Germans only who took part in it, but Belgians, Italians, Spanish; from every side foreigners flowed in to fill the vacant places, for nature abhors a vacuum.

France would have been defeated if peace had continued, but it may be that the war will save her as well as the other countries that were drifting toward race suicide. Such a crisis throws men and women back upon the elemental facts of human nature; it tears away the veil of artificiality and reveals the secrets of life and death. From all lands we hear of a religious awakening and a turning toward the old standards of morality. Marriage is once more coming into fashion in circles where a few months ago it was regarded as an antiquated and superfluous institution. In Vienna and Paris couples who had been living in what is called "free union" have legitimized their relation. The fees of the Church and the restrictions of the State which have been in part the cause or the excuse of such irregular unions have been remitted or relaxed. In France, Germany and Austria recruits who have *fiancées* have been given a furlough in order to make them wives. In Prussia Prince Adalbert set the example by marrying

in August. In England the archbishops are urging the volunteers to marry before going to the front. Many a young man who in time of peace might have drifted thru thoughtlessness or selfishness into confirmed bachelorhood has been suddenly confronted with the question whether he would wish to be the last of his lineage and has decided to follow the example of his fathers. Many a young woman, indifferent or averse to the thought of marriage and motherhood, has when called upon to make an immediate decision come to realize that she, too, has a duty toward her country and the future. A titled lady of England in urging the young women to marry the volunteers met the objection that they must part so soon by the remark: "Better be married a minute than die an old maid."

So mobilization week has been a week of weddings. Sometimes the village church is filled with young couples all married together. Khaki and *feldgrau* prove as fascinating as ever were brass buttons and gay cloth, and only those in uniform stand any chance of getting partners at a ball. "None but the brave deserve the fair" regains now a meaning that had been forgotten in times of peace, and so we need not fear that the young men of 1936 will be solely the sons of the cowardly, the incompetent and others left behind because they are of no use at the front. In such hasty and wholesale marriage there will no doubt be many a sad mismating, but this is not always avoided in times of more deliberation. A week's honeymoon and a widow's pension are all too little of love and comfort for a woman's life, but unfortunately they are more than some women get in the best of times. There are women in this country who have lived lonely lives for half a century, widowed in spirit tho not in law, because they refused to marry their lovers going off to the war.

**A**S the crisis is calling forth latent manhood so also it is arousing true womanhood to a sense of duty and responsibility. Women have suddenly been brought to realize not merely their own importance to society as temporary and more or less competent substitutes for men in industry, but their supreme and unique importance as women. The men may save the country, but it is only the women who can save the race. The war brides have undertaken a duty more essential and requiring no less courage than that which called their husbands to the trenches, for the percentage of casualties in their branch of the service is nearly as great. Those of the older generation know what it means. There is an old song, which is perhaps not great music or great poetry, but which touches the hearts of many still living. It was arranged for female voices, for bass and tenor

were wanting. The tune is in a minor key, yet with a triumphant note in it after all. The chorus, if we remember right, runs this way:

Brave boys are they! Gone at their country's call  
And yet—and yet—  
We cannot forget  
That many brave boys must fall.

Sing that in an audience of white-haired men and women and you will see the bent backs straighten and upon their uplifted faces smiles and tears as they look into the past. They are thinking of the time when they first heard that song over fifty years ago when it was sung by a quartet or a choir of soldiers' wives, drest all in white which some of them were soon to change to black. But the brave boys who fell at the front did not wholly die. The soldier's widow devoted her life to bringing up a soldier's son, teaching him to honor the memory of the father who never saw him, training him to the ideals of loyalty and courage so that whenever called upon in war or peace he might be as willing to sacrifice himself for others as was his father—and his mother. If it had not been for such women this country would in the early eighties have sunk to a lower depth of political and social corruption than it did.

Then, too, one might still find in some old print shop, tho despised of the connoisseur, two pictures that were popular a half century ago. Pictures came in pairs in those days and these were entitled "The Soldier's Farewell" and "The Soldier's Return." Sometimes his uniform was blue and sometimes it was gray, but the picture was the same. In the first scene he was marching off proudly with musket on shoulder to join his regiment, while his bride at the gate waved the handkerchief which she was to put to another use after he had rounded the corner. In the second picture the hero comes back, this time with a beard and his arm in a sling, and the wife awaiting him at the gate holds up for his first kiss the child that she has borne to him in loneliness and anxiety.

YOU will find the names of some of these soldiers' sons in the roll of Congress, in the biographical dictionaries, in any list of men who are serving their country. We are not sorry that we have them, tho we know what they cost in suffering and toil. That is why it hurts us to hear a younger generation sneer at or denounce war brides. We are sorry that the *Century Magazine*, which has done so much in the past to stimulate patriotism, should now lend its pages to a play which teaches that it is better for a girl to commit suicide than to marry a soldier, and we regret that Nazimova, a refugee from Russian tyranny, should devote her talents to putting this play upon the stage. Its lesson is altogether false as well as immoral. There is, we believe, less chance than ever before in history that a child born now should fall a prey to militarism. One of our reasons for believing that a long if not a permanent peace will follow the Great War is that woman's value to the State is becoming recognized as never before, both by herself and by man, and when it becomes once accepted that her service in bearing children is fully the equivalent of his in bearing arms and worthy of more respect, then woman's voice will be heard on the question what shall become of her children and his. Just now when man's energies are turned aside toward destructiveness is the time when women's creative energies are most needed

and will receive fullest recognition. We hope that the world will have less need for soldiers in the future, but it will have more need for farmers and merchants, for mechanics and engineers, for scientists and artists, and the world is dependent upon the war brides to prevent the total loss of the talent and genius now being wantonly sacrificed in the trenches.

## TWO SOUND PROTESTS

THE Government of the United States, in pursuance of its consistent purpose of neutrality and of the maintenance of American rights, has addrest to the German and British governments two firm and dignified notes. We print the notes on another page.

Each of the notes is perfectly friendly. But both are profoundly earnest. It is difficult to see how either of the governments addrest can fail to give serious attention to the protest.

The note to Germany is the graver in tone. But that is as it should be. For the policy which the German proclamation "foreshadowed,"—to adopt the word used by the State Department—is of the highest gravity. As we pointed out last week, Germany is proposing to change the rules of maritime warfare out of hand. While her navy is kept in harbor by the pressure of the stronger British navy, only with her submarines can she hope to harass British commerce. The submarine, by the very nature of the case, is handicapped in dealing with suspected merchantmen. So Germany must forego interference with the shipping that is bringing supplies to England from the rest of the world, or violate the established customs of sea warfare. She has proposed to accept the second alternative.

The United States has vigorously protested. The protest is based upon the soundest reasoning.

A belligerent has but one right—unless a blockade is effectively established, which is obviously impossible under existing conditions—in dealing with neutral vessels—the right of visit and search. In the words of the American note, "To declare or exercise a right to attack and destroy any vessel entering a proscribed area of the high seas without first certainly determining its belligerent nationality and the contraband nature of its cargo would be an act so unprecedented in naval warfare that this Government is reluctant to believe that the imperial Government of Germany in this case contemplates it as possible."

The destruction by German vessels of war upon the high seas of an American vessel or the lives of American citizens would indeed be "an indefensible violation of neutral rights, which it would be very hard indeed to reconcile with the friendly relations now happily subsisting" between the governments of Germany and the United States.

The contentions of our Government are irrefragable. The "foreshadowed" policy of Germany was indefensible. It is profoundly to be hoped that Germany will hasten to give assurances that American citizens and their vessels will not be molested by the naval forces of Germany except in the ways prescribed by the accepted rules of war and hitherto universally accepted.

The note to Great Britain refers to the systematic use by British merchant ships in the waters about the British Isles of the American flag. The occasional use

by a belligerent merchantman of a neutral flag in order to deceive an approaching enemy is a well recognized *ruse de guerre*.

But, as the American note points out, this well-known practise is "a very different thing from an explicit sanction by a belligerent government for its merchant ships to fly the flag of a neutral power within certain portions of the high seas which are presumed to be frequented with hostile warships." Our Government would be quite right in viewing "with anxious solicitude" any general use of the American flag by British vessels within the German area of war. It is a sound and legitimate protest that we have made to Great Britain on this point.

In these two notes the Government of the United States has met with admirable spirit and commendable judgment an emergency created by the invention in the submarine of a new instrument of naval warfare.

## INDEPENDENCE AND SELF-GOVERNMENT

IT is regrettable that the Democrats in Congress have attached to the Philippine Government bill a preamble declaring the purpose of the United States "to withdraw their sovereignty over the Philippine Islands and to recognize their independence as soon as a stable government can be established therein." Their desire to give the Filipinos a larger measure of self-government is excellent. Their further desire to promise the Filipinos independence and to set the time when they shall become independent is unwise and premature.

The preamble is perfectly gratuitous. Not our promises but our performance will convince the people of the Islands of our sincere devotion to their welfare. For a decade and a half we have governed the Philippines. We have kept order, promoted commerce, provided education, stimulated and encouraged the Filipinos' desire for self-improvement. We have made a fine record of disinterested helpfulness. Our deeds speak for themselves. The fine words of the preamble sound no note of higher sincerity.

The preamble is too vague. It promises independence "as soon as a stable government can be established." What does this mean? There is now a stable government in the Islands. Shall they be made independent tomorrow? Who would be so foolhardy as to suggest it? But if not tomorrow, when? The sponsors for the bill propose a riddle, When is a stable government not a stable government?

The preamble is likewise too definite. It promises independence. But who can know now whether at some indefinite time independence will be the best thing for the Filipinos?

The framers of this bill have been guilty of hazy thinking. They confuse independence with self-government. Self-government is the sacred and inalienable right of every people sufficiently developed to exercise it. Independence may or may not be a right as the circumstances of the case determine. To deprive a civilized people of self-government is tyranny. To refuse to grant a people independence may be a high type of benevolence.

Canada, Australia, New Zealand are in the highest degree self-governing. Not one of them is independent. But there is no tyranny in the relation of the British

Empire to them. Hawaii, Alaska and Porto Rico are as self-governing as any Territory, now become a state, ever was. But does their lack of independence deprive their people of any sacred and inalienable right?

The United States owes to the people of the Philippines a high duty. It is bound by every consideration of justice and fair play to give them the largest possible measure of self-government just as rapidly as they are capable of exercising it. But to give them independence is quite another thing. Whether this should ever be done is a question to be answered only in terms of the actual conditions when the time comes. It may well be that at some future time the best welfare of the Filipinos will demand their independence. Then the American people will give it to them, or be false to their own convictions and ideals. But it may equally well be that not independence but union will prove best for the Filipinos. If such should prove to be the case we should have made a terrible mistake in making a definite promise now.

We must refuse to bind our hands, not for our own sake but for the sake of the people of the Philippines.

## HYPHENATED AMERICANS

WE cannot be counted among those who have in the past opposed hyphenated Americans. On the contrary, we have regretted the haste which many immigrants have shown breaking all connections with their mother countries. We have been sorry to see their children refusing to speak any other language than English. It would be a pity if "the melting pot" turned out an alloy of uniform and commonplace composition. We should prefer to have each of our immigrant constituents furnish a distinct cultural as well as racial contribution to our common American nationality and serve as a channel of communication thru which we might continue to receive the art, literature and science of foreign lands. For that reason we have stood on the street and applauded the processions of Irish on St. Patrick's day and of Italians on Columbus day; we have cheered the Scotch Americans reciting Burns and dancing the Highland fling; we have sung "God Save the King" with the Canadian Americans; we have rejoiced to see the foundation of such international organizations as the Scandinavian-American Society, the Alliance Française and the German-American Alliance.

But the new organization of German-Americans which is being formed for political action and agitation during the war we view with suspicion and disfavor and we are pleased to see that the same view of the movement is taken by Dr. Kuno Francke, the head of the Germanic Museum at Harvard and one of the most vigorous advocates of the German cause in America. In a letter to Representative Bartholdt declining to take part in a conference with this aim he says apropos of the proposal to prohibit the exportation of arms to the Allies:

The establishment of such an embargo would inevitably bring our Government into conflict with England and might drive us into war with England. As a man of German blood I might welcome the help which would accrue to Germany by such a conflict between the United States and England. But as an American citizen I cannot possibly support a policy which would bring the terrors of war to our own country. What I feel bound to support, as an American citizen, is a policy which holds itself strictly within the now

accepted rules of neutrality, altho, to my regret, this policy, thru circumstances over which the United States has no control, practically turns out to the advantage of England and to the detriment of Germany.

Let us continue to have a prominent part in all endeavors for political, civic, and industrial progress; let us stand for the German ideals of honesty, loyalty, truthfulness, devotion to work; let us cultivate our language, our literature, and our art; let us fearlessly defend the cause of our mother country against prejudices and aspersions. But let us refrain from political organizations which would set Germans in this country apart as a class by themselves. Such an attempt would lead not to the raising, but to the degradation of the German name in this country. It would foster hatred instead of sympathy; and only by gaining the sympathy of the majority of the American people can we German-Americans help the cause of our mother country.

This is sound sense and well said. Our Government at the beginning of the war declared its intention to maintain a strict neutrality and not to prevent the sale of supplies to either belligerent. To change that policy now because the Germans are unable to take advantage of it would quite rightfully be regarded by the Allies as an unfriendly act. Suppose the Germans should succeed in their present energetic endeavor to gain command of the sea, would our German-American party wish then to have us refuse to sell them copper? We doubt it. Let the German-Americans continue to supply us with information and arguments in support of the cause of their fatherland. We want to hear the most that can be said on both sides. But if the German-Americans put more emphasis on the first word than the second, if they give reason to suspect that they are not working in the true interests of their adopted country, then there will be revival of anti-foreign feeling that will be very damaging to them as well as to all other recent arrivals.

### SUFFRAGE BY CONSENT

THE legislatures of New York, New Jersey and West Virginia have lately passed resolutions in favor of equal suffrage by votes unanimous or nearly so. This does not, of course, mean that all the members personally approve of the measure. No doubt some of them will vote against it at the polls, as they have a perfect right to do.

But the practical unanimity of the vote in the various state legislatures means more than that the question is regarded as of sufficient importance to be submitted to a referendum of the people. It means that the political opposition to equal suffrage has virtually collapsed all over the country. No party is willing to commit itself to decided opposition. Prominent politicians are as a rule either hedging or outspoken in its favor. Many people, who are conscientiously opposed to it, will admit in conversation that they know it is coming, tho they believe it their duty to prevent it as long as possible.

When a reform reaches this stage its success is assured unless it is overwhelmed by a general reactionary movement, or its advocates in their haste adopt offensive tactics. Votes for women is so obviously a deduction of democracy that in the natural course of progress it is bound to come in any self-governing community. Its only active enemies are those whose interests are threatened, like the liquor dealers, or those who from a false theory of woman's capabilities, or a mistaken opinion of the workings of equal suffrage, are led to fear that it will be

injurious to society. There is always such opposition. There were slaves in America and serfs in Russia who petitioned against their own emancipation. The real opposition against the enfranchisement of women is conservatism and indifference, and against these the power of good examples, sweet reasonableness and steady propaganda must in time prevail.

### CONSERVING RELIGIOUS ENERGY

WHEN Billy Sunday invades a city a new tabernacle is built for him. It seats thousands so advantageously that every one of them can hear each sensational phrase. The platform is so constructed that the spoken word is thrown forward with maximum effect. The hall is scientifically fitted to its purpose.

In many a church where the worshippers would shudder at Sunday it is impossible to hear without discomfort—either from too much sound or too little, lights are so placed that to look at the speaker is to court eye-strain and fatigue, the ventilation is wholly given over to the "prince of the power of the air," as Ian MacLaren defined him.

If it is necessary for Sunday thus to reinforce his powerful personality and admirable publicity organization, it is doubly true that the more forward-looking churches whose work goes on in quieter ways need the maximum of physical efficiency. Billy Sunday's way is worth imitating architecturally if not doctrinally.

The confusion as to the meaning of the "kultur" which the Germans say they are fighting for has at last been cleared up by the Kaiser. In a recent address he made the following definition:

Many people who judge us Germans solely by outward polish and term us barbarians, seem not to know that there is a great difference between civilization and "kultur." England certainly is a highly civilized nation. One notices this always in the drawing room. But to have "kultur" means to possess deep conscience and high morale.

A Rhodes scholar from Australia writes home that he wants to quit college and enlist because there is nobody left now at Oxford "except niggers, Yanks and rotters." It was the idea of Cecil Rhodes that by educating together young men from Australia, Canada, South Africa, Germany, the United States and the United Kingdom, they would learn to respect and like one another. Evidently the plan does not work quite as he expected.

*The Panama News Letter* suggests that the Canal Zone, as the center of the neutral American republics, is the proper place to hold the peace conference which shall conclude the Great War. It is somewhat premature to discuss the place before the time is set, but it is more likely that some place nearer the seat of war will be selected, perhaps the Peace Palace at The Hague if that is still neutral territory by that time.

In Berlin bread is selling at 2.8 cents a pound for white and 2.2 cents for brown. In New York bread is selling at seven cents a pound. Don't we need some kind of a war in this country?

# THE STORY OF THE WEEK

## THE GREAT WAR

**February 8**—Hindenburg prepares an attack on the Russians east of Mazurian lakes. Austro-German force fighting Russians for Dukla Pass, Carpathians.

**February 9**—In France the chief centers of activity are near Albert, Soissons and in the Argonne. Turks retreat from Suez after loss of 10,000 men.

**February 10**—House of Commons unanimously votes appropriation for an army of 3,000,000. Berlin reports German East Africa completely cleared of British.

**February 11**—Germans take Sierpe, in Poland, north of Vistula. United States protests to Germany against war zone and to England against use of American flag.

**February 12**—Germans take 26,000 Russian prisoners near Lyck, East Prussia. China refuses to concede the twenty-one demands of Japan.

**February 13**—Russians retire in Bukovina. Albanians invade Serbia.

**February 14**—Russians fall back upon Niemen River. Germans resume bombardment of Rheims and Ypres.

### Hindenburg Makes a New Attack

Field Marshal von Hindenburg has made another of those quick changes of the point of attack which have been the striking feature of the campaign in the east. While the reports were still coming to us of his terrible defeat before Warsaw, which, in Russian opinion, marked the end of the German offensive, he suddenly appeared in his favorite battleground in the Mazurian lake district and drove the Russian forces from East Prussia.

This rapid movement was accomplished by the aid of automobile trucks, of which Hindenburg is said to have 30,000, each capable of making sixteen miles an hour and of carrying twenty men with rations and ammunition for three days.

The new scene of operations is 150 miles north of the Bzura River, where the bloodiest battle of the war was fought during the first week in February, and the German losses, if we may believe the official report of the French War Office, exceeded 40,000 dead. The number, at any rate, was enough to convince the Field Marshal or the Kaiser that there was no use attempting to take Warsaw for the present by a direct frontal attack south of the Vistula, so the Germans have slackened activity in Poland and even, it is reported, abandoned to the Russians Lodz and Skierniewice, which a few weeks ago had cost the Germans thousands of men.

But meanwhile the new Russian army was invading East Prussia and had occupied a strip of territory about twenty miles wide on its eastern end. They had advanced along the Memel (Niemen) River toward Tilsit, and they threatened Insterburg, the railroad center of all the lines in this region. In a few weeks more they might have got to Königsberg and resumed the siege which was so suddenly interrupted in August by the appearance of Hindenburg upon the scene. South of this the Russians had taken Lyck and had made some progress in penetrating the labyrinth of lakes and bogs which lie behind.

There are many stories now current about Hindenburg's interest in the Mazurian lakes; how year after year he took his troops into this region for their maneuvers, much to the disgust of the officers and men, who could see no reason why they should be kept wading around in the

mud when there was plenty of dry ground for training; also that he opposed the plans for draining the marshes because he insisted that they would be needed as a defense against the Russians. However that may be, he has certainly made good use of them in the present war. It was here that he cornered the Russians during the last week in August and captured some 70,000 prisoners.

Now he has repeated the tactics with almost as great success. General von François had been trying to defend East Prussia with a single army corps. But during the second week in February Marshal von Hindenburg brought four more army corps in the field, partly troops withdrawn from Poland and partly reserves and recruits, making altogether about 200,000 men, according to Petrograd accounts. The Kaiser went to the front to watch operations. The German force was divided, the left wing advancing north of the

HINDENBURG'S CHANGE OF ATTACK

During the last days of January and the first of February the Germans made a desperate effort to reach Warsaw by a direct attack from the Bzura River near Sochatchev, but were repulsed with great slaughter. Immediately after Marshal von Hindenburg shifted a large part of his troops to East Prussia and surprised the Russians, who had occupied the territory between the Russian frontier and the Mazurian lakes. By sending one force around the lakes to the south and the other to the north he was able to envelop the Russians near Lyck and to take 26,000 prisoners. The Russian Army approaching the German fortress of Thorn has been driven back from Lipno and Sierpe. Another German force is advancing toward the Russian fortress of Ostrolenka, apparently with a view to attacking Warsaw from the north. The shaded area is that under Russian control and the arrows indicate the chief points of German attack.

#### THE SINKING "BLUECHER"—THE GERMAN VICTIM OF THE NORTH SEA FIGHT

Afire amidships, with her mast wrecked and her hull battered, the 15,500-ton battle cruiser was photographed just before she sank. The crew—singing patriotic songs, as an eye-witness reports—are crowded aft and a British destroyer is coming up to rescue the Germans

lakes and the other south, so the Russians near Lyck were caught between them and lost 26,000 men as prisoners besides twenty cannon, thirty machine guns and much war supplies. This at least is the German claim. According to the Petrograd version the Russians made an orderly retreat for strategic reasons because "the Russian General Staff has decided that the most favorable disposition of Russian forces can be made on Russian territory." It will be noted that the German staff holds a different theory and prefers to fight on the enemy's territory whenever it can.

#### Midst the Wild Carpathians

In spite of the winter weather—or perhaps because of it—the struggle for the possession of the passes in the mountain barrier which separates Galicia from Hungary has been fiercer than ever. The Austrians in this region have been reinforced by a German force, estimated by their enemies at 300,000 men, and German officers have the general command of the operations. The conflict rages chiefly in the mountains south of the besieged fortress of Przemyśl. The Russians succeeded in penetrating into Hungary thru the Dukla and Uzsok passes as they did once before, but this time they are meeting with a stubborn opposition from the Austro-German forces, and it is impossible to tell from the confused and contradictory reports which side has the best of it on the whole. But both agree as to the desperate character of the fighting and tell of bayonet charges amid the snowdrifts which leave thousands of dead strewn upon

the mountain slope. The Austro-German forces are rumored to have lost 8300 killed and wounded and 1000 prisoners in the passes.

Further to the east the Russians have undeniably lost ground and have been forced to evacuate the crownland of Bukowina. According to Berlin they have even abandoned the capital, Czernowitz, which they took as early as August, but Petrograd asserts, on the contrary, that the Russians still hold Czernowitz and the country eighteen miles south of it. At any rate, the Russians have been driven back from the Rumanian frontier, so Transylvania has no longer to fear a joint invasion of Russians and Rumanians, as seemed imminent a few weeks ago.

The Austrian Government is said to be contemplating a diplomatic stroke to gain the favor of the Poles. Russia promised autonomy to the Poles at the beginning of the war; Austria now proposes to give them a king. The Archduke Stephan has been selected for that precarious position and he is, according to the story, to be crowned at Cracow soon. Since Archduke Stephan belongs to the Austrian house of Hapsburg and also to the Polish house of Radziwill, he is expected to increase the loyalty of the Poles for the Austrian crown. Cracow became the capital of Poland 600 years ago and here all the Polish kings were crowned and buried. No doubt a coronation in the city about which centers the tradition of all the ancient glories of their race would rally the Poles of the Dual Monarchy to its defense, but it remains to be seen whether it will have the same effect upon the Poles in Russia and Germany.

Sunday morning, British Air Raid July 25, 1909, a monoplane landed on the Dover cliffs bearing Blériot from Calais. This gave occasion for one of H. G. Wells' most brilliant and pessimistic essays, which, as published in his *Social Forces in England and America*, is worth the re-reading in the light of the present. In this he scores his countrymen for falling behind in initiative and ingenuity. As he says:

Within a year we shall have—or rather *they* will have—aeroplanes capable of starting from Calais, let us say, circling over London, dropping a hundred weight or so of explosive upon the printing machines of *The Times* and returning securely to Calais for another similar parcel. I do not think a large army of under-educated, under-trained, extremely unwilling conscripts is going to be any good against this sort of thing.

Nearly six years have passed since this was written, and so far no bombs have been dropt upon *The Times*, altho there are many who would like to do it, and so far England has not been obliged to resort to conscription. Spurred perhaps by such lay taunts as this the British have been rapidly catching up with the French, Germans and Russians, who had got so far ahead of them in this new field of human endeavor. Their exploits in the air have been nearly as brilliant as those of any of their allies or enemies, and last week they accomplished the most imposing aerial attack in the history of the world.

Early on the morning of February 12 a flock of thirty-four seaplanes and aeroplanes rose thru the thick mist from the Dover cliffs and in one long string like wild ducks

Underwood & Underwood

BETWEEN BATTLES—GERMANS MAKING THE BEST OF POLAND'S SNOW

flew over the Channel to the Continent. Reaching the coast in about twenty minutes, they soared over the Belgium of the Germans and dropt bombs in five Flemish cities near the sea, Bruges, Ostend, Zeebrugge, Blankenberghe and Nieuport. Then they returned to their base without the loss of a man. Flight Commander Grahame-White, the best known of British aviators in this country, fell into the water off Nieuport and was under fire of the Germans, but a French warship rescued him.

The amount of damage done is doubtful. According to the British version the railroad station at Ostend was burned and bombs dropt on the German gun positions and

mine laying vessels. From Berlin, by wireless direct to Sayville, it is reported that "the bombs caused regrettable damage to the civil population, while from a military point of view we suffered only slight losses." In the Berlin report as it came thru London these words were omitted.

Among the British aviators taking part in the raid was Squadron Commander John Cyril Porte, who was to attempt the flight across the Atlantic in Rodman Wanamaker's flying boat "America," later bought by the British Admiralty for \$25,000.

From Berlin comes the news that a British aeroplane trying to reach Brussels on February 11 was attacked by a Taube and brought down, killing both men.

French and British aeroplanes have flown over Thrace and dropt bombs in Adrianople. It will be remembered that the first use of flying machines in warfare was in the siege of Adrianople by the Bulgars.

Food and Cotton Cargoes

The steamship "Dacia," which was bought from the Hamburg-American Company by E. N. Breitung, put under the American flag and loaded with cotton at Galveston for a German port, sailed on the 11th from Norfolk, where she had stopped to take on coal. It was expected that she would be seized by a British cruiser and taken before a prize court. The British Government is not satisfied that the transfer was a genuine one, and desires to avoid a precedent that would permit the purchase and use of all the German ships now lying idle in our ports.

On the 22d the American steamship "Wilhelmina," loaded with grain, flour and other foodstuffs by a firm in St. Louis, started from New York for Hamburg. Some days later the German Government took possession of all the grain and flour in the country. The German Ambassador assured our Government that the cargo would not be taken by his Government, but would go freely to non-combatants. On the 9th, the ship put in at the English port of Falmouth for repairs, having been shaken by storms during the voyage. There her cargo was seized, in order that it might be considered by a prize court. The ship was to be released, and it was understood that Great Britain would pay for the cargo if it should be held.

Mr. Lindheim, counsel for the owners, says they were told by Sec-

retary Bryan that they had a perfect right to send the cargo to Germany. Our Government asked for delay at Falmouth, in order that the owners might have time to present evidence. There will be delay. The owners say that only fifteen per cent of the cargo (the grain and flour) could be affected by the German decree. The value of the cargo is about \$200,000.

#### The Ship Purchase Bill

It was clearly seen, last week, that the Ship Purchase bill could not be passed in its original form. The opposition of seven Democrats and nearly all the Republicans in the Senate could not be overcome. There was one continuous Senate session of fifty-five hours, the longest on record. Among the speeches was that of Mr. Jones, who was talking for thirteen hours and fifty-five minutes, the occasional roll-call intervals excepted. There were indications that amendments excluding permanent government ownership and forbidding the purchase of interned ships might gain the support of the seven Democrats in revolt, but the effect of such changes could not be predicted with certainty. The substitute offered by Mr. Gore found favor at the White House, but it provided for no time limit of government ownership.

Supporters of the project turned to the House. Government ownership without limit was opposed there by Leader Underwood, Mr. Kitchin (his successor) and others. At the end of the week there were signs that a House Democratic caucus would approve a compromise bill providing that the ships, two years hence or at the end of the war, shall

be turned over to the Navy Department for use as auxiliaries or to be leased to private firms. But it was not known that such a bill could be passed in the Senate.

In that body the subject of debate had been changed, owing to a movement for cloture, requiring a final vote on the 16th. This movement had the support of the unanimous vote of a Democratic caucus, but from that caucus the seven Senators in revolt were absent. The result of the contest remained in doubt. It was understood that the President would not hesitate to call an extra session if no bill should be passed.

#### For a Peace Conference

In the Senate, Mr. La Follette, of Wisconsin, has introduced a resolution authorizing the President to convey to all neutral nations the desire of our Government that an international conference be held for the purpose of promoting an early cessation of hostilities and the establishment of peace in Europe by co-operation and friendly offices. This conference, the resolution provides, would also consider uniform rules for a general limitation of armaments, the nationalization of the manufacture of military and naval supplies; the prohibition of the exportation of arms, ammunition, armor plate, torpedoes, etc., from one country to another; the ultimate establishment of an international tribunal where any nation may be heard on any issue involving rights vital to its peace and the development of its national life, and plans for the federation of the neutral nations in the adoption of rules providing for the neutralization of cer-

tain waters and maritime trade routes, together with other measures for the protection of neutral commerce at the present time. Mr. La Follette has spoken in support of the resolution, urging the Senate to adopt it.

#### Carranza Expels a Minister

Carranza asserted that Angel Delcaso, a Spanish subject who claimed to be a confidential agent of the Spanish Government, was really an associate and "accomplice" of Villa. Saying that Delcaso had found refuge in the Spanish legation, he demanded that the Spanish Minister, José Caro, should give him up. Caro denied that the man was in the legation. On the 11th, Carranza ordered the Spanish Minister to leave the country within twenty-four hours. The Minister went at once to Vera Cruz. Secretary Daniels instructed the commander of the battleship "Delaware," then lying at that port, to receive him. The Minister went on board the battleship, but only to await the departure of a Spanish merchant ship, which was to carry him to Havana. Villa had invited him to come to any city which was in his possession.

It was seen that Carranza's action might cause disagreeable complications. There was a report that Spain had made application to several European powers for consideration of the matter, asserting that Mexico was in a condition of anarchy. Later reports said, however, that Spain had decided to deal directly with Carranza. The latter defended his action in a long statement. Delcaso, he said, had married a Mexican woman and owned real estate in the

country. He had been Villa's confidential agent in the United States, and was involved with Villa in many murders and other crimes. The Spanish Minister had sought to save the man from merited punishment. There had been proof that Delcaso was hiding in the legation. "I could have taken more severe measures," said he, "without violating the rules of international diplomatic procedure."

He issued orders, and telegraphed them to Washington, forbidding his military commanders to have any dealings with the confidential agents of foreign governments. All diplomatic negotiations, he said, must be with himself. Some said that these orders would be inconvenient for Mr. Silliman, Mr. Carothers and Mr. Duval West, agents of our Government or personal representatives of the President. Mr. West, formerly Federal District Attorney at San Antonio, was appointed last week. The treatment of the Spanish Minister was resented by the other diplomatic representatives in Mexico, and they may decide to leave the country.

**Mexico's Warring Factions** Obregon remained at the capital, and his troops had occasional engagements with Zapata's men, who were not far away. Villa came down from the north to Queretaro, leaving Angeles at the head of military operations in the vicinity of Monterey. There were persistent reports from Carranza that Villa, attempting to capture Guadalajara, Mexico's second city, had been whipped and driven back. It soon ap-

peared, however, that he had been successful. He took the city, and Carranza's commander there fled.

The capture of Guadalajara was included in Villa's plan of preparation for his attack upon Tampico. In the north, Angeles had routed the Carranza forces under Herrera, at Monterey. They were drawn into the city by a deceptive movement, and many were killed. Tampico is said to be defended by 20,000 soldiers. Fifty of Maytorena's men have occupied Naco, on the northern boundary, thus breaking the agreement made a few weeks ago.

The condition of the Mexican capital is deplorable. Banks and stores are closed, and there is very little food in the city. Zapata has destroyed the water works in the suburbs, and the reservoirs are dry. The people rely upon the Chapultepec springs. Carranza ordered the distribution of \$13,000 among the poor. General Obregon has demanded \$250,000 from the Catholic clergy, and church property will be taken if the money is not paid.

Villa and Carranza will have nothing to do with the peace convention at San Antonio. Villa says it is only another Cientifico plot. Villa has asked his generals to ratify his assumption of the Presidency. There is no word from President Garza, reported to have been put to death by Zapata. Carranza declared that only eleven of the 155 members of the original Aguascalientes convention are supporters of Villa. The convention, however, has disappeared since the capture of the capital by Obregon. Carranza's list of the members,

if it is a correct one, shows that five have been assassinated, four have been killed in battle, two are in prison and twenty-seven are missing.

**Hurricane in Samoa** The Manua Islands of the Samoan group, which are possessions of the United States, were visited last week by a hurricane, an earthquake and a tidal wave. There are three of these islands. On them are five villages, in each of which is a church. The storm is said to have been one of fury almost unprecedented, even in the South Seas. The village habitations were swept away. Iron roofs of churches were torn off and carried three miles by the wind. Soil was so removed that coffins in graves were exposed. Only three lives were lost, but the 3000 inhabitants are destitute and threatened with starvation. Three-fourths of the cocoa palms upon which they depended are gone. They have no food and can produce none on the islands for a long time to come. For six months they must look to the outside world for supplies.

Secretary Daniels sent to Congress a recommendation that an emergency appropriation of \$10,000 be granted at once. The United States gunboat "Princeton" is in those waters and has given to the people such food as the ship could spare. On the day of this hurricane a similar storm caused a loss of \$1,000,000 in Colon, at the eastern terminus of the Panama Canal. More than half of the new eastern breakwater was destroyed. Six inches of rain fell, altho February is there the driest month of the year.

BETWEEN BATTLES—FRENCH SOLDIERS LEAVE A CARD GAME IN THE TRENCHES TO WATCH A SCOUTING TAUBE

# IN DEFENSE OF AMERICAN NEUTRAL RIGHTS

## THE REPRESENTATIONS OF THE DEPARTMENT OF STATE TO GREAT BRITAIN AND GERMANY

### THE AMERICAN FLAG MUST NOT BE MISUSED—THE NOTE TO GREAT BRITAIN

Washington, D. C., Feb. 10, 1915.  
**T**HE Secretary of State has instructed Ambassador Page, at London, to present to the British Government a note to the following effect:

The department has been advised of the declaration of the German Admiralty on February 4, indicating that the British Government had on January 31 explicitly authorized the use of neutral flags on British merchant vessels, presumably for the purpose of avoiding recognition by German naval forces.

The department's attention has also been directed to reports in the press that the Captain of the *Lusitania*, acting upon orders or information received from the British authorities, raised the American flag as his vessel approached the British coasts, in order to escape anticipated attacks by German submarines.

Today's press reports also contain an alleged official statement of the Foreign Office defending the use of the flag of a neutral country by a belligerent vessel in order to escape capture or attack by an enemy.

Assuming that the foregoing reports are true, the Government of the United States, reserving for future consideration the legality and propriety of the deceptive use of the flag of a neu-

tral power, in any case, for the purpose of avoiding capture, desires very respectfully to point out to His Britannic Majesty's Government the serious consequences which may result to American vessels and American citizens if this practise is continued.

The occasional use of the flag of a neutral or an enemy, under the stress of immediate pursuit and to deceive an approaching enemy, which appears by the press reports to be represented as the precedent and justification used to support this action, seems to this Government a very different thing from an explicit sanction by a belligerent Government for its merchant ships generally to fly the flag of a neutral power within certain portions of the high seas which are presumed to be frequented by hostile warships.

The formal declaration of such a policy of general misuse of a neutral's flag jeopardizes the vessels of the neutral visiting those waters in a peculiar degree by raising the presumption that they are of belligerent nationality, regardless of the flag which they may carry.

In view of the announced purpose of the German Admiralty to engage in active naval operations in certain delimited sea areas adjacent to the coasts of Great Britain and Ireland, the Government of the United States would

view with anxious solicitude any general use of the flag of the United States by British vessels traversing those waters. A policy such as the one which His Majesty's Government is said to intend to adopt would, if the declaration of the German Admiralty be put in force, it seems clear, afford no protection to British vessels, while it would be a serious and constant menace to the lives and vessels of American citizens.

The Government of the United States, therefore, trusts that His Majesty's Government will do all in their power to restrain vessels of British nationality in the deceptive use of the United States flag in the sea area defined by the German declaration, since such practise would greatly endanger the vessels of a friendly power navigating those waters, and would even seem to impose upon the Government of Great Britain a measure of responsibility for the loss of American lives and vessels, in case of an attack by a German naval force.

You will impress upon His Majesty's Government the grave concern which this Government feels, in the circumstances, in regard to the safety of American vessels and lives in the war zone declared by the German Admiralty.

### NEUTRAL SHIPPING MUST BE RESPECTED—THE NOTE TO GERMANY

Washington, D. C., Feb. 10, 1915.  
**T**HE Secretary of State has instructed Ambassador Gerard, at Berlin, to present to the German Government a note to the following effect:

The Government of the United States, having had its attention directed to the proclamation of the German Admiralty, issued on the 4th of February, that the waters surrounding Great Britain and Ireland, including the whole of the English Channel, are to be considered as comprised within the seat of war; that all enemy merchant vessels found in those waters after the 18th inst. will be destroyed, altho it may not always be possible to save crews and passengers, and that neutral vessels expose themselves to danger within this zone of war, because, in view of the misuse of neutral flags, said to have been ordered by the British Government on the 31st of January, and of the contingencies of maritime warfare, it may not be possible always to exempt neutral vessels from attacks intended to strike enemy ships, feels it to be its duty to call the attention of the Imperial German Government, with sincere respect and the most friendly sentiments, but very candidly and earnestly, to the very serious possibilities of the course of action apparently contemplated under that proclamation.

The Government of the United States views those possibilities with such grave concern that it feels it to be its privilege, and indeed its duty in the circumstances, to request the Imperial German Government to consider before action is taken the critical situation in respect of the relation between this country and Germany which might arise were the German naval forces, in carrying out the policy foreshadowed in the Admiralty's proclamation, to destroy any merchant vessel of the United States or cause the death of American citizens.

It is of course not necessary to re-

mind the German Government that the sole right of a belligerent in dealing with neutral vessels on the high seas is limited to visit and search, unless a blockade is proclaimed, and effectively maintained, which this Government does not understand to be proposed in this case.

To declare or exercise a right to attack and destroy any vessel entering a proscribed area of the high seas without first certainly determining its belligerent nationality and the contraband character of its cargo would be an act so unprecedented in naval warfare that this Government is reluctant to believe that the Imperial Government of Germany in this case contemplates it as possible.

The suspicion that enemy ships are using neutral flags improperly can create no just presumption that all ships traversing a proscribed area are subject to the same suspicion. It is to determine exactly such questions that this Government understands the right of visit and search to have been recognized.

This Government has carefully noted the explanatory statement issued by the Imperial German Government, at the same time with the proclamation of the German Admiralty, and takes this occasion to remind the Imperial German Government very respectfully that the Government of the United States is open to none of the criticisms for unneutral action to which the German Government believes the Governments of certain other neutral nations have laid themselves open; that the Government of the United States has not consented to or acquiesced in any measures which may have been taken by the other belligerent nations in the present war which operate to restrain neutral trade, but has, on the contrary, taken in all such matters a position which warrants it in holding those Governments responsible in the proper way for any untoward effects on American shipping

which the accepted principles of international law do not justify; and that it therefore regards itself as free in the present instance to take with a clear conscience and upon accepted principles the position indicated in this note.

If the commanders of German vessels of war should act upon the presumption that the flag of the United States was not being used in good faith, and should destroy on the high seas an American vessel or the lives of American citizens, it would be difficult for the Government of the United States to view the act in any other light than as an indefensible violation of neutral rights, which it would be very hard indeed to reconcile with the friendly relations now happily subsisting between the two Governments.

If such a deplorable situation should arise, the Imperial German Government can readily appreciate that the Government of the United States would be constrained to hold the Imperial German Government to a strict accountability for such acts of their naval authorities, and to take any steps it might be necessary to take to safeguard American lives and property and to secure to American citizens the full enjoyment of their acknowledged rights on the high seas.

The Government of the United States, in view of these considerations, which it urges with the greatest respect, and with the sincere purpose of making sure that no misunderstanding may arise, and no circumstances occur that might even cloud the intercourse of the two Governments, expresses the confident hope and expectation that the Imperial German Government can and will give assurance that American citizens and their vessels will not be molested by the naval forces of Germany otherwise than by visit and search, tho their vessels may be traversing the sea area delimited in the proclamation of the German Admiralty.

# WHAT THE WAR WILL BRING FORTH

BY WILHELM OSTWALD

**W**HEN Germany was attacked on three sides by what seemed to be an irresistible force, the object of the war into which we were unexpectedly plunged was perfectly simple and obvious to us. It was to defend our home country against the danger threatening it from the east and the west, and partially also against the actual foreign invasion of German soil. That to us it was an unexpected war and purely a war of defense is proved beyond the shadow of a doubt not only by the diplomatic papers, but also by the fact that until a few days before the declaration of the war the Kaiser was in foreign waters on his summer trip to Norway.

Since then we have succeeded in repelling the enemy from German soil and carrying the war into his own country. And now the question uppermost in the minds of the Germans naturally is, "What is to happen after the war, and what gain will result from it when peace is established?" For of this we are all thoroly convinced—that it is only for the sake of peace that the war is being fought, and the peace will be the more enduring and the more secure, the greater the sacrifices of this terrible catastrophe.

At the time of writing we Germans feel absolutely certain of the termination of the war by the triumph of the German-Austrian allies. We need only observe our cities and villages to convince ourselves what large reserves of men capable of fighting we still possess. As regards the other means necessary to bring the present world situation to a successful conclusion, food supplies and the production of the equipments for war, especially ammunition, it is a well-known fact that the Germans are so far advanced in the technique of chemistry that we need have no fear on that score. With the large number of workers set free in their own trades by the stoppage of the export trade, we can so extend our agriculture as to be able to feed all the German-Austrian nations ourselves. And England's hope to deprive us of the possibility of continuing the war any length of time by preventing the importation of Chile saltpeter, essential in the manufacture of explosives, has also been shattered. By chemical methods we can manufacture saltpeter of our own in any quantities we choose.

The present war must bring about a future peace in which there shall be, first, permanent security against Russian attack, and, second, perma-

*We asked Professor Ostwald to write for The Independent on the probable consequences of the war, for there is no one better qualified to interpret to American readers the German standpoint. He was invited to the United States as a representative of German science at the International Congress of Science and Art held at St. Louis in connection with the Louisiana Purchase Exposition, and he has given courses of lectures at Harvard and Columbia. He has also been in close touch with English men of science, especially Sir William Ramsay, and since he was born and educated in Russia he knows that country as well. In 1909 he was awarded the Nobel prize for his researches in chemistry, and he devoted the prize money to the cause of internationalism, in which he has been engaged since he resigned the professorship of chemistry at Leipzig University. In his "Sunday Sermons," which have a wide circulation in Germany, he has always preached the gospel of peace and condemned the waste of human energy thru the friction between the rival nations and industrial classes.—THE EDITOR.*

nent security against England's policy, steadfastly pursued for the last two centuries, to destroy every rival fleet, so that she may remain sole mistress of the sea. This dominion of the sea by England we regard as the last remnant of a barbarism that consists in the brutal military government of foreign nations by superior force of arms and fighting strength for the purpose of exploiting those nations economically in the interest of the barbaric governing imperialistic nation. This was the policy England has hitherto followed, and this it is that has led directly to the present war. To destroy this policy of England permanently is the most important object of the war.

As regards the Russian question, its solution can already be foreseen. With incomprehensible lack of vision and self-deception, the Russian Government has made bitter enemies of all the nations that inhabit the western portion of her vast empire by suppressing their national character, by persecutions, and by the disregard of their civic rights. Take a glance at the map. From Finland on the north down thru the Russian east provinces and Poland to Little Russia stretching south to the Black Sea, you find one continuous chain of nations all embittered against Russia. In establishing peace, it shall be our aim to free all these opprest

nations, to secure political independence for them, and to do all we can to unite them into a confederation similar to that of the German Empire, so that, while each state in the confederation will enjoy greater independence, it will constitute a united power strong enough to guarantee its military security against further Russian attacks.

On the other hand, Germany and Austria will be freed from immediate contact with a neighbor so extremely unpleasant in every way as is Russia. Any future attack by Russia will first have to be met by the newly formed buffer states. To secure our eastern frontiers in this manner seems to us Germans so great a political advantage that we shall consider ourselves well repaid for the sacrifice we are making in the eastern field of war. As the liberated nations will owe their freedom to Germany, and as their developing culture can find encouragement and fertilization only in the west and not in the east, we feel assured against any possibility of their ever making common cause against Europe with the barbarous eastern state.

The situation in the west is much more obscure. So I shall refrain from discussing its possibilities and merely content myself with the statement that here we shall probably endeavor, in the first place, to obtain a free outlet for our surplus labor energy for common cultural and economic ends. We hope that just as Belgium is already beginning to see that she was shamefully misused by England, so our French neighbors will come to feel the same way. And they will see that the future of France will be more securely guaranteed by coöperating with the growing and powerful German nation in the work of civilization than by stubbornly clinging to the fruitless idea of revenge.

To me the problem of England seems to be the most difficult to solve. There will be so vast a change in the political significance of that empire, the difference between what it was before and what it will be after the war will be so great, that it is too much to expect that the generation of English politicians now living will be able to grasp it, and draw the practical conclusions from it. But as the foundations of the future relations of England are still to be created, it would be premature to attempt even a rough sketch of our idea of the way the British situation will shape itself.

# HOME AND EFFICIENCY

## FOURTH ARTICLE IN THE SERIES ON EFFICIENCY AND LIFE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**W**E are in the midst of a strange phenomenon. Its like has not occurred before in history.

For centuries we have inherited the idea that commerce is selfish, trade mean, finance sordid.

We have despised, ignored, at best merely tolerated, the shop-keepers among us, the makers of merchandise, the vendors of farm products. Anything not a profession was a confession. Of it we were ashamed.

Now behold what has come to pass.

The economic gospel of scientific management was born in a shop; the saving methods of personal efficiency have taken rise in factories and stores; habits of health and thrift, of energy, loyalty, alertness and skill that our schools, homes and churches failed to inculcate are being taught employees by the captains of industry; and all Europe is looking to the farms and looms of America to save what is left of Europe from the cruelty, blindness and folly of the professional classes of Europe—the professional kings, emperors, talkers, fighters and gunmakers. Verily, Business now hath her innings.

If I were a lawyer, a doctor, a teacher, a clergyman, or a housewife, I should pick out the most successful business man I knew and go to school to him. That is, provided he would let me, which he might do out of pity.

Only a small percentage of the citizens of the United States are actively engaged in making or selling merchandise. Yet by this small class of workers practically all the efficiency methods worth while have been evolved. What is the matter with all the rest of us? Why don't we produce an efficiency system for medicine, for the law, for the school, for the church, for the home?

Almost every normal girl wants to marry and have a home. Yet how many girls are taught, before marriage, how to organize, furnish, arrange, equip and conduct a home? If we threw our boys into the world-battle with no collegiate or industrial training, we should think ourselves monsters of cruelty. We do throw our girls into a struggle no less fierce—

the struggle to make and keep a home all it should be—and we tell them nothing of the tasks and trials ahead. Are homes of less value than stores and factories?

Business science is a century ahead of home science. And the majority of the women of America are not even awake to the fact. Furthermore, the mental and spiritual solidarity of the home is fast being destroyed. Who ever hears, nowadays, of a whole family going on the same picnic, or sitting in the same church pew? Parents see their children only at meal time (which, believe me, is the worst time to look at anybody). Fathers have been reduced to animated bank-books. Wives and mothers are relegated to a place of social ornament or civic uplift, while servants look after the household. As we grow in wealth, we are becoming a homeless race. And experts hold that the decreasing marriage rate, the increasing divorce rate, the spread of social unrest and moral contamination is largely due to the disappearance of old-fashioned American home life.

How shall the home be revived and maintained? Thru a general adoption of the principles of domestic science, and a personal acquisition of a better understanding by women of the hard problems which their men folks are meeting every day. At least forty per cent of a man's efficiency lies in the hands of women—his mother, his sweetheart or wife, his housekeeper, his clerk or stenographer, and these same women factors in the life of his client or customer. On a mere selfish basis, the fathers of America should insist that their daughters be taught how to earn a good living and how to conduct an ideal home. All honor be to a few great institutions like the Washington Irving High School in New York, where a girl is taught something of the science of home-making.

Efficiency depends on our home life. Energy is perhaps the most important bodily factor in efficiency. Energy is a product of pure, wholesome, abundant food, properly chosen, combined and prepared; of sound,

refreshing sleep in a quiet, clean, airy, dark, restful room; of loose, comfortable, hygienic clothing made of the right materials in a manner that becomes the individual; of daily bath and exercise, with conveniences and appliances therefor; of rest and relaxation in the evening, away from business and in the company of those you love. These things must be had from the home.

The most valuable mental trait in efficiency is probably enthusiasm—a blend of courage, optimism, kindness and alertness. These qualities are manufactured daily as by-products of a normal household. The solitude of bachelorhood leads to boredom and cynicism. Of the two worst cynics I know, one is divorced and the other was never married.

Home is the great power-house of human electricity. Our nerves are the wires, our emotions the currents, our actions the manifestations of light, energy and influence carried from home by the radiant stream of ambition and affection. In a power-house we employ the highest-priced electrical engineers, to handle the machinery with faultless care. But in a kitchen we hire cheap maids totally ignorant of the digestive machinery, the science of marketing, the principles of household economy, hygiene, sanitation, organization.

Let me cite the cases of two women, both housewives, but as unlike as mud and fire.

The first woman lives in the country. She works fourteen hours a day—and never seems to get a thing finished. She takes five steps where one would do. She has no place for anything—and keeps everything in its place. Observing the thread in her work basket, you think it the worst snarl you have ever seen, but you change your mind when you see her temper. She is faded, wilted, nervous, shrill. She has pains and weaknesses and miseries galore. She enjoys poor health to the utmost—the utmost being a debauch of self-pity. She has grown common to her husband, and for years has been to her children merely a servant-in-waiting.

The second woman lives in the city.

She spends an hour every morning planning meals, discussing problems with her housekeeper, instructing her maid for the work of the day. Then she rides to her office downtown, where she conducts a large law practice, earning thereby the wages of her maid and housekeeper, and a good deal more. Her evenings are free for social duties and pleasures, and she has time to spare for human service and uplift work. She is in demand for lectures and magazine articles. She holds the adoration of her husband. She keeps her youth and beauty.

I know that the majority of farmers' wives, and of women in small towns, have not the facilities and resources to manage their homes effectively by an hour's work a day, and to embark on a public career at the same time. I know that the average housewife gets about 300 per cent more out of the time and money available, than her husband would. But I also know that from twenty to forty per cent of the motion in the

average kitchen is lost motion, and that one dollar out of every five spent on the household is wasted.

A science of home-making, in which every girl should be trained, would include these points, among others.

1. *Location.* The site should be high and dry, with abundance of light and air, in a neighborhood with a low mortality-rate. If choosing a city apartment, look for an eastern exposure, and be sure that no buildings are so near as to shut off your sunlight. Easy access from the home to shops, theaters, churches and other public places should be had by surface car, subway or elevated road, on payment of a single fare. If members of the family work downtown, the time of transit should be carefully considered—thousands of New Yorkers waste an hour a day in useless travel, the time and strain and cost of which would have been saved if they had chosen their home with a view to quick transit.

One's home should be away from his work—but not too far away, preferably within good walking distance, a half-mile to a mile. This is usually possible, except in the largest cities. One reason why so many college professors are stupid is because they try to work in the house where they eat and sleep. This form of psychological hash is mentally indigestible—and torpid minds naturally result. Besides, the most loving wife needs to be delivered from the presence of her husband for at least eight hours every day; and if the home is too near the office, he may run over any time and interrupt the household regime. An actor is a poor husband because never home—a doctor is a poor husband because always home.

Silence is a prime factor in your surroundings. Do not plan to live near a street-car line, a railroad, an automobile highway, or a bridge used by heavy trucks. And before you engage an apartment, visit the same about ten o'clock of an evening and

## HOME EFFICIENCY TABLE

### FOR THE AMERICAN HOUSEWIFE AND MOTHER

**DIRECTIONS.** If answer is Yes, write on dotted line the number in parenthesis following each question. If answer is No, leave space blank. If neither Yes nor No, vary the figure accordingly. Find your percentage by adding column of numbers. The average grade is probably 45. It should be 95. A Table of complete values would include other questions, but this Table gives a fair estimate.

- |     |   |       |
|-----|---|-------|
| 1.  | Do you take joy and pride in your housework? (3)  | ..... |
| 2.  | Can you finish your daily duties in eight hours? (1)  | ..... |
| 3.  | Have you ever counted and tried to cut down the number of needless steps you take in a day's work? (3)                            | ..... |
| 4.  | When you are tired out, can you rest and recuperate easily and quickly? (2)   | ..... |
| 5.  | Have you time and strength in the evening to enjoy home pleasures with the family? (2)  | ..... |
| 6.  | Is your home in quiet surroundings? (3)   | ..... |
| 7.  | Do your sleeping rooms have direct exposure to morning sun? (2)   | ..... |
| 8.  | Do you keep daily records of expenses, with a modern filing system for reference? (3)   | ..... |
| 9.  | Is your grocer the best in your neighborhood—have you learned why? (3)  | ..... |
| 10. | Do you plan your meals a week ahead, and use all the "left-overs"? (1)  | ..... |
| 11. | Do you order and prepare meals on a scientific basis of nutritive value? (3)  | ..... |
| 12. | Can you serve palatable, economical substitutes for meat? (2)   | ..... |
| 13. | Do you know the signs of fresh meat, fish, eggs, fruits and vegetables? (2)   | ..... |
| 14. | Has your drinking water been guaranteed pure by expert analysis? (3)  | ..... |
| 15. | Do you buy food, clothing, furnishings, etc., on a scientific system of economy? (3)  | ..... |
| 16. | Have you studied at least three modern schools of diet, (such as the Lahmann, the Lust, the Christian, or the Kellogg system? (3) | ..... |
| 17. | Have you read at least three standard books on domestic science and household economy? (3)  | ..... |
| 18. | Do you belong to a woman's club? (3)  | ..... |
| 19. | Are you a member of the Housewives' League? (3)   | ..... |
| 20. | Do you subscribe for one or more magazines devoted to home-making? (3)  | ..... |
| 21. | Do you spend a day away from home at least once a month? (1)  | ..... |
| 22. | Do you take a vacation from your family of at least two weeks every year? (3)   | ..... |
| 23. | Have you installed a modern cleaning system, from efficient soap to vacuum cleaner? (2)   | ..... |
| 24. | Is there an emergency medicine chest in your bathroom? (1)  | ..... |
| 25. | Are all your windows equipped with hygienic ventilators? (3)  | ..... |
| 26. | Is your lighting system powerful, while restful to the eyes? (2)  | ..... |
| 27. | Have you studied the hygiene of dress? (2)  | ..... |
| 28. | Is your doctor a teacher of health—not just a prescriber of drugs? (3)  | ..... |
| 29. | Do you receive regularly the monthly list of publications of the U. S. Department of Agriculture? (1)                             | ..... |
| 30. | Are you thoroly informed on vocational training? (3)  | ..... |
| 31. | Do you know where and with whom your children play? (3)   | ..... |
| 32. | Can you answer all your children's questions, without evasion or embarrassment? (3)   | ..... |
| 33. | Do you conduct home discussions on great questions of the day? (2)  | ..... |
| 34. | Are you teaching your children how to earn, to save and to spend money? (3)   | ..... |
| 35. | Can all the members of your family use their hands and brains equally well? (3)   | ..... |
| 36. | Do the pictures and decorations in your home express sound esthetic principles? (2)   | ..... |
| 37. | Have you developed a saving sense of humor? (3)   | ..... |
| 38. | Are you giving your children systematic religious or ethical instruction? (3)   | ..... |
| 39. | Do you recognize the mistakes of your early married life and are you training your children to prevent or avoid them? (3)         | ..... |
| 40. | Is your home a haven for the poor and friendless? (3)   | ..... |

Add up column and approximate  
your grade in Home Efficiency

count the aggregations of pianos, phonographs, mouth-organs, gossiping ladies, growling men, wailing infants and polemic felines, within range of hearing. Then ponder before you move.

2. *Sanitation.* This includes open plumbing; rapid and complete drainage; scientific prevention of sewer-gas; abundance of running water, hot and cold; use of proper soaps, cleansers and disinfectants, from cellar to attic; modern cleaning methods—such as oiled cloths, sweeper, and vacuum cleaner, in place of old-fashioned broom and feather duster; elimination of carpets, curtains and tapestries that gather dust and germs, and substitution of rugs, simple furniture and other common sense equipment.

3. *Hygiene.* A few of the items under this head are a home gymnasium; a heating apparatus both healthful and reliable, that keeps the temperature from sixty to seventy degrees Fahrenheit in cold weather; bathroom appliances and conveniences, to make the daily bath more enjoyable and expeditious; ventilators for all the windows in the house; an emergency case of home remedies, such as mustard plaster, court plaster, hot water bottle, smelling salts, fountain syringe, peroxide of hydrogen, bandage material and sanitary cotton; a chart or booklet always handy on What to Do in Accidents and Emergencies; an address book with names of best druggists, physicians and surgeons available—these having first been investigated; a lighting system (whether of gas, electricity or acetylene) that includes soft, shaded, overhead lights, but full-power, concentrated desk lamps; a combination of color schemes harmonious and restful; a good supply of drinking water guaranteed pure—either bottled, and certified by chemical analysis, or distilled or boiled in your own kitchen.

We are only beginning to understand the psychology of color—one of the subtle yet powerful aids to cheerfulness and vitality. Recent experiments have shown that a person confined in a room with wallpaper and hangings of an uproarious red loses temper and grows vicious. No one can estimate how many women have gone crazy from looking at the gargoyles creeping up their wall paper. Science now proves—what Nature has always known—that the green of the grass and the blue of the sky produce the least strain on the optic nerves, and therefore induce a feeling of comfort and peace.

4. *Economy.* Certain articles for home use cost less from mail-order

houses, others cost less from local dealers. Which are they, in each list? At certain seasons of the year, bargains may be had regularly—in clothing, furnishings, foods, and so forth. Do you buy accordingly? In the kitchen, there is a science of utilizing “scraps” and left-overs. Have you learned it? A pound of beans, of whole-wheat grains, of nuts or of cheese, contains from two to three times as much pure nourishment as a pound of best steak, and costs perhaps half as much. Do you consult modern tables of food values in ordering the daily meals?

5. *Beauty.* Both vitality and morality require that a sense of harmony and repose comfort us in the few hours of ease accorded to us. In this violently practical age, when even schools and churches are made for utilitarian purposes, the home is the only place where we can satisfy our souls with grace of line, symmetry of form, harmony of color, beauty of texture, poetry of symbolism. We are soothed, or irritated, by the pattern in the rug, the picture on the wall, the contour of the home against the sky. A cottage costing \$3000, planned by an artist for the needs and the tastes of the members of the family, is a better investment than a \$30,000 mansion void of the magic touch of refinement and affection.

6. *Relaxation.* Hurry is the chief cause of worry, and a home is the haven of rest where we can smile at our haste, and watch the world go by. One of the first rules of a scientific household is that nobody's ailments or troubles or fears be mentioned in the presence of the family assemblage. Above all, gloom should be chased from the dining-room; every dyspeptic stomach was first somehow discouraged, and mastication, properly attended, comes between mirth and meditation. One of the sure tests of a real home is that the very thought of it relaxes our nerves, mind, muscles, and gently and firmly restores our peace and faith in the goodness of God's great plan.

7. *Education.* Much of the criticism now being directed at the public schools and colleges of America really applies to the home, where scientific training of the hearts, heads and hands of children properly begins. Parents are not qualified for the duties of parenthood until they have studied together the principles and methods of Plato, Horace Mann, Froebel, William Morris, Kneipp, Fowler, Taylor, Madame Montessori, Isadora Duncan, and other great pioneers of rational education. Are you teaching your children to develop their sympathies and sensibilities,

their lungs and muscles, their hopes and desires and ambitions, along with their brains? Real education starts with inspiration, leads to action, and ends in satisfaction of teacher and taught. The inspiration comes from a mother's heart, the action must be guided by a father's strength and skill. And the parents whose children are their pride were teachers even more than parents.

8. *Hospitality.* By this I do not mean the perfunctory exchange of dinner invitations, or the needless suffering entailed by a box party at the opera. I mean the outflow of heart and overflow of spirit which moves you to give a feast to the poor, to search out and hearten up the victims of a “hallroom” desolation, to throw your doors wide to the waifs in the street—slang, dirt, bruises and all. A home is not a home until it shelters the homeless. The reason is a secret, you must find it out for yourself.

9. *Service.* One of the first duties of a mother is to make her children proud to wait on her. But, alas, few mothers learn this until they are too old to begin and too tired to care. Each member of a family has certain duties and responsibilities to every other member. These are usually ignored; and often violated, as in the case of a father who whips his boy, or of a girl who wears her mother's clothes. The founder of the Children's Court, after judging 60,000 cases of wayward boys and girls, declares that lawlessness is born in the home, that parents in general fail to teach the rights of property, the obligations of justice and generosity, the sense of brotherhood, the rewards of service. When “family pride” is changed into community feeling, and community feeling grows to be race fellowship, we shall have made the home what it should be—a starting point for service.

10. *Religion.* Parents mostly are guilty of either invasion or evasion of the souls of their children—they force dogmas on the young folk, or they neglect altogether to provide religious training. Either attitude is immoral. No man is a good Baptist until he sees the good in a Methodist; and it should be a solemn duty of a good Methodist to explain to his children the peculiar merits of a good Baptist. I do not think God looks at the label on our church; I think He looks at the love in our life. Greatness overlaps goodness. And as a man's greatest human love is the love of wife and children, so does that love, truly and wisely and freely expressed, make more for righteousness than any other instrumentality on earth.

*Harris & Ewing*

**ROBERT LANSING, COUNSELOR FOR THE DEPARTMENT OF STATE**

MR. LANSING PREPARED THE INCISIVE NOTES TO THE BRITISH AND GERMAN GOVERNMENTS.  
THEY ARE PRINTED ON ANOTHER PAGE

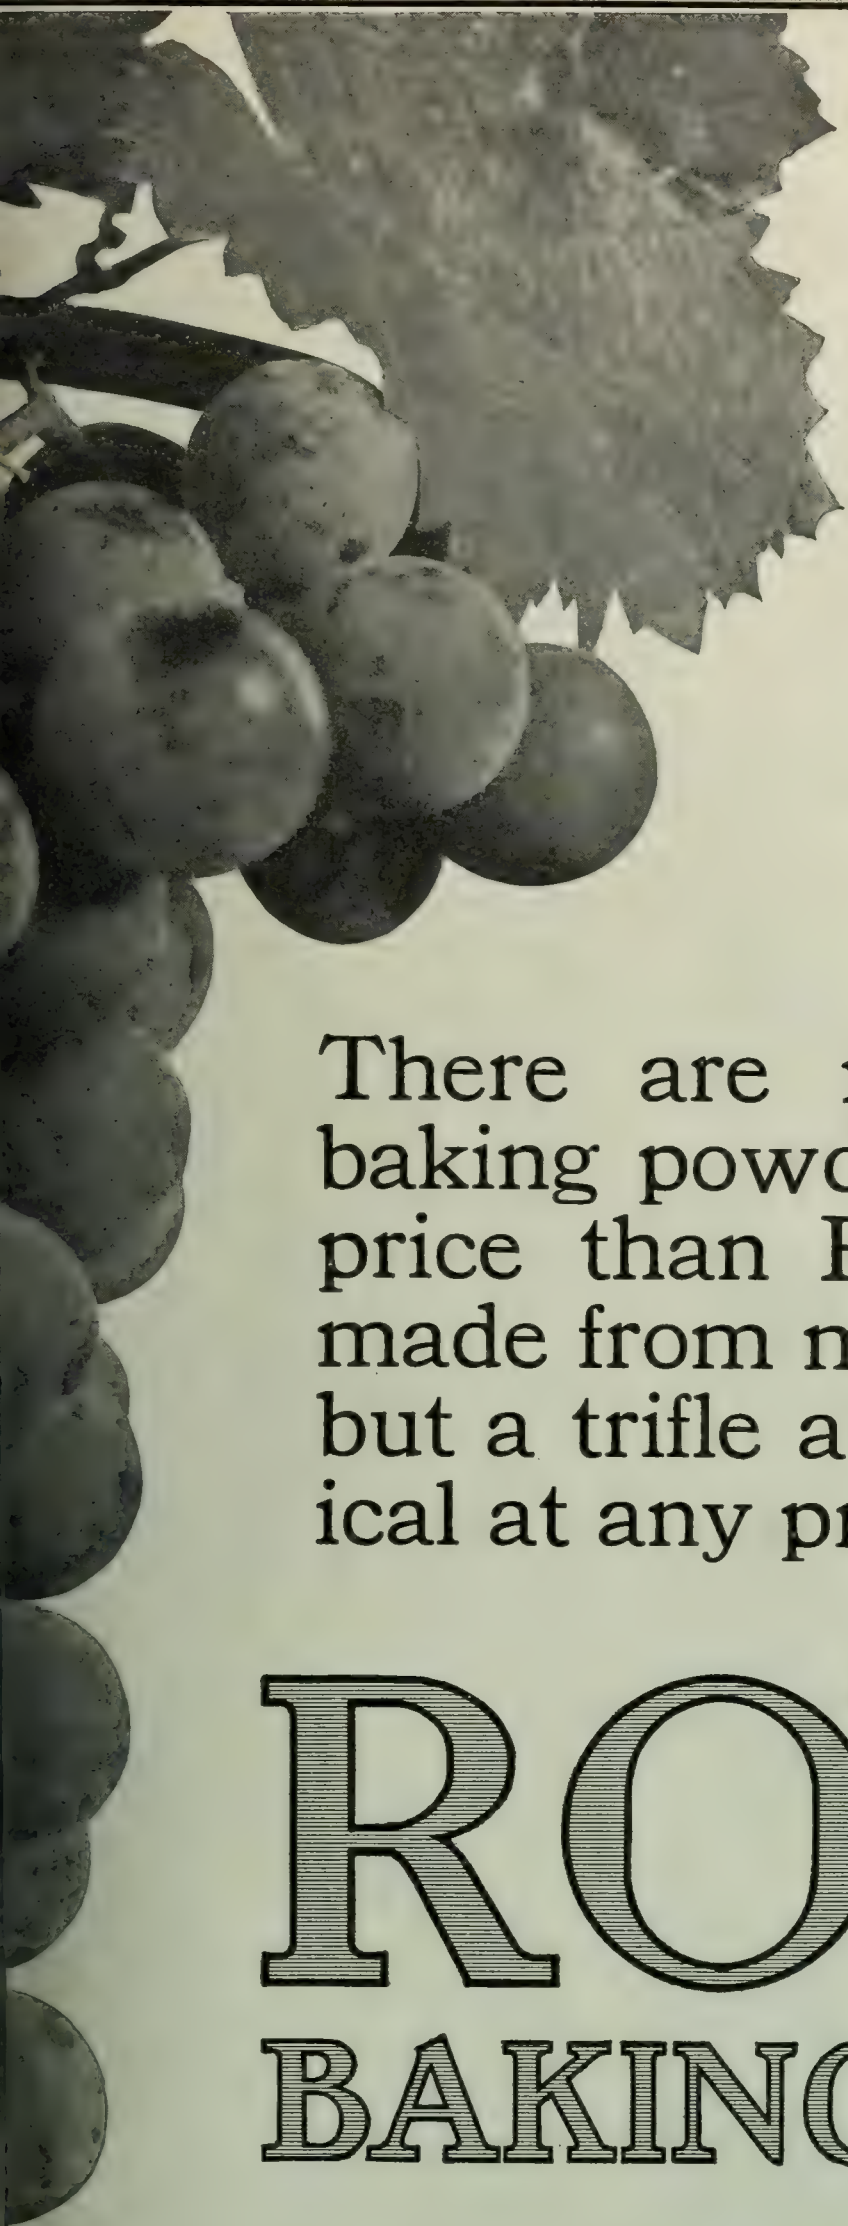

**T**HIS bunch of grapes, weighing a pound, would furnish cream of tartar sufficient to make the Royal Baking Powder required to raise a dozen tea biscuits.

When partaking of the hot biscuits, or delicious cakes, there is an added zest from an appreciation of the cleanly and healthful source of their ingredients.

Determine the quality and healthfulness of the baking powder you purchase by reading the clause on the back of the label, which shows what it is made of. It should say "Cream of Tartar" to entitle it to your favor.

The wholesome, highly efficient baking powder used by particular people who desire the best and will have no other, is made from cream of tartar, the product of grapes.

There are numerous so-called baking powders sold at a lower price than Royal; but they are made from materials which cost but a trifle and are not economical at any price.

# ROYAL

## BAKING POWDER

Contains no alum or lime phosphate.  
It is absolutely pure and healthful.

## THE BOUNDARY OF PEACE

THE SECOND OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH-SPEAKING PEOPLES

THE War of 1812 with Great Britain left the important issues of that struggle for the future to decide. One of these was the question of marking out a definite boundary between the United States and Canada; another, less definite, but perhaps more important, was the question of how the territory of two world powers could have a common frontier of many hundreds of miles without taxing the resources of both to defend it. It is very interesting to see what a different fate the two questions have had. The questions as to the true boundary between American and British territory remained largely undecided for about thirty years after the Treaty of Ghent and several details were left unsettled for many years thereafter. But that the boundary, wherever it might be located, was to be unguarded by either party was agreed to within less than three years and that informal pledge has

been faithfully adhered to ever since. There was no treaty, no convention, no arbitration needed to bring the nations into agreement on this point. In 1817 the two governments promised each other that not more than one warship was to be allowed on Lake Champlain, one on Lake Ontario and two on the upper lakes to each country and that these ships should not exceed one hundred tons apiece or carry more than one gun! Besides these tiny little gunboats, useful only to fire salutes, revenue cutters and training ships are allowed to each party, but no ship which would be formidable in war.

The land frontier is equally unprotected. For a considerable part of the distance it is an imaginary line along the forty-ninth parallel of latitude not marked by any range of hills or other natural features. The United States could march as many soldiers as could be raised and armed across the Canadian frontier and far

into the heart of the country without meeting any opposition. Great Britain could as easily land troops in Canada and using that country as a base of operations advance forces of any size into the United States. This may not seem very surprising today when both nations have long since come to regard war with each other as impossible, but it was very different in 1817 when a war between the two nations was barely over and numerous grievances were cherished on both sides any one of which might lead to renewed trouble.

The marking out of the frontier has been equally a triumph of friendly methods; of treaty, of arbitration and of diplomatic agreement. Both nations have at different times gained and granted thousands of square miles of territory along the border, but not an acre of it has been won by force. The original treaties and agreements as to the boundaries along the northern part of the United States were not clear and there was an honest difference of opinion as to what they meant. Beginning at the Atlantic coast and reaching to the Pacific hardly any of the boundary was established except perhaps that part marked out by the Great Lakes. East of Maine are two small bays, Passamaquoddy and Fundy, containing a number of islands. There was a question as to which nation owned these islands.

Then the boundary of Maine is on the east marked by the St. Croix River. It was not easy to make certain which of several rivers in that part of the country that were called by the name was the true St. Croix. The northern boundary of Maine was said to be a range of highlands dividing the rivers that flowed into the St. Lawrence from those which flowed into the Atlantic. Two different ranges many miles apart were possibly the "highlands" referred to and the maps which should have decided the question did not agree with each other. Turning westward we find the exact boundary of New Hampshire open to question because the original survey had been carelessly made. West of the Great Lakes were further difficulties. The treaty of 1783 had made the American border run "on a due west course

MITCHELL'S MAP, MADE IN 1755, USED BY THE TREATY COMMISSIONERS

From an engraving

DANIEL WEBSTER

from the northwest corner of the Lake of the Woods to the Mississippi." But the surveyors found that the Lake of the Woods was *north* of the source of the Mississippi. To the west was the territory acquired from France by the Louisiana purchase of very indefinite extent. Beyond the Rocky Mountains there was no certainty of possession at all. The "Oregon country," as it was called, was claimed by both nations.

The boundary commissions arranged for by the Treaty of Ghent found their task very difficult. The first one on the ownership of the islands east of Maine awarded those in Passamaquoddy Bay to the United States and those in the Bay of Fundy to Great Britain. The second commission, to draw the line from the source of the St. Croix to where the forty-fifth degree of latitude met the St. Lawrence, could come to no decision and ended in disagreement in 1822. The third commission, to fix the boundary from the St. Lawrence to the northwest corner of the Lake of the Woods, completed it as far as the junction of Lake Huron and Lake Superior. West of this point boundaries were still partly unsettled as far as the Mississippi. But in 1818 Great Britain and the United States agreed that the boundary of the Louisiana acquisition should run along the forty-ninth parallel of latitude till it reached the "Stony Mountains," which we now call the Rockies. At the same time it was agreed that the Oregon country should be occupied jointly by Great Britain and the United States for ten years and be open to settlement by the citizens of either nation. Thus the Oregon question was postponed

(how it was finally settled will be told in another article) and the chief remaining difficulty was our north-eastern boundary.

This was really a most important question. Between the "highlands" claimed by the British and the "highlands" insisted upon by the Americans lay an area of over 12,000 square miles or about the size of the Kingdom of the Netherlands (Holland) in Europe. It is an odd coincidence that the King of the Netherlands should be called upon to arbitrate the dispute. He decided that either of the two interpretations of the maps and treaties could be made with much justice. So in 1831 it was proposed that a compromise line be drawn between the two extreme contentions. Both nations protested against a compromise, and the United States Senate voted not to agree to the decision. This was a very dangerous policy to follow, for it was impossible that a "no man's land" should exist between two such rapidly growing countries. Other grievances helped to endanger peace. One of these is worth relating to show what difficulties met those who tried to adjust the differences.

In 1837 there was a tiny rebellion in Canada with which some Americans sympathized. A ship called the "Caroline," owned in Buffalo, was accused of smuggling arms to the rebels and was caught by the Canadian authorities, set on fire and allowed to drift over the rapids. The Americans demanded redress, but the British said that a pirate ship might be destroyed anywhere and at any time. A British subject named McLeod boasted of attacking the "Caroline" and the American authorities promptly arrested him for murder. Great Britain threatened war if he were not released at once and if he had not been able to prove an alibi it is very possible that war might have resulted.

*References.*—J. W. Foster's *A Century of American Diplomacy* (pages 252-6) gives a brief account of the partial disarmament agreement of 1817. K. C. Babcock's *The Rise of American Nationality* (pages 259-70) covers the boundary adjustments of 1818, and G. P. Garrison's *Westward Expansion* (pages 67-84) the northeastern boundary dispute. Both books are included in A. B. Hart's *American Nation* series. Henry Cabot Lodge's *One Hundred Years of Peace* (pages 68-79) and W. A. Dunning's *The British Empire and the United States* (pages 13-22; 26-32; 88-112) also treat of the Webster-Ashburton Treaty, the text of which is given in William MacDonald's *Select Documents of United States History* (pages 335-43). Perhaps the fullest and best, but certainly one of the longest, accounts of the Treaty and boundary arbitrations of the period may be found in John Basset Moore's great work on *International Arbitration*, Volume I (pages 1-195). It should not be difficult to obtain a good map showing how the Canadian boundary was marked out. W. R. Shepherd's *Historical Atlas* (pages 198-99) may be mentioned in addition to the history texts referred to above.

LORD ASHBURTON

From the portrait painted by Healy in 1843 to commemorate the Webster-Ashburton treaty, now in the Diplomatic Reception Rooms, State Department, Washington

Serious trouble existed between the settlers in the disputed region, which was thinly inhabited and mountainous, but covered with valuable forests. General Scott was sent to restore order and in the meantime it was decided to negotiate directly instead of again resorting to arbitration. The American representative was Daniel Webster, then Secretary of State, who remained in President Tyler's Cabinet after all his colleagues had resigned in order to carry thru the negotiations with Great Britain. The British Government sent Lord Ashburton, an able and prominent statesman. In August, 1842, an agreement was reached. A compromise line was drawn which gave the Americans more than half of the disputed area, but less than they would have had if they had accepted the decision of the Netherlands eleven years before. Other and less important boundary adjustments were made at the same time. New Hampshire was allowed a little territory north of the forty-fifth parallel of latitude and the boundary to the Lake of the Woods was more exactly defined. The United States had to pay a sum of money to the states of Maine and Massachusetts (before 1820 Maine had been part of Massachusetts) to make them willing to abide by the treaty. This common-sense compromise was agreed to by both nations and the way was left open to settle the remaining question of the ownership of the Oregon country. East of the Rockies the frontier of peace was settled and complete.

# TO THE GOOD SHEPHERD

BY LOUIS F. BENSON

Not of this fold, Thine other sheep obey Thee,  
And follow on by paths we do not know,  
Out in the world, in other worlds, it may be,  
Which God can find, and where His free winds blow.

Free blow His winds, altho our path is narrow;  
Warm shines His sun, altho our hearts are cold;  
His heavens aid the fall of every sparrow;  
And all Thy sheep, O Christ, may find a fold.

One Shepherd's voice, on hills where dusk is falling!  
One flock beneath the sunlight and the star!  
If any sheep has wandered from Thy calling,  
I pray Thee, Christ, it wander not too far.

So many folds! So many sheep-bells chiming!  
One fold at last; one Shepherd evermore!  
And some that hardly know Thy voice are climbing  
To enter in, O Christ, the Open Door.

## JESUS THE CHRIST

WHAT I BELIEVE AND WHY—TWENTY-SECOND PAPER

BY WILLIAM HAYES WARD

**T**HE old question, "Who do men say that the Son of Man is?" now is asked as earnestly as in the days when he went about teaching and healing; and however the answers may vary, so deep and wide has been his influence that there are few who cannot accept Peter's confession, "Thou art the Christ, the Son of the living God." Who need measure his words when acknowledging the mightiest power that has ever moved the world?

Peter did not know what the words meant to which he was giving his assent. What was it to be the Christ, the Messiah? He thought it was to be a lordly ruler over freed Israel, or even over the subject Roman Empire and the whole earth; he had to learn that it meant for him and his Master crucifixion and "content with death and shame," for his kingdom was not of this world. But thru the centuries that have passed, and to the end of time, no badge of honor fails to yield place to the cross of the Christ. Jesus is the world's Messiah.

### WHAT DO WE KNOW OF JESUS?

Yet all we know of the life and death and resurrection of Christ is what was written in four short biographies, of which three repeat much, and the fourth is not so much a history as an exposition. The three are made up of various jottings and memoranda written first from memory of incidents and discourses, such as were repeated in meetings of the early Christians, collected in no such critical way as a modern scholar would write a biography, but compiled with all honesty and with all reverence as well as the authors could do it, a generation or more after the death of our Lord. Luke says he had many written sources, as doubtless had Matthew, and perhaps Mark, who must have heard

Peter tell what his Master said and did. Of these three Gospels Mark is the oldest, and comes nearest to the primitive tradition; while in a half century more or less before the Gospels of Matthew and Luke were compiled there had been time for accretions and embellishments to have grown up on the simple but wonderful story of the life of Jesus. Paul does not seem to have known anything of any of our present four Gospels. Pious invention added other stories to the life of Christ, some of which we have in apocryphal Gospels never accepted in the Canon, but which illustrate the growth of myths which always form an accretion about the life of a hero. So we have the story of Washington and the cherry tree, and in late days a cycle of miracles has sprung up around the founder of the Babist sect.

Of the teachings of Jesus as variously reported in the Synoptic Gospels nothing need be said beyond what I have already said, that the world has accepted them as the new revelation of God as love, and of love to all humanity as the highest expression of duty, as against all the ethical systems that make self-culture the chief duty. The Emperor Julian, who knew Christianity and rejected it, said in his Oration to the Cynics, "The end and aim of the Cynic philosophy and of all other philosophies is happiness, along the line of one's nature." Such, he tells us, is the definition of happiness for the gods, that they fulfil their own nature, and make the most of themselves. The Christian ethics requires us to value others as much as ourselves, and so to sacrifice ourselves for others, thus making justice to our fellow men insufficient and making overflowing love supreme. The teaching of Jesus is again new and supreme in religion in that it places no value on service of the hand or

mouth, but only on the worship of the heart. Religion is solely spiritual. This is the new ethics and the new religion which Jesus brought in his teaching, and beyond which we have not gone, and, so far as we can see, never can go. All this is to be accepted beyond doubt. We can judge of it. We are capable of judging, for the evidence is in ourselves; we respond to it.

### HOW SHOULD WE REGARD MIRACLES?

But as we read the Gospels the case cannot be the same as to the biography and history they have compiled. They have to be tested by the best critical judgment we have, and no other subject in all literary history has attracted so many scholars. It is a proper subject whatever our view as to inspiration, for our view of inspiration must depend on what we first conclude as to the veracity of the reports of the acts of our Lord, and especially as to the miracles related about him. The evidence as to their truth we are obliged to sift, for it is not such as we would accept now as related to some modern teacher or claimant. It is the reports coming we do not know from whom and gathered by quite uncritical compilers who differ on many minor and some major matters. I have heard it often said that Jesus was so wonderful a teacher that his divine teaching accredits his miracles. But that is a topsy-turvy argument. The purpose of the miracle is to accredit the teacher; not of the teacher to accredit the miracle.

I am not conscious of any pre-judgment against miracles. I have been taught to believe in them and have accepted them, certainly some of them, but I admit that my faith in them is less than it was; partly because the evidence for those of the Old Testament is so weak, and the proof for those of the New Testa-

ment by no means such as we might desire for evidential purposes; and partly because they have become of much less evidential value since burden of proof is now required to support the miracles and not the teaching. Indeed, the miracles have come to be a weakness rather than a strength. Of one miracle this is not true, the miracle of the resurrection of our Lord. If that can be depended upon it is of very great help in supporting the teaching of our Lord as to the future state.

#### MIRACLES TODAY

And yet I find in myself a growing hesitation about accepting second-hand witnesses to the miracles of the New Testament. I believe no man living has ever seen a genuine miracle. I do not believe that any one has seen a miracle since the days of the Apostles. A multitude are reported every year: miracles are cheap; but yet we do not believe in them. We believe the laws of nature are not transcended. Are the stories true told of miracles in Christ's day? Not one of the writers of the New Testament claims ever to have seen a miracle. The Matthew Gospel is said to have been based on an Aramaic writing by the Apostle Matthew, but that is lost. Mark was not an eye-witness, nor Luke. We do not know who wrote the Fourth Gospel, John the Apostle or John the Presbyter, or some one else; but it is a didactic work rather than a biography, written to magnify Jesus as the Son of God. The nearest we have to an assured eye-witness is found in the first verse of the First Epistle of John, if that was written by the Apostle, which says: "That which was from the beginning, that which we have heard, that which we have seen with our eyes, that which we beheld and our hands have handled, concerning the Word [or word] of life (and the life was manifested, and we have seen and bear witness, and declare unto you the life, the eternal life, which was with the Father and was manifested unto us); that which we have seen and heard declare we unto you also, that ye also may have fellowship with us; yea, and our fellowship is with the Father and his Son Jesus Christ." And he goes on to say that "the message we have heard from him" is "that God is light" and that we should not "walk in the darkness." There is not in the whole Epistle one reference to a miracle, not even to the Resurrection, only to abiding in God. But it is by no means agreed that the Epistle was written by John the Apostle, and there is serious reason to believe that

the First Epistle of Peter, which does plainly mention the miracle of the Resurrection, was not written by the Apostle.

#### THE MIRACLES OF HEALING

The Gospel miracles are those of healing, the Virgin Birth, and the Resurrection. One might as well deny that Christ lived at all as to deny that he was a healer. There is no intrinsic improbability in the statements that he healed the sick. We have had healers in every generation, followed by thousands, multitudes of whom declared they had been healed from real diseases; and as old pagan shrines were crowded with effigies of portions of the body healed by prayers and vows to the gods, so the walls of churches have been covered with crutches and trusses thrown away by invalids who follow some Zionist healer or popular saint. But the diseases cured are usually those caused by a nervous breakdown, for the cure of which faith has a marvelous power. Such were many of the diseases healed by our Lord, who required faith of his invalids; and where there was little faith, as in his own city of Nazareth, we are told that he could not do many mighty works there. But this explanation will not hold in cases of leprosy, nor in those born blind, nor those raised from the dead. Either those were genuine miracles or they were legends that had grown up during the generation or more after our Lord's death before the Gospels were composed. It is the most natural thing in the world that such myths should arise. We know of legends not incorporated in the Gospels, such as that of the Infancy, which reports Jesus at play as a child, making sparrows of clay, while the sparrows made by his companions remained clay, but those made by the boy Jesus took wing and flew away. We reject the miracle at once as too puerile, under the Horatian literary rule not to have a god intervene unless the occasion is worthy; and this is not worthy; and for this same reason I would reject the Old Testament miracle of the borrowed ax that was made to swim.

If a multitude of stories and legends were likely to grow up in the first half century about the wonderful teacher and healer, as we know was the case during the first century, and if, even, as in the Gospel of John, religious teaching could be told in the form of miracle stories, it may well be that stranger miracles than those really performed thru an act of faith should have been included in the three Gospels, such as those of

the raising of the dead. Faith, we all know, will work wonderful miracles of healing, and, in a community which easily believes, tales of wonder grow as easily. I must hold—I cannot help it if I would—that it is our duty, seeking truth, to sift the evidence and sift the miracles, with this assurance, that for us the miracles are not needed to support our faith in the teachings of Jesus Christ as to duty toward God and man. The teachings of our Lord justify and prove themselves. We cannot go back on them; but, granting conduct to be pleasing to God, whatever conclusion we honestly reach on matters of history or philosophy, be we wise or ignorant, we shall still abide in the tabernacle of his love.

#### THE VIRGIN BIRTH

The miracle of the Virgin Birth requires separate consideration, for much more is made of it now than was made by the Apostolic Church. It is not mentioned in the Gospel of Mark, but is added in the later Gospels of Matthew and Luke. Nowhere else is it referred to in the Bible. Paul never refers to it to the special glory of Jesus as the Son of God, nor does the author of Hebrews. If they did not know of it, or did not find it an important doctrine, I do not see how it is important for us. Indeed, God could beyond question as easily have put the fulness of his spirit into Jesus having a human father as into Jesus with only a human mother. If he had no human father that could be known only to Mary herself and could in no way be proved, and it certainly was not known to the people of Nazareth, who believed him to be the son of Joseph; and it is strange that Mark does not tell so astonishing a thing in his Gospel. The story told in Matthew and developed in Luke looks to me like a beautiful embellishment of the Gospel story, conceived to give the additional honor which seemed to the writers to be properly due to the Messiah, and suggested by the prophecy, "A virgin shall conceive and bear a son," which had no such meaning as was put upon it, but which, under the very loose Jewish way of exegesis, and applied to Jesus, might require him to be born of a virgin. But it would seem that the story of birth without human fatherhood, tho unfamiliar to Hebrew thought, was familiar to Greek fable, which had multitudes of heroes begotten by the gods of human maidens, and I cannot deny that, exquisite as the story is and ever dear as it will be to us, it represents a pagan view, and, while meant to honor Jesus and Mary, it

does not honor God. Yet I do not want to lose it any more than I want to lose the sublime story in Genesis of the creation of the world in six days, with its sabbath rest.

#### THE RESURRECTION AND ASCENSION

The final miracle of Christ is that of the Resurrection and Ascension. Unlike the Infancy story, we have the fullest evidence from the earliest records known to us that the resurrection of Jesus from the dead was universally accepted as a fact by the Church. On it Paul based his ministry. To be sure he had had a spiritual vision of the risen Christ and regarded himself as a witness; but he also knew and believed in the resurrection on the third day, and he tells the whole story in a sort of confession of faith, "that Christ died for our sins according to the Scriptures; and that he was buried; and that he hath been raised on the third day according to the Scriptures; and that he appeared to Cephas; then to the twelve; then he appeared unto above five hundred brethren at once, of whom the greater part remain until now, but some are fallen asleep; then he appeared to James; then to all the Apostles; then last of all, as to one born out of due time, he appeared to me also." What Paul believed they all believed. Again and again in his Epistles he mentions Christ's resurrection from the dead, and bases on it the whole weight of his ministry. If Christ be not risen Paul's whole life is a blunder; and when he attacks those who say the dead rise not, he bases his argument on the acknowledged fact of Christ's resurrection. The repeated appearances of our Lord after his death are his argument, they being accepted facts of general knowledge among the believers. So this miracle of our Lord's resurrection from the grave has vastly more evidence than any or all other miracles in the Bible. I cannot easily explain why the total Church should have accepted this belief if it were not true. To be sure, if there were not so many witnesses, a myth might have arisen out of the willingness to find a prophecy of Hosea fulfilled, "After two days will he revive us; on the third day he will raise us up and we shall live before him"; or we may recall the statement of the Jews that the disciples might enter into a conspiracy of deceit. But that seems improbable and at the time hopeless.

If one refuses to accept a miracle as in the course of nature impossible, some explanation of the origin of the myth can be conjured up, even to the assumption of an American and one or two German scholars, that no

such person as Jesus ever lived, and that the whole story of his life and death is a colossal delusion. But this last is past belief; and, with the evidence at hand, it is easier—apart from the antecedent denial of any possible miracle—to believe that Jesus did rise from the dead than that so many witnesses were deceived by an imagined apparition, or that they invented the story to their own sure persecution and death. I do not say that it is finally and absolutely proved that Jesus arose from the dead in such a form that he could be seen and recognized, but no hypothesis otherwise to explain the fact that the belief was universal in the Church immediately after his death and was attested by so many witnesses seems to me plausible. For his faith in this miracle Peter died. I recognize that the acceptance of this one stupendous miracle makes other miracles, otherwise insufficiently substantiated, considerably more credible; but that is all. I also recognize that my satisfaction in accepting our Lord's resurrection as being, as Paul says, the assurance and first-fruits of our resurrection into immortality, may possibly warp my conclusion in its favor; but it surely is not my conscious desire to let my wishes guide my conclusion. This I say, that if the evidence appears to lead to the belief that Jesus did rise from the dead, and did appear to the Twelve and to many others, then I am glad; but yet the disbelief would not, whatever Paul's hasty language allows, affect the obligation of our conduct to obey the rules and life of the Christian religion which Jesus promulgated, obeyed, and imposed on his Disciples and now on all of us.

#### THE SON OF MAN

What, then, am I to think of Jesus? He called himself the Son of Man, and he allowed his Disciples to regard him as the promised Messiah. They called him the Son of God, and John's Gospel says that in Jesus the Logos, the Word, which was in the beginning with God, which made the worlds, was made flesh in the person of Jesus Christ; and as such the Christian Church generally worships him. He, Jesus, son of Mary, man like us, is, say the ancient creeds which we repeat, the very God in one of the three Persons.

I cannot see that it is essential, or even important, that we should believe this doctrine, that the fulness of the Godhead was incorporated with the human person of Jesus Christ. I do see that it is difficult to understand how man and God can be thus unified, but that difficulty is of little

account, for we can know little of God's essence, except that he is a spirit, even as we can know little of the essence of our own spirits. Nor am I clear that the author of the Fourth Gospel meant to make Jesus the Second Person in the Trinity; and if he did mean it I find no reason for believing that he knew anything more about it than we can know. It appears to me that only God knows, and he has given us no statement on the subject. Any belief or disbelief is a deduction of reason, or an hypothesis devised to account for the facts.

#### PHILO'S NOMENCLATURE

What does the Fourth Gospel say? That in the beginning was the Logos, the Word with God. Now this is just what in the eighth chapter of Proverbs is said of Wisdom, which is there nothing more than a personified attribute of God. It was "before his works of old"; it was with him "when he established the heavens"; "when he made firm the skies above"; ever "by him as a master workman." Philo of Alexandria added to this personification a tincture of Greek philosophy. To him and to the Jews who held the name of God too sacred to be spoken with the lips, there was needed an intermediary for the Infinite One, one by whom all things could be made, and Philo translated the Hebrew Wisdom into the Greek Logos, Word, and gave it entity, no longer abstract Wisdom but Jehovah's substantial substitute creator, who operates for him, for "by the Word of Jehovah were the heavens made, and all the host of them by the *breath* (Spirit) of his master." Here the "Word" is the Spirit, and in Jewish interpretation easily separated by Philo from God himself. Philo's great effort was to relate Greek philosophy, Platonic and Stoic, to the Bible. He had the idea that the self-existent Jehovah, the "Am that I Am" is too transcendent and sublime a being to mix with matter, and so God created the world and rules it by his other self, his Logos, Word. The expression is Greek, and comes down thru Heraclitus and Plato and Zeno and the Neo-Platonists to Philo, who found the Word as well as Wisdom in the Bible. God needed an intermediary. He made the designs, the patterns, the "ideas" of things, and the Word fashioned them. This Logos Philo calls "the tool, the instrument of God."

Alexandrian ideas, including those of Philo, were rife among the Jews of the first century, and among the Jewish Christians. Apollon was from Alexandria, and like Philo, was "mighty in the Scriptures," and

# Will the Boss Send for YOU

## When that Better Job is Open?

Will he offer *YOU* the job that means better pay in the kind of work you *like to do*?

You'd better have an understanding with yourself on this matter *right now!* You simply can't expect to *earn* more until you *learn* more. The boss will want a *trained* man for the better job. He won't want *you* unless you have the *training*.

For more than 23 years the International Correspondence Schools have been training men to *get and hold* better jobs.

Thousands of men of all ages and occupations have profited by I. C. S. courses in spare hour study. Without loss of time or wages and at small expense, they have obtained the *special training* that has enabled them to make good in the job that was worth while

Why not let the I. C. S. help you, too?  
Be ready when opportunity knocks.

Construction Bond is made in white and eight attractive colors, in various finishes, with Envelopes to Match.

## The Lesson the War Has Taught U. S.

Here's the real truth the European War has forced home on us—that **America must become more self-sustaining.** She must make her products instead of buying them. She must build up American industry instead of drawing her materials from abroad. She must make American business safer—more stable. The only way she can do it is by using products that are made in America of American material. That's why so many far-sighted business men have been insisting upon

## Construction Bond

Construction Bond has always been made of bright, clean clippings collected from American garment factories by American industry. Many bond papers have been made of imported rags collected from the tenements of Europe. Such rags are cheaper, but which do you prefer to have your letterheads made of?

While war has curtailed the importation of rags, and many makers of bond paper are shifting about for new sources of supply, the manufacture of Construction Bond has gone right ahead without changes in formula or finish. That's why the quality and uniformity of Construction Bond is being maintained in spite of the war. That's why it offers even better comparative value now than ever before.

Construction Bond has long been known as the standard of value in business correspondence paper. It is a substantial and impressive paper, sold only in large quantities direct to the most capable and responsible printers and lithographers in the 190 principal cities of the United States—not through jobbers. Obviously, by eliminating the jobber and buying in large quantities, those concerns who handle Construction Bond are able to give you better value in impressive business stationery.

Write us today on your letterhead for names of those concerns near you. Also for 25 handsome letterhead specimens that may offer valuable suggestions for the improvement of your own business stationery.

doubtless in the same allegorizing way which we find in Hebrews.

#### THE WORD AND THE TRINITY

The first verses of the Fourth Gospel tell us that the Word was in the beginning with God, and was God, and by him were all things made. This is no more than was said of Wisdom in Proverbs and the apocryphal Wisdom literature, and no more than what Philo taught of the Word. We are then told that the true light came into the world, and that he made the world. Then the true light must be the same as the Word. This true light, the world rejected. Then we are told that "the Word was made flesh and dwelt (tabernacled) among us, and we beheld his glory, glory as of the only begotten of the Father, full of grace and truth." Here the Word of Philo is said to have been incarnated in Jesus, and to have "tabernacled" among men with a divine glory. I cannot see in this the teaching that Jesus was the Second Person in the Trinity, but simply that he had in him the Spirit of God, called here the Word of God, in a way far superior to that in which it was exhibited in John the Baptist, a way that was unique, as was expected, in the Messiah. The writer of the Gospel, in his purpose to show that Jesus was "the Messiah, the Son of the living God," made use of current philosophy, half Jewish, half Greek, to express his view of the greatness of our Lord.

#### A MESSENGER FROM GOD

The other passage from which most directly the doctrine of Jesus as the Second Person in the Trinity is derived, is the baptismal formula at the end of Matthew's Gospel. The Disciples are bidden to baptize "into the name of the Father and the Son and the Holy Ghost." I observe that these parting words of Jesus are not found in any of the other Gospels; but they surely represent what was a belief from the beginning in the supreme primacy of Jesus among men, as the Messiah, and as possessing a fulness of the Spirit of God making him the one special messenger from God of truth and light.

When the Gospels of Matthew and John had been accepted as Sacred Scripture, as binding and as full of meaning as the Old Testament had come to be, it was easy to draw from these and other passages the conclusion that Jesus was the very God, God and man mysteriously united in one; and, indeed, the doctrine could hardly help following; and it was early supported by intentional corruptions of the text, as when in I Tim. 3:16 the confession of faith in Jesus, "He who was manifested in the flesh," was by a dot in and a cross-line over an O made to read "God was manifested in the flesh." I can see the Spirit of God preëminently in Jesus, but whether the doctrine of Three in One is true I have no means of knowing. God knows, and that knowledge it is not important that I should possess. Only goodness is really essential as taught by our Lord, for "grace and truth come by Jesus Christ," and "of his fulness we have all received."

# The New Books

## A NEW WAR BOOK EVERY DAY

**A** BIBLIOGRAPHY of the Napoleonic wars which the compiler, a German scholar, modestly admits to be incomplete, lists 80,000 works relating to that period. The Great War will doubtless prove to be as important a crisis in the history of the world as that of a hundred years before and its literature is likely to be still more extensive, to judge by the fact that books on the subject are now coming out at the rate of one a day. Of course a true history of the war cannot be written for fifty years yet. Historians have only recently begun to get a real understanding of the causes of the war of 1870-71, thru the publication of memoirs and diplomatic correspondence.

The American people have been diligent readers of the official documents issued by the various governments, but they have not always sufficiently realized the unreliability of such sources, considered by themselves. A diplomatic document may tell the truth, but it does not tell the whole truth and many important agreements are not put upon paper at all. For instance, M. P. Price shows in his *Diplomatic History of the War* that Sir Edward Grey had put England under moral obligation to support France in a war with Germany as early as 1906 and that this understanding had been confirmed in 1912 and was the reason why France withdrew her fleet to the Mediterranean, leaving her north coast to be guarded by the British fleet. Yet this arrangement being "unofficial" Sir Edward Grey was able to state in Parliament as late as March 24, 1913, that "this country is not under any obligation, not public and known to Parliament, which compels it to take part in a war."

The most valuable feature of Price's *Diplomatic History* is the "Diary of Negotiations," in which he shows what correspondence and conversations were going on at the same time in the various countries in so far as this has transpired. He also tells of the military preparations and mobilizations that were being made from day to day in Russia, France, Germany and Austria, but omits Great Britain, presumably on account of the censor. The volume contains the English White Paper, the German Denkschrift, the Austrian White Paper, the Belgian Gray Book, and the Russian Orange Book, but not the French Yellow Book, as this appeared later. The inclusion of the treaties establishing the neutrality of Belgium, the Anglo-French convention of 1904 with the secret clauses which did

# White Dress Materials at McCutcheon's

Reg. Trade Mark

*White Fabrics* will be much in demand this season. Our assortment includes all desirable materials from sheer, transparent mousseline to heavy Skirting Linen. The following are some of our most important lines:

*White Dimities*—Stripes, Checks and Plaids, 25c. to 45c. yard.

*White Piques*—every size cord, 27 to 43 inches wide, 25c. to \$1.25 yard.

*White Madras*—150 styles Plain and Fancy effects, 30c. to 85c. yard.

*Ottoman Cords*—various designs, Skirting weights, 25c. to 75c. yard.

*Check and Stripe Voiles* in most attractive styles, 45c. to \$1.25 yard.

*Embroidered Batiste, Voiles, Organdy, Crepes, St. Gall Swiss in dots*, small figures, Scroll and other larger designs, 50c. to \$3.50 yard.

*French Golfine, Corduroy, Golfo, Gabardine, Heavy Crepes*, etc., 50c. to \$1.75 yard.

## DIVIDENDS

### SOUTHERN PACIFIC COMPANY

#### DIVIDEND NO. 34.

A QUARTERLY DIVIDEND of One Dollar and Fifty Cents (\$1.50) per share on the Capital Stock of this Company has been declared, payable at the Treasurer's Office, No. 165 Broadway, New York, N. Y., on April 1, 1915, to stockholders of record at the close of business Saturday, February 27, 1915. The stock transfer books will not be closed for the payment of this dividend. Cheques will be mailed only to stockholders who have filed permanent dividend orders.

A. K. VAN DEVENTER, Treasurer  
February 11, 1915.

### UNION PACIFIC RAILROAD CO.

The regular Semi-Annual Dividend of \$2.00 per share on the Preferred Stock and the regular Quarterly Dividend of \$2.00 per share on the Common Stock of this Company have this day been declared, payable at the Treasurer's office, 165 Broadway, New York, N. Y., on Thursday, April 1, 1915, to stockholders of record at 3 p. m., on Monday, March 1, 1915.

Stockholders who have not already done so are urgently requested to file dividend mailing orders with the undersigned, from whom blank forms may be had upon application.

FREDERIC V. S. CROSBY, Treasurer  
New York, N. Y., February 11, 1915.

## A NEW DEPARTURE IN EDUCATION

In introducing The Independent into schools thruout the land we have met with only one real difficulty. Teachers generally admit the desirability of some use of current literature and recognize the suitability of The Independent for that purpose, but they do not always know how to go about it. To introduce such an unconventional method of instruction into an established curriculum is not always easy, so it is no wonder that teachers sometimes prefer to wait until convenient methods for use have been worked out elsewhere.

Pamphlet No. 1 of our series of aids to the use of periodical literature in the class room gives the experience of teachers who are using The Independent in college and High School classes in connection with their courses in English, Oral Composition, Public Speaking, Journalism, International Law, Economics, Current History, American Politics and Civil Government.

Pamphlet No. 2 is called "How to Use The Independent in the Teaching of Civics," by Simon J. Jumnefsky, A.B., LL.B., of the Julia Richman High School.

Pamphlet No. 3 is called "How to Use The Independent in the Teaching of English," by Frederick Houk Law, A.M., Ph.D., of the Stuyvesant High School.

This literature is free to any teacher.

Address—W. W. Ferrin, The Independent  
119 West Fortieth Street, New York

## New Books of Authentic Importance

### THE VALLEY OF FEAR *A New Sherlock Holmes Story* By A. Conan Doyle

A full-length Sherlock Holmes novel, half of it laid in America. Holmes's detective genius solving an amazing murder mystery; Dr. Watson and the Baker Street rooms. And throughout a feature which makes this differ from all other tales of Holmes.

Color illustrations by Arthur I. Keller; color jacket. Net \$1.25

### RED FLEECE

By Will Levington Comfort

Marching with the Russian advance are the heroic revolutionists, nursing the sick, urging men to cease firing, risking summary execution. Among them was a white-browed girl who showed to a young American correspondent the crime of war and the glory of love. Literature that stirs with noble life.

Picture jacket in full color. Net \$1.25

### PATHS OF CLORY

By Irvin S. Cobb

Cobb has seen the glory of war, the impressiveness of the big guns, and the German columns, but with eyes of genius he has seen in the solemnity of stilled trenches and villages the horror of war. In these pictures of war which the whole country is discussing is the biggest argument for Peace.

Picture jacket in color. Net \$1.50

### MUSHROOM TOWN

By Oliver Onions

A beautifully different novel. The story of a boom-town, of the coming of mammoth piers and Ferris wheels to a dreaming seashore village, evicting the gulls and the dreams. An epic of the Restless Generation.

Net \$1.25

### HERE'S TO THE DAY!

By Charles Agnew MacLean and Frank Blighton

A thrilling story of the Great War, of Zeppelins, aeroplanes, the mist of gray-clad men, and an American man and girl who were caught in the hopper of death and had to escape with dramatic pluck.

Picture jacket in color. Net \$1.25

### THE WOODEN HORSE

By Hugh Walpole

The first publication in America of one of the most charming novels by the distinguished author of FORTITUDE—a story of the gray cliffs of Cornwall, the haunted moors, and the surprise brought by an unrepentant prodigal.

Net \$1.25

### THE VEILS OF ISIS

By Frank Harris

Stories brilliantly executed, sharply dramatic, with strange and fascinating backgrounds, by the famous author of THE BOMB.

Net \$1.25

### ARUNDEL

By E. F. Benson

With the wit he showed in DODO and a greater vision of the power of love, Mr. Benson tells how Edward, the player of croquet, padded in the cotton wool of comfort, heard the roar of love's flame and saw a miracle.

Picture jacket in color. Net \$1.25

### THE THEATRE OF IDEAS

Henry Arthur Jones

A burlesque on the Peace Movement and on the faddy theatre cults, with three brilliantly dramatic plays, a book essential to all theatre-goers.

Net \$1.00

### JAMES

By W. Dane Bank

The frank story of the business buccaneer. "We hasten to salute a writer of power and insight. The book, brief but pregnant, flashes a life story."—*London Daily Mail*.

Net \$1.25

### THE MAGIC TALE OF HARVANGER AND YOLANDE

By G. P. Baker

A silver-wrought fantasy of mediaeval towers and love's pilgrimage.

End-papers and jacket in color. Net \$1.35

### WHY I AM A SOCIALIST

By Charles Edward Russell

New edition with an important new authoritative chapter: "Socialism and the Great War."

Net \$0.50

### NEIGHBOURS

By Herbert Kaufman

A revelation of the people one forgets in car and home and office.

Net \$0.75

Room 201, 339 Fifth Ave. N. Y. City

not appear until 1911, the Anglo-Russian convention regarding Persia, and quotations from the parliamentary speeches and press correspondence at the outbreak of the war make this volume the most valuable book of reference that has yet been published.

In his consideration of *The Evidence in the Case* James M. Beck, late Attorney General of the United States, takes the part of prosecuting attorney and readily secures from himself as judge a verdict against the defendant Kaiser. As is natural to the legal mind he is concerned chiefly with official documents and pays little attention to the economic and historic forces which are the real and fundamental causes of the war. So while giving Mr. Beck full credit for his eloquence and honest indignation we are unable to agree with the claim of the publishers that "the work will be accepted as belonging to lasting history."

*Britain's Case Against Germany* is equally partizan, since it was written to aid recruiting, but the author, Ramsay Muir, Professor of Modern History in the University of Manchester, gives a more adequate idea of the historical and psychological background of the antagonism between Germany and England. Professor Muir has performed this service better than he realizes, for while he is exposing the German's idea of Germany he is also unconsciously portraying the Englishman's idea of England. It sounds somewhat amusing to the neutral-minded American to hear Great Britain eulogized as *par excellence* the protector and upholder of small states against absorption by great ones, as the persistent opponent of war and the defender of the sanctity of all treaties. One wonders how Great Britain happened to gain possession of a quarter of the whole world.

The apologists of Great Britain are quite right in assuming that their most effective means of gaining public sympathy is to translate what the Germans say of themselves. The volume called *Germany's War Mania* consists of a collection of the most jingoistic utterances to be found, beginning with the speeches of the Kaiser and the Crown Prince. Bernhardt, Clausewitz, Treitschke and von der Goltz are, as usual, the chief writers drawn upon. Houston Chamberlain is, also as usual, omitted, tho he is as extreme and as influential as any. Is this because of his English birth? Of course a similar compilation of extravagant self-esteem and wild ambition could be made from British, French or American sources, altho it is doubtless true that it would not be so philosophically exprest or so unanimously accepted as in the case of Germany.

*Deutschland über Alles* is a similar tho less extensive collection of the expressions of German patriotism since the war began, compiled and analyzed by John Jay Chapman. The author makes no attempt to understand the point of view of the distinguished authors, theologians and scientists who he quotes, but comes to the easy con-

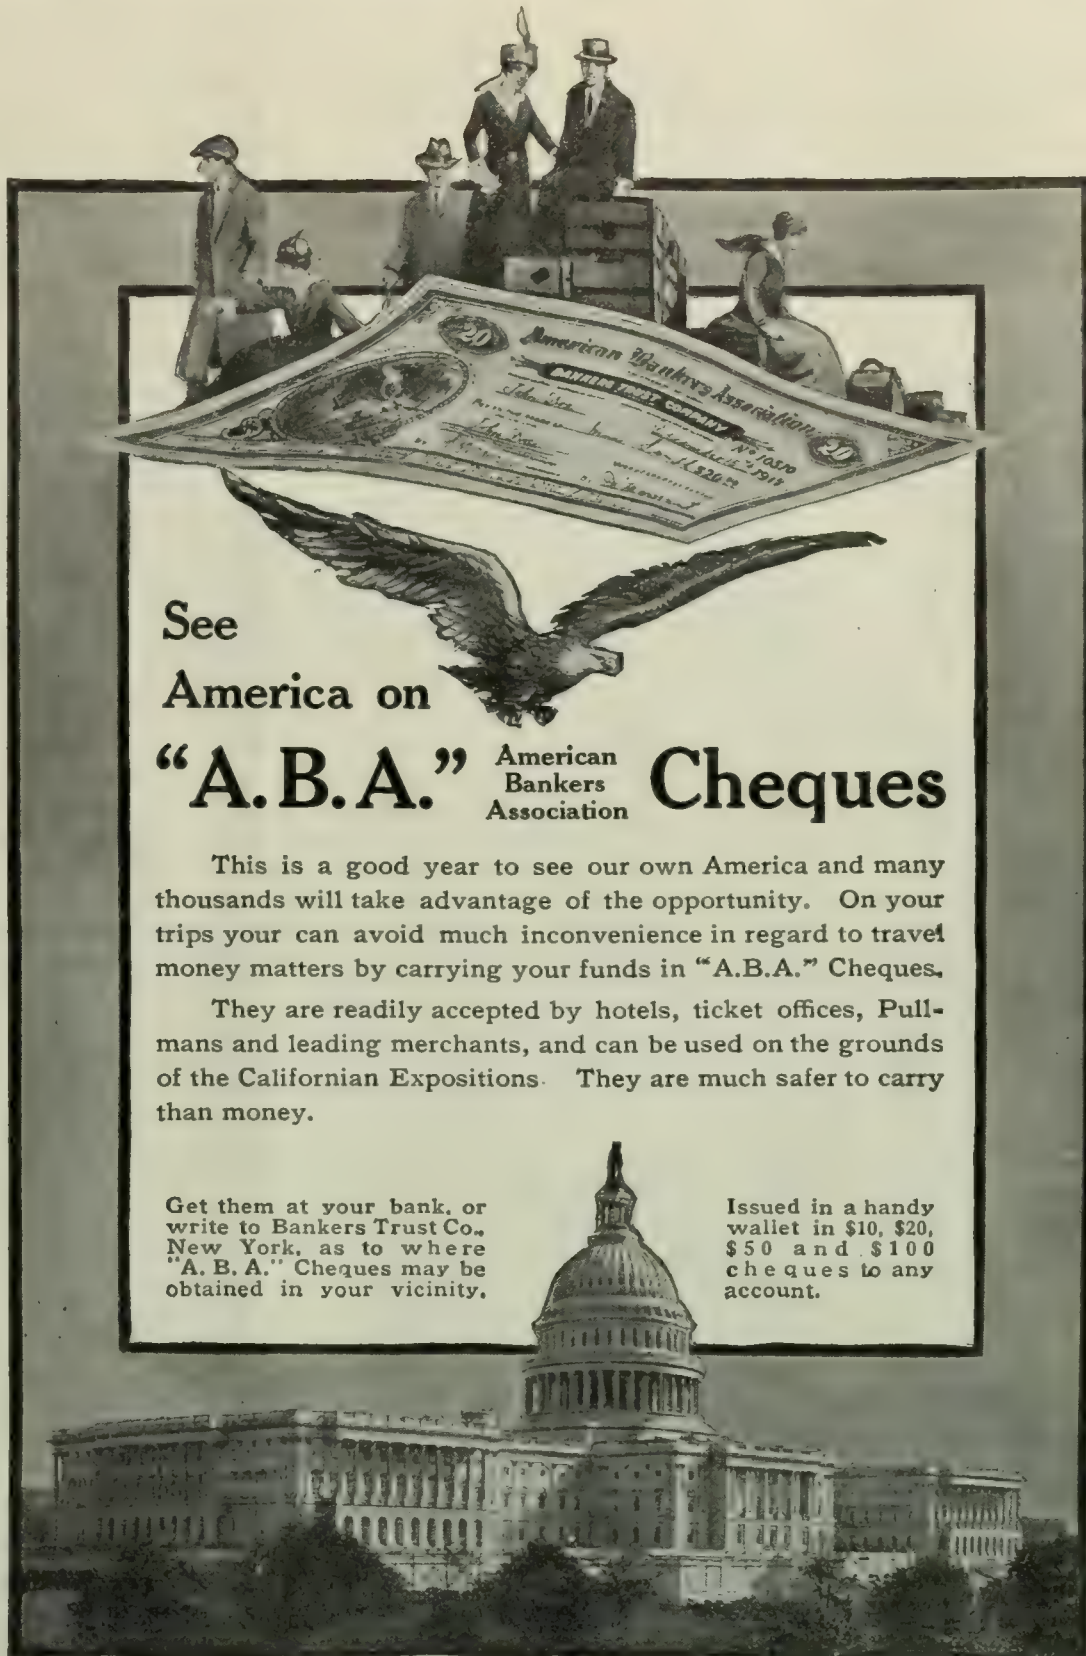

clusion that they are all crazy. Like Cecil Chesterton he appears proud of never having heard before of "Doctor Lenard of Heidelberg." Still, in other circles than those frequented by Mr. Chesterton and Mr. Chapman, the "Lenard rays," for the discovery of which the Nobel prize was awarded, are not altogether unknown.

Our old friend, the creator of the "Dolly Dialogs" and "Dodo," Anthony Hope, who this time adds his last name, Hawkins, denounces in *The New (German) Testament* the doctrines of Bernhardt, Treitschke and the "scrap of paper" with sincere horror and earnest eloquence, but adds nothing new to the controversy.

The next of these polemic pamphlets is of a very different and much more useful kind. In *Germany and Europe*, Mr. Allen, a lecturer in modern history in the University of London, makes an honest and not altogether unsuccessful effort to interpret the German point of view that he then criticizes and condemns. He at least knows that the Germans do not mean by *Kultur* what the English mean by "culture," altho he is not very clear about what the German ideal of civilization is. He very frankly expresses his regret that Sir Edward Grey should have alleged the violation of Belgian neutrality as the reason for England's action instead of stating frankly that England was fighting for France and to crush the German menace. One of the best things in the book is what a French officer said to the author, "No one in West Europe believes any longer in war except the Germans. That is the cause of the war."

A better known historian, Dr. Rose of Cambridge, gives us in *The Origin of the War*, a careful study of the development of the German colonial policy since 1884 and how it came into conflict with British interests in Africa, China, Asia Minor and the Pacific. An hour devoted to a book like this is worth a hundred given to the reading of Bernhardt and diplomatic papers, white, yellow, orange or what not, for these are more misleading than helpful unless one has the necessary knowledge of the historic causes of national tendencies. Dr. Rose knows how to keep his temper even in war time and he looks beyond the battlesmoke to see what can be done to remove the causes of war in the future. We wish he had enlarged upon the interesting suggestion he makes in the final paragraph, that The Hague take on a constructive function and relieve international strain instead of merely trying to prevent a break. Such a tribunal would, he supposes, allow the Germans peaceably to expand into Asia Minor, Mesopotamia and Brazil.

More lively reading, but not so profitable, is *The Prussian Hath Said in His Heart*, by Cecil Chesterton. The editor of *The New Witness* has the dogmatism of his brother, Gilbert K., but not much of his wit. His theory of the war is the common British view: that "the history of Prussia after 1870 was simply the

**See America on "A.B.A." American Bankers Association Cheques**

This is a good year to see our own America and many thousands will take advantage of the opportunity. On your trips you can avoid much inconvenience in regard to travel money matters by carrying your funds in "A.B.A." Cheques.

They are readily accepted by hotels, ticket offices, Pullmans and leading merchants, and can be used on the grounds of the Californian Expositions. They are much safer to carry than money.

Get them at your bank, or write to Bankers Trust Co., New York, as to where "A. B. A." Cheques may be obtained in your vicinity.

Issued in a handy wallet in \$10, \$20, \$50 and \$100 cheques to any account.

history of a whole nation going slowly and systematically mad." The titles of some of the chapters will sufficiently indicate the style and point of view of the volume: "The Great Diabolist," "The Wars of Anti-Christ," "The Worship of the Beast," "The Barbarians," "Thou Shalt Not Suffer a Witch to Live." Mr. Chesterton is a good hater, but it is hard to tell whom he hates the most, Protestants, Pacifists, Germans or Jews. He is introduced in this book by Bernard Shaw, who differs from him in almost every opinion, but likes him nevertheless. And so do we.

It is an unfortunate fate that has set William Harbutt Dawson to writing on *What's Wrong with Germany*, since he has written a dozen volumes to tell what's right with it. His *Evolution of Modern Germany* is the best book we have on the industrial and commercial development of the empire, but his admiration for German achievements in science, organization and social reform has never made him blind to the grave defects of German character and institutions. Consequently in writing now as an "alien enemy" he has little or nothing to take back. As in his former works Mr. Dawson substantiates his assertions by abundant quotation and his wide and long continued reading of German newspapers and books keeps him from the common error of attaching too much importance to one or two conspicuous authors. His discussion of such topics as absolutism, Byzantinism, imperialism, Prussianism, etc., will be enlightening to any reader. His preface is pathetic:

This is the first book upon Germany which I have written without pleasure. It is no light matter for one who has sincerely striven during many of the best years of his life to help forward the reconciliation of two great nations, to have to confess the failure of the effort and aim and to add his own "Vanity of vanities!" to the long and saddening record of disillusionment and disappointment, of unfulfilled hopes and shattered faith. It is wise, however, to face the facts.

*Life in a German Crack Regiment*, by "Baron von Schlicht," is one of the group of muck-raking novels which have appeared in recent years devoted to the exposure of the rottenness of military life. The trouble with them all is that they attempt to prove too much. We are not only expected to believe that German officers are brutal, extravagant, licentious, dissolute and exclusive, but we are also assured that they are ignorant, incompetent, undisciplined and ill-trained. It cannot be accepted as a true picture, even tho the individual cases may be true.

A timely reprint is a new edition of President Schurman's little book on *The Balkan Wars of 1912-13*. As the author points out in the new preface the present war arose directly out of these conflicts and can only be understood by those who have some knowledge of the Balkan question.

Finally—for we must stop here altho our five-foot shelf of war books is not yet empty—we should mention that the Library of Congress has published a classified list of references to books and

periodical articles on *Europe and International Politics* in relation to the present issues and that the American Association for International Conciliation is issuing for gratis distribution the diplomatic correspondence under the title of *Documents Regarding the European War*.

*Diplomatic History of the War*, by M. P. Price. New York: Chas. Scribner's Sons. \$1.

*The Evidence in the Case*, by James M. Beck. New York: G. P. Putnam's Sons. \$1.

## THE EARTH AS A WHOLE

A translation from the French of Professor Alphonse Berget's *The Earth; Its Life and Death* gives conveniently into one volume knowledge as to the formation, movements, and history of the globe that ordinarily is to be found scattered in geologies, geographies and astronomies. The discussion of magnetic and seismic phenomena is especially full.

Putnam. \$1.75 net.

## DEMOS EMERGENT

In calling his book *The Rise of the Working Class* the Rev. Algernon Sidney Crapsey does not seek to give the impression that the working class has completed its rise; he wishes merely to call attention to the reasons why it must rise, and to the fact that it is actually on the way. The thirteen very readable chapters retell the story of the social revolution with clearness and with earnestness. Particularly interesting is the contrast of the religion, morality, politics and the philosophy of the working class with the corresponding adjuncts who consider themselves "society."

The Century Co. \$1.30 net.

## A GREAT BENEFACTION

Probably there never has been bestowed on any public a greater musical benefaction than that of Major Henry Lee Higginson in founding, supporting and providing for the permanent maintenance of the Boston Symphony Orchestra, which has now been in existence for a third of a century and in that time, besides elevating Boston, has greatly advanced the cause of good music thruout the United States. Coincidentally with Major Higginson's completion of his eightieth year there appears a straightforward and highly interesting historical sketch of the *Boston Symphony Orchestra* by M. A. DeWolfe Howe, which many music lovers in other towns as well as in Boston will be glad to have.

Houghton Mifflin Co. \$2.

SUMMER

IN

JAPAN

(Shorter Japan Tour)

- July 3
- San Francisco; S.S. "Korea," American flag.
- 9
- Honolulu; our Pacific Capital; ride about the city.
- 20
- Yokohama; the gateway; "Rickshas" everywhere.
- 21
- Tokyo; Tomb - temples of the Shoguns, flower festivals, museum, Palace. The Metropolis of Japan and its capital since 1868.
- 22
- Nikko; Tombs of the great Shoguns, charming location.
- 23
- Kamakura; the great bronze Buddha.
- 24
- Enoshima.
- 25
- Miyanoshta; famous views of Fuji Lake Hakone.
- 26
- Nagoya; Palace of Shoguns, Famous Castle.
- 27
- Yamada; beautiful shrine by the sea.
- 28
- Nara; capital during Japan's Golden Age.
- 29
- Kyoto; capital for a thousand years. Beautiful location. Excursions to Lake Biwa and the Arashiyama.
- 30
- Osaka; busy modern Japanese city.
- 31
- Miyajima; sacred island of great beauty. Water Torii.
- Aug. 1
- Nagasaki; embark on "Korea."
- 2
- The Inland Sea; enchanting.
- 3
- Kobe; A day in this great Japanese port.
- 4
- Yokohama; last day in Japan.
- 5
- Honolulu; second visit.
- 6
- San Francisco.

PRICE \$525

NOTE:  
This tour is also offered in Spring, late Summer and Autumn, sailing by same line, as below: March 27, July 31, August 28, September 18.  
Send for special announcement.

FUJI-SAN

*"The Honorable Fuji," Fuji, the Sacred Mountain, dominates the landscape of Central Japan. Its perfect cone, usually snow covered and often seeming literally to float in the sky, rises 12,300 feet above the sea. Its long, flowing lines of perfect symmetry rise from the very shores of the sea through rice fields and stretches of cultivated land, through bamboo and pine forests, unbroken to the very summit. Fuji is unique even in picturesque, mountainous Japan.*

CHAUTAUQUA ORIENTAL EXTENSION

Three seasons of Chautauqua Travel Extension courses have abundantly demonstrated the need of them and their advantages. Under the able leadership of Dr. Willard and Dr. Powers they have been increasingly popular. They are true Chautauqua extensions. They combine the advantages of scholarly interpretation with the inspiration that can come only from personal acquaintance with the things that through the ages men have counted worthy.

We are glad to announce that the series need not be interrupted this year. The awful struggle in Europe bars us from the fields where we chose first to wander, but the way lies open in another direction where peace reigns, where both Nature and Man invite us, where the Present fascinates, where the Past, rich in art and story, has left full treasures for our enjoyment.

The call of the East is clear and plain. It is the "Far East" no longer, for the journey westward to the coast, which so many will take in any case, brings us almost to its door. The summer in Japan this year costs no more than an ordinary trip to Europe. The great boats of the Pacific Mail Line, flying the American flag, take us out and back in luxury.

There are two grades of steamships in the Pacific service, both rated "first class," but differing radically in size, speed and accommodations. The

smaller boats, naturally much less expensive, are generally included in tours whose prices compare with that of the Chautauqua Extension. We shall make both voyages on the "Korea," one of the "Big Four" of the Pacific Mail Line.

Hotel accommodations in Japan will be the best the land affords, and that means very good indeed. The Japanese have mastered the problem of catering to occidental taste without losing oriental charm and novelty. The railroads of Japan are excellently managed, and with a high standard of comfort. Only first class rail accommodations will be used. This is another indication of the fact that every attention will be paid to physical comfort.

Yet with all this, the plan might still fall far short of the Chautauqua standard. The chief distinction of this tour, as of all tours under the management of the Bureau of University Travel, lies in the character of its leadership. Dr. H. H. Powers, President of the Bureau, will again take personal charge of the Chautauqua Extension Tour. Through his books, his many seasons at Chautauqua, and his signal triumph with last season's tour in the face of tremendous obstacles, he is well-known to thousands of Chautauquans to whom the thought of his inspiring leadership will be one of the great inducements to adopt this plan for the coming summer.

# An Old Man at Fifty —A Young Man at Seventy

The Remarkable Story of Sanford Bennett, a San Francisco Business Man, Who Has Solved the Problem of Prolonging Youth

By C. E. WILLIAMS

THERE is no longer any occasion to go hunting for the Spring of Eternal Youth. What Ponce de Leon failed to discover in his world-famous mission, ages ago, has been brought to light right here in staid, prosaic America, by Sanford Bennett, a San Francisco business man. He can prove it, too, right in his own person.

At 50 he was partially bald. Today he has a thick head of hair, although it is white. At 50 his eyes were weak. Today they are as strong as when he was a child. At 50 he was a worn-out, broken-down, old man. Today he is in perfect health, a good deal of an athlete and as young as the average man of 35.

All this he has accomplished by some very simple and gentle exercises which he practises for about ten minutes before arising in the morning. Yes, the exercises are taken in bed, peculiar as this may seem.

As Mr. Bennett explains, his case was not one of preserving good health, but one of rejuvenating a weak middle-aged body into a robust old one, and he says what he has accomplished, anyone can accomplish by the application of the same methods, and so it would seem. All of which puts the Dr. Osler theory to shame.

I haven't room in this article to go into a lengthy description of Mr. Bennett's methods for the restoration of youth and the prevention of old age. All of this he tells himself in a book which he has written, entitled "Old Age—Its Cause and Preven-

tion." This book is a complete history of himself and his experiences, and contains complete instructions for those who wish to put his health and youth-building methods to their own use. It is a wonderful book. It is a book that every man and woman who is desirous of remaining young after passing the fiftieth, sixtieth, seventieth, and, as Mr. Bennett firmly believes, the one hundredth milestone of life, should read.

For the purpose of spreading broadcast the methods of promoting health and longevity developed by Mr. Bennett, an interesting eight-page booklet, which is in effect a summary of his system, has been prepared by the publishers of Mr. Bennett's interesting book—the Physical Culture Publishing Company, 3402 Flatiron Building, New York City.

This booklet they will send free to anyone sufficiently interested to write for it.

The grandest thing in the world is Youth, and it is one of

the really great hardships of life that "its beauteous morn" should pass so swiftly and give place to old age.

For having solved the problem of prolonging youth during life, the world owes Sanford Bennett a vote of thanks. Of course there are those who will scoff at the idea, but the real wise men and women among those who hear of Sanford Bennett and his return to youth, will most certainly investigate further, and at least acquire a knowledge of his methods.—*Advertisement.*

## Independent Opinions

AS IT MIGHT HAVE BEEN—AND  
MAY BE

In our leading editorial of October 26, "Looking Backward in 1920," we suggested that the war might have been averted if some liberal minded Chancellor of Germany had encouraged the racial aspirations of the Alsations, Poles, Bosnians, Finns and Persians and formed them into a Central European Confederation. The idea received favorable comment in this country and we are pleased to see that even in Germany it is considered worthy of serious attention. *Kunstwart*, one of the leading periodicals of Munich, reprints it entire in an admirable translation and adds the following comment:

Chancellor Schmidt of Jena is a good American: very, very well-disposed and intent upon Pan-America, but when he speaks of our affairs, a decided humorist. For example, what a jest it seems to the student acquainted with the state of affairs, that the Slavs in Austria should strive for an equal footing with the Germans, whereas in reality the Germans need to catch up with the Slavs! It is too bad that we did not also hear how Sir Edward Grey of the British Empire stood in regard to the invincible might of the Central European Confederation. We conjecture that he would do what he has done, not only in the actual year 1914 but in previous years as well: he would have opposed all plans for such a league with every possible means.

But what Chancellor ex-Professor Schmidt had neglected perhaps President ex-Professor Wilson might achieve if things will go so well as our worthy American thinks. Could he not make the Irish nation, plundered by Great Britain and driven to America by tens of thousands, an "independent, neutral state" in Europe? To be sure, we don't know how, but the father of Chancellor Schmidt knows it all right. Could he give back their independence to the Boer republics of the Transvaal and Orange Free State, which Kitchener conquered with the sacrifice of thousands of Boer women and children in the concentration camps? Could he again restore Egypt, which was stolen by England under a breach of international law, to its Khedive and to itself? Could he free India where England has waded in blood? Could he restore Gibraltar to Spain, Malta to Italy, Cyprus to Turkey, Canada, Guiana, etc., to the American Confederation? Should not what is right for Germany be right for England, too?

And now, seriously, the heart of this Utopia, the Confederation of Central Europe, resting upon mutual respect and recognition of national independence, is a valuable idea. Certainly it is not a new one to us Germans. It has for a long time been thought about in many German heads. Perhaps the logic and force of events will undertake the rôle of Chancellor Schmidt. Hitherto Chancellor Schmidt would have been shipwrecked on an obstacle of which our American does not speak: on the English anxiety about the German competition with its trade and its power which has debased the "champion of free civilization" to an alliance with the most dangerous foe of freedom and civilization, for which credulous Americans even today see in England the protector.

The suggestion that President Wilson might carry out the program of our fictitious "Chancellor Schmidt" is an interesting one, but hardly practical. We Americans have troubles enough of our own. As for the criticisms of *Kunstwart* we will explain that our plan was for the purpose, not of rectifying the wrongs of the past, but of providing for the needs of the future. To give back lands to the people who happen to live now in the countries which once owned them would be impossible and in most cases undesirable. We have, for instance, no intention of moving back to Europe in order to leave America to the Indians, for they took this country with as little legal right as we and made much less use of it. To restore the old boundaries of Europe to the lines they occupied in the nineteenth, eighteenth, seventeenth, sixteenth or any previous century would make a bad matters worse. What is needed is a plan of sufficient elasticity to allow for the rise of new nationalities such as the Serbian and the expansion of old nationalities such as the German. Unless this be done wars are inevitable.

#### IOWA AHEAD OF WISCONSIN

Yes, yes. We know that Wisconsin does not originate all of the fine schemes for which it gets the credit, but what is an ignorant editor in the Far East to do when the state combines with its undeniable energy in putting new things thru an unparalleled lack of reticence as to its own achievements? But we will do what we can to prevent that ambitious state from getting undeserved credit by publishing the following protest from the Director of Library Extension in Iowa against our article alluding to Wisconsin as a pioneer in sending books by parcel post to individual readers. The issue may narrow down to the question of the time of day when the first parcels of books were mailed from Madison and Des Moines. But surely it is as important to put this race on record as the split seconds difference in an interstate sprint.

Iowa long ago abandoned the use of the group system alone in her Traveling Library work, and books have for years been sent to individual readers in the state, in many cases by return mail or express, and always at the bare cost of transportation.

On the day that the parcel post law for books went into effect the Iowa Library Commission began the use of that method of carriage for its books, and hundreds of volumes have since been sent from our Traveling Library by parcel post all over the state, parcel post being especially useful here because almost the entire state lies within the first and second zones.

I beg, also, in this connection, to call your attention to the fact that the inclusion of books in parcel post was largely due to the efforts of an Iowa congressman, Mr. H. M. Towner of Corning, Iowa. Also that another Iowa congressman, Mr. W. R. Green of Audubon, Iowa, has recently introduced a bill in the House of Representatives to permit the sending of books free of charge by public libraries, and their return to these libraries, on rural routes running out of cities and towns with such libraries.

JULIA A. ROBINSON  
Secretary Iowa Library Commission

*"Today convinced  
me that I need  
Sanatogen!"*

AND one day there comes to most of us the conviction that we, too, must have help—help that rebuilds, restores, replaces the nervous energy that has been so recklessly expended.

It is then that the kindly, tonic influence of Sanatogen is appreciated. For after all, that need of help is often but the nerves' need of nourishment.

And when Sanatogen brings to the starved cells and tissues the very foods they hunger for, in just the form that is most easily taken up, it is not long before relief comes.

Over 21,000 physicians have written letters, telling how they have watched Sanatogen reconstruct cell and tissue—enrich the blood—recall keener appetite and better slumber, and infuse the whole system with a new vigor.

Such, too, is the recorded experience of scores of the world's foremost thinkers. And it will be *your* experience as well, once you decide to give *your* nerves this kindly, restorative aid of Sanatogen.

Sanatogen is sold by good druggists everywhere in 3 sizes, from \$1.00 up.

Grand Prize, International Congress of Medicine,  
London, 1913.

**Prof. Thomas B. Stillman,  
M.S., Ph.D.,**

The well-known research chemist, New York, writes:

"The Chemical Union of the constituents of Sanatogen is a true one, representative of the highest skill in the formation of a product containing phosphorus in the organic phosphate condition, and so combined that digestion and assimilation of Sanatogen are rendered complete with the greatest ease."

**Sir Gilbert Parker, M.P.,**

The eminent novelist-statesman, writes from London:

"Sanatogen is to my mind a true food-tonic, feeding the nerves, increasing the energy, and giving fresh vigor to the overworked body and mind."

**SANATOGEN**  
ENDORSED BY OVER 21,000 PHYSICIANS

*Send*

for Elbert Hubbard's new book, "Health in the Making." Written in his attractive manner and filled with his shrewd philosophy together with capital advice on Sanatogen, health and contentment. It is free.

714-716 Chestnut St.  
Philadelphia, Pa.

## Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY

Geo. E. Ide, President.

256 BROADWAY

NEW YORK

# THE MARKET PLACE

## THE RAILROADS

Of the two decisions announced last week by the Interstate Commerce Commission one is more distinctly favorable to the railroads than the other, but both are of a character to encourage the companies and to cause further expenditures for needed supplies. In the decision which modifies the original one in the intermountain cases—virtually reversing parts of it—relief is given to transcontinental lines in the matter of rates because of the serious effect of water competition by way of the Panama Canal. In the other decision, which relates to the law which forbade railroad companies to own, operate or control steamship lines, operated thru the Panama Canal or in use elsewhere, with which they were naturally in competition, there is some relief for companies which own water lines that are not operated thru the Canal. They are permitted to retain the steamship lines unless it is shown that control of them is injurious to the public on account of a suppression of competition.

The railroad companies of Pennsylvania and New Jersey have begun a campaign for the repeal of the full crew laws of those states. It is their purpose to appeal to the people. Missouri's repeal of a full crew law by popular vote encourages them to believe that their arguments will be effective.

Railroad companies continue to give orders for the rails, locomotives and cars which they really need. The orders placed in the last thirty days amount to more than \$30,000,000.

## STOCKS AND THE INDUSTRIES

There was some improvement, last week, in the market for securities. On the New York Stock Exchange—where 997,550 shares were sold, against 1,258,715 in the week preceding—there were net gains, as a rule, especially in industrials. Additions to the prices of railroad shares were only fractional, in most cases, and New York Central lost 3½ points, owing to the company's issue of \$100,000,000 of twenty-year convertible debentures, bearing interest at six per cent, which was generally regarded as a high rate. These bonds will be convertible into stock, at 105, after May 1, 1917. Bankers applied promptly for more than the entire issue, and the preliminary quotations in the market were at about 103. American Smelting shares showed an advance of 4½, and the gain for Bethlehem Steel shares was 2¾. The Bethlehem Company is at work on large orders, said to exceed \$50,000,000, for the armies of the Allies. There was a net addition of three points to the market value of Steel Corporation common stock, the closing price being 43¾, which is nearly six points above the lowest price recently

reached, after the passing of the dividend. Sterling exchange declined to 4.82 1/16, the lowest figures known since October, 1907.

The market has been affected favorably by the improved condition of the great steel industry. Reports from the Steel Corporation last week showed that its unfilled orders on hand had increased in January by 411,928 tons. In December there had been a gain of 512,000 tons. One after another, the company's idle mills and furnaces have been going into operation. At Gary, the rail mill, closed for three months, is now at work on full time, and 2000 men have come back to the shops. The corporation's wire company has increased by \$1 per ton the price of its product. Its tin plate mills are underselling the Welsh manufacturers in foreign markets. Their export trade is growing. Working now at ninety per cent of their capacity, they will soon, it is said, reach the limit of 100 per cent. All the men employed by the Singer Sewing Machine Company were called back, last week, to full time. A few months ago, about 4000 were laid off, but 2000 had returned since the beginning of the year.

Continued increase of exports is taken into account in the securities market. Returns from the ports which represent eighty-five per cent of the trade show a great excess of exports over imports in the first week of February. New orders for war supplies are coming in. Spain has been added to the nations that are buying. Two officers sent by the Spanish Government are on their way to this country, where they are to purchase arms and submarines.

## WAR COST IN CANADA

Canada is about to impose many new taxes, owing to her war expenditures. The bill was introduced by the Government last week in Parliament. It adds 7½ per cent to the general and intermediate tariff rates, and five per cent to the British preference rates. But certain articles, mostly those which farmers and fishermen must have, are excepted. The free list is virtually wiped out, the additional percentages applying to free-listed imports.

Even with the additional revenue thus obtained, there will be a deficit of \$60,000,000 for the year that ends with March. And the Government looks forward to an outgo of \$300,000,000 in the year beginning with April, while the income will be only \$120,000,000, altho the new taxes will yield about \$30,000,000. It intends to borrow \$100,000,000.

The following dividends are announced:  
Southern Pacific Company, quarterly, \$1.50 per share, payable April 1.

## WHERE IS THE BEE'S NOSE?

Any one who dares to venture close enough to the honey bee to watch him at work will see that his feelers or antennæ are of very great service to him. These little hair-like projections, coming from each side of the head, are continually in motion. Those who have made a study of the bee naturally concluded that it was in these appendages that the sense of smell was located and that their usefulness to the bee was in directing him to the honey-producing flowers. Experiments at first seemed to prove that this was the case. But recently Dr. McIndoo, one of the workers in the Entomological Department at Washington, has shown that we are entirely wrong in believing the nose of the bee to be located in the antennæ. He has found that the bee possesses a remarkably fine apparatus, far better than olfactory cells in the two feelers would be, which guides him to his food supply.

On many parts of the body of the honey bee Dr. McIndoo has found groups of bright spots. These spots when examined with the microscope proved to be pores which lead to elongated cells. When studied in detail each of these cells shows that its contents is in direct communication with the air at the outer end thru the pore and that its inner end connects with the nervous system. There are more than 2000 of these cells located on various parts of the body, legs, sting and mouth, but none of them is found on the antennæ. These, when examined microscopically, are found to be covered with a hardened membrane which could not possibly serve the bee in detecting odors. Dr. McIndoo has proved that the pores are the olfactory cells of the bee by coating them over so that odors cannot reach them and then observing what the bee does when different substances bearing odors are placed near him.

With 2000 cells provided to smell with, small wonder is it that the bee finds his food so easily even when he must make long journeys for it. When flying around he is continually bathing in scent laden air and whenever his olfactory cells are stimulated by his particular brand of odor he can easily detect the direction from which it comes.

(Please pin coupon to your business letterhead or business card, stating your position.)

## Smoke Five Free

I make this offer especially to men accustomed to smoking 10c and two-for-25c. cigars.

For these are the men who most appreciate the exquisite flavor of my private Havana.

The leaf is from a mountainous district in Cuba. It is selected for me by a resident expert. Then made up especially for me under my monogram band. In 40 years of smoking I have never found so mild and sweet a smoke.

I want you to know, as thousands already do, what a delightful smoke this is. If you don't say that these cigars at \$5 per hundred are the peer of any 10c cigar you ever smoked, the trial will have cost you nothing.

**My Offer:** Send me 10c toward shipping expenses and I will send you trial cigars. Then you can get future supplies at my low price—\$5 per hundred, \$2.60 for fifty, all charges prepaid. I offer other cigars, too, for those who like heavier, stronger smokes. You will find them described in my booklet. But send for the trial J. Rogers Warner Panetelas now. The coupon above is for your convenience.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

## DID HE WIN?

In our issue of February 8, we briefly described the experience of Mr. A. W. Smith, who maintained a Whole Life policy sixty-four years, commencing when he was thirty-two years old, surviving to receive in his own proper person the face value of it. The occasion is a rare one for the reason that very few people live to attain that advanced age. In commenting on the incident, I said that Mr. Smith lived and won.

One of my correspondents, a clergyman at Burlington, Massachusetts, questions the accuracy of my assertion. He writes:

"Did the Albert W. Smith, mentioned by you in your issue of February 8, live and win? The question has been raised in my mind by the fact that if each year he had deposited \$11 (which was the average amount of premium, minus dividends, paid by him) in a savings bank that compounded annually at four per cent he, at the age of ninety-five, would have drawn better than \$2200 instead of the \$1000."

In saying that Mr. Smith lived and won, I had in mind the ancient selfish objection to life insurance, to the effect that a man must die to win its benefits; meaning, of course, that he himself would never receive the reward. The survival of this policyholder to the age of ninety-six, or beyond, is conclusive proof that as a protection against death life insurance was superfluous, and it must be admitted that he finally would have secured a larger sum if he had deposited the premiums in a savings bank at four per cent interest.

But is that an argument of sufficient weight for the guidance of more than one man in a million? Experience proves that the adoption of such a principle by any man who has dependents to protect would be disastrous. All that the vast majority of those who acted on it would have at death would be the accumulated principal and interest to their credit at the bank. Some of them would die the first year, an increased number the second year, and so on, until all were gone. A few would outlive the time necessary to accumulate by savings amounts equal to their insurance. No man knows the date of his death; Mr. Smith doubtless never believed he would live so long, at any rate, he was not assured of it. He needed protection and received it. He paid his share of the expense incident to that service during the time he had it.

The point I wished to make in this case, however, is unrelated to the question raised by my correspondent. It will be noted that the amount of money paid to Mr. Smith by the insurance company equaled exactly the amount of the insurance. It was, in fact, the reserve the company had been accumu-

lating for the policy during the sixty-four years the contract had run. The principal of this reserve at the beginning of the sixty-third year was the difference between the face of the policy and the amount of interest at the assumed rate (probably four per cent) for one year, say \$996.25. If he had died during that year this \$996.25, plus the interest, would have settled the claim of \$1000. Having outlived the year and the tabular term of the contract, the money was surrendered to him.

I was merely endeavoring to demonstrate in a few words the superior value—nay, the absolute necessity—of the mathematical reserve in life insurance, and by inference to caution policyholders against any scheme which attempts to dispense with it.

In conclusion, I may be permitted to say that with all its hardships, most of us desire a continuance of life. Mr. Smith survived to a green old age, and the account we have of him warrants us in believing that he was in fair health and happy. To achieve these only, is to win. At one time he evidently needed the protection given by life insurance, and realizing that it was an expense willingly bore his share of it. The money he spent for shelter, clothing, food and entertainment for himself and family brought him and them—transitory, it is true—its fair equivalents. Some of it might have been saved and improved at interest. So with the service rendered by his policy. He had to contribute his just proportion of the death benefits of his company associates who preceded him to the grave. Finally, he outlives the necessities for the provision and receives the completed endowment which the wisdom of old line life insurance began sixty-four years previously to accumulate for him. I am firmly of the opinion that he won handsomely.

J. L., 23 Beaver street, N. Y. C.—The latest advices we have indicate that the Home Life Insurance Company, 256 Broadway, New York, N. Y., is the only company as yet from which the policy of the Gilder Policy Association may be procured.

E. M. O., Ithaca, N. Y.—As you do not like endowments, I can unequivocally recommend the policy offered you by the representative of the Connecticut company. You will not err either as to the contract itself or the company offering it. The latter stands well up in the first rank in the matter of management and in service to policyholders. Take that policy and keep it.

E. W. B., Wakonda, S. D.—Have no information yet of the company's operations in 1914 and do not know its present financial condition. December 31, 1913, its surplus was insignificant. Up to the date mentioned, its management was fairly subject to criticism.

The Aetna Life Insurance Company has just increased its capital from \$4,000,000 to \$5,000,000, and has a bill before the Connecticut legislature providing that it be made \$10,000,000.

January 1, 1915.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

"Do you know where the little boys go who don't put their Sunday School money in the plate?"  
"Yes'm—to the movies."—*Williams' Purple Cow.*

Fond Mother (proudly)—An' do ye no think 'e looks like 'is father?  
Sympathetic Neighbor (cheerfully)—An niver ye mind thot, Mrs. McCarty, so long as 'e's 'ealthy.—*Harvard Lampoon.*

Cholly—When I was a boy, you know, the doctor said if I didn't stop smoking cigarets I would become feeble-minded.  
Miss Keen—Well, why didn't you stop? —*London Evening Standard.*

Musical Maiden (after trying her voice)—Do you think I can ever do anything with my voice, Professor?  
Music Master (cautiously)—Well, it may come in handy in case of fire.—*Sydney Bulletin.*

Professor of Chemistry—If anything should go wrong in this experiment, we and the laboratory with us might be blown sky-high. Come closer, gentlemen, so that you may be better able to follow me.—*Brooklyn Eagle.*

Simpson gallantly escorted his Boston hostess to the table.  
"May I," he asked, "sit on your right hand?"  
"No," she replied, "I have to eat with that. You'd better take a chair."—*Exchange.*

"S. C. 1. The Brussels sprouts will do no harm to the apple trees."—*Morning Post.* All very well, but we know what these Belgians are. As likely as not they have been plotting for years with the French beans to spring upon their inoffensive neighbors.—*Punch.*

THE STAR-SPANGLED BANNER  
Adapted for British use and respectfully dedicated to the British Admiralty.  
BY BETSEY ROSS

Oh, say, can you see by the dawn's early light  
What so proudly we spurned at the twilight's last gleaming,  
Whose broad stripes and bright stars thru the perilous fight  
We have always regarded as gauche and ill-seeming;  
But the submarine scare, and the bombs in the air  
Have made us content that our flag is not there.  
Oh, say, does that star-spangled banner now wave  
To insure that no Briton can e'er be a slave?  
On the shore dimly seen thru the mists of the deep,  
Where the Kaiser's grim host in dread silence reposes,  
"What is that?" he exclaims, "do I wake or I sleep?  
What flag now the breeze half conceals, half discloses?"  
Now it catches the gleam of the morning's first beam,  
And Old Glory reflected now shines on the stream.  
" 'Tis the star-spangled banner, intended to wave  
O'er the land of the free and the home of the brave."  
Oh, thus be it ever when Frenchmen shall stand  
Between our loved homes and the loss we might suffer.  
Blest with victory and peace by our Allies' firm stand,  
And by brave little Belgium, which served as a buffer.  
Then conquer we must, for the Yankees we trust  
To kindly forget we are ever unjust;  
And the star-spangled banner we earnestly crave  
May enable Britannia to still rule the wave.  
—*New York Evening Post.*

# A Number of Things by Edwin E. Slosson

THIS war is renewing my youth. Being a "war baby" I grew up on the stories of the young veterans instead of *Arabian Nights* or Grimm's *Fairy Tales*. Now they all come back to me. For instance, the German Information Service sends me today the following "news" with a space left for yesterday's date:

Frankfort, February .—Lured by the taste of real Silesian bacon, thirty Russians marched with a German prisoner into a German camp, relates the *Oberschlesische Anzeiger* of Upper Silesia.

George Goralczyk, a locksmith from Beuthen, chief of the volunteer fire brigade in that city, is a corporal in a machine gun corps which resisted the Russians. In one encounter, when the troop was hard pressed and forced to withdraw, Goralczyk took the heavy machine gun on his shoulder and carried it to the nearest village, where he found refuge in a barn. Removing his knapsack, he lay down for a well earned rest, when suddenly he was surprised by a number of Russians. Goralczyk put down his rifle and revolver and, since he could speak Polish well, began to converse with the Russians.

They were all hungry, so Goralczyk took a piece of real Silesian bacon and a piece of bread from his knapsack and gave them to the Russians while he thought of a plan for escape. He told them that German soldiers got such a ration of bacon and bread, besides warm food, whisky and excellent pay. By this glowing tale he succeeded in inducing the Russians to return to camp with him.

At dusk they marched to the German camp, the thirty men arranged in two files under Goralczyk's command. They halted before the quarters of the sergeant major, and Goralczyk reported to his superior. The latter refused to believe at first that Goralczyk had captured thirty men single handed and asked, "How did you manage it?"

"It was very simple," replied Goralczyk with a laugh. "I surrounded them."

I know this story is true because I have often heard him tell about it. Only his name was not Goralczyk. I think it was Macarthy or some such and he lived in Sabetha, Kansas, not Beuthen. The number of prisoners was originally two, but it rose to five while I was a boy and the natural increase would make it about thirty by now. "You didn't need a gun," he used to tell us. "All you had to do was to go out and holler 'Bacon, beans and baccy!' and the rebs would come a-runnin'."

And then the climax. The narrator always encored it several times without waiting for his auditors to demand it, and long after the applause had subsided and other speakers had the floor we could hear him chuckling over it to

himself: "I surrounded 'em," sez I, and you ought to have heard how the captain laft."

That always was a good story. But there are others, like the one that comes from France about how the Germans entered an empty town whence all the inhabitants had suddenly fled, leaving the doors open and the meals cooking in the kitchen, and what fun the soldiers had with the trinkets in the jewelry stores. That was a Georgia town as I heard it. "And that afternoon we played ball with gold watches in the street," said the man with the G. A. R. badge. "Why didn't you put a watch in your pocket?" I asked, for I saw he had none. "That would have been stealing, sonny," he replied in grave reproof.

In one of the Petrograd reports it is stated that the German army in Poland is provided with some sort of a machine that turns the rails into corkscrew shape so they cannot be relaid when the line falls again into the hands of the Russians. What nonsense! There is no need for a portable rolling-mill. I could show them how it's done, for it has been shown me over many a camp-fire. First you build up a log house out of the ties and lay the rails across it. Thenset it on fire and when the rails are soft enough two men at each end can bend them into curves. Our boys used to make U S out of them mostly as being easy and patriotic. But if they had time they would wind them around trees or construct words and sentences of a satiric and uncomplimentary nature for the benefit of the Confederates who were to follow. No doubt in Poland they are doing the same. The Russian language done in steel rails must look fine.

History repeats itself—or perhaps we should say, historians repeat themselves.

The clumsy attempt to disguise the "Lusitania" by displaying the American flag shows a lack of resourcefulness on the part of the British Admiralty that we should not expect from the land of Sherlock Holmes. They should rather have hoisted the Swiss, Bolivian or Bohemian flags. Or they might have painted on the stern some well-chosen *nom de guerre* such as

THE BERNHARDI

or

DIE GÖTZENDÄMMERUNG

Doubtless it would be equally effective to label the "Lusitania"

'WARE DERELICT!

or

THIS IS A GERMAN SUBMARINE IN  
DISGUISE

Later, as the Germans got onto these tricks, more elaborate disguises would be necessary. For instance, a vessel might easily be made up during the winter to resemble an iceberg by spraying water over the deck and sides and hanging a frieze of icicles along the sheets. (N. B. Sheets is a nautical term meaning ropes, not bed-kivers.) Since a whale was recently shelled by the British as a submarine, why should not the Germans, being so much stupider,

mistake a Cunarder for a whale? The deception could be facilitated by a little brown canvas, and a spray pump on the bow to spout at intervals and spread abroad the odor of oil and spermaceti. Perhaps, too, the British Admiralty might buy out the scenery of some stranded comic opera and get up the liner as a coral island with the four funnels as palm trees and the edge of the torpedo net as a coral reef.

Instead of attempting to stop it would it not be more advisable for Congress to pass a law permitting any belligerent vessel in distress to raise the American flag on condition that it is kept up? The Germans could not object because their warships, "Goeben" and "Breslau," escaped capture in the Mediterranean by quickly selling themselves to Turkey. In this way we might in the course of time acquire a large part of the British merchant marine and navy at a mere nominal cost. To meet such an emergency every belligerent vessel on leaving port might be provided at our expense with an American flag and a pennant inscribed

SOLD TO AMERICA, 5 MINUTES AGO

But, after all, I am inclined to think that there is nothing better than a simple canvas sign lettered in lamp-black and turpentine:

FRESH PAINT! KEEP OFF!

A student in the University of Atlantis who has had a great deal of experience in debates, formal and casual, has drawn up a set of rules governing the ethics and tactics of discussion which he permits me to publish:

THE TEN RULES OF ARGUMENTATION

I. You can discuss matters with a person or punch his nose. Sometimes the former policy has advantages.

II. Don't do things by halves. Either discuss or fight; it is a mistake to mingle the methods.

III. Your opponent is not a hypocrite, altho you might be one if you said the same things. Almost any position may be held sincerely.

IV. Your opponent may make mistakes in point of fact, but he does not tell lies. You have no business to discuss with liars at all.

V. Don't challenge any statement of fact made by your opponent unless you can prove his mistake.

VI. On the other hand, don't state anything as a fact unless you know how it could be proved.

VII. Don't accuse your opponent of "interested motives." That argument leads to mutual stalemate, for it can be bandied back and forth forever.

VIII. Don't misrepresent your opponent's arguments. By so doing you lead a charge against an army of ghosts and leave a real flesh and blood enemy to attack your unprotected flank.

IX. When you have lost your temper remember a pressing engagement at once. With your temper gone you are as capable of successful argument as a decapitated general is of strategy.

X. "But whosoever shall say, 'Thou fool,' shall be in danger of hell fire."

When in Rome do as the Romans ought to do.

It is a permissible surmise that the world would get along better if we all paid less heed to the *Zeitgeist* and more to the *Heilige Geist*.

## INDEPENDENT OPINIONS

It may have been venturesome for a periodical seeking to develop rapidly its circulation to announce a series of articles on theistic cosmology at a time when, they say, nobody is interested in religion or philosophy. Nevertheless, it appears to have been justified for we have received more letters in commendation of this feature than of many supposedly more popular. Witness the following:

I am enjoying to the fullest Dr. Ward's articles on "What I Believe." I'm hoping they will find their way into book form. I cannot tell what a liberalizing and enlightening influence his writings have had over my mind and in my life during the last quarter of a century or more. I well recall the joy that filled my heart when I received the first copy of The Independent while serving in my first pastorate at Murfreesboro, Tennessee. It has widened my vision and driven sectarianism out of my heart. It has put me in touch with such great and gracious interpreters of literature and nature as Maurice Thompson and E. P. Powell, who taught me to love, as never before, the hills and valleys and birds and streams of my Southern Middle Tennessee home. The sanity of your views on Biblical Criticism saved me from "The Eclipse of Faith" and made of religion an infinitely more vital force in my life.

Mathews, Virginia

GEORGE GOWEN

A distinguished American theologian thinks we have not made sufficiently prominent the following points in this constant discussion of the conduct of the war:

In getting at a judgment whether colossal guilt is to be ascribed to Germany for "militarism" ought not the reader to put into the balances the possible benefit that "militarism" has had for Germany? For the first time I heard from Professor Christlieb, then delegate to the meeting of the Evangelical Alliance in New York, 1873, that the German military system was a blessing to his country because it developed the physical manhood of its people. I have conversed since in many studies and homes in Germany from peace-loving Stuttgart to Prussian Berlin and in every case I found the same view taken. During these last forty years something has come over the German people. The men seem to be

physically better developed and have better carriage. More than that, there seems to be in Germany more self-reliance and manliness unto personal bravery. If a certain amount of insolence has come with this development, it is to be deplored. But I have found American braggartism and English insolence also.

So far as I have seen in The Independent no condemnation of the employment of Turcos and other Africans under French control and of Sikhs under English auspices. If to burn Louvain is "an awful atrocity," what of the employment of these agents of war and blood against white men? "Everything is fair in war." That is a horrible principle and was made horrible long ago by the declaration of a great Englishman, Lord Chatham. We used to learn the passage under Mark Bailey at New Haven. After condemning the resort to "the shambles of every German despot" for mercenaries to fight Americans, he says "who has dared to authorize and associate to our arms the tomahawk and the scalping knife of the savage, to call into civilized alliance the wild and inhuman inhabitants of the woods, to delegate to merciless Indians the defense of disputed rights and to wage the horrors of this barbarous war against our brethren?" It seems to me that while the curse is being pronounced upon Germany, the fact of the employment of half savages against her should be brought out.

DAVID S. SCHAFF

Pittsburgh, Pennsylvania

That something is wrong with the commercial connection between producer and consumer is evident when glut and scarcity can coexist in the same country, as described in the letter below. The natural instinct of the rural mind is to lay everything that goes wrong to the financial system, but we fear the problem is not so simple as that.

Benton County, Missouri, had a million bushels of apples rotting on the ground because her people had no money to pay for gathering and shipping the crop and there are three counties in Illinois that did not gather or ship their apples because they would not pay for the labor; this, with millions of people in the great cities to whom those apples would be the bread of life and the builder of health; and with men, women and children needing work in the canning factories. This, with like conditions affecting the South's great crop of sweet potatoes, molasses, dairy products, chickens and eggs; this, with the railroads complaining that they are not making running expenses and the people crying out about the high cost of living; this, with widows and little children glad to get work in the canning factories and not able to afford meat once a week.

Secretary McAdoo, in his effort to make bankers deal justly by their clients, has tied up millions of dollars just when and where they were most sorely needed. In many towns of the South people mortgage their lands to borrow money at ten per cent interest and the banker makes in a few years, an excuse to renew the bond, charging interest on interest. Beautiful lands are for sale at ten dollars an acre with no buyers.

MRS. MARGARET A. COLLINS

Fayetteville, Arkansas

I am reading The Independent these days with keen enjoyment from cover to cover. I think the short, concise articles you are publishing on the Great War have given me a better idea of the existing conditions than anything else I have read.

I feel that when I have gone thru a number of The Independent I am reliably posted up-to-date on many subjects, and the process has been interesting as well as instructive. The Independent is its own best advertisement.

VOLUME 81

MONDAY, MARCH 1, 1915

NUMBER 3456

## MR. WILSON AFTER TWO YEARS

**T**HE presidency of Woodrow Wilson has run half its course. It is a convenient occasion to consider what kind of a President he is and how he has comported himself in his great office. No estimate made now can be final. Only the rectifying perspective and the clarifying illumination of passing time will avail to make the picture a thoroly truthful one.

Mr. Wilson is by conviction a democrat. He believes in the people. He would have them govern; and he would have every act of government infused with the purpose of promoting the popular welfare. He is a hater of autocracy, a consistent foe of special privilege. In his dealing with the tariff, with the trust problem, with the banking and currency system, with the perplexities of the people of Mexico, he has uniformly and firmly upheld the rights of the many as against the privileges of the few. In working out these vexing problems he may have made mistakes. He may have fallen short of the wisest adjustment of means to ends. But his purpose, at least, has been single, his motives high.

Mr. Wilson is not only a democrat in the broad meaning of the term, he is a Democrat in the partizan sense. He believes profoundly in his party, its principles and its purposes; and he sometimes lets his party loyalty color his actions and obscure his judgment. Partizan appointments in the diplomatic service, displacing with inexperienced men others who had been trained by service at different capitals, have been a disappointment to those who had hoped that the recently adopted policy of promotion for merit and ability would be a continuing one. In his Jackson Day address Mr. Wilson declared that the Republican party had not had a new idea in thirty years. Such a statement is defensible only on a definition of the term "Republican party" worthy of none but the most reckless political campaigner. During the presidential campaign and since Mr. Wilson has persistently misinterpreted the fundamental principle of the trust program of the Progressive candidate for President and his associates in describing it as an advocacy of "regulated monopoly." In such instances as these Mr. Wilson lets his partizanship cloud his usually clear vision.

Mr. Wilson knows his own mind. He has the courage of his convictions. With pertinacity and determination he has held his party associates in Congress to the task of working out the party's program of legislation long after many of them would have been glad to give it up for the time and go home. There has been little room for doubt at any time as to just what the President wanted. There has at no time been any sign of weakening in his efforts to bring it to accomplishment.

Sometimes it has seemed that he has been a little too sure that in knowing his own mind he knew the mind of the country as well. In the matter of the Ship Purchase bill he has been persistent to the point of obstinacy, on a matter to which the country had never committed itself and on which there appeared in increasing volume, as time went on, strong differences of opinion.

Mr. Wilson has shown himself an able and forceful party leader. He was nominated by a divided party; he has made it act in its legislative career as tho it were a united party. His hand has been continuously felt in the work of Congress. He has stood rigidly for the redemption of party pledges and for the enactment of legislation to which the party stood committed. He has exerted great influence upon Congress. But he has done it by the force of his personality and the prestige of his position in the nation and in his party. There is no evidence that he has used any improper means of influence or brought pressure to bear upon individual congressmen in unjustifiable ways. Mr. Wilson has proceeded upon the sound conviction that the President is a co-ordinate part of the law-making power, holding, indeed, a peculiar position therein as the one man elected by all the people and representing therefore not any sectional interest but the common welfare.

**I**N international relations Mr. Wilson has kept the United States upon a high plane of idealism and honor. He threw the whole force of his personal influence into the scale to impel a not too eager Congress to do justice in the repeal of the Panama Canal tolls exemption act. He has encouraged the signing of arbitration and "breathing spell" peace treaties with many nations of the world. Since the Great War began, he has steered a steady course in perilous waters. He has maintained the neutrality of the United States with fine impartiality; and at the same time he has not hesitated to call the warring powers to account for actual or threatened invasions of American rights.

In Mexico, Mr. Wilson has been actuated by a keen feeling for democracy and the rights of man. He has wanted the Mexican people to have every opportunity, consistent with due respect for the rights of the rest of the world, to work out their own problems in their own way. But in translating his convictions into action he has fallen into serious inconsistencies. He has vibrated between impulsive action and passive drifting. He brought the United States to the verge of war thru a demand for reparation which in the outcome was never granted. He seized a custom house and a city at a cost of seventeen American dead in order to prevent the

landing of arms which a few days later were quietly disembarked at another port without a shadow of protest. Mr. Wilson's ideals for Mexico have been splendid; his policy has hardly been either consistent or sound.

But despite these criticisms, well founded as we believe them to be, Mr. Wilson has shown himself a President notable for high-mindedness, commanding ability, breadth of vision and fineness of spirit. Naught but the verdict of history should dub a man great. But if the promise and performance of the first half of his administration are not belied in the second, it would be a matter of the keenest surprise and disappointment if the future time does not put the name of Woodrow Wilson high on the roll of America's chief executives.

### THE MEANING OF A HURRICANE

THE news that the Manua Islands of the Samoan group have been devastated by a South Sea cyclone, leaving nearly two thousand of our wards in danger of starvation, reminds us of our duty toward the people we have taken under our protection. The American gunboat "Princeton" has brought to them what aid it could, but since the Samoans have lost not only their food supplies but also many of their palm trees, not only their houses but even in some places the soil, it is imperative that our Government should take prompt and generous action to relieve their necessities.

It also reminds us that we owe our peaceful acquisition of these islands to another hurricane of this same stormy season but twenty-six years ago. The phrase which ancient law applied to all such catastrophes is appropriate here at least, for the storm that providentially came in the nick of time to prevent a war between Germany and the United States might well be called the "Act of God." Robert Louis Stevenson modestly entitled his marvelous bit of descriptive writing "A Footnote to History," but in his closing lines he discloses the fact that he realized the importance of the episode as few did in those days:

Thus in what seemed the very article of war and within the duration of a single day, the sword-arm of each of the two angry powers was broken; their formidable ships reduced to junk; the disciplined hundreds to a horde of castaways. . . . The so-called hurricane of March 16 made thus a marking epoch in world history; directly and at once it brought about the congress and treaty of Berlin; indirectly, and by a process still continuing, it founded the modern navy of the States. Coming years and other historians will declare the influence of that.

"Coming historians" will indeed have much to say of this critical moment, but already we can see better than R. L. S., for all his prophetic insight, what it meant when the American warships "Trenton," "Vandalia" and "Nipsic" ranged up alongside of the German warships "Adler," "Eber" and "Olga" and the British warship "Calliope" stood between holding the balance of power. President Cleveland was known to be no jingo. He was so averse to expansion in the Pacific that he tried to give back Hawaii to her savage queen. So when he called upon Congress to appropriate six hundred thousand dollars for immediate use in the protection of American interests in Samoa there was no opposition except from those who thought he should have taken even stronger action when the Germans in Apia harbor violated a

fundamental American principle by searching our vessels. Senator Reagan called for armed opposition to "the arrogant power." Senator Frye said that no fourth class European power would stand what the United States had stood from Germany. It was the expectation of the world that the American and British vessels would soon be in conflict with the German. In fact the newspapers reported firing had already begun.

Then the storm broke. There were thirteen unlucky vessels afloat in Apia Bay when the sun rose. When it set there was none left. Twelve were sunk or grounded. One, the British "Calliope," steamed out of the harbor mouth against the storm, cheered by the Americans on the "Trenton" which she passed as she made her way to safety in the open sea.

If the battle had been fought the loss of shipping could not have been greater. Of the crew of the American "Vandalia" forty-three were lost. Of eighty Germans on the "Eber" only four were saved. It seemed as tho Nature had tried to put to shame the destructive efforts of man. When the news reached Europe and America the horror of it banished all thoughts of war. But those on the spot did not know that the danger was over, so Admiral Kimberly collected his shipwrecked men and paraded them on the beach while the band played "Hail Columbia." It would make a scene for a historical painter—if our American artists were not so exclusively occupied with purple cows and mermaids—the green background of volcanic peaks, the stormy sea in the foreground dashing against the vessels stranded upon the coral reef, the tattered palm trees along the beach, the ruins of nipa huts and corrugated iron shops, and amid this devastation two separating bands of castaways, just snatched from the jaws of death but ready to enter them again at command of their countries.

But no such commands were given. Ten years later the British "Porpoise" and the American "Philadelphia" joined in a bombardment of Apia, but since then Samoa has been at peace. To put an end to the dispute England withdrew her claims to Samoa and Germany and the United States divided the islands between them. Now it is New Zealand instead of Germany which holds Apia and Stevenson's wish has come true.

### THE VISION OF PROPHETS AND BARDS

BECAUSE war is so utterly devilish, and has sunk to such a level of meanness, hiding in muddy ditches, retreating many miles away to hurl bombs on whom they may hit, at safe distance shooting with superior guns a flying foe, bombarding cathedrals, burning libraries and universities, raiding defenseless towns, devising and singing revenge and hate; therefore this is the time to dream of the sweetness of peace and the return of the Saturnian Age, an age that never was, but will be if perennial longings and prayers can bring it.

It is no siren song, this of Hebrew prophet and Greek sage and Roman bard and Persian seer and the inspired singers of every age. "They shall beat their swords into plowshares," says Isaiah, "and learn war no more." Then "righteousness and praise shall spring forth before all the nations," and "none shall hurt or destroy in all God's holy mountain." And he that had the vision in Patmos saw the angel come down from

Heaven with the key of the abyss and the chain to close and seal Hell for a thousand years.

So Plato, mouthpiece of the wisest of the Greeks, turned aside from the riot of the Persian war to tell of the well-governed Atlantis, to be followed in our later centuries by Bacon's *New Atlantis* and More's *Utopia*, and he gave the longest of his dialogs to design a Republic founded on philosophy and justice, a state "in which they only shall rule who are truly rich, not in silver and gold, but in virtue and wisdom, which are the true blessings of life." And so, after the wars of Cæsar, the twin Augustan poets looked for the Golden Age and seemed to see it close at hand. He who sang Iulus, progenitor of Julius Cæsar, promised Pollio that the spindles of the accordant Fates should hasten the day when war should cease, when navies should no more vex the seas, and herds no more fear the huge lions, and when the fields and flocks of every land should supply the wants of all. His brother poet took up the refrain, and in the nation's secular prayer to Apollo and Diana foresaw the day when—

Faith now and Peace shall back to earth return,  
Honor and ancient Chastity revive;  
Forgotten Virtue dare appear again  
And richest Plenty fill her freshening horn.

Space would fail us to cite the poets of our own tongue only who have had the same sweet vision. Listen to the youth who sang as no other boy ever sang:

Yea, Truth and Justice then  
Shall down descend to men  
Orbed in a rainbow; and, like glories wearing,  
Mercy shall sit between  
Orbed in celestial sheen,  
With radiant feet the tissued clouds down steering,  
And Heaven as at some festival  
Shall open wide the gates of her high palace wall.

And we must mention him who struck Virgil's lyre with a diviner fervor:

All crime shall cease, and ancient fraud shall fail,  
Returning Justice lift aloft her scale;  
Peace o'er the world her olive wand extend,  
And white-robed Innocence from Heaven descend.  
No more shall nation against nation rise,  
Nor ardent warriors meet with hateful eyes;  
Nor fields with gleaming steel be covered o'er,  
The brazen trumpets kindle rage no more;  
But useless lances into scythes shall bend,  
And the broad falchion in a plowshare end.

We have quoted Milton and Pope; we add only, out of many from the prophet Tennyson:

Ring out old shapes of foul disease;  
Ring out the narrowing love of gold;  
Ring out the thousand wars of old;  
Ring in the thousand years of Peace.

Ring in the valiant man and free,  
The larger heart, the kindlier hand;  
Ring out the darkness of the land,  
Ring in the Christ that is to be.

Not yet, shriek the jangling iron throats of War. But the prophet and the bard and the peace-song of Bethlehem will ere long shame the discord of courts and kings, for this year's worst of all wars will hasten the years of peace.

Yet with the war of sin and strife  
The world has suffered long;  
Beneath the angels' strain have rolled  
Two thousand years of wrong;  
And man at war with man, hears not  
The love-song which they bring;  
Oh! hush the noise, ye men of strife,  
And hear the angels sing!

## AMERICAN MADE RATTAN

HERE is an opportunity for getting hold of a branch of American trade that properly belongs to us anyway. The war has disclosed the curious fact that the chair-makers of the United States have been getting their rattan from the Philippines by way of Germany! The crude rattan raised in the southern Philippines is mostly shipped first to the British port of Singapore, then to the German port of Hamburg, where it is machined and made ready for use, and then it comes to America, where, of course, the purchaser pays for all of the English and German middlemen thru whose hands it has passed. Now that this roundabout route is blocked, why not short-circuit it and get our rattan direct from our own islands?

The *sika* of Palawan is the best rattan in the world, with the possible exception of that from Borneo, and the supply is large in other forests of the Philippines. Surely Uncle Sam will feel more comfortable when he is sitting on the front porch of an evening in a chair grown and shipped and made under the American flag.

## A BATTLE-BORN UNIVERSITY

THE Germans are determined not to let the stress of conflict interfere with the continued development of that phase of their culture that has been the admiration of the outside world, namely their system of higher education. A new university has come into existence, during the war, at Frankfort on the Main.

The Kaiser had signed its charter on August 1, the same day as the declaration of war against Russia, and on its opening day sent a telegram from the field regretting that "the defense of the Fatherland" prevented his attending the inauguration in person. The greatest of German universities, Berlin, opened its doors in a time of strife second only to the present, for it dates from 1809, and Leyden, the greatest of the Dutch universities, owed its origin to the siege of that city by the Spanish in 1574.

The city of Frankfort has long been ambitious to have a university of its own, partly because its growing importance demands that it be put on an equality with the cities of eastern Germany in this respect, partly because it wanted an institution of a different kind; a university that would give proper recognition to the practical arts and sciences and a university that would be free from the aristocratic and sectarian traditions which were particularly obnoxious in a city whose population consists largely of Jews. So we find in this new university only three faculties of the conventional four. Law, medicine and philosophy are present, but instead of the fourth, theology, we find two other departments, natural science and economic and social science. This last will incorporate the previously existing Academy of Social and Commercial Science, which had last year over a thousand students. One of its objects is the training of public officials and business men, whom the Germans very curiously seem to regard as needing education. Apparently they have never heard of our American theory that every man knows by natural instinct the art of mayoring or of salesmanship.

The University of Frankfort also includes other existing institutions of learning, among them the Royal Institution of Experimental Therapy, under the direc-

tion of Dr. Paul Ehrlich, discoverer of salvarsan. The endowment is two million dollars and the city will give it a liberal appropriation. It starts off with forty-nine professors, thirteen assistant professors and eighteen docents. Like the other German universities, it is coeducational.

Americans will watch the development of the new university with especial interest, for it represents movements of growing strength in this country. Many of our institutions have added courses in commerce and civic affairs and our municipal and urban universities have become of such importance that they have started the new year with a National Association for coöperation in the development of city activities. It is eminently fitting that the ancient Free City of Frankfort should be a leader in the movement for municipal universities.

### WISE AS SERPENTS

THERE lies on our table a startling refutation of the common notion that a missionary magazine is dull. *World Outlook*, with a news-stand cover, striking illustrations, ingenious and varied "makeup," and sprightly "copy," is so completely attractive as to deceive the unwary reader into regarding it as a frankly secular affair. "*World Outlook*," say the editors, who represent the Board of Foreign Missions of the Methodist Episcopal Church, "aims to be a journal of the future." It certainly succeeds as a journal of the present.

### SHAW'S FABLE FARCE

ONLY Shaw could have done it, and he never did it before; to use an early Christian legend as the plot for hilarious horseplay comedy, to make fun out of the martyrs without making fun of them, to introduce anachronisms for the purpose of making an historical scene true to life, to present the most serious of modern problems in the discussion of the questions of offering incense to Diana and of fighting in the Coliseum, these are what Shaw has done in *Androcles and the Lion*, which was published in *Everybody's* in September and is now being produced by Granville Barker in New York. We must also not forget to mention that this war-play was written before the war, as Shaw with his characteristic lack of diffidence reminds us in his note written for the New York production:

Finally, a word must be said about the prophetic character given to this play by the outbreak of war, which followed it so soon. In *Ferrovius* you have not only an individual character of a familiar type, but a historic symbol of humanity, captivated by the fascination of the Christian doctrine and passionately embracing it, only to discover at the first blast of the war trumpet that his real god is still Mars, and his Christianity only an admiration, an aspiration, a glimpse of a higher future, after all. Readers of the author's *Common Sense About the War* will remember the passage in which he calls on the Christian churches to close their doors until the war is over, and not to put Mars in the place of Christ on their altars. In this he is obviously holding up the example of *Ferrovius* in this play, who quite simply and honestly gives up his pretension to Christianity after his sanguinary victory in the arena, and confesses himself a disciple of Mars, whilst retaining his conviction that tho "the Christian God is not yet," he will have the last word when all our pseudo-Christians are dust.

*Ferrovius*, the strong man, is a match for *Ursus* of *Quo Vadis* with only such difference as there is between a Sienkiewicz and a Shaw. The lion, with his hind legs kneed the wrong way, is as funny as his prototype in the "Wizard of Oz," but this does not detract from the

inherent dignity of his surgeon and waltzing partner, *Androcles*, the real hero of the play tho most unheroic of aspect. *Androcles* is more than Tolstoyan, he goes back to St. Francis at least, if not to Buddha, who gave himself as food to the starving lioness. This gives Shaw his chance to preach vegetarianism on the sly. As for the jolly Christian martyrs, we have no fault to find with them, remembering how St. Lawrence jested on the gridiron.

### UNCLE SAM'S TREASURE SHIP

WHEN Jason sailed the "Argo" it was only on the homeward voyage that she carried treasure. But U. S. S. "Jason," a mere collier, is a treasure ship outbound and homebound alike. In November we saw her sail with Christmas gifts for Europe; now she is returning freighted with exhibits for our own Panama-Pacific Exposition.

The last gift was unloaded at Salonica. Then the "Jason" steamed to Piræus and Genoa, where one set of allies—Germany, Austria, and Hungary—sent their exhibits aboard. At Marseilles she took on the French and Belgian consignments, at Barcelona those from Spain and Portugal. After a stop at Plymouth for what British merchants are sending, and the Scandinavian, Dutch and Russian exhibits, she sails home and thru the Canal to San Francisco. The Belgian showing is doubly interesting. It is pathetically historic, now, and its presence here involves the friendly coöperation of France, whose railways carried it free to Marseilles.

It will be remembered that the effort to make the Panama-Pacific an international exposition in the widest sense failed because England and Germany had made an agreement not to participate. Now that the war has broken all bonds between the two countries Germany is going to exhibit and will use more than 40,000 square feet of space at San Francisco.

If the United States sent some joy to Europe by the Christmas Ship, this second cargo brings its recompense, for without these contributions from the belligerents the Exposition would have lacked much that was needed to round out its significance. And there in the "Jason's" hold, where Belgian and German products lie side by side, there is a satirical—and cheerful—bit of internationalism rare enough on the war-troubled seas today.

Professor Rudolf Eucken of Jena University, in protesting against taking Bernhardi, whom he has never read, as the exponent of the German spirit, says:

I will guarantee to show any great people in any light that is desired, peaceful or warlike, soft or hard, believing or unbelieving, if I am allowed to select any portions I like out of its literature, and to pin the whole people to them. In this way one can prove what one likes.

This is quite true, but unfortunately the Germans are now behaving as tho they had read more of Bernhardi than of Eucken.

According to the *antis* the right of suffrage depends upon the ability to bear arms. Therefore we may expect them to petition the Czar to give the ballot to Olga Krasilnikoff, the girl who took part in nineteen Polish battles without being discovered, until on being wounded in the foot she was taken to the Moscow hospital. The Czar, not being an *anti*, has bestowed upon her the Cross of St. George instead of the vote.

# THE STORY OF THE WEEK

## THE GREAT WAR

*February 15*—Germans driving Russians back in Poland north of Vistula. Forty British and French aeroplanes bombard Belgian cities.

*February 16*—Austrians and Germans defeat Russians on Sereth River. Bukowina. American foodship "Wilhelmina" from New York to Hamburg seized by British.

*February 17*—Austrians defeat Russians in Dukla Pass. Russians evacuate Czernowitz and retire beyond Pruth River.

*February 18*—French repulse German attacks in Champagne and Argonne. German proclamation declaring war zone about England and Ireland takes effect.

*February 19*—German submarines torpedo French steamer "Dinorah" and Norwegian tanker "Belridge" from New Orleans in Channel, but neither sunk. Germans direct attack toward Narew River, Poland.

*February 20*—Germans approach Novo Georgievsk, strongest of Polish fortresses. French gain in Vosges Mountains.

the last house. Our beautiful Mazurian country is a wilderness. What cannot be replaced has been lost, but I know myself to be one with every German when I solemnly promise that everything within human power shall be done to create anew fresh life from the ruins.

**The German Advance** The Germans are not content with clearing the Russians out of East Prussia, but are carrying the war into the enemy's country and have continued their advance eastward toward the Niemen (Memel) River, which parallels the frontier at a distance of fifty miles. This is defended by three fortresses, Kovno, Olita and Grodno, forming the northern part of the chain which extends down the Narew River to Warsaw. The Germans tried to break thru this chain last fall, but were defeated at Suwalki and Augustowo. If they succeed this time they will be able to cut the railroad which runs behind this chain of fortifications. This

would cut off the connection between Petrograd and Warsaw except by a roundabout southern route and probably compel the surrender of the Polish capital.

All of the fighting so far, terrific as it has been, may be compared to the driving in of outposts before a line of entrenchments. For the Germans have merely reached the foremost of the Russian fortifications. The established line of defense in Poland is, for reasons already stated, placed not at the frontier but along the triangle formed by the Vistula and its chief tributary, the Narew River. The famous "Polish Quadrilateral" is composed of the four fortresses of Warsaw, Novo Georgievsk, Ivangorod on the Vistula and Brest-Litovsk on the Bug. The line is completed by a chain of fortresses of varying strength along the Niemen and Narew rivers. It remains to be seen, for the Germans have so far not been able to prove, whether these strong-

## The Recovery of East Prussia

The victory of the Germans east of the Mazurian Lakes

seems to have been greater than was at first reported. The German General Staff claims to have taken 64,000 prisoners and to have inflicted terrible losses upon the enemy in killed and wounded. The Russians were almost enveloped before they knew it by the two wings of the German army, which closed in upon them from north and south by swift night marches. The left wing formed behind Insterburg and advanced thru Pilkallen to the frontier, then swept southward on the Russian side of the line. On the night of February 10 this column captured 10,000 prisoners and seventy-five camp kitchens. A furious snowstorm and muddy roads delayed the Germans, so that part of the Russian forces in this region managed to escape the trap and retreat to their own country.

The German left, which passed by Johannsburg to the south of the Mazurian Lakes, was equally successful, and the Fifty-seventh Russian was almost wiped out, losing 5000 men as prisoners.

Emperor William was present during the fighting in the center and afterward reviewed his troops in Lyck. In his telegram from the front to the Imperial Chancellor in Berlin reporting the victory he says:

My joy was tempered by the sight of that one time so flourishing region which for long weeks has been in the hands of an enemy without human feelings. The enemy has in senseless fury destroyed during his flight almost

THE GERMAN ADVANCE

The above map shows the great change made in the eastern situation. During the past week the Russians have been driven out of the territory lightly shaded in the darker area of the map. In Poland north of the Vistula the Germans have retaken Lipno, Sierpec and Plock, and are now only fifteen miles from the key fortress of the Russian line of defense, Novo Georgievsk. The Russians, who had occupied East Prussia as far as the Mazurian Lakes, were suddenly attacked from north and south by the German forces moving along the frontier. The German left moved eastward from Insterburg and then struck south, while the right, advancing south of the lake district by Johannsburg, attacked from this quarter. The Germans are now within reach of the river fortresses from Osowiec to Warsaw (represented on the map by stars)

holds will collapse under attack as quickly as Liège and Namur, or will resist them indefinitely, like Verdun. Doubtless Hindenburg would rather undertake to capture Warsaw than to carry the Yser Canal. The lesson of the war is that the only reliable ramparts are those that are made of men. Give them shovels, guns and plenty of ammunition and they will be safer in the open than beneath the shelter of a Gruson chilled-steel cupola.

In order to prevent the Germans from utilizing the railroads in an invasion of Russia the Russian railroads were built with a different width of track from the standard gage of Western Europe and America, four feet eight and a half inches. The five-foot Russian gage is no doubt better than the ordinary, but the constant necessity of changing

cars at the frontier has seriously impeded the foreign trade of Russia, and the supposed military advantage seems likely to prove illusory, for the Germans have had their rolling stock fitted with adjustable wheels so they may also be run on the wider Russian road. But, on the other hand, if the Russians come to invade Germany they will not be able to employ the numerous German railroads until they can capture enough engines and cars, and these, of course, will be run out of their reach as rapidly as possible.

**The Recovery of Bukowina** During the first week of September the Russians occupied, without resistance, Czernowitz (pronounced Cher'-no-vitz), the capital of Bukowina. In December they completed the conquest of the prov-

ince as far as the Rumanian frontier. Then the tide of war turned and ever since they have been on the retreat, closely pressed by the Austrian troops. It is reported from Budapest that the onslaught of the Austrians was so sudden as to capture the Russian General Staff and the commander-in-chief committed suicide.

The retreat of the Russians from southern Bukowina was accomplished under the greatest difficulties. The weather was twenty degrees below zero and the snow thru which the Siberian troops had to make their way was in places over four feet deep. The defiles had been obstructed by felling trees and while the Siberians were breaking thru the Tyroleans fired upon them from the mountains and rolled down rocks upon them.

The Russians, outnumbered and unable to bring reinforcements into Bukowina because of the absence of railroads, did not attempt to make a stand until they got beyond the Sereth River, about fifteen miles south of the capital of the crownland. Here they fortified a strong position on top of a plateau behind the river valley. The Austrians bombarded this line on February 15 and 16 and finally charged across the Sereth in the face of the enemy's fire. This fight was witnessed by the correspondent of the *London Chronicle* and *New York Times*, and he gives us almost the only description we have had of the fighting on the eastern theater:

Early today masses of the enemy advanced at three points, and their assaults seemed utterly regardless of losses. Pursuing their favorite tactics of smashing thru at any cost as long as they gained the bottom of the valley, they began climbing the opposite slope. The Russian artillery soon found the range and simply swept the enemy away as they attempted to advance.

It was a grand spectacle in the snow-carpeted valley, and from the hillsides there was a continuous roar of heavy artillery, the harsh, snappy sound of the machine guns joining in the terrible symphony of death. Wave after wave of gray-coated Austrians and Germans came on anew, passing over the bodies of their slain comrades, and then would melt away to disintegrate as if they were so many men of snow suddenly exposed to the spring sunshine.

The glistening white surface of the valley was discolored with groups of inanimate objects which a few hours before had been living men. They died there in thousands, annihilated by the Russian fire. Some there were who succeeded in crossing the shell-swept valley of death, and, climbing the slope, confronted the Russians, only to meet their end by a deadly fire at short range from the entrenched positions.

Isolated groups of what had once been whole brigades flung themselves against the parapets of the trenches behind which was arranged the brown-coated Russian line fighting with the fierce and deadly desperation of men

Paul Thompson

**TO-DAY'S FIGHTING—BACK TO THE BARRACKS AFTER DUTY IN THE TRENCHES**  
Germans who have taken part in the heavy fighting at Soissons returning, mud-stained but unhurt, to their quarters. These troopers are billeted in substantial cottages of the French village

prepared to face extermination in preference to yielding.

The Russians defeated in the battle of the Sereth were obliged to abandon Czernowitz, for they were threatened on the west by another army which had crossed the Carpathians into Galicia and advanced down the Pruth River. Accordingly the Russians evacuated Bukowina and withdrew beyond the Pruth. This has been an unlucky river for the Russians, for it was on the Pruth that Peter the Great met defeat 200 years ago.

This new movement of the Austrians cuts the Russian forces in two and may possibly lead to the regaining of Lemberg, the Galician capital, or to the relief of the beleaguered fortress of Przemyśl, especially if, as the Budapest reports claim, the Russians have also been defeated in Dukla Pass, south of Przemyśl, with the loss of many thousands.

**The British Reply** In reply to the American note, published in full in our last week's issue, calling attention to the danger arising from the use of the American flag by British merchant vessels, the British Government makes the following statements:

It would, therefore, be unreasonable to expect his Majesty's Government to pass legislation forbidding the use of foreign flags by British merchant vessels to avoid capture by the enemy, now that the German Government have announced their intention to sink merchant vessels at sight with their non-combatant crews, cargoes, and papers, a proceeding hitherto regarded by the opinion of the world not as war, but piracy.

It is felt that the United States Government could not fairly ask the British Government to order British merchant vessels to forego a means, always hitherto permitted, of escaping not only capture, but the much worse fate of sinking and destruction.

Great Britain always has, when a neutral, accorded to vessels of other states at war the liberty to use the British flag as a means of protection against capture, and instances are on record when United States vessels availed themselves of this facility during the American civil war. It would be contrary to fair expectation if now, when conditions are reversed, the United States and neutral nations were to grudge to British ships the liberty to take similar action.

The British Government have no intention of advising their merchant shipping to use foreign flags as a general practice or to resort to them otherwise than for escaping capture or destruction. The obligation upon a belligerent warship to ascertain definitely for itself the nationality and character of a merchant vessel before capturing it, and *a fortiori* before sinking and destroying it, has been universally recognized.

If that obligation is fulfilled, the hoisting of a neutral flag on board a British vessel cannot possibly endanger neutral shipping, and the British Gov-

ernment holds that if loss to neutrals is caused by disregard of this obligation it is upon the enemy vessel disregarding it and upon the government giving the orders that it should be disregarded that the sole responsibility for injury to neutrals ought to rest.

**The German Reply** Last week we published the full text of the American warning to Germany against the risk to neutral shipping thru the establishment of a war zone about England and Ireland. The main points of the German reply are as follows:

At the very beginning of the war Germany immediately agreed to the proposal of the American Government to ratify the new Declaration of London, and took over its contents unaltered, and without formal obligation, into her prize law.

The German Government has obeyed these rules, even when they were diametrically opposed to her military interests. For instance, Germany allowed

the transportation of provisions to England from Denmark until today, tho she was well able, by her sea forces, to prevent it. In contradistinction to this attitude, England has not even hesitated at a second infringement of international law, if by such means she could paralyze the peaceful commerce of Germany with neutrals. . . .

In view of this situation, Germany, after six months of patient waiting, sees herself obliged to answer Great Britain's murderous method of naval warfare with sharp counter-measures. If Great Britain in her fight against Germany summons hunger as an ally, for the purpose of imposing upon a civilized people of 70,000,000 the choice between destitution and starvation or submission to Great Britain's commercial will, then Germany today is determined to take up the gauntlet and appeal to similar allies.

Germany trusts that the neutrals, who so far have submitted to the disadvantageous consequences of Great Britain's hunger war in silence, or merely in registering a protest, will display toward Germany no smaller

## YESTERDAY'S FIGHTING—LISTING THE GERMAN DEAD

This is part of the section of the war department offices in Berlin in which the official lists of dead and injured are made up

measure of toleration, even if German measures, like those of Great Britain, present new terrors of naval warfare.

Moreover, the German Government is resolved to suppress with all the means at its disposal the importation of war material to Great Britain and her allies, and she takes it for granted that neutral governments, which so far have taken no steps against the traffic in arms with Germany's enemies, will not oppose forcible suppression by Germany of this trade.

In view of the fact that Germany gave the first proof of her good will in fixing a time limit of not less than fourteen days before the execution of said measures, so that neutral shipping might have an opportunity of making arrangements to avoid threatened danger, this can most surely be achieved by remaining away from the naval war zone. Neutral vessels which, despite this ample notice, which greatly affects the achievement of our aims in our war against Great Britain, enter these closed waters will themselves bear the responsibility for any unfortunate accidents that may occur. Germany disclaims all responsibility for such accidents and their consequences.

Germany is ready, finally, to deliberate with the United States concerning any measures which might secure the safety of legitimate shipping of neutrals in the war zone. Germany cannot, however, forbear to point out that all its efforts in this direction may be rendered very difficult by two circumstances: First, the misuse of neutral flags by British merchant vessels, which is indubitably known to the United States; second, the contraband trade already mentioned, especially in war materials, on neutral vessels.

Regarding the latter point, Germany would fain hope that the United States, after further consideration, will come to a conclusion corresponding to the spirit of real neutrality. Regarding the first point, the secret order of the British Admiralty, recommending to British

merchant ships the use of neutral flags, has been communicated by Germany to the United States and confirmed by communication with the British Foreign Office, which designates this procedure as entirely unobjectionable and in accordance with British law. British merchant shipping immediately followed this advice, as doubtless is known to the American Government from the incidents of the "Lusitania" and the "Laertes."

Moreover, the British Government has supplied arms to British merchant ships and instructed them forcibly to resist German submarines. In these circumstances, it would be very difficult for submarines to recognize neutral merchant ships, for search in most cases cannot be undertaken, seeing that in the case of a disguised British ship from which an attack may be expected the searching party and the submarine would be exposed to destruction.

Great Britain, then, was in a position to make the German measures illusory if the British merchant fleet persisted in the misuse of neutral flags and neutral ships could not otherwise be recognized beyond doubt. Germany, however, being in a state of necessity, wherein she was placed by violation of law, must render effective her measures in all circumstances, in order thereby to compel her adversary to adopt methods of warfare corresponding with international law, and so to restore the freedom of the seas, of which Germany at all times is the defender and for which she today is fighting.

In order to prevent in the surest manner the consequences of confusion—tho naturally not so far as mines are concerned—Germany recommends that the United States make its ships which are conveying peaceful cargoes thru the British war zone discernible by means of convoys.

If the United States, in view of the weight which it is justified in throwing and able to throw into the scales of the fate of peoples, should succeed at the

last moment in removing the grounds which make that procedure an obligatory duty for Germany, and if the American Government, in particular, should find a way to make the Declaration of London respected—on behalf, also, of those powers which are fighting on Germany's side—and thereby make possible for Germany legitimate importation of the necessities of life and industrial raw material, then the German Government could not too highly appreciate such a service, rendered in the interests of humane methods of warfare, and would gladly draw conclusions from the new situation.

What Japan Demands from China      The question of the concessions which

Japan is demanding of the Chinese republic is raising serious discussion not only in China but quite as much in neutral countries which fear lest they should mean the closing of the "open door." Official secrecy has been maintained as to the contents of the notes exchanged, so it is impossible to state with accuracy the extent of the concessions demanded or to decide whether they involve any infraction of China's sovereignty. The two versions that have transpired, one thru Japanese and the other thru Chinese sources, differ decidedly on some of the most important points involved. It appears that Japan presented a list of twenty-one demands, of which the Peking Government was willing to consider only twelve, maintaining that the others involved a derogation of the essential rights of the Chinese republic.

According to the Chinese version the Japanese demanded, first, the cession of all of the rights in Shantung acquired and enjoyed by Germany, including trade privileges in the important cities and the right to construct a railroad from Kaio-chau into the interior of China.

The second article relates to South Manchuria and East Mongolia, in which Japan insists for her nationals the privilege of free residence and trade and the right to rent and purchase lands for manufacture and agriculture. The railroads in this region are to be exclusively under Japanese control for ninety-nine years and no citizens or subjects of other countries are to be allowed to build railroads or to make loans in this region without the consent of Japan. China is required to consult Japan before employing advisers or instructors for the conduct of administrative, financial or military affairs in this region.

The Japanese claims are not confined to the northern part of China, but in some form affect the whole extent of the country from Harbin to Canton. China is called upon to

permit Japan to build railroads opening up the interior from Swatow on the coast opposite the island of Formosa, which was taken from China by Japan in 1895. This line will extend to Wu-chang, where the great steel works are located, and will tap the rich valley of the Yang-tze River. Japanese capital shall be employed for the development of the province of Fukien, opposite Formosa. A joint force of Chinese and Japanese shall police "the important places in China." The Japanese are to have the right to establish hospitals, missions and schools in the interior of China, to propagate their religious doctrines and to hold land for this purpose. China is to purchase from Japan at least half the arms and ammunition required by the whole country. The Government of China is to employ influential Japanese advisers for administrative, financial and military affairs. China is required not to alienate or lease to any third power any port or harbor or island on the coast of China.

The Japanese version is said to have omitted from this last article the words "any third power." According to the Japanese their Government has no designs upon the territorial integrity of China and merely seeks the formation and extension of its rights in Southern Manchuria and East Mongolia and the German rights which it has acquired from the siege of Tsing-tao.

#### Ship Bill Laid Aside

The prevailing opinion at Washington is that the Ship Purchase bill is dead. In a House Democratic caucus it was approved, with twenty-nine dissenting votes. On the following day it was passed in the House by a vote of 215 to 121. All of the Republicans and nineteen Democrats were counted in the negative. In the Senate, twenty-four hours later, the bill, by an informal agreement, was sent to conference, with a provision that it should remain there until February 27.

No one expects that it will then be taken up and carried to a vote. The end of the session will be near at hand, and, in all probability, all of the annual appropriation bills will not be passed before adjournment. It is understood, however, that an extra session will be avoided, and that the President opposes the calling of one.

#### TO-MORROW'S FIGHTING—BELGIAN RECRUITS IN TRAINING

In this camp there are 7,000 recruits of 1914, ranging in age from 16 to 24. These boys are carrying out rations for distribution

ford Railroad Company, which has been the subject of much litigation, has given to them a statement of its policy and of the course it is taking in compliance with the decree of the Federal Court requiring separation from many of the subsidiaries which it acquired and operated in violation, it was alleged, of the Anti-Trust law. The company is seeking legislation in the three States which will facilitate a readjustment of its finances.

It will be the policy of the company, this statement says, to sell its so-called outside properties, the securities and the real estate which are not required for the conduct of its business, and to use the proceeds in reducing its liabilities and in making needed improvements. It will not acquire any interest in properties or business other than those which are directly and clearly necessary to the transportation companies which it is allowed to retain. It will "attend closely to the business of transportation" and so conduct that business that "capital requirements will be kept at a minimum." It also promises to promote in every reasonable way safety, efficiency and economy, and to give the public good service.

Control of the Boston & Maine, the Rhode Island trolley companies, and a company owning several trolley lines in Connecticut has already been transferred to trustees. The Berkshire trolleys and part of the steamship holdings are to be sold. The New England Navigation Company, operating certain steamship lines, is to be wound up and dissolved. Be-

cause the Central New England Company's line includes the Poughkeepsie Bridge route, useful for thru traffic to and from the West, it will be retained, and also stock control of the Ontario & Western, a line which gives New England direct connection with the anthracite coal fields. The New York, Westchester & Boston, a short branch near New York, will be retained as an alternate route into that city, and because of a belief that in time it will be a paying investment, but \$4,000,000 worth of real estate along the line is to be sold. The statement shows how much progress has been made in the work of dissolution or disintegration of the combination which the Government attacked in the courts.

#### The Ways of Carranza

José Caro, the Spanish Minister expelled from Mexico by Carranza, was carried to Havana on a Spanish ship. There is no evidence that Spain has appealed to European powers, but complaints to our Government from Madrid are expected. On account of this incident, and because of the deplorable condition of the Mexican capital, several ambassadors of European nations at Washington have expressed their anxiety to our State Department. The diplomatic representatives in Mexico have refused to go to Vera Cruz, because acceptance of Carranza's invitation would be equivalent to a recognition of his Government. But they cannot discuss international questions with those who control the capital without

Underwood & Underwood

#### TO-MORROW'S FIGHTING—A NEW ARMY DRILLING IN ENGLAND

Part of the Canadian forces which have been encamped on Salisbury Plain marching into position to be reviewed by King George

going to that port, as Carranza's recent order forbids General Obregon or any other officer to listen to them. Last week the railway to Vera Cruz was cut by Zapata's men, and Obregon, who had gone to the coast for a conference with the First Chief, was unable to return. This suggested a false report that Carranza's forces had withdrawn from the capital, and that Obregon was dead. The diplomats have permission from their governments to leave the city and to withdraw from Mexico, if they think they ought to do so.

Secretary Bryan has shown respect for Carranza's order, and has directed Mr. Silliman, the representative of President Wilson, to move from the capital to Vera Cruz. But this does not imply recognition of Carranza's Government. On the other hand, Carranza is in disfavor at Washington because he has scarcely noticed a sharp warning sent to him by our Government six weeks ago concerning the harsh treatment of Spaniards by his forces. Eight had been killed in the vicinity of Pueblo, and nearly fifty were in prison, expecting that they would be put to death. Carranza merely replied that an investigation would be made. It is partly on account of his course with respect to this matter that his representative at Washington, Eliseo Arredondo, accompanied by his counsel, Charles A. Douglas, has gone down to Vera Cruz. They will tell the First Chief that he has not shown sufficient regard for the views of our Government.

Something will be said to him, also, about the treatment of W. O. Jenkins, consular agent of the United States at Pueblo. Mr. Jenkins was first arrested and imprisoned by Zapata. Then Zapata was driven away by Carranza's forces, by whom the consular agent was arrested, beaten and placed before a firing squad to be shot. An officer saved his life by demanding that he should be taken before General Obregon. The latter

released him and sent to Washington an apology. But our Government insists that those who abused Mr. Jenkins shall be punished.

Residents of the capital are suffering for lack of food. Obregon has taken one-tenth of the supplies held by grocers, and is selling to the poor at very low prices. There is scarcity of food in many parts of Mexico, and organized government has almost ceased to exist in several states.

#### Mexico's Warring Factions

After taking possession of Guadalajara, Villa pursued the retreating soldiers of Carranza in the direction of the Pacific coast. Not far from Manzanillo he overtook them and killed 200 in a battle. He seeks control of that port, in order that he may receive there 9000 rifles and 3,000,000 rounds of ammunition which are coming to him from San Diego. Returning to Aguascalientes, he said that he would soon move against Tampico. Recent reports about military operations have been vague and conflicting. Angeles remains in command of Villa's men in the vicinity of Mon-

terey. It is said that Raoul and Emilio Madero have quarreled with him and gone away because he took into his army men who had been officers under Huerta. Gutierrez, formerly provisional President, who fled from the capital with a small force, has been besieging Saltillo. He represents no one but himself. His overtures to Carranza and Obregon were rejected.

In the northwest there has been little or no fighting. Several weeks ago, General Juan Cabral was sent to the vicinity of Naco by Villa, to supersede General Maytorena. The latter quarreled with him and put him in prison. Cabral escaped and fled to Arizona, saying he would have no more to do with Mexico. Last week, however, he and Maytorena settled their differences and the exile returned to his 2000 soldiers, who had been in camp near the Mormon colony in the Bavispe River district. It is reported that General Benavides, who left Villa and fought against him, has committed suicide in a village near Queretaro, because Villa refused to take him back.

At the capital, Rafael Zabaran, Carranza's Minister of the Interior, has made an agreement with the labor unions. In consideration of his promise that Carranza, if successful, will help them, they have undertaken to supply municipal guards that shall take the places of soldiers, and also to form a brigade for the army. Carranza says that this agreement adds 100,000 men to his active force. There have been many arrests at the capital, owing to the discovery of documents connecting prominent citizens with Zapata. Johnson, the prize-fighter, has arrived at Tampico, the dispatches say, and will be permitted to pass thru the lines on his way to Juarez, where he is to fight a man named Willard. Duval West, a new agent of our Government, has started from El Paso to have conferences with Villa and Carranza in turn.

PLUNGING ALONG TO SINK A MERCHANTMAN—AND TO FLOUT INTERNATIONAL LAW

## THE INVISIBLE BLOCKADE

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

**T**HE submarine is at the bottom of the trouble which has caused the President's notes of protest to Germany and England concerning the invisible blockade. The military questions involved are those which arise from the use of a neutral flag by the menaced British merchant vessels and the conditions which attend the threatened employment of the submarine.

The display of false colors in order to deceive the enemy at sea is an old ruse. A war vessel usually adopts it in order to lure the enemy within range of her guns. The object of the merchantman, on the other hand, is to induce the enemy to keep away. The disguise in both cases is often carried much further. In the old days, before the advent of the iron-clad, wooden warships were usually painted black, with a white stripe around them, checkered by the gun-ports. Nothing was more common than for merchant vessels to paint their hulls in the same way, the black squares on the white stripe being then merely imitation gun-ports. This was often done by whalers and other ships venturing into far distant seas where piracy was to be expected, and probably many an old sailing craft has owed to the deception her immunity from piratical attack. So also it was customary to change the sails and rigging to remove features peculiar to men-of-war or characteristic of some particular nationality. This was frequently done by our own ships during the Civil War. In the summer of 1863 the sloop-of-war "Macedonian," then

a practise vessel for the midshipmen at the Naval Academy, while making her cruise in European waters, on being warned that she might fall in with the "Alabama" disguised herself to resemble a Spanish merchantman, and not only did she wear a Spanish ensign, but she had people about her decks suitably dressed to represent Spanish seamen. She was a slow sailing vessel, while the "Alabama" was a fast steamer, but the latter would have stood little chance if once lured within range of the "Macedonian's" battery. The fixed rule relative to warships is that before they fire any gun in battle, the false colors must be replaced by the national ensign, usually then displayed not only at the staff but at every masthead. Nor can any vessel use a foreign national flag other than temporarily to meet an emergency, without inviting from the nation whose colors she has appropriated such a protest as the President has already sent to Great Britain.

Warships are easily distinguished by their build or peculiar features such as the cage masts of our own vessels. Even when they are converted merchantmen the long coach-whip pennant which all warships carry at the masthead and which private vessels never display indicates their character. Every warship today is provided with silhouettes of the principal warships of all navies, and from these the stranger can often be recognized when many miles distant.

On the other hand, a warship desiring to avoid recognition will

change her silhouette outline, as for example, by an additional dummy smokestack made of canvas, or by erecting canvas screens about her decks which in outline may look like turrets, or work other changes in the apparent shape of her superstructure. There is, however, nothing to prevent a war vessel from boarding another war vessel if she deems it necessary in order to determine the latter's true character, and this was done in Manila by Admiral Dewey upon the arrival of the German ships. When the German Admiral objected and declared his flag to be a sufficient identification, Admiral Dewey sententiously replied that bunting could be bought for fifty cents a yard.

A merchant vessel, however, is never identified in war times by her flag, but by her papers, which are examined under the right of visit and search accorded by international law. These papers include, for example, her register, as a ship engaged in foreign trade or her license for coasting trade, her shipping articles and crew list, the manifest of her cargo, her clearance permitting her to leave her last port, her log-book, bills of lading, bill of health, and so on, and must be produced by the captain and exhibited to the boarding officer. If the latter is satisfied that the ship should not be detained or captured he makes a record of his visit in her log-book with much particularity as to time and place for the information of the next vessel which may over-haul her.

The futility of such famous trans-

© By special arrangement with the "London Graphic" and "Leslie's Weekly"

#### THE EARLY ACHIEVEMENTS OF THE GERMAN SUBMARINE COMMERCE-RAIDERS

On February 15, three days before the invisible blockade was to begin, a submarine torpedoed without warning another British vessel, the "Dulwich" (Hull-Rouen). Her crew escaped

Atlantic liners as the "Lusitania" or "Mauretania" hoisting the American flag in order to conceal their nationality is obvious. German naval officers know, of course, that no such

vessels are owned in the United States, nor would they be deceived as to their identity no matter what colors might be displayed. If the "Lusitania" really expected to mis-

lead a possible assailant, she would have shown not merely a false ensign but a false distinguishing signal—the string of small flags which correspond to her name in the interna-

tional signal book. All warships can read these flags.

It has been suggested that the "Lusitania" used our flag to give warning that American citizens were on board. The flag has no such accepted meaning. When it is hoisted in its proper place on the staff at the stern or at the peak of a gaff on the after-mast, it shows simply nationality and would doubtless be given that signification if displayed anywhere by a vessel having no other flags set. But ordinarily if hoisted at the foremast head, it indicates the country to which the vessel plies from her home port; if union down, it is a signal of distress, and if fastened in the shrouds it calls for the visit of the quarantine authorities. In addition to the national flag and that of the country to which the voyage is made, all ocean liners and many other merchantmen carry house flags indicative of their ownership. Thus to a false ensign and a false name signal the "Lusitania," in order to complete her deception, so far as flags could compass it, might have added the emblem of some foreign owner, like the blue eagle of the American line or the green-white-green stripes of the Holland line, and so have worn all the flag habiliments of a neutral liner. The Dutch and Scandinavian vessels traversing the "zone" have painted their names and colors on their sides and are using electric signs at night; but, as British ships can give false information in this way as well as any other, the value of the expedient is not clear.

But, as said in the beginning, the basis of the trouble is the submarine, which now comes to unsettle the sage conclusions of Hague Conventions, London Declarations and the other latter-day codifications of international law. A prize having been taken, whether an enemy's vessel or that of a neutral, must be brought into port for adjudication of the validity of the capture unless the safety of the captor or the success of the operations in which he is engaged at the time is endangered. In that case before the prize is destroyed, all persons on board must be placed in safety and all the ship's papers and other documents relevant to a decision on the validity of the capture must be preserved. If the necessity for destruction is not imminent, and the burden is on the captor to show that it is, he usually keeps the prize under his guns until port is reached or sends her there in charge of a prize crew. But the submarine cannot do this. She may have a light gun for use when she is not submerged and sufficient to overcome an un-

armed merchantman, and she can force the arrested vessel to send a boat to convey on board the officer charged with the duty of search. But that is all. She can put no prize crew on board, for she has no men to spare. She cannot bring her prisoner into port, for the advent of the lightest armed vessel of the enemy will cause her incontinently to dive. She is so vulnerable herself that a piece of old grate bar fired from the brass gun which many ships carry for signaling purposes might sink her at short range, and if as is generally suspected the liners now in service are not wholly unprovided with quick-fire modern pieces hidden in out-of-the-way places in the hold, her triumphant career might be brought to a sudden end when least expected. What, then, is she to do with the human beings on a prize which the exigencies of war compel her to destroy? Up to the present writing, so far as is known the crews of British vessels meeting this fate have been given time enough to take to their boats and in one instance the German captor considerably towed the latter nearly to the shore. But it is hardly likely with the "zone" swarming with all kinds of craft watching for German submarines that the latter will trouble themselves to rescue British crews.

Where there are neutrals on board or where a really neutral vessel is torpedoed by mistake, the case is different and the consequences are too plainly set forth in the President's note to Germany to need any elucidation here. To warn neutral vessels not to go into the arbitrary zone is merely to affirm a "paper" blockade which is legally non-existent. The proposal in the German reply to the President's protest that every American merchantman traversing the forbidden area shall be convoyed by a United States war vessel is impracticable. Neutral vessels under convoy are exempt from search, the belligerent warship taking the written word of the commander of the convoying warship as to all the information which could be obtained by actually searching the vessels in his charge. Even if it is believed that this is in error the investigating ship can only represent the fact to the convoy commander, who will determine to what extent, if at all, his protection shall be withdrawn from the vessel or vessels at fault. Any attempt by the belligerent to interfere with or attack the convoyed ships would result in an immediate fight with their protector. As no American commander would give false assurances, the result would be that the determinations which are a

proper subject for the belligerents' own search of neutral unconvoyed ships would be thrown upon our Government, which would simply become a guarantor of the non-contraband character of the cargoes—a function which it is extremely unlikely it would be willing to assume. Furthermore, the German reply says that the "zone" is to be mined. Surely we cannot send our warships into such danger. It is safe to conclude that American merchant ships will continue to traverse British, French, Russian, Portuguese, Serbian, Montenegrin, Japanese, Austrian, Turkish or German "zones" quite as freely as elsewhere and not under convoy.

The idea of establishing around the British Islands an invisible blockade was proposed by Grand Admiral von Tirpitz last December, and at the same time he took occasion to state that Germany was building forty new submarines of 900 tons displacement, competent to travel around the "whole of England and remain absent a fortnight." This is probably the flotilla which the Kaiser is reported to have gone to Cuxhaven recently in order to "bless" prior to its departure.

Meanwhile some definite information as to what the German submarines have so far accomplished has been given to Parliament by the first Lord of the Admiralty. Of the 6200 officers and men representing the total naval loss at sea most have been victims of submarine attack; but the loss in merchant vessels sunk by submarines in the vicinity of British ports appears to be relatively much smaller in proportion to the number of sailings and arrivals than has hitherto been believed. The former aggregate 3600 and the latter 4465 during the last three months, and yet the submarines have destroyed but fourteen ships in all. This probably accounts for the remarkable coolness and courage with which the British merchant service has taken the somewhat lurid warnings of the British newspapers. After the German submarine "U-21" had sunk a steamer a few miles north of Liverpool, there was some apprehension and shipping was held in Belfast and other Irish Sea ports; but within a few days traffic was fully resumed and in fact abnormal numbers of passengers were carried. As the danger zone includes the locality in which King George's dreadnoughts are known to be assembled, the British are wondering why the present menace is restricted to merchantmen and transports and generally seem inclined to regard it as "bluff." On the other hand, not having succeeded in their drive to Paris, nor accomplished any-

thing by coast raids, nor effected other than a very moderate scare by their Zeppelins, pretty much any expedient to worry the enemy may now seem justifiable to the Germans, in view of the steadily increasing stringency of their food supply and the looming possibilities of the Russian fleet, which has four battle-cruisers nearing readiness much more powerful than anything of the kind Germany possesses (for each carries twelve 14-inch guns and can make twenty-eight knots speed), besides six battleships of the newest type. What these ships can do on the North German coast in conjunction with the Russian army remains to be seen. A part of the German fleet must apparently be sent into the Baltic to meet them. That divides the German force and leaves the remainder of it in the North Sea proportionately weakened against British attack.

The German Embassy in Washington avers that British merchant ships have been "instructed to sail in groups and to ram German sub-

marines while examination is proceeding or should the submarines lie alongside to throw bombs into them or else to attempt to overpower the examining party coming on board." This is an obvious attempt to justify the running amuck of German submarines and will deceive nobody, and the spectacle of a group of merchantmen chasing a submarine in order to ram her would only resemble so many shooting-blinds trying to ram a canvasback duck. Why private British owners should mass their ships after the Admiralty's express prohibition of similar grouping by war vessels in like danger of submarine attack, the German Embassy omits to explain. Neutral passengers on armed liners take the usual chances of being torpedoed or destroyed by gunfire which fall to the military crew. People contemplating transatlantic voyages this summer in British vessels despite the war will no doubt consider this.

The latest German accounts of the North Sea battle eliminates sub-

marines entirely as a factor in that fight, and assert that Admiral Beatty stopped the chase and went back because three of his ships were so badly injured that they could not proceed further. They also aver that the German ships were but slightly hurt. It, therefore, appears that Admiral Beatty stopped chasing vessels seriously damaged and on fire, because of submarines which were not there, and Admiral Hibber kept on running because he knew his pursuers were in retreat and so badly shattered that they could not catch him. This is perplexing: for even if Beatty would not go after Hibber, what prevented Hibber from going after Beatty? Anyway, this is the first time in naval history that two admirals have each, on his own showing, run away from the other, with full knowledge on the part of each that he had defeated his antagonist. Small wonder the head of the British Admiralty gravely assured Parliament that the action was "incomplete."

*New York City*

## A SINGER OF THE BIRD SONGS

**M**ANY scientists have envied the power art gave to Siegfried and Hiawatha—the power to understand the language of birds. And in these days of exact records, many an ornithologist has spent weary hours trying to put upon paper the musical notation of a bird's call. But in the person of Miss Katharine Minahan we have caught a complete aviary of song.

Miss Minahan as a little girl entered a convent school. There she was allowed to wander at will in the woods, where no doubt her acute ear drank in the slightest differing notes of the birds she saw around her. Imagine her delight on the day when she discovered that her feathered friends answered to her call; and this power of hers added not a little to the prestige she had among her school friends.

As the years advanced she found this power of hers growing deeper and richer. Then one day David Belasco heard of her, and it happened that he was about to produce "The Good Little Devil," in which a nightingale was to sing its plaintive song, and where, in Juliet's garden, were to be heard the cooing of doves and the chirp of other birds. So he sent for Miss Minahan, and she was engaged to fill the garden with song. America is not the home of the nightingale; in fact I have never seen but one miserably cold specimen in a wooden cage at the Bronx Park Gar-

dens. So a hasty order was sent to England, and soon there arrived aboard a giant liner six nightingales. On these Miss Minahan lavished her care and attention. When Belasco called for final rehearsals, she was ready. Indeed so ready that when the manager criticized certain notes of hers, asking if she would not give other intonations for the cooing doves, she asked him to test her rightness. The real doves were placed in the wings on the opposite side from Miss Minahan, and she gave her call. There was a moment's silence, and there came the answer from across stage. She was right.

MISS MINAHAN AS "THE BIRD GIRL"

As to the scientific part of her voice, Miss Minahan will refer you to a doctor who has studied her throat and told her something of its similarity to the vocal apparatus in birds and reptiles. The thing Miss Minahan is interested in is this power she has, not to imitate a bird, but to be a bird at the moment of singing.

But like all persons endowed with a special gift, Miss Minahan is ambitious in other directions. She does not wish to repudiate her talent, which after "The Good Little Devil" she employed to such excellent example in Mr. Percy Mackaye's bird masque, "Sanctuary," as to make President Wilson marvel. But she wishes to give it some secure basis, other than an occasional recital, and the long wait until some play is produced requiring her special services.

It is true that since she gave her bird notes at Cornish, New Hampshire, where "Sanctuary" was first played, she has identified herself more and more with the Mackaye masque. But there is a greater ambition, to produce a play of her own, wherein she has made sure that her bird notes will receive sufficient outlet. For eight years she worked upon a dramatization of George Eliot's "Spanish Gypsy." "And when that is a success," she said, "I shall go to the country, buy me an aviary such as I have dreamt of, and learn all the secrets of the birds."

# "FIFTY-FOUR FORTY OR FIGHT!"

THE THIRD OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH-SPEAKING PEOPLES

THE most important as well as the most famous of all our boundary disputes with Great Britain concerned that vast tract of mountain and forest watered by the Oregon (now the Columbia) River. Claim to all or part of the country on the basis of exploration was made by Spain, Russia, Great Britain and the United States, but Spain gave up any claim to territory above forty-two degrees and a convention with Russia extinguished her claim south of the famous line of fifty-four degrees and forty minutes. Between these boundaries north and south, the Rocky Mountains to the east and the Pacific Ocean on the west, the country was open to settlement by British or by Americans, but possession was given to neither. At first there were only a few scattered fur-trading posts established within the region by either party. One of the earliest of these was Astoria, founded by John Jacob Astor, but it was captured and held by the British during the War of 1812. Such Americans as ventured into the wilderness settled south of the Columbia and Great Britain offered the course of this river as a boundary, but the United States made the offer on the other hand of extending the boundary of the forty-ninth parallel to the Pacific. The agreement of 1818 was to cover only ten years, but in 1827 it was provided that the "joint occupation" by the two countries was to continue until either the American or the British Government gave a year's notice to end it. Any year when the people of the United States or of Great Britain might wish to insist upon setting up a government in the disputed region the agreement would come to an end and there would be

no way to preserve peace except by dividing the Oregon country between the two nations.

Still so long as the population remained very small the "joint occupation" worked well enough. But American expansion, which had already made the great prairies of the Middle West a populous farming region, was transforming the Oregon country from a backwoods of hunters and trappers into a land of settlements and clearings. In 1838 and 1840 the American residents petitioned Congress to establish a regular territorial government in Oregon and in 1843 the settlers established

a provisional government of their own while the population was still less than three thousand. At the same time that the settlers themselves were demanding that the American Government extend its protection and authority over them, the people in the eastern states were waking up to the importance of the question. The Democratic party wished to join the Republic of Texas to the United States but, while the southern states were very anxious to see this done, many northerners opposed it on the ground that Texas would be a slave state and unless some free territory was gained at the same time it would

upset the "balance between the sections" of North and South. The Democratic party could not hope to win if it appealed to only one section of the country, so in 1844 it coupled the Texas and Oregon questions in the following plank of the party platform:

Our title to the whole of the territory of Oregon is clear and unquestionable; no portion of the same ought to be ceded to England or to any other power; and the re-occupation of Oregon and the re-annexation of Texas at the earliest practicable period, are great American measures, which this convention recommends to the cordial support of the Democracy of the Union.

With this platform the Democrats swept the country. The campaign was a very exciting one and, altho Texas was everywhere the chief issue, Oregon was by no means forgotten by the voters. At campaign meetings the followers of James Knox Polk, Democratic candidate for President, shouted: "All Oregon or None"; "Fifty-four Forty or Fight," which telling alliteration was one of the most effective campaign slogans in all American history. The new administration

THE OREGON COUNTRY  
The region jointly occupied by Great Britain and the United States extended from the northern boundary of California to 54° 40'

at Washington was clearly committed to forcing Great Britain out of the whole of the Oregon country. President Polk in his first annual message to Congress made this plain. He advised that the agreement of 1827 be ended, that America assert its jurisdiction over all the Oregon settlers, that an Indian agency be established, that military protection be given to the Oregon trail and an overland mail route to the Pacific be founded. He asserted in words that sound familiar to us to day, that the national claims in Oregon "cannot be abandoned without a sacrifice of both national honor and interest."

The two nations stood on the brink of war. In 1846 Congress acted on the President's message and ended the agreement with Great Britain. It seemed as though every means of averting war had been exhausted without success. The British Minister, Pakenham, had offered us arbitration more than a year before, but the proposal was scornfully rejected.

When Pakenham suggested "the expediency of referring the whole question of an equitable division of the territory to the arbitration of some friendly sovereign or state" and proposed Switzerland, Hamburg and Bremen as possible arbitrators, Secretary of State Buchanan replied "that while my own inclinations were strongly against arbitration, if I were compelled to select an arbitrator it would be the Pope. That both nations were heretics and the Pope would be impartial." The humor of this was somewhat lost on the British Minister, who rejected the renewed American offer to extend the boundary of the forty-ninth parallel westward from the Rocky Mountains to the Pacific without even informing the British Government of our proposal or asking for instructions. If either nation had been looking for an excuse to break off friendly relations and begin fighting it would have had more than enough pretext to do so.

But instead of so doing the British Government tried to have the American offer of boundary, which their Minister had refused to consider, renewed. A tentative treaty was drawn up by the British and sent to President Polk, who took

the unusual step of referring it to the Senate before signing it himself. In view of the fact that a

From an engraving

PRESIDENT JAMES K. POLK  
Elected in 1844 in the "Fifty-four forty or fight" campaign

war with Mexico was more than likely the Senate advised the President to accept the terms offered and later it ratified the treaty. The boundary line of 1818 was extended from the Rockies to the channel which divided the Island of Vancouver from the mainland and thence the boundary followed the middle of the Channel and the Strait of San Juan de Fuca to the ocean. Great Britain retained of the disputed area the Island of Vancouver and a large part of the mainland of what is now called British Columbia. The United States held what is today the states of Washington, Oregon and Idaho, besides a large part of Wyoming and Montana. The exact course of the

water boundary remained in dispute until the German Emperor was appealed to as arbitrator in 1872 he decided in favor of the American interpretation of the Treaty of 1846.

This amicable agreement is one of the most important events in the history of peace. The United States had a formal claim to the Oregon country, a Presidential election had been won largely on the issue of the annexation of the whole of it, the majority party, together with President Polk, had declared themselves in favor of such a stand, "national honor and interest" were said to be involved, previous negotiations for almost thirty years had failed to settle the question and the practical issues at stake were immense. The country which Great Britain and the United States had occupied together from 1818 to 1846 was larger than any European country except Russia, its total population today amounts to about two and a half millions, its natural resources in some respects

can hardly be paralleled on the American continent. Probably most of the wars in history have been fought with less provocation on either side and less to be gained by victory than the war which might have been in 1846. But, owing to the wise statesmanship on both sides of the Atlantic, of which both nations may well be proud, an honorable compromise was made and the war was never fought. The war averted over Oregon is a greater glory to the Polk administration than the victorious war with Mexico for which it has chiefly been famous. Our victory over Mexico was over a weak, disunited and backward country and was everywhere expected; our satisfactory settlement with

England was won in the face of obstacles which were as great as have occurred or are likely to occur in all our dealings with the mother country.

*References.*—The history of the Oregon question is fairly well covered in most textbooks of American history. *Westward Extension*, by Prof. G. P. Garrison (in Hart's American Nation series), pages 157-173, may again be recommended. Lodge's *One Hundred Years of Peace* discusses the matter briefly on pages 79-83. J. W. Foster's *A Century of American Diplomacy*, pages 302-313, and W. A. Dunning's *The British Empire and the United States*, pages 124-133, are good short accounts. For the story of the early settlements H. Bancroft's *North-west Coast* may be mentioned. For the settlement of the San Juan de Fuca water boundary, J. B. Moore's *International Arbitration*, Vol. I, pages 196-236, is a very full reference.

## PRIESTS AND LEVITES ?

BY SARAH N. CLEGHORN

"So cruel it was, I could not bear the sight;  
I hurried past, and turned my eyes away."  
"Placed as I am, what could I do or say?  
I must uphold my colleagues, wrong or right."  
"My sympathies are with you in the fight,  
But do not call me as a witness, pray."  
"To join the cause I do not see my way:  
My time is occupied from morn to night."

Did not the priest and Levite, when they met,  
Solemnly sigh, and shake the pious head,  
Half fearing lest they never should forget  
That wounded traveler, robbed and left for dead?  
"Pity we needs must hasten past so soon:  
But the Sanhedrim met that afternoon."

# MOTORIZING AMERICA

A REVIEW AND  
FORECAST OF  
AMERICA'S  
AUTOMOBILE  
INDUSTRY

BY  
BRONSON  
BATCHELOR

**A** LITTLE more than a decade ago men discovered for a second time in history how much of the world lay outside the narrow confines of their everyday lives.

Just as communities and peoples had brought home to them, with the coming of the locomotive a century before, the isolation of the little world in which they had previously dwelt, so now more acutely than ever before men realized the closeness with which for ages their individual inter-relations had been restricted. They grew impatient of the halting, crowded street-cars, by which their homes were connected with their businesses or their pleasures. They grew intolerant of the painful slowness of the horse, tho it had been man's faithful servitor for centuries. The flat-dweller became discontented with the closeness of the city from which he could only escape by horse or by rail, and the farmer began to grow restive at his own isolation.

It was the automobile that brought the new vision of the widening horizons of life. With the discovery began a new revolution: the motorization of America.

Today one person out of every eighty in the United States possesses an automobile.

This year nearly 500,000 motor cars, with a value exceeding \$450,000,000, will be produced in America.

Familiar as we are with tremendous figures, with the severing of continents and the leveling of mountains, more marvelous still has been the creation during the past decade and a half of the vast industry, which is the outgrowth of that cough-

ing, wheezing, rattling contraption that twenty years ago set forth on an adventure at the perilous rate of seven miles an hour!

What a far cry it is from New York's first automobile demonstration in 1896 when the Park Commissioner, "for fear it might scare the horses," forbade to the strange vehicle the right to go thru Central Park!

Yet today involved in the making of those vehicles is invested millions of dollars, estimated variously at from two hundred million dollars up—pouring in so rapidly that the manufacturers themselves scarcely know what the amount is. In ten years, from one hundred and fiftieth in the list of American industries, the manufacture of motor cars has risen to a position among the first dozen, and to leadership in at least one state.

Not many years ago Michigan was largely an agricultural state; Detroit little more than a huge, sprawling, mid-Western town. Now the Wolverine State produces no less than seventy-five per cent of that half a million cars. In Detroit are to be found a large proportion of the world's most efficient and scientific factories, running night and day in their effort to put an impatient earth on pneumatic-tired wheels. Twenty-two per cent of the industrial workers of Michigan are employed in the automobile and allied trades. Motor cars have almost replaced Grand Rapids furniture as the trade-mark of the state.

If the story of Pennsylvania is the history of steel, then the later chapters of Michigan's annals are the

story of the automobile. Pittsburgh has been called the "city of a thousand millionaires"—made by steel; Detroit differs from Pittsburgh in that its millionaires are still in the making.

Now when men first discovered that the horse was an antiquated institution, and proceeded to retire it over-night, as it were, to the place where all antiquated things belong, they did it neither from a sudden inspiration nor from a dawning sense of reason. Economic revolutions as a rule do not happen that way. Some do occasionally, such as the sewing machine, the telephone, the electric light, which had advantages that could not be overlooked. They were simple, they were cheap, and their uses were almost imperative.

Not so with the automobile, the purchase price of which alone was equal to the cost of a fair-sized house and lot.

The motor car revolution has been due not so much to economic utility as to other causes. Not to the machine so much as to the daring methods which the makers pursued in manufacture and salesmanship.

And the triumph they have achieved is but another tribute to the genius of the American business man. Nowhere else in the world is the automobile so generally used as in the United States; the American car, like farming machinery, adding machines, and any number of articles, has become the standard the world over.

Where the American manufacturer surpassed his European competitor is that he saw in the automobile

something more than a luxury, a plaything for the very rich. In every class except the poorest, he visioned it as the necessity, while in Europe, except where the American lower-priced car has begun to compete, it is still the extravagance for the few. It is American daring that has made the motor car democratic and useful.

That the men in charge of the development of the automobile were men of genius is proved by two things. And those things were the two ideas of advertising and large scale production—with which the inventors of the automobile must share the credit for the Aladdin-like development of this newest of the Big Businesses.

Manufacturers as a rule are keen-eyed, long-headed gentlemen who pride themselves on knowing what the public wants, and then providing it. But the makers of automobiles were a little keener than the rest and they went a step further. They were not content merely to satisfy a public demand; they wanted to create it.

So they set about to show the public what a good thing the motor car was. Theirs was an expensive commodity, which was looked upon as luxury's last word, and its normal growth they knew would be slow and hazardous. The automobile companies began to talk its comforts and advantages, they began to preach the automobile as a *necessity*. By advertisements alluding to the great out-of-doors or the mystery of unseen places, by the romance of the race and endurance contests, they succeeded in creating a demand for motor cars. Factories sprung up like mushrooms over night.

Automobile manufacturers were among the first to appreciate the psychology of modern advertising. They were among the first to set aside regularly a portion of their earnings, amounting today to between four and seven per cent of the gross revenue, to the stimulation and development of the markets which the printed word made potential.

But to the second idea more than to the first has the present motor saturation been due.

Certain of the more far-seeing manufacturers began to perceive that the markets they were then cultivating had their limits. They saw that at the prices for which cars were selling, and with the tendency toward the still more luxurious machine, the people who could afford to buy them would soon be supplied.

One of the manufacturers, pursuing this idea, was curious to know how many persons there were in the United States who could afford automobiles. He wanted

to know definitely how large the motor market was. The figures he found ran something like this. That 7000 families had incomes over \$60,000 a year; 40,000 families had incomes between \$15,000 and \$60,000 a year; 253,000 families had incomes between \$6000 and \$15,000 a year; 700,000 families had incomes between \$3000 and \$6000 a year; 1,500,000 families had incomes between \$1800 and \$3000 a year; 2,138,000 families had incomes between \$1200 and \$1800 a year.

Then instead of conducting motor fashion shops with a dozen different models some of these makers decided to concentrate their entire energy on one design. That design was to be the best and cheapest in the world for the money. The lower they could bring the price of their product, they calculated, the more of the income groups of America would become potential purchasers of motor cars. As the next step began the study how to lessen cost

THE RED CROSS WAGON

of production without cheapening the quality. First the unessentials were eliminated: not an ounce of excess weight over the strength required, nor two bolts where one would do; not even was there a concession to ornament when it was at the expense of utility. In the factory everything was planned from the same scientific viewpoint of maximum efficiency from given effort. Statistics best tell the story of the revolution in production which followed.

From 1896 to 1904 the number of cars produced had reached only 12,000 annually, but in the next year alone, the number almost doubled, with 22,500. By 1907 the production had touched 39,000; in 1908 it was 50,000 with a second hundred per cent jump the next year to 108,000. The figures of the following years sound almost like a fairy tale: 173,000 in 1910; 200,000 in 1911; 340,000 in 1912; 430,000 in 1913, culminating with the half million of the past year.

A like expansion has followed in the number of producers. Today there are some four hundred and fifty American factories engaged in making a score of different varieties of gasoline and electric, pleasure and com-

THE APPLE CART

mercial  
motor cars.

By far the greater number—two hundred and forty-five—are building gasoline vehicles for business, where competition has not yet weeded out the weak. In the older and more fully developed touring car field no less than one hundred and sixteen well established trade-marks

coupled with constantly decreasing margins of profit unite to discourage the formation of new companies. Future progress will largely show the concentration of present numbers more than the addition of new competitors.

Another valuable lesson afforded to the world by the automobile industry has been the keen race for the reduction of production costs. Within five years the average price of the motor car has dropt from nearly \$3000 to less than \$1000, and in every way each year's product is the superior of those that have gone before. The explanation is *scientific* industry.

In the automobile industry more than in others, the scientist has had full control of both the product and the plant. No longer is there room here for the hit-and-miss methods masqueraded for so many years under the name of Yankee shrewdness; no longer any scorning of "scientific methods," long synonymous in popular estimation with near-sighted eyes and absent-minded professors. Modern automobile manufacture is scientific and—what has not always followed the introduction of economics in manufacture—it is the consumer who has largely had the benefit. For factory buildings modern in every detail of light and air, for maximum efficiency in men and machines, for its wage level and the loyalty and morale of its workers, the automobile industry comes close—very close—to being the best in America.

The use of machinery and labor saving devices has always been one of the main characteristics of American industry. If anything it is of their machines that our manufacturers have been proudest. Here, too, has the motor builder surpassed himself. More nearly does a modern automobile plant resemble a huge experimental laboratory than a factory. And the tens of thousands of cars which are the annual output of any one of many American companies suggest rather the product of these giant perfected frankensteins than that of human hands.

Watch, for instance, a gang of these machines in one of the large Detroit factories, set and controlled by a single hand, engaged in stamping out cylinder heads for engines fifteen at a time, as tho no more than copper cents, milling at the same operation the top and two sides of each casting. Or, in another of the laboratory-shops, follow the work of a huge multiple drilling machine, which is the successor of twelve operators and as many drills. It bores in the frame side bars of a motor car at one operation all the holes necessary for the assembling of the body and the chassis.

THE GIMBEL FLEET

At another plant, in Cleveland, powerful machines mill out of solid steel wheels for the heaviest motor trucks. From the 900 pound casting they cut, in two and a half hours, 250 pounds of excess material, machining at the same time both sides of the wheel, the edges of all the spokes, the center and bores of the hub, even to cutting the threads for the ball-bearings and the dust caps. In the automobile industry, for the heaviest part of the work, man is now largely a supervisory intelligence.

The general organization of the motor factories is no less remarkable. The mere ability to turn out, complete, an average of a thousand cars a day, means organization, needless to say, which eliminates the second and expedites every possible operation.

The departments in one factory, for instance, have been arranged not in any arbitrary way, but as the particular part made in each contributed to the completed car. Thus literally, as well as in the advertising literature, raw material goes in at one end and comes out at the other a finished product.

One manufacturer, with an aerial mono-railway, likewise has effected as much of a revolution in the shop as the automobile he makes has helped effect in the world. Instead of trundling material from department to department, or from floor to floor, in the time-honored and archaic way, he installed thruout his shop a miniature railway system transporting its burdens over to workmen and machines, thus saving both minutes and valuable floor space.

The complicated operation of assembling a car has been reduced to these simple elements:

Over a pair of "horses" a rear axle is laid, to which the side frames are added, followed by the front axle. Wheels, with their tires already inflated, are then applied and the frame rolls to where an engine is fitted into position. At the third advance the dashboard and steering gear are bolted fast; at the next stop the radiator; then the gasoline tank is mounted filled with fuel.

The same efficiency obtains even to the testing of the mechanism. The engine is cranked by pressing the rear wheels of the car to revolving pulleys in the floor. A rubber hose connected with the exhaust pipe carries the gases outside the building. A lever is thrown, and off thru the door starts the chassis, wrenching itself loose from the hose as it goes. After a trial around the testing ground, the car returns to another point in the factory where down an inclined chute from an upper floor the body slides and is clamped rapidly to the chassis by men who have become experts in this one simple operation.

In less than a minute after a car has left any one position, another has taken its place.

It still remains to apply the motor car in commerce. Exploited as a toy, a huge plaything, as it were, for grown-ups, it must now be made to do the work of the nation.

Thus when a conservative dealer or stockholder gets alarmed at the present rate of automobile production and foresees the exhaustion of markets and closing of factories, it is to the future of the commercial car that the optimistic manufacturer points. And the immensity of this future he sees in that but a scant thirty thousand of last year's half million cars went into business use.

In every field where the horse is employed our enthusiastic maker knows that his truck has proved its superior economy and utility. He points as proof of his contention to the scores of businesses today where it is already indispensable. And in replacing the horses alone he sees a future market for more than three million trucks. After that, or along with it, if the conservative stockholder is still intractable, there is the export trade, now only in its beginnings, to be counted.

From exports of \$150,000 in 1910 the total has risen to more than \$33,000,000 the past year, excluding the immense numbers of war automobiles we are supplying to Europe. With any one of a dozen American companies exceeding in a month the entire year's output of the largest foreign factory, an optimistic maker visions a whole world supplied with American automobiles.

And the motor truck already promises to fulfill its expectations. Its growth thus far has exceeded even the corresponding period in the elder branch of the industry. In the department store, dairy, coal and express delivery business, the horse is in a

fair way of soon being altogether eliminated. Cheaper to maintain, with a greater radius of action, capable of longer hours of service, and requiring but a small part of the same housing space, the motor truck is the horse's superior in every particular.

A big metropolitan dairy company well demonstrates this efficiency by doing with six ten-ton trucks the work for which it formerly employed a hundred horses. Instead of half-day service from its teams, the company by using two shifts of drivers, now gets twenty hours' work out of each of its motors. During the remaining four hours the trucks are overhauled and made ready for the next day's task. During the blizzard which last winter tied up all the horse and surface car transportation in New York City these trucks remained steadily in operation.

A Chicago coal dealer with one five-ton truck has been able to haul as high as two hundred and thirty-four tons of coal in a day. Thirty tons was his best day's record with a three-horse truck. By using motor cars an express company in another city has reduced the average cost of its parcel delivery from 11.68 cents each to the record figure of 3.16 cents. So economical and reliable has this form of delivery proved that one of the largest express companies of Philadelphia and one of the largest of the New York department stores have not a single horse in service.

The one hundred and ten motor cars of another New York store last year did no less than seventy-five per cent of its delivery business, distrib-

uting in the city and surrounding country more than 3,375,000 packages. Horses are still used by the company, but in a lessened degree yearly, while their radius of action has constantly shortened. Formerly, to serve its suburban customers, the store sent its delivery wagon once a week by relays of horses to the outlying towns. Now, no horse vehicle goes above Sixtieth street, and instead of weekly, the towns and their outlying districts are served daily from their delivery sub-stations, while increased territory has been brought under the store's influence.

In the estimation of the motor truck manufacturer one truck on the average can displace four horses. If it did not he would feel that he was making a poor product. Every horse is to him a direct challenge. And the census reminds him that there are in the country still some twenty-five millions of the animals.

Wherefore, if a motor maker gets the "blues"—which conceivably may happen if the accustomed orders from Zanzibar, Siam, Terra del Fuego, or any other far corner of the earth fail to show up in the morning's mail; which may happen if some year his engineers fail to bring out a single new feature for his next model; which may happen if he is compelled to forego his annual custom of doubling the plant's capacity—in any one of these contingencies, I repeat, all the aforesaid manufacturer has to do to be blissfully happy is to think of those twenty-five million horses against which it is his duty to wage unceasing war.

THE MILK WAGON THAT  
WORKS TWENTY HOURS  
A DAY

# THE FUTURE LIFE

WHAT I BELIEVE AND WHY—TWENTY-THIRD PAPER

BY WILLIAM HAYES WARD

**T**HE most solemn hour is the hour of death. The most solemn question a man can ask is, What comes after death?

One approaches this question with great awe, if he ventures to approach it at all. It is easier, pleasanter, to evade the question, to rest in the easy faith of one's childhood when he believed what he was told because he was told it, and was under no obligation to seek for himself the reason for what he was told. But we are not children; we are adults who have no right to believe anything except upon evidence presumptive if not conclusive of truth. We have been taught that there is a future state, that the soul is immortal, and it has been believed the world over. It is not wholly a happy thing to raise the question. It conduces to happiness to believe what everybody always has believed, Egyptians, Babylonians, Greeks and Barbarians, as if it were a self-evident fact that the soul lives after the body dies. But is it self-evident?

It did not seem self-evident to philosophers of old, and the wisest of them searched for reasons to convince themselves that the soul survives the body and they were not wholly satisfied with the proof; and Cicero took a chill satisfaction to himself in saying that if it should prove that he was mistaken in believing that he should meet his friends in the other world, none of those who had opposed his belief would ever be able to twit him for his error.

## THE SILENCE OF THE OLD TESTAMENT

It is a remarkable fact that the immortality of the soul, with its judgments of Heaven and Hell, found no place in the Old Testament religion. It is only in the latest fringe of the Hebrew Scriptures that we get, as in Daniel, a hint of a future life; but so dim was the faith that the ruling sect, that of the Sadducees, refused to believe in angel or spirit. The belief, I presume, came in under the Persian rule; for Judaism looked kindly on the Zoroastrian faith of Cyrus, who restored the Captivity to Jerusalem; and the Jews were favored by his successors in the time of Nehemiah and Ezra. Thus we must except the Mosaic religion from the universal inculcation of belief in immortality; and yet as the story of the Witch of Endor shows, there must have been a popular heterodox belief in the ghosts of the dead. Saul called up the ghost of Samuel; and

necromancy was punished with death under Mosaic law. I am inclined to believe that the reason why the teachers of the Jewish religion made little or nothing of the future life is because it was in the neighboring Egyptian religion the central doctrine of its paganism, elaborated in the Book of the Dead with strange ingenuity of imagination which invented a host of gods and demons to help or harass the soul on its perilous way to the judgments of Osiris and his forty-two assessors and to the realms of bliss. In Palestine, so long ruled by Egypt, the doctrine of the immortality of the soul could not escape the poison of polytheism until the teaching of the Avesta, under the ruling Persian empire, had replaced the many gods of Egypt and Assyria with the one supreme god Ormazd and the one almost supreme devil Ahriman. But in Sadduceeism the old rejection of a future life was retained; and even our Lord, when he met this unbelief, had to use a biblical argument against it which does not at all convince us; for the declaration, "I am the God of Abraham, Isaac and Jacob," does not so naturally mean, I am the God of the present living Abraham, Isaac and Jacob, as that, I am he who was their God when alive.

## DREAMS AND SPIRITS

I am not clear why it was that primitive men came to believe in the future life. Yet it has ever been so involved with the belief in shadowy ghosts that appear to men in waking visions, and with the return of the dead in vivid dreams for encouragement or warning, that I am inclined to believe that it was because of what they had thus seen and heard that they came to believe that the spirits of the dead still walked the earth. The gods also appeared in dreams, as various old stories tell us; and if there were gods, supposed to exist and appear in the condition of spirits, equally the spirits of men which appeared in dreams must continue to persist after death. But such a reason has no weight with us who understand better the origin of dreams; and it becomes a necessity for us, for our own intellectual satisfaction, to investigate the value of the reasons why we believe, if we do believe, that our souls, if we have souls, do not dissolve with the dissolution of the body.

Because I am in philosophy a dualist and not a monist, a spiritualist

and not a materialist, it is not difficult for me to believe in the immortality of the soul. The operations of knowing and reasoning and feeling and willing are of an order so different from those of weight and texture that it seems natural to believe, as the world has always believed, that there is something that knows and feels quite other than the brain. The qualities, functions or activities of the body, such as growth and digestion, are visibly physical, material; while those which we are in the habit of referring to mind, such as love, judgment, purpose, are absolutely different, of another order, and cannot be described or investigated in the terms of physics. It is hard work for me to imagine that a complex of brain fibers can think, can compose an epic, can devise a cathedral, can guide a nation thru peace and war, could create a civilization or develop the Christian religion.

## THE PERSISTENCE OF MIND

If, now, we are right in believing that we have minds that inhabit and rule the body, but are not the body, then it is a reasonable presumption that the mind, which is not the body, is not so attached and fixt to the body that it must sink into annihilation when the body loses life and is dissolved. The great probability is that it survives the death of the body. It is no complex of parts, as is the body, which can disintegrate and disappear. And if it can and does survive, we can see no reason why it may not continue to survive indefinitely and forever. We know of nothing that is annihilated. Matter may change its form or its combinations of atoms, but it never ceases to exist. The analogy favors the unending persistence of mind. If we have a soul at all, not material but spiritual, not brain but mind, it is easy to believe, and hard not to believe, that it possesses the boon of immortality.

Altho I thus conclude from the non-material energies of the human will, feeling and reason that the human soul is spiritual and survives the body, I have no right to avoid the question, Do not the lower animals show reason, feeling and will, and do all these, from the protozoon to the elephant and the collie dog, possess an immortal soul as well as we? Well, I do not know why they should not, each after its measure. We live surrounded by innumerable millions of them in this little world

# Western Electric Vacuum Cleaner

## The Clean Way to Clean

Eventually you will discard the unhealthy, destructive broom-and-duster method of caring for your home. What are you going to substitute?

THE  
CLEANER  
NOT  
BUILT  
LIKE A  
BROOM

An electric lamp socket will furnish the power at a cost of only a few cents per hour to run an electric vacuum cleaner. It will profit you to learn something about the careful design of the Western Electric vacuum cleaner that has made it the cleaner pre-eminent—about the simple mechanism that cannot get out of order and requires practically no attention. The dust bag rests on a light, rigid frame which makes it easy to handle, and allows

the cleaner to be hung away on a closet hook.

This Western Electric vacuum cleaner is backed by the world's largest distributors of electrical supplies.

The new model No. 11, here illustrated, is a radical departure in design, and sells for \$32.50. You should know about it before you buy. Ask for Booklet No. 4-BJ, and the name of our nearest agent.

of ours, most of them with but an infinitesimal intelligence, and others with a considerable degree of intelligence and affection, and even sense of duty; and this modicum of theirs does not crowd our more spacious minds that range on a higher level, and the infinite universe is big enough for them all, corporeal or incorporeal. I might say, as many have said, that man's reason is different from animals' reason, and that man's reason is worth survival and immortality, while their reason is not. But I fail to see any difference in nature, only in degree; and so I have no prejudice against allowing that whatever has reason or instinct or will has a mind, and that mind may continue after death. To be sure, this objection is raised as if it were preposterous to imagine that the polyp of a sponge or a coral has an immortal soul, but to me it is not preposterous. The polyp is not so inferior to us as we are to the infinite God.

Yet we know so little about what soul or spirit is that no one has the right to dogmatize on the subject. I can imagine that a feebly and scantily segregated soul might be resolved back into its original ether or primitive infinite spirit, while stronger and better compacted spirits might resist return to the vast profound of their original source. Even so some have surmised that the human soul which has too long sinned against the laws of its being will finally exhaust its strength and waste away. Such may not be the case, and the "eternal hope" of the final return of all to goodness is something better. Nature does not favor, and the normal mind dreads, annihilation:

For who would lose,  
Tho full of pain, this intellectual being,  
These thoughts that wander thru eternity,  
To perish rather, swallowed up and lost  
In the wide womb of uncreated night,  
Devoid of sense and motion?

### SPIRITS AKIN TO GOD

Another satisfactory reason why I believe in immortality is because I believe in God. I believe God is a spirit, and therefore I believe in spirit, and that there may be other spirits than the Infinite Spirit. If there is an infinite spirit it is almost incredible to me that there should not also be finite spirits. All the attributes of God, who somehow brought into existence all the forms of matter, would seem to assure us that he would somehow secure the creation of spiritual existences, of a vastly higher order than matter, and thus much more like himself. Such spiritual existences there seem to be and to have been, many thousands of millions of them, in the souls of men ruling their bodies, doing spiritual work; and I find it plausible, almost necessary, to believe that they have come from God, and are little copies of the Universal Macrocosm. How many more there are in other worlds, or escaped from other worlds, we can only guess. But if God has created such it seems likely that they will survive the death of the body, even as the ultimate elements of matter, escaping whatever temporary combinations, persist unchanged and indestructible. Why should we not thus

## My Beauty Exercises

will make you look Younger and More Genuinely Beautiful than all the artificial, external treatments known.

As my way is Just Nature's Way, results are permanent and come soon. It is astonishing to see how the too thin face and neck round out and the hollows fill in by scientifically developing and thickening the muscles. Other special exercises Reduce Double Chin by working away excess fatty tissue, leaving the flesh firm.

Wrinkles caused by the drooping facial muscles disappear. Muddy, sallow skins become clear and the complexion Fresh as in Girlhood. No one too old to benefit.

Instructions for beautifying the hair, hands, nails and feet are included.

Write today for my Illustrated Facial Beauty Booklet—FREE. If you tell me what improvement you would like I can write you more helpfully.

think of souls as unitary, as Plato thought of them, indissoluble, but residing for a while in bodies, and so capable of being combined into families, tribes and nations, even as electrons are combined into atoms, molecules and larger masses? The combination breaks up; families and nations constantly dissolve and re-form; the soul of Abraham Lincoln is drawn away from the souls of the nation he has guided; and in turn every other soul is moved by a new force to leave its old attractions of kindred and friendship, but yet merely transfers its old attractions elsewhere after the manner of the coarser attractions of physics. But the ultimate units remain indestructible, only gone over to new relations.

I think that for me the principal assurance I have of immortality rests in my belief in God. It is much that I believe that there is such a thing as the spirit separate from the body, and therefore separable, so that the spirit does not necessarily dissolve with physical dissolution. It is much, to my heart, that there is testimony that once in Judea a man was crucified and died and afterward miraculously appeared and walked among men, as reported by men who died for their witness. But the value of these and other proofs is not absolutely conclusive. I and others can still question and doubt. To be sure, the argument drawn from the existence of God as an infinite spirit is not final, like mathematics, past possible question, but it seems to me so near demonstration that I rest in the belief. If there is one living Great Spirit not shackled by physical encumbrances, it is incredible that there should not be others of a lesser grade, such as ours in the body and beyond the body. Because the divine Spirit does not need a physical body lesser spirits do not need it. It is logical that those who deny the immateriality of the soul, who believe that the mind perishes with the body which created it, should usually rest their materialism on Atheism, or call themselves by the milder name of Agnostics.

#### THE RESURRECTION OF JESUS

I have already indicated that to my mind the miracles of the Bible are not sufficiently authenticated to be of conclusive value as proof of the existence of God. I have also said that the one miracle which has more support than all others combined is that of the resurrection from the dead of Jesus Christ. It is necessary to consider the resurrection of Jesus Christ as evidence of the existence of the soul after death.

The proof of Christ's resurrection rests on the concurrence of belief, in the very first generation of the Church, that he did rise from the dead, and of the belief that there were many witnesses then living who had seen him after his resurrection. Their faith is unquestionable, and they died for their belief.

We may take and somewhat analyze the statements of Paul in I Cor. 15. It is a magnificent chapter, one to stir the blood of the reader, written by a mighty religious reformer, and yet a man of

his day, and of his day's trend of thinking. In that chapter he treats of Christ's resurrection, and yet he surprises us by saying that there were those in the Christian body at Corinth who did not believe in the general resurrection of the dead, that is, who were Christian Sadducees, as Paul was a Christian Pharisee. Yet they seem to have believed in Christ's resurrection, and Paul argues from it as an admitted fact that the resurrection of his followers was to be expected, a most natural conclusion; altho one is surprised that any one could doubt the resurrection of the dead if they had ever heard of our Lord's teaching in Matthew 25 of the Judgment of the Last Day. Paul says most pertinently, "How say some of you that there is no resurrection of the dead? But if there is no resurrection from the dead, then Christ hath not been raised."

#### THE WITNESSES

Paul declares that the resurrection of Christ was the sum of his teaching: "That Christ died for our sins according to the Scriptures, that he was buried, and that he hath been raised on the third day according to the Scriptures; and that he appeared to Cephas, then to the twelve, then he appeared to about five hundred brethren at once, of whom the greater number remain until now, but some are fallen asleep; then he appeared to James; then to all the Apostles; then last of all, as to the child untimely born, he appeared to me also." Here is the list of witnesses, presented to the believers in Corinth, of those in Palestine who had seen the Lord after he had risen from the dead. It is not important to seek to compare this list of witnesses with those given in the Gospels, a matter for the labors of the harmonists. It is enough to gather the fact, of which there can be no doubt, that in Palestine it was believed by the whole Church that hundreds had seen Jesus after he had risen from the grave. There is real weight to us in this indisputable fact, altho that which so much impressed Paul, that he had himself seen the Lord, would not be evidence to us, for it was a vision; and a vision may be, and often has been, subjective. Paul had at least one other vision when he saw unutterable things; but frankly we must admit that his visions may have been the product of an intensely excited imagination.

It is difficult so to explain the general belief among the earliest Christians that their leaders and hundreds of others had seen Jesus alive after his death. To suppose them mistaken is to suppose that the Apostles, the chief witnesses, lied, and died for their lie, and that the other witnesses were a myth which the Apostles invented, nothing less than another lie, which was accepted by their credulous followers and by Paul. Paul was honest, for he really believed he had seen the Lord; but I cannot see how Peter and James and the other Disciples who had followed Jesus for years, not to speak of the mother of Jesus who lived with John, and the other women who followed our

Lord, could have been mistaken in their belief that they had seen him again in the flesh. It may not have been in the flesh, altho the story of Thomas's unbelief, and that of Christ's eating of fish, declare it was; but whether in the flesh or in a spiritual apparition, as not a few now hold, makes no difference as to the evidence of the continued existence of the soul after death. We need not concern ourselves with the nature of our Lord's resurrection body, which we are told passed thru closed doors, for it is only his soul that this question has to do with.

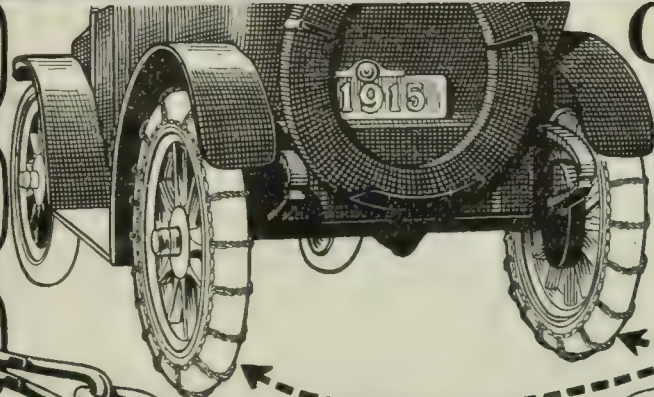

#### IS THE EVIDENCE CONCLUSIVE?

Yet I admit that the actual reappearance of Jesus in a visible form is so extraordinary, so unique, that one must be pardoned for doubting whether it be not a myth. No other case is known, even in the Bible, that would be credible to this present generation. The story of Lazarus is told only in the Fourth Gospel, which is not history, but doctrine. The story is told as a parable is told, for the teaching attached to it. At this day if a teacher of new doctrines were arrested, tried, condemned and beheaded, and a hundred of his followers, and as many opposers, saw the execution, and then if they and others said they saw the head restored to the body and again take full life, perhaps we who did not see it would believe their testimony, but scarcely any less degree of evidence would suffice us. The evidence favors the actual reappearance of Christ after his crucifixion, but we wish that such cases might appear in our own day, under more critical observation; and if there are those who still doubt, as we are told that "some doubted," or as the Jews disbelieved who declared that the disciples had stolen the body, we need not blame them, and we are under no obligation to deny them the Christian name. For what makes one a Christian is not what he intellectually believes, but how far he takes Jesus as Master and lives as his disciple. Because the resurrection of our Lord from the dead is unique, because we cannot cross-examine the evidence for it, because we cannot hear the other side, I do not find it easy to put on the evidence presented the full weight Paul put upon it, and died for its truth. It has weight, great weight; but I admit that I find myself searching for other reasons, and resting even more weight upon them.

#### THE UNCONVINCING SPIRITISTS

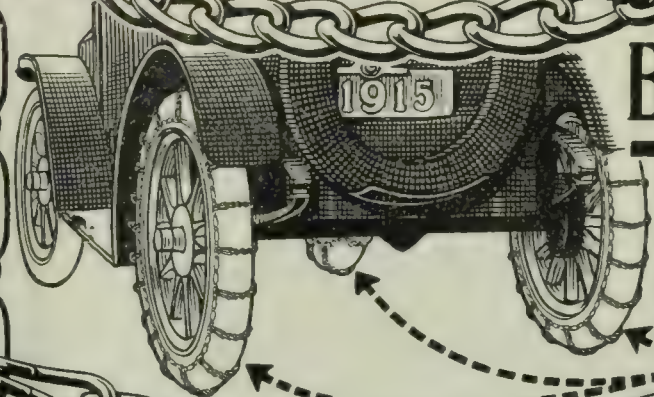

The only positive and conclusive evidence by which we might hope to prove the persistence of the soul after death must come thru actual communication with spirits of the departed. It is much to be desired that investigations in this direction be carried on until a general conclusion can be reached. Such a favorable conclusion I do not regard as hopeless. Such physicists as Sir Oliver Lodge, and other scholars who carry on the work of the Society for Psychical Research, believe the evidence already obtained is sufficient to prove that disembodied spirits do communicate with the living. I am among the

# STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

*We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.*

STEINWAY & SONS, STEINWAY HALL

majority who are not yet convinced. There are too many chances for error, or imagination, or even fraud; or, it may be, for transference of thought from the inquirer to the medium without any fraud on the medium's part. Should it ever seem clear that such communication takes place between the living and

The immortal mind that hath forsook  
Her mansion in this fleshly nook,  
it would seem almost certain that such persistence involves immortality. The soul that can survive for years or centuries can almost certainly live forever, altho the possibility is not excluded that it may disintegrate and fade away.

## TELEPATHY AND THE ETHER

We can hardly say that telepathy, if it be admitted as a real phenomenon, is a proof of the existence of the soul separate from the physical brain, and so of its persistence after death. Telepathy concerns the passage of thought between two distant but living persons; and the two brains may be conceived of as themselves able to transmit and receive the current of thought. Yet this raises the question of the nature of the soul, and so of immortality.

The evidence for telepathy is, I suppose, considerably stronger than that for communication with the dead. Almost every family has some mysterious story of its own. In my own family my father when a boy thought himself one night in great danger of being murdered, and at that same hour his mother received the impression, tho many miles distant, that he was in great danger, and she rose from her bed and prayed for him. If there is truth in telepathy a thought can pass hundreds or thousands of miles from one mind, or brain, to another mind or brain. It must be carried by some medium, and we know of no medium but the ether. Now the sensations we know of in the body are not carried by ether, but by the nerves. It would seem likely that the thought-waves, carried plausibly and even probably by the ether, must find their source of origin and their receiver in something analogous to ether and thus able to act upon it; or the transmitting and receiving minds must actually be products of ether, just as is the case in wireless telegraphy, or light, or gravitation. For it is the movements of the ultimate electrons, which are merely modifications of ether, on which their power rests. May we not then think of the mind as the transmitting and receiving organ, and the ether as the conductor of thought; and the mind itself as a spiritual segregate of ether, just as electrons are the physical segregate; so that what Paul calls the spiritual body may be constituted of ether, and be the mind itself, or, if not, the ultra-substantial organ thru which the mind works, even as we may think of the whole infinite ether as the co-eternal and co-infinite mystery in and thru which the infinite God lives and works? God's mind and will pervades ether and has its being in it; and I know of no supposition more probable than that the human mind in its essence and sub-

## BROWN'S Bronchial TROCHES For Hoarseness

A convenient and effective remedy for throat troubles. Popular among public speakers and singers. For coughs, loss of voice, irritation or soreness of the throat, Brown's Bronchial Troches are better than syrups.

Can be carried in pocket or purse and used freely whenever needed. They contain no opiates.

Sold only in Boxes--never in bulk.

ROMEIKE, INC. 106-110 Seventh Ave., New York City

stance is somehow ethereal. Sir Oliver Lodge hints as much when he says in *The Ether of Space*, p. 123:

We know that matter has a psychical significance, since it can constitute *brain*, which links together the physical and the psychical worlds. If any one thinks that the ether, with all its massiveness and energy has probably no psychical significance, I find myself unable to agree with him.

And he quotes Clerk-Maxwell, a chief master of physics, as saying, p. 117:

Whether this vast homogeneous expanse of isotropic matter [the ether] is fitted not only to be a medium of physical interaction between distant bodies, and to fulfil other physical functions of which, perhaps, we have as yet no conception, but also . . . to constitute the material organism of beings exercising functions of life and mind as high or higher than ours are at present—is a question far transcending the limits of physical speculation.

Such a question physics cannot, it is true, answer, but philosophy and psychology can raise it and perhaps at some time answer it. For we have but just begun to gain a glimpse of the mystery of this insensible, impalpable substance, to our senses thin as nothing, yet so dense and so strong that it holds the moon from flying away from the earth by a force equal to that of a column of steel 400 miles in diameter holding our satellite to our earth. We do not know, but we may say that if out of the infinite and apparently eternal ether all material bodies have been segregated, it is possible that from the same source, as from the very body of God, human souls have also been segregated, and it is easy to conclude that as, when the body dissolves, each ultimate atom yet remains unchanged, so the soul unity may also persist independent of the body.

Of course, I have not been able to prove conclusively the immortality of the soul. Nobody can. Most of us take it on faith, without consideration of evidence, or simply because we wish to believe. But the wish to believe is no proof, nor the general faith, nor the happy effect of belief. It is well, even obligatory on a thinking man, to question the grounds of his belief, so that he may believe, or disbelieve, or doubt intelligently. I find a weighty preponderance of evidence that the soul survives death.

#### THE FUTURE STATE

What is the nature of the future state? Every religion naturally teaches that it depends on life here. The good are rewarded and the evil punished. So the New Testament—not the Old—teaches. It teaches by entrancing pictures of the glories of heaven, and by harrowing descriptions of the pangs of hell. Yet these are all material figures of what is purely spiritual. They need interpreting. Jonathan Edwards, I have been credibly informed, told the Indians to whom he preached that in hell they would have molten lead poured down their throats. He did not really believe it, but it conveyed the true idea he wished to present, just as when he pictured to his own congregation in Northampton the soul of the wicked held like a spider over a flaming furnace. All we can say as to the meaning or authority

### You May Be Sure He Gets It.

"How about some Jell-O, my dear? You know I do not often suggest anything for the table, but so many of our friends are using Jell-O and I find I like it so well that I would really like to have some here at home."

This suggestion should be very welcome to any woman, for

# JELL-O

costs only ten cents, doesn't have to be cooked, and everybody, saint and sinner, likes it.

A great variety of the most delicious desserts can be made of Jell-O by adding only hot water—nothing else.

Marion Harland, Mrs. Rorer, and all other Jell-O users, will tell you, "There never was anything like it."

There are seven delightful *pure fruit* flavors of Jell-O: Strawberry, Raspberry, Lemon, Orange, Cherry, Peach, Chocolate. Each in a separate package, 10 cents at any grocer's.

The new Jell-O book is a real Kewpie book, with pictures of Kewpies by Rose O'Neill herself. If you desire one and will write and ask us for it we will send it to you free.

### A CARD OF CHARACTER

A CARD IS MUCH LIKE A MAN AFTER ALL! The more character, the more power he has. The more character in your card, the more power it has.

**The Peerless Patent Book Form Card** has more character than any card you have ever heard of before! It can be beautifully engraved, or it can be neatly printed, as the user desires. It is necessarily always clean, because of the binding in book form with tissue paper between each card, and the book form also keeps it from becoming wrinkled or crumpled. Besides it is always "right there" when you need it. Can you think of more character for a card? Write and get a sample tab of the cards, detach them, noting as you do so the clean, smooth edge at place of detachment, and the protection from dust and dirt. They have character to convince you, if you will but see them.

## The Truth About Poultry

Get the Facts by Reading **The One-Man Poultry Plant**

Successful Methods of Men on Farms or Small Acreage. Complete in twelve parts; printed in one volume.

By **DR. N. W. SANBORN**

REAL work, with real poultry, on a real New England Farm. This is a simple story of what has been done by a man, at forty-five years of age, town bred and city educated, getting out of practice of medicine, buying a small farm in the hill country, and making a success of the venture. Not only is the rearing of chicks and the management of adult fowl completely covered, but the interesting side issues of fruit growing, grain raising and the production of milk, that cannot be escaped on a real farm. You get rugged facts—rarely found in print. The truth about poultry as found in actual life on a one-man poultry farm.

You Can Do the Same, Book Tells How

**OUR SPECIAL OFFER**—The One-Man Poultry Plant, in twelve parts (book form), and the American Poultry Advocate, one year for only 50 cts., book and Advocate, three years, for only \$1.00, if order is sent at once.

Our paper is handsomely illustrated, practical, progressive, and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cts. a year. 3 months' trial 10 cts. Sample copy free. Catalogue of poultry literature free. Address **AMERICAN POULTRY ADVOCATE, 517 Hodgkins Bldg., Syracuse, N. Y.**

## Gluten Flour

is prescribed by physicians as a diet for diabetics and cases of Kidney and Liver troubles, Rheumatism, Obesity, etc. The U. S. Pure Food Laws require that Gluten Flour must contain at least 35% of gluten or protein. Our Gluten Flour contains about 40% (a recent analysis showed 42%) and must not be confused with "40 Standard Gluten Flours" which contain 20% only. To be safe insist on getting Farwell & Rhines' cross brand of Gluten Flour and other cereal specialties. For booklet or samples address:

Publishers 681 5th Ave. N. Y.

of such biblical figures is that which nature also teaches, that sin is corrupting and an injury and a fearful loss to the corrupted soul. And so goodness is health and strength to the soul, and happiness also. As to the conditions and the degree of either happiness or misery we cannot judge from the pictorial language of Scripture, nor from reason apart from any accepted revelation. It is enough to believe without doubt that it will be well with the righteous in this world and the next, and that it will not be well with the wicked. The material figures we may discard, the lake of fire with the stone of Sisyphus, the gates of pearl with the houris of Mohammed.

Nor need we raise any questions as of importance, as to the opportunity for repentance and restoration in the future life. It is enough to know that the soul's will is free to change for good or bad in this world or the next, and that God is and always will be good and merciful. If a soul chooses to turn from evil to good, no matter when, the good Father cannot help accepting him; it depends on the will of the soul. So we cannot be certain, even from Scripture, but we are allowed to indulge the comfortable hope that somehow evil will at last come to an end; nothing more.

### IMMORTALITY AND GOODNESS

If the soul does survive death, what then? That is the practical question. If the soul does survive death then we should live under the power of the eternal life. This life is but a vapor which soon blows away. Our duty is to live, in the language of the first of Jonathan Edwards's seventy "Resolutions," as we would wish we had lived "never so many myriad of ages hence." It is profitable to believe in a future life; it helps us to live a good life during our little day. That is no reason for deceiving ourselves or others as to immortality, but if for satisfying reasons we believe in immortality, that belief should in all prudence affect our character. But the belief in immortality is not in itself essential to goodness; it is only helpful to goodness. And goodness is the only essential thing, not any belief whether in immortality or in God himself. So Paul went too far, spoke too hastily, when he fell short of the best Stoic philosophy and said, "If the dead are not raised, let us eat and drink, for tomorrow we die." Whether the dead are raised or not the duty remains the same. We are not brutes living only to eat and drink and escape pain. We have the sense of right and wrong; the consequences need not control us. To love others and to sacrifice or even die for them is right, is beautiful; and the obligations of character do not rest on the will or even on the existence of God, but on essential rightness. To be sure, many of us, apart from belief in God and the future state, will take the Epicurean view which Paul so hastily expressed; for morals apart from religion are very weak. Even backed by religion morals are fearfully weak. They cannot prevent war. So all religions, except the Hebrew, have made much of the future life, and have invented multitudes of

heavens and hells to attract to virtue and to deter from vice; and when, to us who have reason to believe that the death of the body is but an incident in the life of the soul, our Lord presents the sublime panorama of the final judgment, his "Come, ye blessed" draws us with the cords of love; and his "Depart, ye cursed" adds multiple intensity of force to our resolve to escape the fruit and penalty of sin.

### BOMBAY'S HUGE ROAD MIRROR

Road mirrors are not rare in England, where they are set at dangerous turns or crossings to warn drivers of vehicles or pedestrians just around the corner. Their success was immediate and some American cities are showing an interest in the device. Bombay, however, has led the world with the largest road mirror on record as well as the first in India. It is set at the corner of Gamdevi Road and Hughes Road, a dangerous point, and measures five by ten feet, which is seven times as large as the average English road mirror.

### THE INCOME OF COLLEGE GRADUATES

BY PROF. H. A. MILLER, OBERLIN COLLEGE

Five years ago I published the incomes of the men of the Dartmouth class of '99 as reported at their decennial reunion. The low figure was made subject of editorial comment to prove that college education was an unprofitable investment of both time and money. The record of the men secured at the quinquennial last June shows a striking increase.

At the decennial reunion reports were secured of the net incomes of sixty-seven out of the one hundred men living; this year from fifty-six out of ninety-five. Since the latter group were almost all included in the former the statistics are directly comparable though incomplete. In both cases some of the men who did not return had incomes considerably under the average, though there is reason for assurance that this was not conspicuously the case.

For 1909 the average income was \$2097 and for 1914, \$3729. Five years ago there were nineteen men getting \$1500 or less with four not over \$1000. Last year there was one under a thousand and one under \$1500, with a total of only ten under \$2000 against thirty-six under that figure ten years ago. At the earlier date only seventeen per cent were above \$3000, while last year just over half were in this class. The tenth year out three men earned \$5000 or more, with the highest at \$7000; five years later twenty-three per cent were in this class with the highest at \$12,000 and two at \$10,000. Several men stated privately that they would get considerable increases this coming year.

These figures indicate that the first decade out of college is a preparatory period in earning capacity and that the productive period comes on rapidly after that.

### SOME EARLY SPRING BOOKS

## BLUE BLOOD AND RED

By Geoffrey Corson

An American love story of Staten and Manhattan Islands. Back of the compelling story movement and undoubted powers of characterization, the reader will continually feel the humor, grace and sense of an unusual author. \$1.35 net.

### LITTLE COMRADE

A TALE OF THE GREAT WAR

By Burton E. Stevenson

A story of mystery, love and international intrigue set in the first weeks of the great war. The hero is a young American surgeon. The author knows the scenes of his story at first hand. By the author of "THE MARATHON MYSTERY," etc. \$1.20 net.

### OUR KNOWLEDGE OF CHRIST

AN HISTORICAL APPROACH

By Lucius H. Miller

By the Assistant Professor of Biblical Instruction, Princeton. \$1.00 net. "A frank, reverent, and reliable account of the facts. I know of no other book which combines, as this does, clearness, frankness and tactful exposition."—Prof. Gerald Birney Smith, *University of Chicago*.

### AMERICAN THOUGHT

By Woodbridge Riley

A study of original thinkers and speculative movements from the New England Fathers to John Dewey and William James. By the Professor of Philosophy, Vassar. \$1.50 net.

### MONTESSORI CHILDREN

By Carolyn Sherwin Bailey

A record of results in concrete cases where definite treatment by Dr. Montessori corrected faults or developed aptitudes, and a definite correlation of these methods with the problems of American parents. Illustrated from photographs. \$1.25 net.

### ACROSS THE BORDER

A PLAY OF THE PRESENT

By Beulah Marie Dix

This achieved an instant success on the stage in New York, Boston and Chicago. "A real achievement. One of the few pleas for peace that touch both the heart and the intelligence. Its remarkable blending of stark realism and extravagant fancy strike home in a manner that defies analysis." *New York Tribune*. Illustrated. 80 cents net.

### AN OUTLINE OF RUSSIAN LITERATURE

By Maurice Baring

An authoritative and stimulating treatment of a subject of rapidly growing interest, by the author of "With the Russians in Manchuria," etc. (Home University Library). 50 cents net.

### THE NAVY AND SEA POWER

By David Hannay

A general survey of a fascinating and timely history by the author of "A Short History of the Royal Navy," "The Sea Trader," etc. (Home University Library). 50 cents net.

### SOME SELECTED HOME UNIVERSITY LIBRARY VOLUMES

New books, not reprints, each 256 pages, cloth 50 cents net.

## HENRY HOLT AND COMPANY

34 W. 33d ST  
NEW YORK

Mr. Ernest Poole's New Novel Published February 3  
Second Edition Now Ready

# THE HARBOR

By ERNEST POOLE

*Mr. Poole has written a novel of remarkable power and vision in which are depicted the great changes taking place in American life, business and ideals in the present generation. Under the tremendous influence of the great New York harbor, with its docks, warehouses, its huge liners and its workers, a young writer passes, in the development of his life and work, from a blind worship of enterprise and efficiency to a deeper knowledge and understanding of humanity.*

## NEW YORK TIMES

This first book of his is by all odds the best American novel that has appeared in many a long day. It is earnest, sincere, broad in scope and purpose, well balanced, combining intellect and emotion. . . . The characters are ably drawn, strikingly contrasted, essentially American. . . . Here in this vision of the harbor is focused much of our modern world, its perplexities, its struggles and its ideals. . . . Mr. Poole may be congratulated upon having written an absorbingly interesting and very significant novel."

## N. Y. TRIBUNE

"This is a remarkable book, . . . an achievement in itself. It is one of the ablest novels added to American fiction in many a year. . . . The first really notable novel produced by the new democracy, . . . a book of the past and the present and the future, not only of New York and of this country, but of all the world. . . .

## N. Y. WORLD

"A fine new American story, in the spirit of the hour. . . . A work which must be placed at once among the rare books that count—which may prove quite possibly to be the distinctive American novel of the year. . . . He finds in the harbor the glory and the wretchedness of the world, together with a new, vast breadth of outlook and a new depth of thought. . . .

## BROOKLYN EAGLE

"Mr. Poole is thoroughly in earnest, very much in love with his subject and he has written a sincere and . . . an extremely vivid story . . . a great deal of the living New York is in it."

## N. Y. GLOBE

"Mr. Poole's story is interesting in many counts. . . . The whole is admirably written. . . . One can say of it what he quotes another as giving as his ideal, 'one more fellow has done his best—by telling of life as he has seen it—his changing life through his changing eyes.'"

## N. Y. POST

"Many and varied as are the themes that have been woven together to make the whole, each one is clean cut and fits into its right place. 'The Harbor' is well worth reading, both for what it gives and the manner in which that is given."

"THE HARBOR" IS THE FIRST REALLY NOTABLE NOVEL PRODUCED BY THE NEW DEMOCRACY."—N. Y. TRIBUNE.

Price \$1.40. On sale at all bookstores

## THE AWAKENING OF THE CITIES

IN the surgings of public consciousness that have characterized American political life during the past few years nothing has come in for more attention than the failure of the cities. This failure it has been customary to attribute to the absorption of money-getting rather than the lack of good citizenship. In *The Modern City and Its Problems* Dr. Frederic C. Howe takes a different view. He believes that it is traceable to American traditions and political limitations. Influenced by the *laissez-faire* doctrines, individual and property rights have been allowed to grow and infringe on the rights of the community.

So long as private corporations under franchise performed municipal functions, monopolized water-fronts or city streets, so long as the individual on his own private property was allowed to erect any kind of building to any height or do anything he pleased there was no place for community service. But the old order is passing. In more than a hundred cities Dr. Howe cites the awakening of a new consciousness. And from what has already been done abroad and is now being carried out in America, notably in Cleveland and Chicago, he paints a brilliant picture of the city of the future.

The chief direct cause for the backwardness of the American city Dr. Howe lays to its absolute subjection to the state government. For instance, the city of Cleveland when it started on its campaign of municipal improvement a few years ago found that to banish dogs, chickens and other noise-making animals it was necessary to go to the state legislature. Nor could it manufacture ice for charitable distribution, abolish unsightly billboards and advertisements or provide public lectures and entertainments as a part of its recreational program. A dozen municipal elections have been fought and more than a hundred injunctions carried to the courts in its effort to reclaim its street railways.

In the volume Dr. Howe has combined much of the material of his earlier books and to very great advantage. To the chapters of wonderful potentialities suggested in his *The City: The Hope of Democracy*, he has added practical studies of what has been accomplished abroad in the way of sanitation, city planning, housing, and recreation, drawn largely from his *European Cities at Work*. Clearly and forcefully presented, the only regret is that the message has not been driven even more completely home with illustrations that

would show the task as well as the goal ahead.

*The Modern City and Its Problems.*  
by Frederic C. Howe. New York:  
Chas. Scribner's Sons. \$1.50.

#### A SOCIOLOGICAL IOET

Not a few of the old pupils and friends of Professor Giddings will be surprised to discover from the little volume, *Pagan Poems*, that this distinguished sociologist has a poetical side to his nature. But why not? The broadest mind must love beauty. Thus President Woolsey almost shamefacedly in his old age allowed a delightful book of his verse to slip from the press. Professor Giddings has the metrical sense as well as the solid sense to put into fit meter. There is music in the opening "Song" that seems to cry for accompanying melody:

Wild as the wildest thing born in the  
wildwood.

In the white of the dawn  
She calls and I listen;  
But her feet  
They are fleet  
As the fawn.  
Hasten; I call;  
She is gone.

I listen: a note from the song-sparrow's  
throat?

Or no? Am I wrong?  
Is it she that I hear?  
Or beat  
Of the feet  
Of the fawn?

Do I know who she is  
She is Song!

There are twenty poems, of which the longest and most impressive are "Creation" and "Where Power Dwells," and each tells the deep lesson that God was pleased when man began to search and know, and that more searching and more passion for knowing will heal the ills of social disorder. For the author is a stout optimist, with more than a touch of that sort of socialism which holds that the knowing and selfish master of trade and the ignorant and equally selfish underling with his sabotage can come to terms.

Seeking minds and dauntless hearts  
Faring on in comradeship,  
Dauntless souls of gentleness,  
Ye the only Power are.

This even appears in this little verse to "Margaret":

Don't be afraid, my little maid,  
Of a saint, or a devil or two;  
But don't be afraid to be afraid  
If the devil is bigger than you.

If there is any paganism in these *Pagan Poems*, it is in the expression, not the spirit. They breathe courage and truth and beauty.

*Pagan Poems*, by Franklin Henry Giddings. New York: Macmillan. \$1.

#### Feeble-mindedness

The fact that a certain portion of our population is so poorly developed on the mental side has given rise to a great deal of concern in recent years. In his *Feeble-mindedness, Its Causes and Consequences*, Dr. Henry H. Goddard, Director of the Research Laboratory at Vineland, New Jersey, besides a clear statement of the problems involved, gives a collection of 327 cases that will be of great help to students of pedagogy and criminology as well as to specialists in feeble-mindedness or heredity. The recognition of the "high-grade" defec-

A. M. CLELAND, Gen. Pass. Agent  
St. Paul, Minn.

"SEE AMERICA"

tive, and of the relativity of feeble-mindedness would do a great deal toward clear thinking on the whole problem; and this book will help toward that end.

The Macmillan Co. \$4.

### THE CURSE OF IDLE HANDS

The story of three sisters in the upper middle class of England written by W. L. George, is called *The Second Blooming*, and is a study of marriage as depressing and inconclusive as most analyses of morbid conditions. Not one of the sisters is really happy, tho the one who spends her life for her large family of children is the least unhappy; the political sister and the one who takes a lover as a means of distraction from the intolerable dullness of her ordered life do not find the happiness they seek.

Little, Brown & Co. \$1.35.

### YOUTH'S ASPIRATIONS

Life aims both prospective and retrospective of widely divergent types find expression in the talks of three comrades vacationing in *The Orchard Pavilion*—first as Oxford undergraduates, wise in their own conceits, drawn together by some subtle attraction of the dissimilar—then as author, lawyer and clergyman, come again to that quaint ruin of an ancient farmstead. Arthur Christopher Benson has blended the grace of a delightful essayist with the simplicity of a true story teller in a little volume quite worthy to take its place by *The Upton Letters* and *From a College Window*.

G. P. Putnam's Sons. \$1.

### THE HUSKS OF INTELLECTUAL LIFE

A knack of curious detail vivifies spots of Gilbert Cannon's work, tho his new book, *Young Earnest*, he mars in creating an artificial atmosphere by obviously performing tricks with the mind of his chief automaton, juggling with his emotions, experimenting with his environment. On the whole the book's parallel, *Ole Mole*, is a more effective development of his novel conception of a new set of values for the man who, having tasted the intellectual life and found it vapid, sees "the wildness of life beneath the trumpery policing we call civilization."

Appletons. \$1.35.

### AN INSPIRING MOVEMENT

An unusually valuable book for all those interested in the eugenic ideals of the young is *The New Chivalry* by Henry E. Jackson, giving an outline of the movement among boys and young men for a positive purity of life and a concerted effort to rid society of its most appalling evil. The book should be in the hands of every pastor, teacher and parent.

George H. Doran Co. 50 cents.

### FAIRYLAND TALES FROM THE EAST

Nine tales retold by Richard Wilson, drawn chiefly from the two great epics, the Ramayana and the Mahabharata, comprise *The Indian Story Book*. The simplicity of its style and its elimination of much of the confusing material of the original, will recommend the book to older folk as well as children. The latter will find in it the same tales of prince and princess, dragon and demon, magic love and righteous triumph to which their own fairy stories have accustomed them—but with an Oriental gorgeous coloring and an undercurrent of sadness that will be new.

Macmillan. \$2.50.

### REVIVING THE EPIC

As a poetical topic the career of *Hernando de Soto* lacks nothing of picturesqueness. Judge Walter Malone has tried the experiment of telling the story in blank verse, after the fashion of the epic, a good and dignified style and none the worse for being at the moment uncommon.

Putnam. \$3.

### A CINDERELLA OF THE SCRUBBING BRUSH

*Amarilly of Clothes-Line Alley* was a delight in her unenlightened state of "et" and "kin" of four tight red braids—until Belle Maniates saw fit to educate her—tho

**SPEYER & CO.**

New York, February 27, 1915.

two long ropes of Titian hair are undeniably more aesthetic, and "ate" and "can" more correct. But in the process the little scrub-lady of the Barlow Stock Theater lost her spicy individuality and her prospective metamorphosis into a finished product of an "ultra-smart" school is a bromidic and undeserved reward for her amusing and successful schemes to fill the exchequer of a second family of Ruggleses.  
Little, Brown & Co. \$1.

### LIFE IN PALACES

By an essay on the period of the accession, Viscount Esher introduces this abridgment of Queen Victoria's girlish diary from 1832 to her marriage. Lord Melbourne is the main figure in the *Training of a Sovereign*, as he was indeed in the young Queen's life. In a few centuries it may be that her conscientious reports of daily occurrences will take on something of the value of Pepys's serious records, which to his contemporaries would no doubt have seemed trifling enough.  
Longmans, Green. \$1.50.

### PRACTICAL BANKING

In *Money and Banking*, John Thom Holdsworth, Ph. D., Professor of Finance in the University of Pittsburgh, has put into text book form the principles, history, and practise of banking and credit institutions. The book is intended for college use and as an aid to the business man who wishes to increase his efficiency by a more or less academic study of the foundations of exchange. Its analysis and practical estimate of the Federal Reserve Act is very timely.  
Appleton. \$2.

### MELODRAMA ON THE HIGH SEAS

Knave's warnings sent thru knaves of cards, a necklace and its paste duplication, secret agents and smuggling plots, combine to make *Sheep's Clothing*, by Louis Joseph Vance, a melodramatic tale of crooks and social adventurers who meet at last the fictional reward assigned to them since stories were first told. A pretty girl, whose use as a tool by her scheming father brings her a husband whom she loves, adds romance to the many complications.  
Little, Brown. \$1.25.

### A PADDED SCENARIO

A moving-picture imagination given free rein in that elemental land of the North is fraught with dramatic possibilities, of which James Oliver Curwood has made due use. *God's Country—and the Woman!* is a highly colored romance in which love, mystery and adventure fairly force one spectacular scene to tread upon the heels of another—all in a vivid, splendid setting of the North Woods.  
Doubleday, Page. \$1.25.

### EUROPE IN 1700

In the eighteenth century *The Grand Tour* took for Englishmen the place of our college course. Professor Mead found here, in following over the continent these well-trodden paths, a new field for study and to see how delightful a task he set himself one needs but to turn to his list of authorities, where is a list of biographies, journals, letters, whose mere titles make alive once more a long past age.  
Houghton Mifflin. \$4.

### WALNUT, OAK AND MAHOGANY

Here is a truly *Practical Book of Period Furniture*, with full and clear treatment of all the styles used in England and this country from King James to Eastlake. In the illustrated key by which any given piece of furniture may be readily classified, H. D. Eberlein and Abbot McClure have added an original and most convenient feature.  
Lippincott. \$5.

### PROBLEMS OF THE WORKING GIRL

*The Girl and Her Chance*, by Harriet McDoual Daniels, is a study of the conditions surrounding the American working girl, especially in New York City, and it contains valuable statistics for those interested in the social and business welfare of young girls.  
Fleming H. Revell Co.

# THE MARKET PLACE

## THE SUPPLY OF WHEAT

The Mayor of New York recently sent to President Wilson a report made by his Committee on Food Supply concerning wheat. In this report the committee express the opinion that the Federal Government should say whether it was in favor of an immediate embargo, and, if not, what conditions would, in his judgment, warrant an embargo in the near future. Nearly all of our surplus, the committee asserted, had already been shipped to Europe; there was every prospect that the demand from Europe would continue; the price of bread here was rising, and would probably be much higher if the Government should say that it was not in favor of an embargo under any conditions.

Mr. Wilson promptly replied that the subject was one to which the Administration had given "the most careful and thoughtful attention." There were erroneous impressions, he added, about the facts. All of these were known to the Department of Agriculture, which would give them to the public. It could be inferred that the President was not in favor of an embargo.

A statement setting forth the facts was published by the department last week. It is well known that our wheat crop last year, 891,000,000 bushels, was the largest ever harvested in the United States. The department says that the available supply was 967,000,000 bushels, because 76,000,000 were carried over. For our own consumption and for seed 610,000,000 are needed. This would leave a surplus of 357,000,000 and at the end of January about 210,000,000 of it had been exported. It will be observed that the committee erred in asserting that nearly all of the surplus had already been shipped to Europe. The department points out that the 147,000,000 bushels remaining exceed by 40,000,000 bushels the average annual exports of the last five years. The quantity is large enough to permit the exportation of nearly 1,000,000 bushels a day until July 1. Before that date the new crop will begin to be available. Exports recently have been not far from 1,000,000 bushels a day.

The Argentine crop is now coming on the market, and a surplus of 100,000,000 bushels will be available from that source. In May or June India will have 75,000,000 bushels or more to sell, the department says. This is a conservative estimate. The best European authorities speak of 80,000,000 as a minimum, and say the quantity may exceed 100,000,000. Moreover, all the wheat-growing countries of the northern hemisphere increased their acreage last fall, our own country by eleven per cent. If there should be a wheat shortage, how-

ever, the department says, it should not be forgotten that the supplies here of corn, meat animals, dairy products, potatoes and fruit are larger at the beginning of 1915 than they have been for many years.

While the demand for our wheat in recent months has been due largely to the desire of the belligerents to have ample supplies of food on hand, it has also been caused by a world shortage last year (outside of the United States) of 400,000,000 bushels, and by the fact that Russia's surplus, usually marketed in other European countries which do not produce enough for their own use, has not been available. The exportation of it has been prevented by the war. It exceeds 100,000,000 bushels.

Probably the price of wheat, if the war continues, will be higher than it is now. It may be expected that very little of the surplus will remain here at the beginning of the new crop year. The department, we think, does not allow for a sufficient quantity to be carried over. While the advance has, inevitably, been accompanied by some speculation, it has been caused by the operation of the old law of supply and demand. Among the buyers have been five European governments, and our Belgian relief committees. In New York there is in progress an official inquiry concerning the increase of the price of bread. It may be that unjust and unlawful practices will be brought to light, but it must be admitted that the increase has naturally followed the high prices of wheat and flour.

## RAILROAD CREW LAWS

In West Virginia, last week, the State Senate rejected a bill for a railroad full crew law. A law of this kind, duly enacted in Missouri nearly two years ago, was annulled by the people of that state in November last, by a vote of 324,085 to 159,593. A bill for the repeal of a similar law is pending in the Legislature of New York. There are statutes of the same character in Pennsylvania and New Jersey. The railroads in those states, as we said last week, have begun an appeal to the people for a repeal of them. They have the support of the New Jersey State Chamber of Commerce, and the boards of trade of several cities.

In a published statement the railroad companies assert that the laws, requiring the employment on their trains of more men than are needed, burden their payrolls with \$2,000,000 a year for "wasted and unwarranted extra labor." This, they say, decreases operating efficiency and is accompanied by heavier casualty lists. The hazard of operation is increased by forcing extra men into crews already adequate, thus tending to divide or distribute responsibility.

Their records are shown to prove that the number of trainmen and passengers killed or injured has been greater since the laws were enacted than it was before, altho the advocates of the laws sought, or professed to seek, to give additional safeguards for both the passenger and the employee. The companies promise that there shall be no lobbying in their interest, "no star chamber conferences, or private deals to influence public opinion or legislative action." The campaign, they say, will be fought in the open. If it can be shown that the present laws relating to the public service commissions of the two states do not give to the commissions ample power to determine how many men are needed on the trains, and to compel the use of a sufficient number, the companies say they will openly support bills granting such power.

The course taken in this matter by President Rea of the Pennsylvania, President Willard of the Baltimore & Ohio, President Voorhees of the Reading, and others who sign the statement address to the public, is to be commended. It cannot fail to cause a thoughtful consideration of their arguments and facts. We do not see why regulations like those in question should not be left to public service commissions in states where such commissions exist, if the commissions have the power that is required. Regulation by commission is something better than enforcement of the demands of a statute which does not take into account varying conditions, which places on certain trains men who must be idle there, and which causes an unwarranted expenditure of money which ought to be used for the purchase of cars, rails, locomotives and other supplies.

The gold-mining industry of the United States enjoyed prosperity in 1914, and regained its normal condition. The preceding year was one of declining output. Preliminary official figures indicate a yield of \$92,823,500 in 1914. The increase in Alaska was about \$300,000.

The largest check on record was drawn last week in New York by Kuhn, Loeb & Co. in favor of the Pennsylvania Railroad to pay the amount subscribed in the recent sale of Pennsylvania 4½ per cent bonds. It called for \$49,098,000.

The Canadian railway companies have asked the Dominion's Railway Commission for permission to make a general increase of freight rates, owing to a reduction of revenues, higher expenses of operation, and impaired borrowing power.

Under the ship registry law of August last, 129 ships have been transferred to the American flag. Their capacity is 465,740 gross tons.

At the end of last week only \$38,096,358 of the emergency currency, or less than ten per cent of the amount issued since the beginning of the war, was still outstanding.

The following dividends are announced: American Telephone & Telegraph Company, coupons from Convertible Four Per Cent Gold Bonds, payable March 1.

American Telephone & Telegraph Company, coupons from Convertible Four and One-Half Per Cent Gold Bonds, payable March 1.

Federal Mining & Smelting Company, preferred, 1 per cent, payable March 15.

Mergenthaler Linotype Company, quarterly, 2½ per cent, payable March 31, 1915.

Coupons of 5 per cent Gold Bonds of 1904. Republic of Cuba, payable on and after March 1.

### WRITING THE PHOTOPLAY

A practical course of twenty lessons in the technique of the photoplay, taught by Arthur Leeds, Editor, THE PHOTOPLAY AUTHOR. 25-page catalogue free.

THE HOME CORRESPONDENCE SCHOOL  
Department 103, Springfield, Mass.

CALIFORNIA, Los Angeles.

### CALIFORNIA HOSPITAL

School for Nurses. Three years learning profession without expense in California's beautiful city. Medical, Surgical, Maternity, Eye and Ear Departments. Illustrated booklet free. Write Medical Director. Also a few young men admitted to a two years' course.

### "HOME-MAKING, THE NEW PROFESSION"

Is a 100-page illustrated hand-book; it's FREE. Cookery, diet, health, children; home-study Domestic Science courses. For home-making and well-paid positions. American School of Home Economics, 529 West 69th St., Chicago, Ill.

### SCHOOL INFORMATION

FREE Catalogs of all Boarding Schools (or camps) in U. S. Expert advice free. Want for girls or boys? Maintained for all schools. Write AMERICAN SCHOOLS' ASSOCIATION 1042 Times Bldg., New York, or 1542 Masonic Temple, Chicago

### Horsford's Cold Weather Plants

And Flower Seeds That Grow

COLD weather plants and lilies must be perfectly fresh when planted. We pack herbaceous plants in fresh moss. Customers say they arrive fresh. All roots of shrubs and trees are dipped in a preparation of wet clay, which excludes the air and prevents drying out. We offer a long list of the hardier shrubs, trees, plants, vines, wild flowers, hardy ferns, bulbs, etc. See our new catalog before placing spring orders. Prices very low, considering the superior quality of stock. Address F. H. HORSFORD, Charlotte, Vermont

### CAMP PENN, Valcour Island Lake Champlain. A

real camp for real boys, from nine to sixteen years inclusive. Our system is unusual. It not only gives the boy a bully good time but brings out the best that is in him. Eight years freedom from sickness and accident speaks for our individual oversight. Experienced staff. Resident physician. 500 acres. Main-line station. Our booklet will interest you. CHAS. K. TAYLOR, M.A., Mgr., W. Mermaid Lane, St. Martin's, Philadelphia, Pa.

Burpee Buildings, Philadelphia

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

### NOT AFFECTED BY THE WAR

In a brief address to his policyholders and the public, submitting comparative figures for the years 1913 and 1914, President Kingsley, of the New York Life Insurance Company, touches on the relations of the company with the war in Europe. Of the million or more policyholders, about 15,600 who are in France, Germany, Belgium and Austria-Hungary (about 1¼ per cent of the membership) include men whose attained ages run from seventeen to thirty-nine years inclusive, about 2400 of whom hold contracts which contain no clause limiting the war risk. The company's death losses in 1914 show a mortality equaling seventy-three per cent of the expected—the same rate experienced in 1913. From which we may conclude that up to the end of last year the company's mortality had not been adversely affected by war losses. On January 1 the company's assets were \$818,461,331, as compared with \$779,555,162 a year earlier—a gain of \$38,906,169.

### ENCOURAGING CRIMINALITY

Two legislatures are now considering bills reintroducing into state regulation of insurance the valued-policy principle.

For the information of those not up on the subject, we will briefly explain the proposition. Take your fire insurance policy and read it: you will find that it promises indemnity against all loss and damage in a sum *not exceeding* the amount for which it was issued. That is the maximum of protection; and it will pay any amount less than that which the adjustment shows is *actually* lost, existing market values governing the calculations. The valued-policy law (which applies to immovable property only) proposes that if the building insured is totally destroyed by fire, the company shall be liable for an amount equaling the face of the policy. Assuming that the value of the property at the time of its destruction was equal to or in excess of the insurance, the conclusion that the insurer is liable for the whole amount of its policy is indisputable. But suppose it is found after the loss occurs that the amount of the insurance exceeds the value of the building? Ordinarily this is not frequent, but it does occur in a small percentage of losses. Naturally, under the stimulus of a valued-policy law the proportion would augment appreciably; over-insurance would "boom" and the arson industry would become unusually active.

Now and then, under comparatively healthy conditions, fire insurance companies are made to buy, at fancy prices, many otherwise unmarketable buildings without seriously impairing their

assumed averages; but what would be their financial condition if crafty speculators in indemnity thru a law may use the power of a state in making the destruction of property a profitable business?

No honest man desires from a fire insurance company more money than he has actually lost; no dishonest man should be permitted to enforce the collection of more. The law should punish, not reward, the latter. Valued-policy laws can aid none but the criminally inclined and should be wiped off the statutes in every state.

A. F., Woodside, N. Y.—You seem to be laboring under a misapprehension respecting the utility and other advantages of the Ordinary Life policy. You say it is commonly supposed to be a poor contract for the man who is looking for protection rather than for insurance and investment combined. I think you are mistaken in your assumption. I should say that 70 or 75 per cent of all the policies in force in old line companies are of the Ordinary Life class. The reason is plain. Most insured persons are recipients of incomes below rather than above the average, and their needs in the insurance line demand the greatest amount of protection that can be bought for the money devoted to that purpose. As nearly as safety will permit, the Ordinary Life policy more fully than any other meets the requirement. You are forty-six years old, and I conclude that you need protection. I unreservedly recommend an Ordinary Life policy in any well managed company. There are so many good ones doing business in this state that we could not name any without discriminating against the others. Write to several and ask for sample policies and dividend records. With such information you will have no trouble making a proper choice.
